If then our neutrality (policy) is to be dynamic and not static, global in concept and not merely parochial, then we must have the wherewithal to remain neutral. And that brings us to the crux of this article. Many of us had the advantage of seeing a motion-picture *Victory through Air Power* (1943) and some of us may have had the advantage of reading a book of the same name by Major Alexander P. de Seversky. Major Seversky has now written a sequel to his first volume entitled *Air Power: Key to Survival*[3] which is on its way to become a best seller in America. A summary of this book has just appeared in the *Reader's Digest* (September, 1950) under the title "The Military Key to Survival." Some of the statements that appear in that book are not only amazing but breath-taking.

It is extremely difficult to summarise his conceptions in simple language but the best we can do is to quote his own words. He says:

> "The only strategy which will win any war under the conditions of modern technology is a strategy of global airpower."[4]

Major Seversky very vehemently advocates a strategy for victory, a strategy geared for global command of the air exercised directly from the American continent. But of course we have not the over-all superiority of an advanced civilisation, nor have we at present the science, the technology, the industrial know-how, which we suppose is the essential prerequisite of a huge aerial armada. It is also very pleasing to imagine but difficult to conceive of masses of our bombers casting oblique shadows over the globe.

Major Seversky points out the futility of Aircraft-carriers. He also goes on to say that even in the epoch of sea power it would have been folly to try to establish command of a patch of ocean in the face of a superior naval fleet. He says:

> "In this aerial age it will be folly no less to try to maintain control of a patch of air in the face of a hostile air fleet."[5]

Thus he rules out summarily *local* air dominance, strategy resting on outlying bases closer to the enemy continent than that of America. He thus argues that no strategy for victory can rest on a "stepping stone" approach to the enemy. He says that

> "The highly appealing idea that war tied to overseas bases would keep the fighting away from one's own shores is merely wishful thinking."[6]

But in the case of India, we have no such islands to use as fortresses of defence or as bases for attack. Nor have we got a navy which can command any area of any sea in the face of a powerful hostile power. Even if we had a navy it would be useless in the present concept of global strategy which is dominated by aerial technology. The reduction of navies to

secondary roles is imposed not merely by superiority of aerial strategy but by the march of science. This is truly the aerial age of man. The aircraft-carrier which is a sort of double-sexed creature, having the mannish quality of the navy and the stream-lined feminity of aeroplanes, is even now a defunct instrument of war.

It is very significant that the only Aircraft-carrier for America which is envisaged by Major Seversky which could be anchored off the European continent is the British Isles.[7] He goes on to say that to keep such a "carrier" afloat and operative will call for the exertions of the whole British air force and the entire British population, plus substantial American support. He says:

> "The magnitude of the defences that will be required to hold the British Isles as a base is a sufficient measure of the folly of trying to hold flimsy floating bases anywhere within the orbit of a Soviet air power."[8]

We have thus seen that the trend of military thought in America is to substitute aerial global supremacy in place of a mixed strategy of air and naval dominance. But even in America this is only a trend and not a reality. Even Major Seversky has to admit that the premises on which strategy is now being formulated in Washington are fallacious and "have in them the seeds of disaster."

In England though a great weight is being placed in the highly technical advance of jet aircraft, still a mixed strategy of army-navy-airforce is respected. It is worth noting that Mr. Cyril Falls, the Chichele Professor of the History of War, Oxford, who gives a monthly commentary in the pages of the *Illustrated London News* under the column "A Window of the World" stated again and again while commenting on the early phases of the Korean campaign that the Korean adventure had proved to the world that mere air dominance is not a key to victory in a single battle or in a series of battles which make up the sum total of war. But as the campaign has proceeded even he admits the advantage of a powerful aerial umbrella. In the issue of the *Illustrated London News* of October 7, 1950, he remarks:

> "This has been very much an infantry and, to a lesser extent, an armoured war. The part played by sea power, is however, quite clear and generally appreciated, but full justice is not done to the part played by the air arm, which seems to be taken for granted. It is as well to bear in mind that in no large-scale war which can be imagined will air predominance on one side be as complete as it has been in Korea, and therefore that in no campaign will land forces be able to operate so freely. The Americans have been fortunate in this respect and it can hardly be doubted that, if conditions had been reversed, they would no longer be on the Korean peninsula. *They were able to move as they chose under air cover.*"[9]

We have read in newspapers that thousands of bombers were employed by the Americans to help making surface advances by ground troops. Through all was the most amazing spectacle of North Korean troops advancing without the heavily geared position of the umbrella of air armadas. But ultimately air supremacy did prevail and turned the tides of war though temporarily. This vindicates the statement strategy attributed to General Montgomery:

> "First of all you must win the battle of If you examine the conduct of my campaigns, you find we never fought a land battle until the battle was won."[10]

Hitherto we have not said a word about the third side of the triangle—the ground forces. It was Minoo Masani who injected into us a pride for our population. He starts his book *Our India* by saying that

> "One man in every five is an Indian. The next four are let's say an American, a European, a Negro and a Chinese."[11]

With this mass population there would be a natural temptation to develop a huge land army. Both our natural disinclination and physical disability were not developing an army of vast proportions.[12] would a huge land army alone help us in a global conflict.

We are at the germinal stages of the development of our military strength and strategy. We still to ponder over, and fashion a military which could guard our frontiers and preserve neutrality. The trend of world thought seems to development of aerial power. We could then our neutrality both in theory and in practice ultimate preservation of peace national and global the reality for which our Prime Minister is night and day. In our capacity to remain neutral development of a powerful air force, discarding mixed strategy of land-air-naval forces, lies the of Asia. The political map of the whole globe changing from day to day. Governments are frontiers are changing with regular but awe-inspiring monotony. No nation can afford to remain complacent The desire for peace alone will not guarantee Our strength and ability to meet any eventuality the ultimate guarantee of peace.

We do not need a huge air armada, for we no territorial ambitions, no political appetites have no axe to grind, no "isms" to propagate, no to impose our political ideology on the peoples ing in other spheres of the world. But we do need a powerful airforce which can effectively guard sea-boards, which can keep away invading

from the skies over the Arabian Sea, the Indian Ocean and the Bay of Bengal.

As we lay stress on aerial strength we can hear dissenting murmurs. We are reminded that we are the followers of Mahatma Gandhi, that we should adopt Satyagraha and non-violence as our political creed, that we should not become crazy in building up mere aerial strength. To that our reply is that Mahatma Gandhi never advocated non-violence at the price of cowardice.

There has been a lot of discussion on the views held by Mahatma Gandhi on the instrument of Satyagraha but we can say without fear of being contradicted that to the father of our nation Satyagraha was the shield of the brave and not a cloud for retreat for a coward. That this was the true meaning of non-violence will be further seen from the views expressed by S. Radhakrishnan. He says in *Mahatma Gandhi*.*

> "Satyagraha or non-violence is not for Gandhi a quiescent or negative attitude. It is positive and dynamic. It is not non-resistance or submission to evil. It is resistance through love."

And then let us see the words of Mahatma Gandhi in *Young India*, September 16, 1927:

> "My creed of non-violence is an extremely active force. It has no room for cowardice or room for weakness. There is hope for a violent man to be *some day non-violent but not for a coward*. I have therefore said more than once in these pages that, if we do not know how to defend ourselves, our women, and our place of worship by the force of suffering, that is non-violence, we must if we are men, *be at least able to defend all of them by fighting*."

And he states in *Young India*, September 28, 1934:

> "The world is not entirely governed by logic. *Life itself involves some kind of violence, and we have to choose the path of least violence*."

Therefore the true follower of Mahatma Gandhi would meet force by non-violence but in the last resort, after he had exhausted all the avenues of Satyagraha, he would greet force by force. And that is why when we assumed power we did not summarily close down all our armament factories or demob our soldiers. That would have been and would be a national suicide in the context of world events. Therefore our exertions should be towards guarding ourselves by an effective air force and not merely savouring pious hopes that none shall attack us.

To summarise, ours shall not be merely a juristic neutrality blind to the ravages of the world, but a dynamic neutrality, active when activity is necessary. Our military strategy shall not be the indiscriminate development of all the three arms of our forces but the most effectual development of air-force geared for a high-tension defence. Our desire for peace should not be a cowardly retreat but a burning love for peace born out of our consciousness that peace alone is desirable. Our love for peace shall not make us immobile, inert, frigid, sterile. It shall make us doubly conscious of our vast heritage. It shall not be the peace of the grave. It shall be in the final summation, *Peace through Power*.

* *Mahatma Gandhi* by S. Radhakrishnan. Allen & Unwin Ltd., page 353.

"THE POPULATION OF INDIA AND PAKISTAN"

By TARAKNATH DAS

The work under review,* the fifth study of major population undertaken by the Office of Population Research of Princeton University, is the first to deal with an Asian people.

Misconceptions about population growth in Asia are widely prevalent. Hence, it is gratifying to note Professor Davis' statement at the very outset that India's modern population growth is not exceptional, but rather slightly less than the estimated world average from 1850-1940, and less, too, than the average in Europe and North America.

The author comes to the conclusion that theoretically, at the present rate of increase, it will take about 58 years to double the population of India and Pakistan. He raises the very pertinent question:

> "Can it (India) actually double its 1947 population in 58 years, the hardening in the year 2005 something like 840 million human beings, more than a third of the world's present population? If so, how will she support them? If not, what is going to stop the trend?" (p. 28)

To get an adequate answer to the above question, the author in 23 chapters of the book and appendices, enters upon a comprehensive study of various phases of human fertility, death rate and efforts for its reduction, social structure and social changes affecting the population problems of India. The author's conclusion is that the solution for India's poverty and for her standard of living will depend upon (*a*) industrial expansion, (*b*) increased production from land and, (*c*) birth control practices to be widely spread among the people.

Regarding the actual state of Indian industrial development the author writes:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Potentialities of this region for industrial development are great; (but) its actual performance in this field seems tragically below what might be expected."

He considers Britain's economic policies during the century and a half of occupation largely responsible:

"England's policy towards her (India), while always mixed with other motives and interests, was the policy of an industrial nation towards an agricultural colony. Such industry as was allowed to develop in India was often for the profit of the citizens of the paramount power. . ." (p. 216)

Professor Davis is careful to exonerate Britain from blame for India's economic vassalage on the ground that

"If the British had not come to rule, some other foreign country would have done so, since India at the time was weakened by political chaos and a feudal economy."

Dr. Davis contends that in all probability British rule did a more efficient and fairer job of governing India than any other foreign nation would have done, but that the enormous task of transforming a people from a peasant economy to an industrial nation in a short time is apparently one that only an indigenous government can perform.

Professor Davis' contentions regarding the British contribution to India's progress casts a rather odd light upon the criticism generally levelled against the Japanese occupation of Korea, for the Japanese role there is quite analogous to the British India. We seem to be confronted here with a double standard of international morality. At any rate, the reviewer agrees with Professor Davis that a subject-nation cannot bring about such an industrial transformation as may affect the interests of an alien conquering power. To effect the much-needed industrialisation of India which was deliberately neglected by its erstwhile British rulers, the people and the Government of India will have to carry out a large-scale, planned program.

India has millions of acres of undeveloped land which can be put under agricultural production. This is particularly necessary in view of the fact that, with the increased population, the acreage in cultivation per person has declined by 15 per cent from 2.23 in 1891-92 to 1.90 in 1939-40. At the same time, as Dr. Davis points out, productivity per acre has not improved and is, in fact, "below that of most agricultural areas." There is thus ample room for agricultural development to provide for a better standard of living in India, quite as desert land is being made productive in Israel today.

The key to India's population problem seems to the reviewer to lie in this type of increased agricultural production and in intensified industrialization. These are the necessary conditions for decent living stadards even in countries with low birth rates. Witness the Scandinavian countries where because both the birth and death rates are low, the actual rate of population increase is about the same as India's. In other words, birth control alone will not solve India's population problem, though Dr. Davis, like most Western sociologists and population experts, emphasizes it as the most important measure to be taken.

A chapter of the book is devoted to the question of the partition of the sub-continent of India. The author, like most of the western experts, thinks that the religious difference between the Hindus and Moslems was the real cause of partition. Yet, even after the partition of India and creation of Pakistan, 40,000,000 Moslems live in the Indian Union without any interference with their religious and cultural life and enjoying equal rights and civil liberties guaranteed by the constitution of the Indian Union. The slogan "Islam will be in danger" under the Government of India where Hindus will be in majority is thus proven to be quite unfounded. It was political pan-Islamism supported by the British Government that was the principal cause of partition of India. This fact is ignored by the author.

As the importance of India and Pakistan in world affairs is growing, this study of their population problems has special value and significance. The work is a mine of information. Excellent maps, graphs and statistical tables, appendices, bibliography and indices will be of great value to students of the problem. In spite of the differences of opinion expressed above, the reviewer regards the study to be one of the best technical analyses of the problem so far published. The author, his associates and the Foundation which supplied the needed funds for the research should be congratulated for this solid achievement.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

A SHORT HISTORY OF THE SIKHS (Vol. I): *By Teja Singh and Ganda Singh. Published by Orient Longmans, Ltd. 1950. Pp. 203. Price not mentioned.*

This is a valuable contribution to the growing literature of the history of the Indian provincial peoples in recent times. The joint authors, who have already a number of monographs on Sikh history and religion to their credit, claim to have made here "the first attempt to write a history of the Sikhs from a secular standpoint," to show, in other words, that the history of Sikhism was an organic growth with the principle of life remaining unchanged, though it underwent a constant transfiguration (but not transformation) under local influences. In particular, the authors altogether discountenance the view of some contemporary scholars that the development of the Sikh character was one-sided, being peaceful at first and military afterwards. On the contrary, they contend (and herein lies their special claim to originality) that the development of the Sikhs was harmonious and many-sided because of a happy combination of geographical and racial factors (Preface p. iii and p. 2). The authors have based their work mainly on original sources which they have used with proper care and discrimination. Thus in regard to the Persian chronicles which have necessarily been their main source-material for the period of Sikh-Muslim clash, they have made allowance for the partisan character of many of those works. Especially they have referred to "the gross inexactitude which appears almost purposeful at times," that disfigure the English translations of these works, making it necessary for the whole thing to be done afresh by "some one more dispassionate or better-equipped with the Persian texts." (Preface pp. iii-iv).

The book consists of two parts entitled *Religious Foundations* (describing the period of the ten Gurus), *Political Foundations* (relating to the stormy career of Banda), and *Persecution Leads to Power* (giving a factual account of the life-and-death struggle of the Sikhs with the Later Mughals and the Durranis ending in their dramatic conquest of Lahore in 1765). From this summary it will appear that this work deals with the formative period of Sikhism from its origin to its emergence for the first time as a political power. While such is the general interest of the work, its treatment of detailed topics is often marked by refreshing originality. Such is the account of the distinctive features of Guru Nanak's teaching as compared with that of contemporary religious reformers (p. 1 and *n*), the vigorous criticism of the current authoritative view about the sudden change in the character of guruship from Hargovind onwards (pp. 36-38) and the estimate of the life and work of Banda (pp. 106-109). The book is written in a clear and easy style which makes it interesting even to the general reader. A good bibliography with works classified under four heads (Punjabi, Persian, Urdu and English) and a full index bring this useful work to a close.

U. N. GHOSHAL

THE CONSTITUTION OF CEYLON: *By Sir Ivor Jennings. Published by the Oxford University Press. Pp. 262. Price Rs. 10.*

This is an authoritative book on the new constitution of Ceylon of 1946-47. The process of development of the present Constitution began in 1943 when at the request of the Ministers under the Donoughmore Constitution of 1931, the British Government issued a Declaration of Policy on Constitutional Reform in Ceylon. Sir Ivor Jennings acted as the Constitutional Adviser. The history of the negotiations has been given in this book and the author, who had a hand in the drafting the Constitution, has used his knowledge to explain the new Constitution. It is not an attempt at a legal exposition, the author's aim has rather been to explain the ideas which underlie the constitution and now the ideas have been carried out. The inclusion of the Constitutional Documents has greatly enriched the book.

D. BURMAN

FORT WILLIAM—INDIA HOUSE CORRESPONDENCE, Vol. V, 1767-1769: *Indian Records (Public) Series. Edited by Narendra Krishna Sinha. Published by the Government of India. Pp. 14+670. Price not stated.*

Thanks to the munificence and generosity of the National Government of India and the labour and perseverance of several scholars under the able guidance of the general editor, Dr. S. N. Sen, documentary materials for rebuilding the history of India under the East India Company are now being again made accessible to the general public. These are letters written just previously to the great famine in Bengal—the terrible *Chhiyattarer Mannantar*. The National Archives Department of the Government of India has resumed the task of rendering real service and thus justifying its existence. Though this is Vol. V, it is published first and others are to follow. We shall anxiously await the completion of this great series and, in the light of the new facts revealed, a complete remodelling of a portion of the history of India.

BRAJENDRA NATH BANERJEE

1. POST-WAR EUROPE THROUGH INDIAN EYES (Illustrated): *By Suresh Chandra Banerjee. Published by A. Mukherji and Co. Ltd., Calcutta. Price Rs. 2/-(four shillings).*

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection. Allahabad.

Digitized by Arya Samaj Foundation Chennai and eGangotri

2. I COVER EUROPE: *By J. M. Dev. Hind Kitabs Ltd., Bombay. Price Rs. 3-12.*

In the first-named book Dr. Suresh Chandra Banerjee, once a Congress stalwart, who later on shifted to the labour front, and has lately come out of the Congress, gives within a narrow compass his impressions of the Seven European countries he visited in 1948 and 1949. The views expressed by him are in some cases superficial, but they ring with a tone of sincerity characteristic of the man.

Dr. Banerjee has a good word or two for every country he visited. But he seems to be a bit hard on Czechoslovakia where in his opinion there is a grave discontent over the restriction of fundamental rights by the Communist Government. The author found only gloom in the country which was rapidly developing into a totalitarian State. Non-Communists are regarded as enemies by the government. According to not a few Czechs, says the Doctor, the Communists are "even worse than Hitler." Sweden, according to him, is one of the most progressive countries in the world and England the most highly taxed. What the latter has done for education and to keep down unemployment by a well-thought-out plan for vocational education should be an eye-opener to the authorities here. Our rulers and leaders should talk less, and think and work more. Not many will disagree with the author's casual remarks that the Germans are the finest people on earth and that the Congress is not up and doing in the matter of establishing a classless democracy in India. Hard words indeed! But true nonetheless. The proof-reading of the book should have been more careful.

The second book under review describes at some length the author's reactions to what he saw and experienced in England, France, Eire, and South Africa in 1946. The name *I Cover Europe* is therefore a misnomer. The insincerity and hypocrisy of the United Nations and the international suspicion and distrust prevailing in post-war Europe did not escape the journalist-author's discerning eyes. The world seems to be in for another global war. Good sense among nations and the emancipation of the colonial peoples—the "neglected estates" of humanity—are essentially necessary to save the world from the horrors of World War III, the shadow of which is lengthening every hour. Shri Dev speaks of the tendency of the British press to blackmail the Indian National Congress and its leaders in pre-independent days. It is ignorant of India and her problems. Indian news is systematically blacked out. Of Britain's 1577 newspapers, *The Daily Worker*, the organ of the British Communist Party alone, is fair to India. The Parliament too was indifferent to India. The members' galleries were deserted on India debate days.

Shri Dev points out how very similar has been the history of India and of Ireland under England, how perfidious Albion went back on solemn pledges to both, how vivisection has been her parting kick to both. He also describes the striking resemblances between Mahatma Gandhi, India's Bapu, and de Valera, the maker of Eire. The author paid a flying visit to France and found the average Frenchman sympathetic but ignorant of India. Everywhere in Europe the people are ignorant of India,—Czechoslovakia and Eire being the only exceptions. Our country "needs to be introduced to the people of the West." The Government of India and the External Affairs Ministry in particular will please note. Shri Dev must be thanked for giving us quite a readable book and some food for thought.

SUDHANSU BIMAL MUKHERJI

THE DRAFT MANIFESTO OF THE INDIAN YOUTH MOVEMENT: *Published on behalf of the Preparatory Committee for the Indian National Youth Movement by Sarama Dutt Mazumdar from 1 Apurba Mitter Road, Calcutta, 26. Pp. 37. Price four annas.*

This pamphlet of about 50 pages including a Foreword by Sri Niharendu Dutt Mazumdar and the Author's Letter by Anthony Elenjimittan proposes to "state with utmost frankness the case of the Indian Youth" and "seeks to survey the nation-wide issues and problems in the perspective of India's historic past," to quote words from the Foreword. One is tempted to dismiss these few pages of undigested enthusiasms with flippant remarks. But as the writer of this review has yet left a few of the crumbs, he will not adopt this easy method. All the same he cannot say that a "case" has been made for "the case of the Indian Youth" as a separate entity in India's society. The author is a Syrian Christian of Indian parentage, and his virgin enthusiasm for Indian traditions has yet to find its balance. In drawing up "the balance-sheet of the last millenium of India's political slavery," he has not been an authentic historian. To idealize the past is a natural human foible. To characterize the Muslim period of about six hundred years as "one of the darkest blot and liability on Indian nationals" accords ill with the compliment paid to Moulana Azad's and Badshah Khan's sterling characters a line below. These aberrations are all due to the lack of "basic education" in India's traditions, of the dimming of understanding of the causes of India's failure to preserve and defend her freedom; therefore do these make British policy as mainly responsible for Hindu-Muslim estrangement. The author and the class whom he represents appear to forget that *ved-niti* has a longer history than Britain's connection with India; that Hindu and Muslim values of life or deviations therefrom created the fertility on which flourished the seed spread over by Britain.

I devote this amount of space to this small pamphlet because it is a symptom of the mental confusion that has made our youth such easy victims to slogans, victims of a "divided" mind. Unless they can get out of the ivory tower of fashionable ideologies, their Conventions, Congresses or Conferences can only lead to multiplication of futile organizations.

SURESH CHANDRA DEB

SAINTS AND SAGES OF INDIA: *By Prof. Pritam Singh, M.A. With a Foreword by Sir Gokul Chand Narang, M.A., Ph.D., Bar-at-Law. Published by New Book Society of India, Devnagar, Karolbagh, New Delhi. Pp. 152. Price Rs. 3-12.*

The learned author is a retired Reader in Economics in the University of Allahabad, and has grown grey in life-long study of the different religions of the world. The book under review contains forty-two biographies of Indian saints—Hindu, Muslim, Sikh, Parsee and Christian. The accounts are brief but informative. Short studies of reform movements, such as Radhaswami Sect, Arya Samaj and Theosophical Society are also given in the book. In the five appendices mysticism, new theism, yoga, spiritism, etc., are discussed.

Sir G. C. Narang in his Foreword observes that the author's view regarding the ancient Aryans being polytheistic this book is not likely to find favour with the members of the Arya Samaj in particular. But this criticism appears to me uncharitable and unjustified since the author has duly discharged the duty of a historian. He upholds no view of his own, but records

Post Box No. 356, NEW DELHI

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

unbiased accounts of religious men and movements as a student of history. Even granting that his view is polytheistic Sir G. C. Narang should not be impatient with it, for it is an important tune in the great symphony of Indian religion. The book may be regarded as a pocket dictionary of religious lives. Its cosmopolitan character is sure to appeal to votaries of all religious communities. The frontispiece contains a beautiful picture of Swami Ramatirtha and the book is dedicated to Mahatma Gandhi.

SWAMI JAGADISWARANANDA

OUR BENGAL: *By Suparna Home. Paramita Prakasani, 77, Dharamtalla Street, Calcutta 13. Price Rs. 2.*

This brochure of 138 pages with profuse illustrations has been written, so we have in the Preface, "with the object of acquainting readers with social and political developments in contemporary India with particular reference to Bengal." A cursory glance through the pages will at once show that no exaggeration has been indulged in, in these words. In the first four chapters, *viz.*, New Age Dawns, Clouds Gather, The Storm Bursts and The Battle Won, the authoress has given in a nutshell the story of Indian Renaissance in Bengal, as well as that of India's struggle for independence for the last one hundred years and more. Bengal has a distinct contribution to our freedom movement, and to the non-Bengali reader this is not known in much detail, as most of the books on the subject have been written in Bengali. Mrs. Home has rendered valuable service by tracing the events in this brochure, for which credit is due to Bengal more than any other province. She has drawn the story to-date. The last or fifth chapter, The City Expands, gives us a running account of the history and constitution of Calcutta with especial emphasis on its cultural achievements, since its foundation by Job Charnock. The book is interesting reading, and will prove useful to the general reader.

JOGESH C. BAGAL

ROTARY GUIDE TO CAREERS—No. 9 (All-India Services): *Published by Oxford University Press, Mercantile Buildings, Lal Bazar, Calcutta. Pages 16. Price eight annas.*

This pamphlet is issued under the auspices of the Vocational Service Committee of the Bombay Rotary Club for the guidance of those entering upon their life-work. It gives brief details of the personal and educational qualifications and essential training required for All-India Services and pay-scale of posts, such as I.A.S., I.P.S., I.F.S., Indian Audit and Account Service, Imperial Customs Service, Military Accounts Service, Indian Railway Accounts Service, Indian Postal Service, Posts under the Ministry of Information and Broadcasting, etc. This series is likely to be helpful to bright and ambitious youth of the country as it gives them an indication of the various avenues of service-life.

NARAYAN C. CHANDA

STRAY JOTTINGS OF A ROSE GARDNER: *By B. K. Kerr. Himalaya Publications, Patna. 1946. Price Rs. 4-8.*

This book contains many useful and valuable hints from a real rosarian, who is very practical and no theorist. He has dealt with several aspects of rose-culture, *e.g.*, cultural hints, hybridization, etc. and given some suggestions for holding such rose exhibitions and their guidance. I am sure every rose-lover will be profited by its perusal, as the author has dealt with this complicated subject very lucidly and comprehensively. But in these days of fine printing, the pictures should have been more brilliant and the get-up of the book much improved. The price is a bit high. I may suggest that the author would do immense service to the subject, if he takes the trouble of incorporating in the next edition several pictures of the Indian rose varieties with their proper descriptions for identification, as has been done by J. Ramsbottom in his book *A Book of Roses* (The King Penguin Books, England, 1939).

R. M. DATTA

LOCAL SELF-GOVERNMENT IN INDIA: *By M. P. Sharma, Published by Hind Kitabs, Bombay. Price Rs. 2-8.*

The principal object for writing this book is to stress the need for reform of the existing form of Local Self-Government in India. This reform, Dr. Sharma of Allahabad University says, has been long overdue.

The local bodies constitutionally stand upon the same foundations as were determined by the Montagu-Chelmsford proposals, and according to him, unless we develop the various social services prevalent in the advanced countries in the West, the "harrowing" tragedies of the early days of Western industrialism are sure to occur in this country.

With this note of caution Dr. Sharma goes on to define the existing functions of the various local bodies, municipalities, district boards and *Panchayats*. He also describes the constitutional structure of local bodies, the present conditions of local services, the system of government control of the local bodies and the different features of local finance.

In making some conclusive observations on the reform of Local Self-Government in this country Dr. Sharma suggests that while Local Government may remain a provincial subject, the Government of India should set up a central organization for the purpose of co-ordination of policy, research and collection of statistics and information for Local Self-Government. He also suggests that the Provincial Government should arrange for both extensive and intensive publicity for the activities of the local bodies; they should help the members of the local bodies in various ways to understand their powers and duties. He further suggests that Local Government should form a subject-matter for study at schools, colleges and universities.

Dr. Sharma has viewed improvement of the workings of Local Self-Government from one angle only. He could suggest the formation of an All-India Institute of Local Government, the like of which is in existence in Bombay with a restricted scope of activities. This institute will be entirely a non-governmental body, able to criticize undue government interference in local activities. Such interference has been so very much regnant that it is time we pay necessary attention to this problem as well.

SANTOSH CHATTERJI

THE FOREIGN TRADE OF INDIA 1900-1940: A Statistical Analysis: *By H. Venkatasubbiah. Published by Indian Council of World Affairs, New Delhi. Pages 83. Price Rs. 3-8.*

The first part gives an analysis of the study of *India's foreign trade from the beginning of this century* to the First World War. Then comes the period after the first World War and the various Empire measures for the furtherance of the Empire trade. The method of British Imperialism was to keep India

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection. Digitized by eGangotri

Digitized by Arya Samaj Foundation Chennai and eGangotri

as a supplier of raw materials for feeding the British industries at home and utilize India as the market-place for British products. Besides, India had to remain a large exporter for paying home charges and dividends on invested capital and other invisible imports in the form of various commercial services. But even during the British rule we notice various changes in the trend of imports and exports particularly of raw cotton, textile, iron and other goods. The emergence of Japan as a competitor of Britain and slow industrialization of the country had the natural reaction of her trade position with empire countries, as well as countries outside the empire. As the book does not give figures nor discusses the altered position due to Second World War, further reaction on trade could not be given in these pages. The author could not possibly get figures for the entire war years. The second part mainly consists of various valuable comparative tables so very necessary to the students of economics and commerce and also to the statesmen of India who shall have to plan economy and trade for the country. Since the close of the Second World War and inauguration of the International Monetary Fund and International Bank, the international trade has entered a new phase based on national and international economy built upon cautious plans and adjustments. In this new world, the problem of international trade is based more on co-operation than competition in the old sense and as such a study of the past is more useful than a mere historical study.

A. B. DUTTA

SANSKRIT

TATTVOPAPLAVASIMHA *of Jayarasi Bhatta. Edited with Introduction and Indices by Pandit Sukhlalji Sanghavi and Prof. Rasiklal C. Parikh. Gaekwad's Oriental Series No. LXXXVII. Price Rs. 4.*

Materialism has found many exponents in India, though it is known as the land of spiritualists. References to and criticism of their views in works of all philosophical systems point out to the importance of their contributions. Students of Indian Philosophy will be grateful to Pt. Sukhlalji and Prof. Parikh for bringing to light in a handsome edition a complete and early work of this system. It critically examines the different epistemological views of the orthodox and non-orthodox systems and shows at length that none of them has been successful in explaining the intricacies of the physical and mental phenomena. It also seems to indicate that the critical method followed by the materialists considerably influenced the protagonists of other systems in the presentation of their views.

In the short but learned introduction, the editors have discussed many important issues regarding the work and its author. They have spared no pains in evolving a correct text and suggesting important emendations when the single MS. seemed to be inaccurate. And the division of the text into paragraphs with suitable headlines has been highly useful.

ANANTALAL THAKUR

HINDI

JEEVANSHODHAN: *By K. G. Mashruwala. Translated from Gujarati by Haribhau Upadhyaya. Pp. 300. Price Rs. 3.*

JADAMULASE KRANTI. *By K. G. Mashruwala. Translated from Gujarati by Ramachandra Billore. Pp. 102. Price Re. 1-8.*

Both published by Navajivan Prakasan Mandir, Ahmedabad.

Shri Mashruwala is a thinker of unusual clarity and conclusiveness, though so great is his humility that he hedges all his conclusions with the proviso "subject to change in the light of further reaches and ranges of Truth." The two books, under review, embody his thoughts on the true aspirations, aims and activities of human life, on the one hand, and on the urgent problem of an all-round radical change in our present perspective and practice of them on the other. This problem is viewed in the context of contemporary situations, educational, economic, political, social and religious. He warns us against the two dangers of facile succumbing to the ideals of other countries without a previous proper analysis and assessment of them in the light of the Eternal Verities, and of accepting unintelligently the traditions and truisms of our ancestors. For, it is bold and brave thinking alone which lends meaning as well as magic to life and endows one with *bhakti* and *shakti*, devotion to, and dynamism of, Truth, thus enabling him to model himself in accordance with the injunctions and instructions of the highest and holiest in him. These two books are indeed of immense help to the educated people, who desire to make their own contribution to the creation of a true kingdom of God on earth. The translators deserve legitimate praise for the excellence of their performance.

G. M.

ASHRAMKI BAHANONKO: *Edited by Kaka Kalelkar. Navajivan Prakashan Mandir, Ahmedabad. May, 1950. Price Re. 1-4.*

These letters of Gandhiji were written during three years preceding 1930 from time to time to the women resident at the Ashram. Their number is 87; and there is an appendix containing notes taken by Maniben Patel from Gandhiji's talks during 1926 when she was a frequent visitor at the Ashram at Sabarmati. Gandhiji could make time to write such letters in order to emphasise bread labour, craftwork, devotion to cleanliness and the cause of purity and also to remove the erroneous idea from the minds of his correspondents that education is literary merely, and to instil in them the idea that true education aims at character-building. Many of these letters were penned on his silence day. The letters were not mere exhortations to any particular code of life, but there was an exchange of ideas, the desire to get as well as give news. The style, moreover, was the man, and I am sure an acquaintance with the book will prove stimulating to many.

P. R. SEN

GUJARATI

ARTHA SHASTRANI PARIBHASHA: *By Vithaldas Maganlal Kothari. Published by the Navjivan Karyalaya, Ahmedabad. 1948. Paper cover. Pp. 65. Price fourteen annas.*

This is a most useful book in the light of the changes which are being made in the medium of education, which is now to be the mother tongue of the District. There are hardly any works in Gujarati on economics, its theory and practice. The first requisite for its teaching is a large vocabulary of equivalents in Gujarati of English terms. This Mr. Kothari has given, carefully explaining the import and use of each such word or phrase. It is a welcome work, first-class and sound.

INDIAN PERIODICALS

Lesson for India

In the course of an article on Education in Business and Public Administration *Science and Culture* writes editorially :

The enviable prosperity which American business has enjoyed through the application of sound business administration methods is a good example to show what can be achieved in a free enterprise economy. By adopting the policy of "less government in business and more business in government," the Americans have successfully applied the principles of scientific management to the administration of their municipal, public, military and other governmental undertakings also.

The rapid progress which Soviet Russia has achieved by applying for the first time the principles of rational management on a national scale is a very good example to show what can be achieved by a Government in a Socialistic economy. Not only did the Russians draw upon the experience of the American and the Western European countries for technical 'know-how,' but they also adopted the principles of scientific management to successfully execute their plans within the periods scheduled.

The quick recovery which England has made from the devastated condition in which she emerged out of the recent war indicates what can be achieved through a prompt appreciation of the need for better management in a mixed economy. The sincerity with which the British people supported the better management movement in the post-war years, the interest they have shown towards organized 'education for management' and the keenness with which they are studying the American methods of production to increase their productivity as evidenced by the reports recently published by the Anglo-American Council on Productivity should serve as the finest lessons that India can possibly take.

Nowhere the need for better management is more urgent than in a country reduced to the subsistence level of living standards. Never can the need for better management be more urgent than during the period in which a substantial share of the country's limited financial resources are being invested in large-scale development projects and the period in which industrial and business enterprises are taking their birth in such large numbers and in such varied sizes both public and private.

"Never can the way be more open for achievement than now, when habits, and institutions, and ideals, and economies have been shattered, and we set ourselves to the great task of assembling the parts, revealing them, rearranging them, and building a new world that affords life, liberty, assured livelihood, and the pursuit of happiness, commonly shared the world over."

Never can the need for organized education and training for management be, therefore, more urgent in India than to-day. This is the time to regulate the development and growth of a management profession and to prescribe standards of education and training for all those who may wish to enter the field, both in the public and in the private sectors of our economy.

We draw the attention of the public to the following observations of the University Commission (1948-49) on this subject, in the hope that speedy action will be taken in the light of their weighty recommendations :

"If India is to become an effective industrial country, with high standards of living for the average worker, business must be looked at as a profession and prepared for as thoroughly as any other. The difference between a craft and a profession has been described as the difference between a job and a career. But the difference is greater than that. As in engineering, the technician deals chiefly with empirical skills, while the professional works not only with skills but with natural laws, organized knowledge, and the application of general principles; so in business there is a difference of kind between commerce course and the profession of business. Following the tradition of the requirements of British administration, much of our course in Commerce have been on the craftsman's level. Equipment for business education on a professional level will require careful preparation and substantial support. Such education should not be introduced in a partisan spirit, but should prepare for a high quality of business administration whether for public business, private industry, labour union management, or the management of the business affairs of educational institutions".....

"India inherited a public administration process made up of a vast accumulation of obsolete bureaucratic routine, one of the chief principles of which seemed to be that responsible discretion should not be delegated, but should be tightly held at the top. The admirably high quality of public administration in England was scarcely transmitted to Indian administration. Comparing the operation of this cumbersome, wasteful system with modern, efficient administration, it seems possible that with radical improvement of administration the entire public work of India might be accomplished with less than half its present expenditure. What such a change would mean in relief from financial pressure and in extension of such vital services as education, power development, the extension of irrigation, agricultural production, and in other ways, can scarcely be imagined. Many factors must enter into such a change, but they are interrelated, and an improvement in one factor tends to the improvement of others. For instance, cumbersome, involved, wasteful procedures lead to a sense of irresponsibility and to a lowered ethical tone. On the other hand, clean-cut, intelligible and effective procedures, with clear and reasonable focussing of responsibility, sharpens the sense of personal responsibility, and gives support to ethical standards."

"In the higher levels of government there is need for clear comprehension of broad principles of government and of administration. Those who formulate or give effect to important policies should know what is involved in their action. They should know how similar issues have been met in the past, and with what success. They should understand how the policies they are dealing with will affect other policies and issues."

Industrial, business and public administration represents professions whose efficiency may well determine the progress and prosperity of a country.

As in other professions, no one person can become competent solely by his own thought and effort. The very

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

essence of a progression is that it undertakes to organize, to advance and to transmit the whole body of accumulated wisdom, knowledge, standards and skills in its field. Such preparation, with few if any exceptions, calls for organized professional education."

Cultural Traditions of Afghanistan

H. E. Dr. Najibullah Khan writes in *Pakhtoonistan Fortnightly* :

Afghanistan with an area of 300,000 square miles and about 12 million inhabitants has a history of more than 3,000 years. It has always been existing from the dawn of the human history with a distinct identity between Indus and Oxus and between India ant Persia.

The separate existence of this country is confirmed in the works of Greek geographers like Eratosthenes and Strabo. Its historical events and racial formation has been mentioned in the works of historians like Herodotus, Ktesias, Arrien, etc.

Only the ancient names of the provinces of the present Afghanistan in itself are expressive of the historical significance of the country in the past, like Bakhtrians or Bahlika of the Vedic literature with her central town—Balkh, mother of the cities, Tukharistan or Talla of the Chinese authors, cradle of the Kushana empires, Arya, Herat of today with all its cultural importance in the antiquity, Middle Ages and modern times; Sakastiana, the present Seistan; countries of the Saka kings with its ancient civilization; Arachosia or Zabulistan of the Middle Ages, the valley of Vedic Harivati or Arakhotos of the Greeks, the present Kandahar with the role that it played in the history of Central Asia; Gandhara the valley of Kabul river with its artistic importance in the world of Greco-Budhistic sculpture.

Pakhtia, the land of the Pakhtoon tribes and the Parompamisus, the heart of the country with the snowy peaks, which is sung in the Vedic hymns, are other such examples.

The names of Kubha (Kabul), Swasti (Swat) and the other places of importance are cited in the different hymns of Rigveda.

Only this enumeration can give you an idea of the land of Ariana Antiqua which is called today Afghanistan. Scholars know that the first Hymns of Rigveda have been sung in Afghanistan and the first rishis were the people who lived at the southern and eastern slopes of Hindu-Kush—mount of rivers.

Greco-Buddhistic Art

From the time of the Indian Emperor Asoka the Maurya, Buddhism entered Afghanistan and developed there and from there spread to China and the Far East. The Buddhistic art meeting the Greek art gave birth to the Greco-Buddhistic art, which reached its zenith under the Kushans.

The greatest monuments of Buddhism and its Afghan art in Afghanistan are two colossal statues of Bamyan or Bamikan of the ancient times and the painted frescoes in its caves.

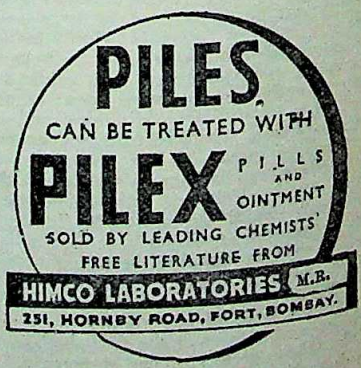
In the Islamic period the cultural importance of Afghanistan did not cease and, on the contrary, Afghanistan or the greater Khorasan of the time became one of the very important centres of Islamic culture.

Scholars, philosophers and poets of Herat, Balkh, Mery-Urrod (ancient Mergiana), Zabulistan, Sagistan and other provinces of Afghanistan have a very prominent share in the elaboration of Muslim scientific and literary inheritance; Arabic, Persian and Pushtu were the medium of their expression. There were philosophers like Farabi of the northern boundary land of Afghanistan, Abu Maashar Balkhi, Abouraihane Biruni, Avicenna of Balkh and others who have their indisputable place in the world of philosophical speculations.

Poets and Mystics

There were great poets and mystics like Ibne Edhem of Balkh, Abdullah Ansari of Herat, Sanai of Ghazne, Nasir Khusro of Kabadian, Busti of Bust, Huiwiri of Ghazne, Maulavi of Balkh, Jami of Harat, Rehman and Khush Hal Khan of Khattak of Frontier, etc., who are well-known in the history of Arabic, Persian and Pushtu literature. Artists like Behzad of Herat and Banai of Herat and many caligraphers and architects left their masterpieces in the world of painting, caligraphy and architecture.

During the reign of Mahmmud of Ghazna, the philosopher and astronomer Abureihan Beruni was sent to India to study Indian Philosophy, religious beliefs, sciences, habits and traditions. In his book *India* Beruni studied the matter not only objectively, but also with tremendous love and passion. Beruni became one of our greatest scholars in the field of classical Indian literature and the ancient sciences of India.



The study of Sanskrit was considered important in Afghanistan of those days, and there is in the Museum of Bombay a coin of Mahmmmoud of Ghazna in Devanagari script. His name is written with the Sanskrit translation of the Islamic motto.

Musoud-i-Saad of Lahore, who belonged to an Afghan family staying in India for many years, and Abul Faraj Rauni of Rauna, are the best specimen of the precursors of Persian literature in India. They were followed in the later years and centuries till recent times by a multitude of poets, philosophers and writers in Persian, like Moin-Uddin Chishti, who settled down in Ajmer, Amir Khusro of Delhi, Nizamuddin Aulia Hassan of Delhi, Faizi and Abul Fazal of Deccan, Bidel of Patna, Mazhar of Gujrat, Ghani of Kashmir, Waqif of Lahore, Ghalib of Delhi and Iqbal of Kashmir, who died a few years ago.

The Indian philosophy and theosophy impressed upon the Muslim minds, like the Neoplatonism of Alexandria and the Christian mysticism in the elaboration of Muslim mysticism, along with the mystical sides of Quorranic teachings.

The contiguity of Afghanistan with India is one of the important reasons that Khorasan became the real heart of Mystical philosophy of Islam in Central Asia and near East.

The Persian language which is called Dari and which became the common language of Persia and Afghanistan is not born in Persia proper. This language had its origin in Khorasan and the Eastern Plateau of Iran, *i.e.* Afghanistan.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The other language of my country is Pushtu-language which is the direct descendant of the ancient Bakhtrian language—sister of Sanskrit. In Pushtu you will find many Vedic words which are used without the slightest alteration even to-day. This language had its cradle in Ghor and Gharjistan of Midlle Ages, and spread eastward to Pakhtia and Indus.

The most ancient written works of this language are dated somewhere in the end of the seventh century A.D. and from those documents it seems that this language at that time, was a very literary and developed one. So we can deduce that the beginning of its written literature was dated at least 200 years back *i.e.*, in the 5th century A.D.

The Pushtu and Persian languages developing side by side in the present Afghanistan and the land of Pakhtoons, i.e., North-West Frontier Province and a part of Baluchistan of to-day, formed the cultural legacy of Afghan nation.

Folk Songs and Dances

The folk songs, stories and dances as well as customs and dresses in Afghanistan are more or less varied from province to province and, in some cases, even from valley to valley.

Pushtu folk songs have a different kind of metric rhymes and rules of versification from the clossical Persian or Arabic verses. They reflect the life of the tribes in all its glory and beauty and also in all its poverty and hardship.

The martial character of the Afghan people is a fact. They have resisted foreign domination all through their history. The struggle of the people during these 3,000 years, defending their freedom and soil against the Assyrians, nomads of the North, Persians, Greeks, Chinese, Arabs, Tartars and the great Moghuls of India and last of all against the British and Tzarist Russia, is very well-known to students of Asian history.

In the beginning of the 19th century, Afghanistan found itself between two antagonistic and conquering powers: (1) Great Britain and (2) Russia. The internal condition of the country was very bad then with feudalism and wars among the princes of the ruling dynasty.

From 1880 to 1900 the Afghan Government was busy with the establishment of a central power and in removing feudalism. During that period boundaries were drawn and the fiscal and economical policy of the Government was shaped and civil and military organisations were brought into existence. From 1900 to 1919 modernisation of the country started slowly and the first school and newspaper were established.

In 1918 after the third Anglo-Afghan war, Afghanistan freed itself from the restrictions imposed on it in the domain of its foreign relations. So it is only from 1919 that my country entered on the modern basis in the family of nations and formed its modern constitution.

From 1919 to 1929 Afghanistan continued its progress depending on its own resources, facing all the difficulties created by different factors and with many uprisings and reactionary insurrections.

National Constitutions

Since 1930 Afghanistan of to-day has been progressing on the basis of a national constitution and a national policy. The first constitution of a constitutional monarchy with a responsible Government to the Parliament, composed of two houses, has been formed. The compulsory free education till the end of higher studies at the expense of the Government has been established.

The national economy of the country with the establishment of national and State banks and Co-operative Societies has taken shape. New roads, new dams, new canals and new towns have been constructed. The industrialisation of the country has begun and the cottage industries are being encouraged.

The campaign against illiteracy has been speeded up all over the country. The University of Kabul and other institutions of higher education have come into being.

All these things have been done without any investment of foreign capital.

Andre Gide

On 20th February, 1951, at his Paris residence Andre Gide breathed his last at the ripe old age of 82 after a protracted illness. *The Present* observes :

The Nobel Laureate in literature 1947, Gide was a remarkable literary figure of modern Europe. His towering influence upon modern European literature has been dominating for a considerable space of time and possibly it will continue to impress upon the literary figures yet to be born. We, in India, are hardly familiar with his creative genius and overall influence, which really have an overwhelming superiority over contemporary litterateurs.

Gide is probably the most controversial literary figure of the modern age. Among his readers there are two very strong and opposite groups—one group admiding his penmanship and obsérvation and the other totally rejecting his thought-models as immoral, vulgar and mischievous. The critical approach of the latter group seems to have a motivated origin. Gide was anti-Soviet and was consequently an anti-communist. His impressions on Soviet Russia where he had been on an invitation were not very appreciative. In his two booklets, *Return from the U.S.S.R.* and *Afterthought on U.S.S.R.*, he has expressly mentioned his anti-communist sentiments. This resulted in his being treated as a renegade and monster by the staunch supporters of Soviet Russia, and even in our country we are very much inclined to consider him to be so due to an all round anti-Gide propoganda.

Yet his anti-Soviet mentality was not the only reason why he was and still is disliked by some people in his homeland and abroad. From the very start upto his last days Gide was a revolutionary in the field of literature. "To cultivate the art of being disagreeable—unpalatable to the reader, to disturb, that is my role,"—this he proclaimed at the start of his literary career. The assertion was bold and provoking, and had undoubtedly far-reaching consequences. The critics could not tolerate his desperate attitude and the readers his "disagreeable and unpalatable" elements. Yet it was he who exposed truths of human life, so long unseen and undiscovered. He trekked through the unknown tracts of human heart and hardly suffered from the remarks of those who were either unable or reluctant to travel the

path. Gide was, of course, conscious of his critics. About the "fundamental disloyalty of some critics," he wrote in his Journals :

"I fear I shall soon have to struggle against a false image of me that is being built up, a monster to which my name is given, which occupies my place, and which is terrifyingly ugly and stupid."

We are sure his struggle did not prove futile ; otherwise, he would not have been awarded the Nobel Prize in literature.

A strong liking for variety and diversity is inherent in Gide's writings. The characters of his books are abnormal, desperate and sometimes dangerous. Desultory mind is the true human mind—this was his accepted view of life. He never aspired after creating a stereotyped man, regulated by the laws of morality. He often vindicated the so-called immoral activities of man and proved that moral laws of society and its consequent restrictions hamper the greatness in a man. Remove his bindings, give him a free life, he will prove a superman.

It is most natural that such an attitude towards society would hurt the critics, and Gide had to suffer scathing criticisms. His critics even pleaded for legal steps against him. To defend him Bernard Shaw had to write :

"There is much that is unpalatable in Gide. But who is there to deny his extra-ordinary greatness, his intellectual height."

During his literary career for about half a century, Andre Gide wrote about fifty books. His best novel is probably *The Immoralist*, wherein he gave a strong blow to the moral laws of the human society and proved their futility. *Straight is the Gate* is a novel of "young love blighted and turned to tragedy by the sense of religious dedication in the beloved." The magnificent contribution of Gide is his *Journals*, which depicts his career of twenty-six years. An unkind critic of his own self, Gide has put down in it his reminiscences, his struggle within himself and the search for his own mind. Unless the *Journals* were published, the real Gide would have been obscure.

The world should admire Gide, the author of the *Journals* and not Gide, who was only a Nobel Laureate.

Does it Belong to the Jews?

England's 'Stone of Destiny,' as the newspapers call it, which has disappeared from Westminster Abbey is one of the most ancient religious relics in existence to-day. Writes a correspondent in *The Mahratta* (Poona) :

In the "Old Testament" of the Christian Bible (Genesis, verses 44-49) we find: "And Jacob took a stone and set it up for a title. And he said to his brethren, 'Bring hither stones' and they gathering stones together made a heap and they ate upon it. And Laban called it the 'Witness Heap' and Jacob the 'Hillock of Testimony,' each of them according to the propriety of his language. Laban said, 'This heap shall be a witness between me and thee this day' and therefore the name thereof was called Galaad, that is, 'The Witness Heap'."

Further, Genesis Chapter XXXII, verses 23-30, are as follows :

"And when all things were brought over that belonged to him, he (Jacob) remained alone, and behold a man wrestled with him until morning. And when he saw that he could not overcome him, he touched the sinew of his thigh, and forthwith its rank. And he said to him: 'Let me go for it is day.' He answered: 'I will not let thee go except thou bless me.' And he said: 'What is thy name?' He answered 'Jacob.' But he said: 'Thy name shall not be called

..will he thank you when he's older ?

He's the apple of your eye and there's nothing you would not do for him now, but are you also laying the foundations for his future?

Jacob but 'Israel,' for if thou hast been strong against God, how much more shalt thou prevail against men?' Jacob asked him: 'Tell me by what name art thou called?' He answered: 'Why dost thou ask my name?' And he blessed him in the same place. And Jacob called the name of the place Phanuel, saying, 'I have seen God face to face and my soul has been saved'."

Jacob-Israel, the father of the twelve sons, who in turn were each the father of one of the twelve tribes of 'Israel,' each tribe taking its name from the son of Israel, who was the head of that particular family, hence 'Jacob' or 'Israel' as he became, is the original father of the Jewish people, and is daily mentioned in their prayers.

Jacob's Stone: This stone was carried by the 'Children of Israel,' as the Jews were called throughout their wanderings, until the break-up of their nation after the fall of Jerusalem in B.C. 587 at which time the Prophet Jeremiah with a remnant of the Jewish people or that branch or tribe which were the sons of "Judah" (one of the 12 sons of Jacob), journeyed to Egypt. (Jer.: 43—4—8 in the Bible). From Egypt, ancient history has it that Jeremiah proceeded to Ireland, having with him Tea Tephi, one of the daughters of Zedekiah, the last king of the Davidic line to reign in Jerusalem. The Prophet also took with him 'David's Stone.' [Here history gets confused with legend, as very old Irish legends tell us that Jeremiah also took, with him the 'Ark of the Covenant,' which, according to these stories, lies buried somewhere in the hill of 'Tara' (strangely 'Tara' is also a Jewish name and not an Irish one).] Again, according to tradition, it was the ships of the Israelite tribe of 'Dan' which conveyed Jeremiah and Tea Tephi to Ireland where Eochaid, an Israelitish prince had just been elected Hermon of all Ireland. This prince promptly fell in love with Tea Tephi and made her his Queen.

Irish history tells us that in later times, one king of Ireland was invited to Scotland where he was crowned 'King of Scotland,'—and for the coronation he took with him the ancient 'Stone of Jacob.' In later years when the wars between England and Scotland were fought, England captured this stone, realising its great significance, for all old legends of the Irish and Scots have it that whichever country possesses this stone and her kings are crowned upon it, that country will hold the balance of World Power.

When Ireland was fighting England for her independence, during the time of the Sinn-Fein risings, and even earlier, there were countless plots to get this Stone into Irish possession. But, Irish Independence was achieved, apparently so also did their intense desire for the possession of this Stone decline. Now only Scotland is left still attached to the 'United Kingdom' and so Scotland too has, from the time of England having taken away the Stone, periodically plotted to recapture it for her own. But from the Nation to whom this stone rightfully belongs, we hear nothing. For, until the Jewish people once more possessed their own country, it was useless to claim their own. But now that the country of 'Israel' is once more, the rightful home of this stone is with the Jewish people.

FOREIGN PERIODICALS

Andre Honnorat
(1868—1950)

We reproduce below from *UNESCO Courier*, a very interesting sketch of the life and activities of Andre Honnorat, founder of the "University City of Paris":

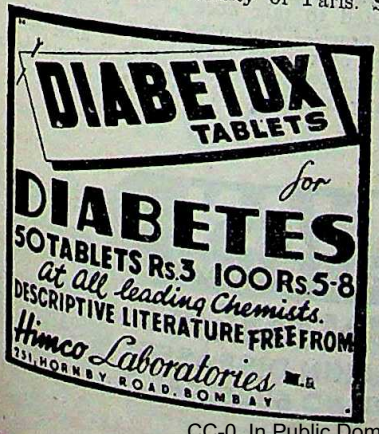
Parisians in the early twenties were somewhat loath to take their visitors on a tour of the city's southern borders. A muddy street was all that separated the pleasant "parc Montsouris" from the dismantled fortifications where, amidst rubble and debris, the vacant lots of suburbia aimlessly awaited the speculators and their blocks of tenement houses. Beyond, midst the smoke and dirt of factories, lay the "red belt" as Parisians called it, a mass of corrugated iron or tarred makeshift hovels, sunk in the pitiless depths of misery.

To this barren waste a man sometimes came to ponder, a distinguished-looking man whom passers-by took to be an architect or a poet. In point of fact he was the Minister of Education. Yet the passers-by were not mistaken, for Andre Honnorat was both a poet and a builder. He used to wander through the brambles and the rubble, a tall figure under the heavy skies. His gaze seemed to miss the ruins and the hovels; in their stead he saw a spacious city, with buildings bordering on tree-lined avenues, on wide sports grounds. Down these avenues, through the broad gateways, came groups of young men and women, laughing, talking together in every known tongue.

An Instrument of Peace

This was Andre Honnorat's dream : a city planned entirely for students, the pupils of the world's most cosmopolitan school—the University of Paris. Striding over the fortifications with a friend, the Minister was no longer a mere dreamer ; he became a prophet : Honnorat could almost count the students and mapped his "city" down to the last detail.

In the centre, he planned to build an International House, and a vast Hall-Library to replace the humble 11th century church, traditional meeting-place of the "nations" of Paris University, which the mediaeval students in their poverty had dedicated to Saint Julian the Pauper.



The thousand-year-old Sorbonne never failed to arouse the Minister's enthusiam : his first gesture upon taking office had been to restore to the University the autonomy which Napoleon had abolished. The Sorbonne of which he dreamed was more than a seat of learning and research, it was to become an instrument of peace. The future of peace . . . the idea obsessed Honnorat; he dwelt upon it in all his speeches, at every meeting: "Do you believe that all the problems which war has brought before the human conscience can really be solved by Government action alone ? Is not the best solution to teach the peoples to understand each other; and to teach such understanding, what better way can be found than to bring the elite of the younger generation into contact with one another?"

Enthusiasm Stimulated Friends and Benefactors

For the general public the Minister of Education was little more than a respected politician. His career was fairly typical of that of many French public servants. Coming of a poor family, he had started life as a journalist and later had been secretary to several ministers. For forty years he represented his native "departement," the mountainous Basses-Alpes, first in the Chamber and later in the Senate. Yet his friends knew Honnorat to be an extraordinary man. He was simple, loyal, sincere. These qualities alone would probably not have distinguished him. But the nobility of his character, the warmth of his human sympathy and his power of vision were truly exceptional.

This creative imagination, which of all human gifts is perhaps the most rare, might have been enough in itself to account for the statesman's extraordinary achievements. A University City in the heart of the "red belt"! The very idea dismayed "serious" people. Yet, in the space of a few years, the dream was to come true. By 1925, the now famous "foundations" were being erected. They were to house hundreds and later thousands of students. Gardens had replaced the rubble and debris, and sports grounds were planned.

The venture owed a large measure of its success to Andre Honnorat's gift for making friends. He never once applied for Government subsidies. His enthusiasm was such that he was always able to stimulate generosity in others and the Cite Universitaire came into being in much the same manner as the mediaeval cathedrals, thanks to the donations of countless benefactors: Jean Branet, David-Well, Emile Deutsch de

la Meurthe, to name but a few of Honnorat's close collaborators. Finally, in 1936, an imposing International House was built; it owed its existence to another friend of the founder, John D. Rockefeller Jr.

Such an undertaking would have been the life-work of any ordinary man, but it was only one of Honnorat's many and varied activities. These included the improvement of public health and social insurance, the promotion of international cultural relations and of historical research. As member of Parliament, he worked to give his constituency roads, post offices and power plants.

It was at his instigation that, in 1915, the French Parliament voted the first sums for the anti-tuberculosis campaign and it was thanks to his efforts and to those of Leon Bourgeois that the first anti-tubercular dispensaries were organized. As president for many years of the National Committee of Defense against tuberculosis, he launched the well-known stamp campaign. This undertaking, which came under heavy criticism, raised 175 million francs last year for French sanatoria and dispensaries.

"He Lived Intensely"

A great lover of history, Honnorat undertook the task of preparing the ground for future historians. He could not bear to think that coming generations should be hampered in their research by the lack of indispensable data, and he therefore set about assembling and distributing to competent bodies a heterogeneous collection of contemporary objects, including books, papers, catalogues, statuettes and even toys and oil lamps—which would be of vital interest to future historians.

"He lived intensely," said one of his friends, "poised between past and present." It can therefore be readily understood that he had a particular fondness for the Society of History of the Great War and for the library which he founded in 1916 and which is called today the Bureau of International and Contemporary Research.

International . . . the word recurs again and again in each of Honnorat's ventures. The smallest undertaking served him as a pretext for breaking down frontiers and for overcoming some new obstacle on the path of international exchange. At his instigation, the Government adopted measures to enable the children of French immigrants in Mexico to complete their education in France. This led him to plan wider cultural exchanges. He was responsible for the Franco-Norwegian school at Rouen, the Franco-Norwegian and Franco-Danish Associations in Paris, and was instrumental in setting up special bodies at the Sorbonne for the study of Germanic, Italian and Japanese civilizations. Finally, it was on his initiative that the National Foundation for the Study of Foreign Civilizations and Sciences was created.

"You Have a Responsibility"

Then came the war of 1939, and Andre Honnorat saw the temporary destruction of many of his achievements. Living in retirement, he continued to work and hope, aided by his wife and a few friends. With the liberation of France he returned to Parliament and to tasks too heavy for his age and health. His life's work was once more a living reality; yet Honnorat was not content to rest. He felt the urgency of strengthening and enlarging his accomplishments. The Cite Universitaire, which had been closed for five years, was reopened and students from thirty nations filled its 22 houses.

Honnorat now sought to expand the University of Paris, hemmed in by its old walls. For this new project he demanded 160 acres of land. Replying to parliamentary critics who considered his proposals premature, he said: "If, in 1840, you had been asked to appropriate land for the Pasteur Institute, you would have refused. You have a responsibility towards the scholars of a hundred years hence. How are you going to accomodate them?"

Andre Honnorat was now an old man of failing health, and the burden of public office proved too heavy for him. He was obliged to abandon many of his official duties. Though he no longer had the strength to make history, his power of vision was as strong as ever. Courteous, sensitive, understanding, he still made friends wherever he went.

He was now over eighty but he worked, as he had done all his life, from four o'clock in the morning to midnight.

Faith in "These Men"

Early in the summer of 1950 his health failed and the doctors ordered him to rest. But from the room which he had finally accepted at the Cite Universitaire he continued to watch over the freedom, the welfare and even the finances of his foundation. The war in Korea affected him far more than his own sufferings. "This world is mad," he said. "these men want to die." Yet he never despaired of "these men." He never lost faith in the United Nations and international organizations and tried to help them to the end. One of the last things he said to his doctor, between two painful attacks, was this: "You know, the more I think about the World Health Organization, the more I realize it must succeed."

He died on the 24th of July. Two months earlier, disregarding all advice, he left his sick-bed to receive the Queen of Holland at the Cite Universitaire. He wanted to talk once again to "his students," to talk of peace—"True peace, to which all men aspire, is not born of written texts alone, it must come from a new attitude of mind . . . from new links between the young minds of all nations."

Goethe: A Universal Mind

Leonard B. Gray writes in *Unity*, November-December, 1950:

November 7, 1775, was a great day in a little German town, in the life of Germany's greatest writer, and in the history of literature, for on that day Johann Wolfgang Goethe entered Weimar.

Oh, those glorious first few months Goethe spent in Weimar! How exciting they were for the central figure and for the townspeople who were entranced by the irresistible spell this fascinating and incomparable young man cast upon them! The little provincial town was shaken out of its dull conventionality and complacency. Aristocratic society to which the newcomer was first introduced became alive and agog. Indeed, life for everybody was stirred, toned up, and lifted out of its regular course. People everywhere idolized, lionized, and worshipped the newly famous poet partly because of the startling things he had written but chiefly because the magnetic man himself was far more interesting than his writings. They read and reread *The Sorrows of Werther*, his recently published work, that was running like wildfire over much of Europe.

In all history we have read or heard of no lionization of a writer equal to this save that given by Edinburgh to Robert Burns when he appeared in that city with the halo of sudden fame around him. The two enthusiastic receptions were alike in that they were aroused more by the poets' personalities than by their poetry. That given by the large city with its huge population and larger number of learned and distinguished men was more widely spread and more glamorous, but this in the German town—being localized in a smaller area with fewer interests and novelties to attract the attention of the people—was probably more intense. Indeed, the latter centered around a poet who was then and always much more of a man than a poet—was unparalleled in its intensity.

We describe those first few months of Goethe's life in Weimar not chiefly to present a bit of interesting history, but rather to describe Goethe and the extraordinary effects that his sudden fame and his personality had upon people. The poet was then in the full bloom of his fair youth. Seldom, if ever, was there a more magnificent and magnetic young man. He looked so strong, muscular, imposing, and manly that most people felt with Napoleon, who said after first meeting the poet: "There's a man for you." And not a few felt like Lavater, when he said: "You would idolize Goethe. He is the most fearful and amiable of men. He is the incomparable, the fearfully exalted among men." And like Heinse, when he said of the youth, "From top to toe genius, power, strength, a heart full of feeling, a mind full of fire and equipped with the wings of the eagle. Resistance is impossible; he carries everything along with him." It was impossible for strangers to keep their eyes off him, some have testified, and not to feel that an extraordinary youth had come into their midst when he entered a room. It was easily observed that in any company he carried the conversation without trying to do so.

Yes, Goethe was then in the full bloom of his fair youth and in the full bloom of his first fame and popularity among the masses. Seldom again was he to be popular, for his fame henceforth was to be restricted chiefly to the intellectual few. Schiller was to be more widely read and is today, an ex-Nazi youth recently told me, more popular in Germany. But at that time everybody was reading our poet. Young men all over Germany were wearing the Werther costume. In public markets Werther was shown painted on cloth or canvas. In a few years three French translations of the poet's first great work were to appear, and Napoleon was to take it with him on his campaign to Egypt in 1798 and read it seven times, and study it so carefully that he could discuss it point by point with the author in 1808.

How interesting and significant is Goethe's own account of how he came to write *Werther* and why this piece of writing leaped into such meteoric popularity! There had come upon many German young people, the poet tells us in his autobiography, a weariness with life which not infrequently led to suicide. This weariness was due in no small measure to the serious nature of the German mind which leads to a contemplation of the transient nature and worthlessness of earthly possessions and of earthly existence itself. Also, the serious, sensitive youth was unusually troubled and pained by the unceasing return of its faults. And this seriousness and disgust with life on the part of the German youth at that time was greatly increased by much reading of English literature which, especially in its poetry, was full of earnest melancholy. Serious English poetry, especially that of Shakespeare, undermining the worth of human nature, was suitable to the peculiar type of German mind just then and it was by far the favorite of the German youth. Particularly Hamlet and his soliloquies haunted the minds of Goethe and his young friends. Almost everyone, it seemed, knew the chief passages of the play by heart and loved to recite them. Frustrated and tortured by unsatisfied passions and by what they considered harsh and confining surroundings, such reading greatly assisted not a few German young people to imagine that their lot was worse than it actually was, as one person expressed it before *Werther* appeared:

To griefs congenial prone,
More wounds than nature gave he knew;
While misery's form his fancy drew
In dark ideal hues and horrors not its own.

Thus the mind of young Germany was perfectly conditioned to respond to the particular chord Werther would strike. Goethe himself found that he was in this psychological predicament, and he considered various ways of committing suicide, the chief being with a handsome, well-polished dagger which he laid by his bedside every night.

At last a combination of circumstances touched off the poet. Just when he was suffering most from his attachment to the wife of one of his friends Goethe heard of the death of Jerusalem occasioned by a similar attachment. Prohibiting the visit of friends and casting out of his mind everything except this subject and almost unconsciously like a somnambulist without any prearranged scheme of the whole, the poet poured out his long pent-up feelings like the bursting forth of a mighty stream and wrote *Werther* in four weeks. And then like a man who has made a great confession Goethe felt freed of his "stormy element," as he put it, healthy-minded and happy again, and ready for a new life.

The book exactly hit the temper of the times. It was a match that blew up an immense mine, that suddenly brought demands, unsatisfied passions, and imaginary wrongs to an eruption. Its success was quick and immense. It was read by high and low. It spread like a raging fire across the continent and to foreign lands. It treated the theme of an unhappy love affair in such a way that it expressed the passions and yearnings of an entire age. Countless people felt that for them was portrayed the right and wrong of their overflowing hearts in their relations to the harsh workaday world and to their strivings for freedom amid the confining circumstances and frustrations in such a world.

Not a few people claim that *Werther* is Goethe's greatest work, while perhaps the majority give the laurels to *Faust*. Anyway, the poet was never again to hit the popular mood so precisely. Among the great poets Germany's greatest was one of the few along with Byron and Burns to be suddenly clothed with fame in early youth.

After graduating from Strasbourg on August 6, 1771, Goethe went home to Frankfort to practise law which he did very little. During those years his lifelong tendency to become easily excited by new interests and to throw his energies in many directions was the most intense. When a subject took strong hold of him he would shut himself off from people and write for days at a stretch, as he did when he wrote *Werther*. Then for a considerable period he could not produce anything at all, even when he most wished to do so, and often he would suffer from ennui. To keep life zestful and to exercise all his faculties he was obliged, he tells us, to devote the intervals when Nature (spelled by him with a capital N) ceased to influence him, to worldly occupations. Evidently he regarded creative writing as the expression of his true nature or Nature expressing itself through him, and not a worldly occupation. He would travel extensively for weeks, especially with distinguished men such as Lavater and Basedon. Then he would give himself to a long and thorough study of some historical or scientific subject. From it he would quickly turn to the writing of a critical article. With extraordinary exuberance of spirit and love for fun-making he would throw himself into some gay social affair. Tiring of this he would roam the countryside in solitary walks at times with feelings of melancholy and depression. Vigorous activity and lifelessness, intense study and intense creative writing, love-making and fellowship with boon companions, joyousness and dejection alternated in him, often rapidly. No wonder his friends said that he could not be expected to act like anyone else. But all the time with his manysidedness, with his historical range and perspective, and with his seeing the varied life about him with every pore of his skin he was forming the universal mind that is one of the great amazements of history.

Also, during his last few years in Frankfort, we note Goethe's growing reference to interior truth, a characteristic of the German mind, Emerson said, but unusually developed in our poet. Back in his student days at Leipzig that tendency to write out of himself had begun. After much floundering about in his consideration of many types of subject-matter and of many methods of writing, he was compelled, he says, to seek for everything within himself. This habit of putting his delights, his troubles, his inspirations, in fact all things that took strong hold of his mind into poems came to its full blossoming in Frankfort. Finding his motivating force, his suggestions, and his material in himself is what largely sets Goethe apart from Shakespeare and the greater Greek poets who for the most part took what happened to other people as the primary motive of their works. Our German poet poetized his own joys and woes. Nearly every one of his characters was his own mouthpiece. Werther was Goethe at one time in Goethe's life. Faust was the essential Goethe all through Goethe's life. Since the poet reacted intellectually and emotionally so strongly to a many-sided life, felt so widely and deeply and richly within himself, his writing out of his own mind and heart accounted in no small measure for the universality we find in his writings.

That his writing out of himself did not prevent him from being objective is both an evidence and a cause of Goethe's universality. We admire his detached and disinterested way of looking at a thing. He could regard a matter purely for what it was in itself, apart from preconceived ideas that he and others held about it, free from bias, from any wish to make it other than it was, from

For Sensing, Feeling and Seeing

any desire to use it for a special interest or cause. And so he could say, "Whatever is useful is only a part of what is significant," and make a character in *Wilhelm Meister's Travels* say, "We do not want to establish anything or to produce any outward effect, but only to enlighten ourselves."

Unable to see that he related every fact or cause to universal nature and judged it by its ability to promote universal truth, many Germans regretted his lack of intense nationalism and called him unpatriotic. Unable to get him to adopt their particular religious beliefs and ways of life, many called him unreligious, and even anti-religious. Those who ridiculed the Bible got no sympathy from him, while he offended the narrow-minded literalist by urging honest investigation of the Bible. And he was probably condemned by most religious sects for commending a person who was trying to found a sect to be called Hypsistari, or communion of those who would choose the best out of all religions. This universal mind saw segments, partialities, half-truths, political parties, nationalities, and religious sects with their limitations and judged their worth in their relations to universal truth. It belonged to no particular age or country or race or religion but to the best in all. How men are divided, Goethe thought, by religions, patriotisms, and politics! So he greatly rejoiced, especially during the latter years of his life, in the growing cosmopolitanism of art and science as one of the most healthy and promising signs of the time. High above all frontiers this great humanist would raise the common human ideals of the good, the true, and the beautiful. He would unite the best men of all lands in a common zeal for the exaltation of letters, science, and art. Enlightenment would spread from such men, he believed, and gradually permeate the masses.

There are always people who think they know what is best for other people. There were such people in Goethe's day and they tried their best to keep our poet in the narrow track they had set for him. They urged him to get out of state affairs and they tried to laugh and ridicule him out of scientific experimenting and writing. Partly because they thought that in science a poet was out of his realm and partly because they were not ripe for his advanced scientific theories, the scientists of his day, except a few great ones, either ignored or scorned Goethe's scientific writings. To be sure, they did have some reasons, for the poet did make himself ridiculous in his claim that he had disproved Sir Isaac Newton's discovery that by the aid of a prism glass white light can be broken up into prismatic hues. But our poet-scientist did, however, make some important and far-reaching discoveries in geology, mineralogy, meteorology, osteology, and biology, and he was remarkably anticipatory of modern ideas in botany, Linne, the great Swedish botanist, was the dominant thinker in this branch of science at that time, and most people went along with him when he declared that so many thousand species had been brought into being on Creation Day, that each rigidly adhered to its type, and that the work of the botanist was merely to register and describe these unchanging species. But Goethe forecast one of the chief principles of evolutionary botany in finding both centripetal and centrifugal tendencies at work, that is, inner tendencies or impulses to keep the type and also, in different surroundings, tendencies to diverge from the type, and that under the influence of some surroundings the species did actually change. And so this great poet showed himself to be an advanced scientist in believing in historical evolution at least twenty years before his great contemporary, Jean Baptiste Lamarck, propounded the theory. Indeed, for his time, Goethe's grasp of living nature was extraordinary. This original, independent thinker in science was given his deservedly eminent place when Helmholtz, a distinguished German physiologist, wrote, "To Goethe belongs the great fame of having first conceived the leading ideas to which science in those days was tending and through which its present form is determined."

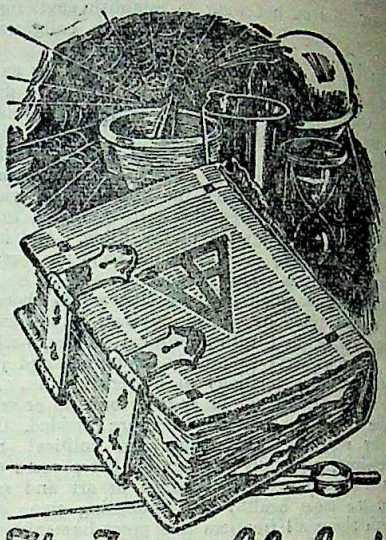
Anyway, at least we see the universal man in the wide, rich culture that Goethe derived from the best in all ages and manifested in his varied and great accomplishments as poet, novelist, art critic, translator, editor, lawyer, counsellor of state, dramatist, theatre manager, actor, and scientist.



With the influence of Spinoza, his favorite philosopher, upon him, our German thinker held that God and nature are identical. In one of his poems in a short series called *Gott und Welt* he wrote: "God must be one who moves the world within, nature in Him, Himself in nature holding," and again, "There is a universe within the soul." So far as God was a person, He was identical with Goethe's own personality, the very inmost core and essence of that. While he greatly admired Christ as man and teacher and shared much of the religion of the New Testament, he had little use for the religion embodied in abstract propositions and creeds. His position was near to that developed by Hellenism and the neo-Platonists. To him the religious life was one of balance, calmness, serenity, free from strife and discordant elements, lived in complete harmony with the divine cosmic order.

Goethe was olympian. He stood on the mountain heights. Not in the power of any mood or passion, not as the servant of any particular dogma or cause, with no axe to grind or private interest to promote, he looked calmly and disinterestedly from the lofty heights and with mental superiority surveyed the systems of thought and the human life of the ages as they were. To be sure, he was not always on the heights. He was a manly man who heartily enjoyed the game of life in its myriad forms, especially such practical matters as conducting state affairs and managing a theatre. And yet there was that original, independent stamp upon his writings that comes chiefly from a man who gets away from life and calmly views it from a distance. This combination of letting life pour through him as he intensely and richly lived it and of solitary, aloof looking at life accounts for his profound depth and wide range that Carlyle admired so much. This combination accounts for his keen penetration into the minds and souls of men and for his dealing with the spirit of life, as he did especially in his novel *Wilhelm Meister*, while so many other writers dealt merely with the costume and condition of life. This combination accounts largely for his being such an inexhaustible fountain of knowledge and wisdom, for his being, as few men have, the incarnation of humanity and of the ages.

To Emerson's claim that Goethe was the soul of his age, we would add that he was the soul of the ages. His perspective ran over all history and he wrote about universal and timeless matters. How he bewildered the people of his day by being at various times the poet of passion, the superb creator of character, the keen investigator, the royal sage, and nature's serene and great interpreter! And he amazes us today by his universality that greatly helps to lift us out of our limitations and to free us from the bondages that religious bigotries, racial prejudices, and intense nationalisms so often put upon us. Goethe encourages us to have large minds, to seek truth honestly and eagerly from all sources, and to follow the truth we find.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you to post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gathering;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind."
—*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know."

—AN UNUSUAL WAR BOOK—

THIS EUROPE

By GIRIJA MOOKERJEE Rs. 7

"The rumblings of a Third World War are being heard all over the world. At such crucial times as now, books of the nature that Girija Mookerjee has written as a faithful account of his harrowing experiences of the Second World War in France, Germany and in neutral Switzerland (!) should serve as a very effective reminder of the evil and catastrophe that war spells in modern times. He is perhaps the first Indian to have written a book of this type."

—FORUM, 11-2-51.

"Like a modern thriller the reader's curiosity is tickled from the beginning and keeps keyed upto the very end of the book."

—NAGPUR TIMES, 28-1-51.

"He writes with the verve of a seasoned reporter who has warmed up to his subject. His glimpses of Paris after the occupation is realistic and so is the picture of the end of the Third Reich…"

—HINDUSTHAN TIMES, 3-12-50.

—A FEW OTHER SARASWATY PUBLICATIONS —

CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honourable place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

JUST OUT

FRAGMENTS OF A PRISONER'S DIARY

VOL. 2

Second Enlarged Edition

INDIA'S MESSAGE

By

M. N. ROY

INDIA'S MESSAGE which forms the second volume in the revised edition, is a collection of six illuminating studies in the reality and problems of Indian society and culture. They combine great erudition and lively wit and are written in style at once precise, graceful and strong. The book is another valuable contribution from Mr. Roy to the movement of Indian Renaissance.

Cloth bound : Pp. 308 + X ; Cr. 8vo.

Price : Rs. 6

A WONDERFUL SCIENTIFIC INVENTION

"PILEGORIN" (Regd.)

Long-felt demand for an effective remedy for piles is now fulfilled. Piles are no longer incurable. There is no need of operation or external application of ointments and pastes of any kind on piles. Piles of any type can be cured completely within six days by taking 'Pilegorin' orally. It acts on the circulatory system of the parts affected as well as on the liver and thus produces tonic effect.

FAMINES IN BENGAL

(1770-1943)

By KALI CHARAN GHOSH

The best documented history of Bengal Famines since 1770. Materials collected from the official Despatches and contemporary literature. Causes of famines and their remedies have been fully discussed.

Writes *Commerce*: "By pointing out the Government's mistake of ignoring the experience of previous famine enquiries, Mr. Ghosh seems to want his book to serve as a warning to them for the future."

Guardian remarks: "……If any safeguard against any future lies…Mr. Ghosh's record will be ready at hand then to lash into shame any possible indifference."

Forum says: "These pages contain one of the best accounts of the Bengal famine."

THE MODERN REVIEW

JUNE 1951

VOL. LXXXIX, No. 6 WHOLE No. 534

NOTES

Freedom, the Constitution and the Press

There is a story in our Sanskrit classics about three scholars who were returning home after having mastered alchemy, occult sciences, etc. When they entered a big and gloomy forest, a fourth man, older than the others but not so full of learning, joined them for company and protection. And so they proceeded, the scholars deep in argument and the older steeped in his thoughts.

When they were deep in the forest, they came upon a heap of a large skull and big bones, evidently picked clean by vulfures and scattered. The little group stopped and there was much speculation as to of what animals those remains were. Then said the youngest: "Behold, I know of a *mantra* that will assort and put together the bones in their proper places."

And so he took up some water in the cup of his hand, uttered some incantations and sprinkled the water on the bones. And forthwith the bones moved to their proper places and the full skeleton of a huge animal was apparent to all.

Next spoke another scholar: "Behold, I know how to clothe these bones with flesh and skin, as will be shown to you."

And he in his turn took up water in his hands, pronounced some incantations, and sprinkled the water on the skeletal remains. And, lo and behold, the bones were covered with flesh and skin, and a gigantic carnivore of fearsome aspect lay there, plain to the eye, awful even though lifeless.

Then spoke the third, full of learning and wisdom: "This is but child's play, for behold, I will bestow life on this animal with life."

The fourth man who so far had been a silent spectator now spoke up in alarm: "Stop, stop, think what might happen if this fearsome monster came alive."

But the scholars were too full of learning and too much imbued with arrogance and so the first two urged the third to prove his learning. The fourth man in terror took to flight and had barely managed to climb a tree when the carnivore came to life with a thunderous roar and tore to bits and devoured the feckless learned ones.

If we put our Constitution drafters and makers and our learned men of the Law Courts in the role of the three scholars and the common citizen of the Union of India as the fourth man, then it would truly illustrate our present Constitutional muddle.

Millions of words have been uttered and millions more would be, but as yet no one seems to have any clear idea about the issues involved. There is so much talk about "Freedom," but has any one so far defined how much freedom there exists today for the common man? He is being freely looted by the blackmarketeers and the few miscreants—or alleged ones—who are apprehended are being set at liberty by the High Courts of Litigation. He is prevented from exercising his common rights at every step, either by official obstructionists or by organised disruptionists and again all judgments go against him, for officialdom must be held sacrosanct and the disruptionists have champions galore in our High and Supreme Courts of Justice. Bribery and corruption is on the increase and the course of the law and that of justice is becoming "curiouser and curiouser" instead of being "Apparent," as it should be by all the laws and customs of democracy.

Today the hankering for power and applause seems to have afflicted all who are in the public eye. No one seems to be able to weigh the consequences of such chaotic speech and thought. Freedom in the absolute would mean converting the Constitution into the Law of the Jungle, where only the richest and the most lawless of the strong ones will survive. On the other hand, absolute power in the hand of bureaucracy will bring in autocracy of the despot.

Meanwhile the debate is on and therefore we shall have to postpone a critical survey for a subsequent issue. For the present, we can only put on record what has transpired so far, with a few comments.

Dr. Ambedkar has put his Cabinet's case in an admirably lucid fashion. We may not agree with all his arguments but there is no ambiguity. He has made it clear that the Bill has come because of the opinion of the Learned in Law that the Constitution is like the Laws of the Persians and the Medes, once written it should last for ever—until disaster overtook the nation, hide-bound in law like the Persians and the Medes. He has further made it clear that though as a lawyer he is bound to obey, he is not bound to respect such decisions.

In this we fully agree. Law to the common logically thinking man is an instrument for obtaining social and personal justice. And justice must be apparent, to the same common citizen and not merely to the vastly learned. And if the Law fails to fulfil its purpose, it must be discarded despite whatever may be written, said or argued. Now let us turn to the debate.

Three main changes have been made in the Constitution Amendment Bill by the Select Committee. By the insertion of the qualification "reasonable" before the proposed restrictions of freedom of speech and expression, the Committee has sought to make justiciable any legislation on the subject which the Parliament may adopt. An extension of the scope of the clause in the Bill seeking to protect backward classes is recommended by specifying "advancement" generally instead of limiting application to social, educational and economic fields. Care has been taken, by means of the third change, to ensure that future state legislation for acquisition of estates becomes immune from judicial challenge only after receiving the President's assent. Although the insertion of the word "reasonable" softens the rigour of Section 19 as sought to be amended, it is evident from the minutes of dissent that the change does not go so far as the critics of the amendment desired. In extending the scope of the amendment to Article 15, relating to backward classes, the Committee has been guided by the Supreme Court verdict on the "Communal G. O." of Madras. Special reference is therefore made to Article 29(2) which forbids discrimination in admission to educational institutions maintained by the State or receiving State aid on grounds only of religion, race, caste and language. According to an additional clause in the proposed Amendment, Article 29(2) shall not prevent any State "from making any special provision for the advancement of any socially and educationally backward classes of citizens or the Scheduled Castes and the Scheduled Tribes."

Amendment to Article 19 has been the most controversial. The Standing Committee of the A.-I.N.E.C. had led a deputation to the Prime Minister and had some correspondence with him. In his letter the President categorically stated that "we hold that the proposed amendment to Article 19(2) practically nullifies the fundamental right of freedom of the Press guaranteed to the citizens under the Constitution." But at the Parliament he agreed with the Prime Minister that the change made by the Select Committee in introducing the word "reasonable" had considerably removed the sting in the original draft. According to him, this was a substantial gain and he "expressed appreciation of the spirit of accommodation shown by the Minister."

This matter of the "Freedom of the Press" should have been put before an emergency session of the A.-I.N.E.C. for a clear discussion as to what are the intrinsic constants of this freedom, since the matter is of so grave national importance. The Press in general we must say, has been ignored. The Press as it is today have themselves merited this slight. Throughout the war, and earlier during the Civil Disobedience Movement, there were a large number of newspapers which refused to voice truth and stand for fundamental rights. During the 1942-movement a large majority of the newspapers of this country did not hesitate to print the Government advertisement that "Congressmen were *goondas*." *Today while oppression of the vilest kind has been let loose on the Bengali-speaking people of the Manbhum District in Bihar, not one of them has raised its voice in defence of the poor oppressed people. Satyagrahis of the purest type, one time co-workers of Dr. Rajendra Prasad, are being assaulted by hired "goondas," and the truest followers of Gandhiji are being sent to jail on trumped up charges of rioting and theft, taking advantage of the fact that Satyagrahis as they are, they will not defend themselves. One-sided trials are being held within the four walls of the jail.* Terrorisation on a mass scale has been let loose. The Bihar Government have refused to recognise the Satyagraha movement against oppressive laws and orders in the province and is trying their best to give it the colour of ordinary crime. Their latest actions show that falsehood and villainy have no limit. *This is going on under the very nose of our Press Lords without any protest.* We know it for certain that the Satyagrahis have sent all materials to many newspapers but nothing have come out, ostensibly for fear of losing circulation of a few copies. If this be the character of the Press, if this be their concern for fundamental rights, we must say that we of the Press do not deserve any protection. Some of us will not need any, because of having proved in the past, as in the present, that there should be no cause for any action from the Government. The few daily, weekly or monthly journals who have so long stood for civil liberties and fundamental rights might be exposed in the future to repression as they have been in the past. They know how to take care of themselves, and they will fight.

Prime Minister's Speech on the Bill

Sri Nehru said, Government had given the "most careful thought and scrutiny to the problem" and brought forward this Bill because, "We thought if these changes are not made, not only great difficulties would arise as they have arisen in the past few months, but perhaps some of the main purposes of the very Constitution may be defeated or delayed."

The Prime Minister said, this Bill was not a very complicated one, nor was it a big one. Nevertheless, it was of "intrinsic and great importance, because anything that deals with the Constitution is important and anything that deals with the fundamental rights incorporated in the Constitution is of great importance."

Therefore, in bringing this bill forward, Government did not do so "in a spirit of light-heartedness, nor in haste but after the most careful thought and scrutiny given to the problem," he added. "We have been thinking about this matter for several months, consulting people, State Governments, Ministers of Provincial Governments, consulting a number of members of the House, referred to various committees and the like, taking such advice from competent legal quarters as we could obtain.

"So, we have proceeded with greater care than we could possibly give to it. We have brought forward now, after all that care, a Bill in the best form that we could give to it, because we thought the changes mentioned in the Bill are necessary, and of course, desirable, because we thought that if these changes are not made, not only great difficulties would arise as they have arisen in the past few months but perhaps some of the main purposes of that very Constitution may be defeated, or delayed."

"There had been criticism not only in our country as there should be, but also in some foreign countries, where some of our friends have got into the habit of criticising us for whatever we might do. When we seek peace they criticise us; if we do something else, they say we are not doing the right thing. So there has been a great deal of criticism and we welcome this criticism, because in a matter of this kind the greater the scrutiny the better."

He said, it was not the desire of the Government to hurry the matter through. He had mentioned an early date for the report of the Select Committee. "I do not myself know how the prolongation of this Bill, a relatively small Bill however important it may be—enables us to give greater thought to it."

Various types of criticism had been raised. One rather curious criticism was that this House having been elected on a narrow franchise, not being representative of the country or the organised will of the community, was not justified or competent to deal with such amendments. These very people raised the criticism about the right not of this House but of its predecessor, the Constituent Assembly in drafting the Constitution, because they were elected on certain franchise.

"Now that Constituent Assembly which has become part of this history of India is no more; but we, who sit here, nearly all of us continue that tradition, that link. In fact, it is we, who were in the Constituent Assembly and drafted it. Now to say that we are not competent to touch the work we did is rather an odd argument."

Government had come up here naturally because after the experience of one and half years or so, they had learnt much, they had found out some error of judgment or possible interpretation to be put on what they had provided for.

"The House would remember that when the Constitution was considered, an Article was proposed that within five years any change in the Constitution should be relatively easy. Why? Because it was thought, and rightly so, that after a little while many little things would come to notice which they should rectify with relative ease. Rather unfortunately that Clause was dropped.

"Nevertheless, so far as this House was concerned, it could proceed in the manner provided for in the Constitution to amend it if this House so chose.

"Now there is no doubt that this House has that authority. I am not talking of legal, or constitutional authority, but moral authority because it is, roughly speaking, this House that drafted the Constitution.

"It was they who actually hammered it into shape after years of debate, and now they had come to this House for amendment because they had noticed some lacunae. Some difficulties had arisen because of various interpretations.

"It had been pointed out by the judicial authority that some lacunae existed. So far as interpretation of the Constitution is concerned, it is the right and privilege of the highest court of the land to do it and it is not for us as individual or even as Government to challenge that right. Judiciary must necessarily stand above, shall I say, political conflicts of life or political interpretation. They have interpreted it in the light of law and we respect them.

"We must obey them. *But having followed their interpretation, it is our business as Parliament to see whether the purpose we aimed at is fulfilled. If it is not fulfilled, then the will of the community does not take effect. If the will of the community does not ultimately take effect, then serious difficulties may arise at any time. At a time like this when powerful and dynamic forces are at work, when changes take place not only here but in other parts, we cannot think of anything static in the world.*

"Nevertheless, it becomes our duty to decide whether the Constitution was or is rightly interpreted and whether it is desirable to change it here and there to give effect to what was our intention. Therefore, I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

come before the House not to challenge any judicial interpretation, rather to take the assistance of the House in clearing up doubts, in removing certain difficulties which have prevented us from going ahead in measures of social reform."

"This House know very well that there are many kinds of Constitutions in the world. There is Constitution which is not written, for instance, the Constitution of the U.K. where Parliament is absolutely supreme and can do and say what it likes and that is the law of the land and no court can challenge it however they may interpret it.

"Then there is the written Constitution, like the Constitution of U.S.A., where the Constitution to some extent limits the authority of the legislature in so far as certain fundamental rights or other provisions are concerned. Now in U.S.A. by a long course of judicial decisions healthy conventions have been laid down and the power of the legislature has been widened somewhat because of the interpretations by high judicial authority and because of those conventions the extreme rigidity that perhaps a written word might have given to it has been made more flexible in the course of generalisation.

"I have no doubt that if we live through a static period, gradually these conventions would arise here too, relaxing that extreme rigidity of the written word and that our courts would help in relaxing that rigidity. But, unfortunately, we have no time. It is barely a little more than a year since we started functioning under this Constitution and to begin with, therefore, it is only the word in all its rigid aspect that apparently counts and not the many inner meanings that we sought to give to it.

"But we are deprived of that slow process of judicial interpretation and development of conventions which the other countries with the written Constitutions have gone through like U.S.A.

"Therefore, because we live in these rapidly changing time we cannot wait for that slow process. We have to give a slightly different shape to the written word. In effect we are doing what in the normal course judicial interpretation might have done and probably would have done and we come up before this House for that purpose.

"Now a great deal has been said about the desire of this Government to put any kind of curb or restraint on the freedom of the citizen or Press or of groups. First of all, may I remind the House that this Bill only perhaps clears up what the authority of Parliament is. We are not putting down any kind of curb or restraint. We are removing certain doubts so as to enable Parliament to function if it so chooses and when it chooses. Nothing else happens when this Bill is passed except to clarify the authority of Parliament.

"May I also point out to this House that we in this Government and we in this House have not got a very long life. This session is coming to a close and after this session there is likely to be a brief session again before the General Elections take place in the country.

"Even the present Parliament will give place to another, larger one, perhaps different one. The Government may give place to another and whatever changes we may make in the Constitution today, it is highly unlikely that this Government or this Parliament will take advantage of them by passing laws to that effect unless some very severe crisis, national or international, arises.

In fact, therefore, it is not this Government that is trying to seek power or consolidate itself and certainly I repudiate the suggestion which has been made here and there that any of these amendments are meant to be utilised for political or party purposes. We do wish when we walk away from this present scene before the election or after to leave something for the succeeding Parliament and for the younger generation that will come up—something that they can wield and handle with ease for the advancement of India and not something which will come always in their way and deflect them from the set purpose we have in view. Therefore, it is from this point of view that we have put forward this Bill."

Continuing Sri Nehru said that if they had examined the various proposals made in the Bill, they would find that a number of amendments were secondary in importance not concerning any vital matters or principles. For instance, one of the Articles laid down that this House should meet twice a year and the President should address them. Now a possible interpretation of that was that this House had not met at all this year. It was an extraordinary position considering that this time this House had laboured more than probably at any time.

The amendments to Article 87 and also to Articles 174 and 176 of the Constitution were somewhat secondary in importance. They related to the functions of the President in Parliament and that of the Governors in State Assemblies. So also the amendments to the Articles 341 and 342 related to the function of the President where, there is no Rajpramukh at all. The amendment to Article 372 related taxation laws and so also the amendment to Article 376 enabled the Government to appoint as Chief Justice a person who was not a citizen of India. These were the minor of the amendments proposed.

"But the really important provisions which I am putting before this House," Sri Nehru continued "relate to Article 19, Article 31 and also to Article 15 of the Constitution."

Dealing with Article 15 first, the Prime Minister stated that it had been proposed to add certain provisions to that article. It had been considered

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

desirable to add them in the light of the experience of working the Constitution.

"The real difficulty before us is this : The Constitution has laid down certain Directive Principles of State policy and, if I may point out, the Constitution has also laid down certain Fundamental Rights.

"While the purpose behind the Constitution was not to effect any conflict between the two sets of principles, somehow or other the working of either is to some extent hindered by the static element in the Fundamental Rights. We have therefore to find out some way.

"The amendment which I seek to move is no solution of this basic problem and what the amendment proposed to give is to give authority to Parliament or to the future Parliament to deal with the matters as they arise.

"I may also point out that we should try to remove possible impediments in the way of implementing the Constitution. It is suggested by some that it is proposed to devise a method of bringing about some kind of communal element by a number of these amendments. I want to make it perfectly clear that so far as we are concerned and our Government is concerned, we do not wish to have any element of communalism anywhere. But you have to distinguish between the backward classes who are specially mentioned in the Constitution. You have to help them in order to advance them educationally and economically.

"But sometimes this intervention by the Government or a party presents difficulties, because we have to give a certain type of education, technical or other, to the backward classes. The question therefore is that we should give some encouragement, some reasonable encouragement, to their education and give representatives of the backward classes who otherwise would not come up at all. Therefore, there is no question of Government giving any special assistance to any community on the ground of religion, etc.

Coming to another difficulty in the working of the Constitution, Sri Nehru said that difficulty related to the interpretation of Fundamental Rights and the protection of individual and personal liberty.

"The question now to be considered is this : in the protection of individual liberty you would give also individual group inequality. In that case you come to a conflict. Is it the guarantee of Directive Principle of the State policy or the moral advance of the group in general that constitute a more rapid advance possible and in which way there is less and lses inequality or more and more equality.

"Now, if any kind of individual liberty is treated as very important, then an appeal is made to the continuation of the existing inequality. Then there is difficulty; there is a conflict between the rights of individuals and the relation of individuals to the society. We shall have to deal with those cases and I feel the present amendment of mine seeks to give authority to Parliament to deal with it."

Articles 19 and 31

"Then we come to two important articles of the Constitution, which this Bill proposed to amend. They are Articles 19 and 31. Article 19 deals with Fundamental Rights. It is said that this Government seeks to curb or restrict the freedom of the Press. Members are fully aware of the state of affairs today. I do not think there is any country in the world today and at the present moment which offers so much freedom for any one in regard to publication of news and views as in India. I have often given expression to my appreciation of the way in which journalists and newspapermen have conducted their functions in this country; and I would like to say the same about them every now and then. But I have also to draw the attention of the House to the ways in which less responsible newspapers are conducted."

"It has become a matter of daily occurrence," he added, "that some of these news-sheets are often indulging in creating insecurity and disunity in the country and day after day they indulge in this general degrading of not only intellectual quality but also in the degradation of moral standard." (Cry of shame, shame).

"I do not consider it merely as a political problem. I do look at it as a moral problem. How are we to preserve our moral standards if such news-sheets by indulging in such moral deterioration day after day carry on their poisoning effect and demoralise the younger generations in the colleges and schools.

"It is true that everybody should have the freedom to carry on his own views; but freedom is also associated with certain responsibilities and obligations."

"It must also be realised by members in the House." Sri Nehru continued, "that it is the duty of the Government to protect the freedom of the country from external invasion by use of the Army or Navy or Air Force at its command. But I may also say that this type of control does not alone solve the problem while individual responsibility to preserve that freedom is not fully realised. It has to rely on both the resources, the resources of armed strength and individual moral strength, which in my opinion is most effective.

"Therefore, it is not that I want to impose any controls on the expression of free and individual opinion. But the moral standards of the country also have to be kept in view. Intelligent people think that morals are as important as any other force towards the progress and preservation of the group or of the individual. But unfortunately, there is a total lack of this restriction on our part. I am not concerned about the election. But if there is no sense of responsibility and obligation, what are we to do? How are we to stop the corroding influence that is gradually increasing? That is my difficulty."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The present amendment, Sri Nehru continued, is only an enabling measure. It really clarifies the powers of Parliament in regard to such matters when its authority happens to be challenged.

"The principle underlying this bill therefore," Sri Nehru explained, "does not deal with any particular group or individuals. The measure is only an enabling one clarifying the power of Parliament. To what extent and in what manner that had to be done I do not know.

"Now one of the difficulties that I have referred to is the difficulty in dealing with the Press," Sri Nehru said. Press is one of the vital organs of modern life, more especially of democracy. The Press has got tremendous powers and tremendous responsibilities. The Press has to be restrained and restricted in its tone. But at the same time, the Press should have some authority to carry on their functions also independently."

Striking a personal note the Prime Minister said, in his younger days he too had something of a journalist in him and therefore, whatever he said about the functions of a journalist was out of practical experience. He appreciated the extent of their powers and the difficulties under which they had to function. He also understood the difficulties with which journalists are faced.

"But what is a Press if it does not represent the national opinion?" Sri Nehru asked, *"Is it the great organised public opinion that had to be taken as the Press of the country or some two sheets of paper that is brought out overnight without any regularity and which is fully used for blackmailing certain people?"* Nobody in the country, he felt, would support such kind of Press which failed to appreciate its obligations and then its functions in a proper and adequate manner. Therefore, there was then necessity for imposing a limit to the licence which was being indulged in order to poison and vitiate the entire atmosphere of the country.

Coming to the amendment to Article 19(2) of the Constitution, Sri Nehru said it contained three different aspects which were, friendly relations of India with foreign countries, public order and incitement to offence.

Nobody in the country or in the House need apprehend, he continued, that by the proposed amendment the Government of India wanted to stifle criticism. What was contemplated was only to enable Parliament from time to time to determine what was best suited to the maintenance of good relations with foreign countries and to prevent the deterioration of such friendly relations as quickly and rapidly as possible. That power to devise those steps had been proposed to be given to Parliament under the amendment, and that was necessary for the preservation and maintenance of the friendly relations with foreign countries that India had at present.

The other two things contemplated in the proposed amendment, were public order and incitement to offence. Again, those were principles over which there could be no serious controversy.

"In this connection I may just mention," Sri Nehru said, "of the coercive parties which made use of the powers of authority in Hyderabad and Telengana. We could not wait for the development of democratic methods. We were faced with a challenge to authority and that challenge had to be taken up."

The other article which the Bill proposed to amend is Article 31, Sri Nehru said. That article, he said, had recalled to his mind a gamut of pictures that he had dreamt of. That was the question of abolition of zemindari, and bringing about a system of land and agrarian reform. If at all the Congress stood committed to anything, it was the abolition of zemindari and agrarian reforms. Of course, many other countries had also effected such agrarian reforms rather quickly and rapidly, with or without payment of compensation or payment of nominal compensation. Here in India also they had to deal with the question quickly, for the stability of the State.

But the Article 31 of the Constitution gave rise to a difference of interpretation in the courts of law and the amendment proposed sought to clarify the power of Parliament in regard to this matter.

"Many of us who were responsible for drafting the Constitution," Sri Nehru said, *"were lawyers. Nevertheless, lawyer represents litigation. Somehow, therefore, we have to find a way out so that this magnificent Constitution of ours is not kidnapped by the lawyers."*

Sri Nehru said that from a recent article on India by an American author he read, the American author had put India's problems in five words. Those five words were—land, water, babies, cows and capital. There was much truth in those five words. Unless they solved the problem of land, no stability could be established in the country either socially or economically. That was why he had brought in the Bill to amend Article 31, of the Constitution, he said.

Amendment of the Constitution

The following is the full text of the Constitution Amendment Bill :

Be it enacted by Parliament as follows:

1. *Short Title*—This Act may be called the Constitution (First Amendment) Act, 1951.

2. *Amendment of Article 15*—In Clause (3) of Article 15 of the Constitution, after the word "children," the words "or for the education, economic or social advancement of any backward class of citizens" shall be added.

3. *Amendment of Article 19 and Validation of certain laws*—(1) *In Article 19 of the Constitution*—

(a) For Clause (2), the following clause shall be substituted, namely:—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have been originally enacted in the following form, namely :

"(2) Nothing in Sub-Clause (A) of Clause (1) shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, in the interests of the security of the State, friendly relations with foreign States, public order, decency or morality, restrictions on the exercise of the right conferred by the said sub-clause, and, in particular, nothing in the said sub-clause shall affect the operation of any existing law in so far as it relates to, or prevent the State from making any law relating to, contempt of court, defamation or incitement to an offence."

(B) In Clause (6), for the words beginning with the words "nothing in the said sub-clause" and ending with the words "occupation, trade or business," the following shall be substituted, namely :

"Nothing in the said sub-clause shall affect the operation of any existing law in so far as it relates to, or prevent the State from making any law relating to,—

(I) The professional or technical qualifications necessary for practising any profession or carrying on any occupation, trade or business, or (II) the carrying on by the State, or by a corporation owned or controlled by the State, of any trade, business, industry or service, whether to the exclusion, complete or partial, of citizens or otherwise."

(2) No law in force in the territory of India immediately before the commencement of the Constitution which is consistent with the provisions of Article 19 of the Constitution as amended by Sub-Section (1) of this Section, shall be deemed to be void, or ever to have become void, on the ground only that, being a law which takes away or abridges the right conferred by Sub-Clause (A) of Clause (1) of the said Article, its operation was not saved by Sub-Clause (2) of that Article as originally enacted and notwithstanding any judgement, decree or order of any court or tribunal to the contrary, every such law shall continue in force until altered or repealed by a competent Legislature or other competent Authority.

Explanation—In this Sub-Section the expression "law in force" has the same meaning as in Clause (1) of Article 13 of the Constitution.

NEW ARTICLES

4. *Insertion of new Article 31 A—after Article 31 of the Constitution* : The following Article shall be inserted, and shall be deemed always to have been inserted, namely :

"31A. Saving of laws providing for acquisition of estates, etc.—(1) Notwithstanding anything in the foregoing provisions of this part, no law providing for the acquisition by the State of any estate or of any rights therein or for the extinguishment or modification of any such rights shall be deemed to be void on the ground that it is inconsistent with, or takes away or abridges any of the rights conferred by, any provisions of this part.

(2) In this Article,—

(A) The expression "estate" shall, in relation to any local area, have the same meaning as in the existing law relating to land tenures in force in that area ;

(B) The expression "rights," in relation to an estate, shall include any rights vesting in a proprietor, sub-proprietor, under-proprietor, tenure-holder or other intermediary and any rights or privileges in respect of land revenue."

5. *Insertion of new Article 31 B.*—After Article 31 A of the Constitution as inserted by Section 4, the following Article shall be inserted, namely :

31B. Validation of Certain Acts.—Without prejudice to the generality of the provisions contained in Article 31A, none of the Acts specified in the Ninth Schedule nor any of the provisions thereof shall be deemed to be void, or ever to have become void, on the ground that such Act or provision is inconsistent with, or takes away or abridges any of the rights conferred by any provisions of this part, and notwithstanding any judgment, decree or order of any court or tribunal to the contrary, each of the said Acts shall continue in force until altered or repealed by a competent Legislature."

6. *Amendment of Article 85.*—For Article 85 of the Constitution the following Article shall be substituted, namely :

"85. Sessions of Parliament, Prorogation and Dissolution. (1) The President shall from time to time summon each House of Parliament to meet at such time and place as he thinks fit, but six months shall not intervene between its last sitting in one session and the date appointed for its first sitting in the next session.

(2) The President may from time to time—(a) Prorogue the House or either House, (b) Dissolve the House of the People."

7. *Amendment of Article 87*—In Article 87 of the Constitution :

(1) In Clause (1). for the words "every session" the words "the first session of each year" shall be substituted ;

(2) In Clause (2), the words "and for the precedence of such discussion over other business of the House" shall be omitted.

8. *Amendment of Article 174.*—For Article 174 of the Constitution, the following Article shall be substituted, namely :

"174. Sessions of the State Legislature, prorogation and dissolution. (1) The Governor shall from time to time summon the House or each House of the Legislature of the State to meet at such time and place as he thinks fit, but six months shall not intervene between its last sitting in one session and the date appointed for its first sitting in the next session.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(2) The Governor may from time to time—(a) Prorogue the House or either House; (b) Dissolve the Legislative Assembly."

9. *Amendment of Article 176.*—In Article 176 of the Constitution,—(1) in Clause (1), for the words "every session" the words "the first session of each year" shall be substituted; (2) In Clause (2), the words "and for the precedence of such discussion over other business of the House" shall be omitted.

10. *Amendment of Article 341*—In Clause (1) of Article 341 of the Constitution, for the words "may, after consultation with the Governor or Rajpramukh of a State," the words "may with respect to any State, and where it is a State specified in Part A or Part B of the First Schedule, after consultation with Governor or Rajapramukh thereof," shall be substituted.

11. *Amendment of Article 342*—In Clause (1) of Article 342 of the Constitution, for the words "may, after consultation with the Governor or Rajpramukh of a State," the words "may with respect to any State, and where it is a State specified in Part A or Part B of the First Schedule, after consultation with the Governor or a Rajpramukh thereof," shall be substituted.

12. *Amendment of Article 372*—In Sub-Clause (A) of Clause (3) of Article 372 of the Constitution, for the words "two years" the words "three years" shall be substituted.

13. *Amendment of Article 376.*—At the end of Clause (1) of Article 376 of the Constitution, the following shall be added, namely: "Any such judge shall, notwithstanding that he is not a citizen of India, be eligible or for appointment as Chief Justice of such High Court or as Chief Justice or other judge of any other High Court or of the Supreme Court."

14. *Addition of Ninth Schedule.*—After the Eighth Schedule to the Constitution, the following schedule shall be added, namely:

Ninth Schedule (*Article 31B*): (1) The Bihar Land Reforms Act, 1950 (Bihar Act XXX of 1950), (2) The Bombay Tenancy and Agricultural Lands Act, 1948, (3) The Bombay Maleki Tenure Abolition Act, 1949, (4) The Bombay Taluqdari Tenure Abolition Act, 1949, (5) The Panch Mahals Mehwassi Tenure Abolition Act. 1949, (6) The Bombay Khoti Abolition Act, 1950, (7) The Bombay Paragana and Kulkarni Watan Abolition Act, 1950, (8) The Madhya Pradesh Abolition of Proprietary Rights (Estates, Mahals, Alienated Lands) Act, 1950, (9) The Madras Estates (Abolition and Conversion into Ryotwari) Act, 1948, (10) The Madras Estates (Abolition and Conversion into Ryotwari) Amendment Act, 1950, (11) The Uttar Pradesh Zamindari Abolition and Land Reforms Act, 1950.

Objects and Reasons

During the last fifteen months of the working of the Constitution, certain difficulties have been brought to light by judicial decisions and pronouncements specially in regard to the chapter on Fundamental Rights. The citizen's right to freedom of speech and expression guaranteed by Article 19(1)(A) has been held by some courts to be so comprehensive as not to render a person culpable even if he advocates murder and other crimes of violence. In other countries with written Constitutions, freedom of speech and of the Press is not regarded as debarring the State from punishing or preventing abuse of this freedom. The citizen's right to practise any profession or to carry on any occupation, trade or business conferred by Article 19(1)(G) is subject to reasonable restrictions which the laws of the State may impose "in the interests of the general public."

While the words cited are comprehensive enough to cover any scheme of nationalisation which the State may undertake, it is desirable to place the matter beyond doubt by a clarificatory addition to Article 19(6). Another Article in regard to which unanticipated difficulties have arisen is Article 31. The validity of agrarian reform measures passed by the State Legislatures in the last three years has, in spite of the provisions of Clauses (4) and (6) of Article 31, formed the subject-matter of dilatory litigation, as a result of which the implementation of these important measures, affecting large numbers of people, has been held up.

The main objects of this Bill are, according to amend Article 19 for the purposes indicated above and to insert provisions fully securing the constitutional validity of Zamindari abolition laws in general and certain specified State Acts in particular. The opportunity has been taken to propose a few minor amendments to other Articles in order to remove difficulties that may arise.

It is laid down in Article 46 as a directive principle of State policy that the State should promote with special care the educational and economic interests of the weaker sections of the people and protect them from social injustice. In order that any special provision that the State may make for the education, economic or social advancement of any backward class of citizens may not be challenged on ground of being discriminatory, it is proposed that Article 15(3) should be suitably amplified. Certain amendments in respect of Articles dealing with the convening and proroguing of the sessions of Parliament have been found necessary and are also incorporated in this Bill. So also a few minor amendments in respect of Articles 341, 342, 372 and 376.

Annexure to Bill

The following is the annexure to the Constitution of India (First Amendment) Bill introduced in Parliament by Prime Minister Jawaharlal Nehru:

Extracts from the Constitution of India

Article 15: (3) Nothing in this Article shall prevent the State from making any special provision for women and children.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Article 19 : Protection of certain rights regarding freedom of speech, etc.: (1) All citizens shall have the right (a) to freedom of speech and expression; (b) to practise any profession, or to carry on any occupation, trade or business.

(2) Nothing in Sub-Clause (A) of Clause (1) shall affect the operation of any existing law in so far as it relates to, or prevent the State from making any law relating to, libel, slander, defamation, contempt of court or any matter which offends against decency or morality or which undermines the security of, or tends to overthrow, the State.

(6) Nothing in Sub-Clause (G) of the said Clause shall affect the operation of any existing law in so far as it imposes, or prevent the State from making any law imposing, in the interests of the general public, reasonable restrictions on the exercise of the right conferred by the said Sub-Clause, and, in particular, nothing in the said Sub-clause shall affect the operation of any existing law in so far as it prescribes or empowers any authority to prescribe, prevent the State from making any law prescribing or empowering any authority to prescribe, the professional or technical qualifications necessary for practising any profession or carrying on any occupation, trade or business.

Article 85 : Sessions of Parliament. Prorogation and Dissolution. (1) The House of Parliament shall be summoned to meet twice at least in every year, and six months shall not intervene between their last sitting in one session and the date appointed for their first sitting in the next session.

(2) Subject to the provisions of Clause (1), the President may from time to time—(a) Summon the Houses or either House to meet at such time and place as he thinks fit ; (b) prorogue the Houses ; (c) dissolve the House of the People.

Article 87 : Special address by the President at the commencement of every session. (1) At the commencement of every session the President shall address both Houses of Parliament assembled together and inform Parliament of the causes of its summons.

(2) Provision shall be made by the rules regulating the procedure of either House for the allotment of time for discussion of the matters referred to in such address and for the precedence of such discussion over other business of the House.

Article 174 : Sessions of the State Legislature, prorogation and dissolution (1). The House or Houses of the Legislature of the State shall be summoned to meet twice at least in every year, and six months shall not intervene between their last sitting in one session and the date appointed for their first sitting in the next session.

(2) Subject to the provisions of Clause (1), the Governor may from time to time—(a) Summon the House or either House to meet at such time and place as he thinks fit; (b) Prorogue the House or Houses; (c) Dissolve the Legislative Assembly.

Article 176 : Special address by the Governor at the commencement of every session. (1) At the commencement of every session, the Governor shall address the Legislative Assembly or, in the case of a State having a Legislative Council, both Houses assembled together and inform the Legislature of the causes of its summons.

(2) Provision shall be made by the rules regulating the procedure of the House or either House for the allotment of time for discussion of the matters referred to in such address and for the precedence of such discussion over other business of the House.

Article 341(1) : Scheduled Castes—(1) The President may, after consultatoin with the Governor or Rajpramukh of a State, by public notification, specify the castes, races or tribes or parts of or groups within castes, races or tribes which shall for the purposes of this Constitution be deemed to be Scheduled Castes in relation to that State.

Article 342(1) : Scheduled Tribes—(1) The President may, after consultation with the Governor or Rajpramukh of a State, by public notification, specify the tribes or tribal communities or parts of or groups within tribes or tribal communities which shall for the purposes of this Constitution be deemed to be Scheduled Tribes in relation to that State.

Article 372 (3) (A): Nothing in Clause (2) shall be deemed—(a) To empower the President to make any adaptation of or modification of any law after the expiration of two years from the commencement of this Constitution.

Article 376 (1): Provisions as to Judges of High Courts—(1) Notwithstanding anything in Clause (2) of Article 217, the Judges of a High Court in any province holding office immediately before the commencement of this Constitution shall, unless they have elected otherwise, become on such commencement the Judges of the High Court in the corresponding State, and shall thereupon be entitled to such salaries and allowances and to such rights in respect of leave of absence and pension as are provided for under Article 221 in respect of the Judges of such High Court.

Opposition's Objections

Referring to the proposed amendment of Article 19 of the Constitution, Dr. Mookerjee remarked that the changes are fundamental and they go to the very root of some of the vital provisions of the Constitution, not only the constitution of this country, but the constitution of any country in which people are anxious to retain freedom and liberty of thought and action.

This is a challenge which the Prime Minister has thrown up to the people of India. Does he feel, asked Dr. Mookerjee, that he is incapable today to carry on the administration of the country unless he is clothed with more and more powers to be arbitrarily utilised so that his will may be the last word on the subject?

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Referring to the Prime Minister's observation that the Bill was a permissive measure giving power to Parliament, Dr. Mookerjee asked: Was the Parliament being really trusted? Was not even in the matter of considering this amendment to the Constitution a party whip issued on Congress members?

Speaking about the vulgar and the gutter Press of which mention had been made by the Prime Minister, Dr. Mookerjee pointed out that already adequate provisions existed in the Constitution to proceed against them.

As regards public order and incitement to crime also, the existing laws, preventive as well as penal, were quite adequate to meet the requirements of the situation.

As regards the question of foreign relations, Dr. Mookerjee said he was not aware of any precedent in any part of the civilised world where by law under the provisions of the Constitution criticism of foreign Powers is taboo. This proposed amendment would create an impossible situation; even any reasoned criticism of a foreign Power or any reply to any scurrilous writing or propoganda by a foreign country against India might not be permitted under this provision. Dr. Mookerjee cited in this connection a book written in Chinese issued by the present Chinese Government which contained filthy abuse of India, her culture, her leaders starting from Mahatma Gandhi and ending by saying that England is the following dog of America and India today under Pandit Jawaharlal Nehru's leadership is the running dog of Britain.

He felt that a situation had not arisen yet when any change in Article 31 was called for.

The Prime Minister had assured that it had not been brought forward in a spirit of lightheartedness nor in haste and that he had consulted various people. But any changes in the Constitution which might be considered by Parliament had to be considered not in secrecy by Government and its chosen people but opinion must be obtained from the people at large outside.

It was most unfair, complained Pandit Kunzru, that the House should have been called upon to consider a measure of this description without having been supplied with any materials on which a correct judgment could be based.

The most important of the changes related to Article 19, and these changes were so drastic and sweeping, that it would bring the provisions of Article 19 on the same line as those of the Preventive Detention Act, the only difference being that one is preventive while the other will be punitive.

The addition of 'foreign relations,' 'public order' and 'incitement to crime' would constitute so fundamental a change in the right of free speech and free expression, that it would amount to complete abrogation of those rights.

The Prime Minister, said Pandit Kunzru, had made a surprising statement that the amendments proposed would merely enable Parliament to make laws in regard to Fundamental Rights and did not affect the existing position. But Fundamental Rights, asserted the speaker, are meant, not to confer powers on Parliament, but to protect the rights of individual citizens against the tyranny of changing majorities of Parliament.

Referring to proposed changes about State acquisition of zemindary, Pandit Kunzru observed that these amounted to virtual repeal of Article 31 of the Constitution.

The Prime Minister, he observed, should have chosen a simpler and more straightforward course rather than the indirect and cumbersome process he had adopted of deleting Article 19 and Article 31 of the Constitution.

The reason behind the extraordinary course of amending Article 31 without waiting for the verdict of the Supreme Court was a political purpose with the coming elections in view, remarked Pandit Kunzru.

Lala Deshbandhu Gupta expressed grave disappointment that the freedom of the Press, which though not specifically mentioned in the Constitution, but nonetheless, guaranteed through freedom of expression, was now being taken away. The amendment of Article 19 of the Constitution had been proposed in a light-hearted manner and there was no occasion for this measure. This country, which had inherited the largest number of repressive laws on the statute book, was given complete freedom of Press under the sovereign Constitution. Let not that distinction be sullied now, appealed Lala Deshbandhu.

He joined issue with the Prime Minister that the Bill would not affect the existing position, and asked: Would not the many oppressive and obnoxious laws, such as the Press Emergency Powers Act, Section 153 I.P.C., Section 144 Cr. P.C. and other similar laws, be automatically revived with the enlarging of the limitations attached to the Fundamental Rights under Article 19 of the Constitution?

Dr. Ambedkar's Explanation of the Bill

Dr. Ambedkar said: "I have carefully studied both these judgments of the Supreme Court and with all respect to the Judges of the Supreme Court I cannot help saying that I find this judgment to be utterly unsatisfactory."

The Law Minister who initiated the debate with a well documented speech lasting one hour and 40 minutes gave an illuminating exposition of the legal and constitutional position with copious references from American constitutional interpretations, and British Common Law, and put up an able advocacy of the Bill.

He said that in the course of the debate yesterday Pandit Kunzru had said that the Government had done great injustice to the House by not explaining the necessity and the purpose of the various Clauses in the Bill and that some one on the side of the Government should discharge this duty to the House.

"I do not know that any member in this House will believe that a person of the intelligence of Pandit Kunzru does require explanation of the Bill."

Dr. Ambedkar continued: "However, as Pandit Kunzru had expressed the wish of many members of this House, I think it incumbent on my part to intervene in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

this debate and clarify the position so as to dispel two arguments which have been used in the course of the debate, namely, that there is no necessity for the amendment of the Constitution, and secondly, the Government could wait for the public opinion of the country for such a long time and not rush through this measure."

Coming to Clause 2 of the Bill, the Law Minister explained that the Clause proposed to amend Article 15 of the Constitution. The necessity for such an amendment had arisen on account of the judgment recently delivered by the Supreme Court in two cases which came up before them from the Madras State.

One case was Madras State vs. C. Hampakam Dorai Raj and the second one was Venkataraman vs. The Madras State. In the latter case the question involved was the interpretation of Article 16 (4) of the Constitution and in the case of Hampakam vs. Madras State the question involved interpretation of Article 29 (2) of the Constitution.

In the one case the question involved related to the reservation of certain number of posts for the so-called backward classes in public services and in the other case the question involved was the reservation of backward classes in educational institutions.

Both the questions were commonly known in Madras and elsewhere as the Communal G. O. of the Madras Government.

The argument on which the Communal G. O. of the Madras Government was declared as void was based on the interpretation of Article 29 (2) of the Constitution, which did not have the saving Clause like the one attached to Article 16 (4) of the Constitution.

The House will remember, Dr. Ambedkar continued, that in Article 16 (4) special provision had been made to enable the Government to give suitable representation to backward classes in the services. Such a provision is not found in Article 29 (2).

With regard to Article 16 (4) the Supreme Court came to the conclusion that it involves a discrimination on the ground of caste and, therefore, it was invalid.

"I have carefully studied both the judgments of the Supreme Court," continued Dr. Ambedkar, "and with all respect to the judges of the Supreme Court I am convinced that the judgements are utterly unsatisfactory."

Sri Naziruddin Ahmed at this stage raised a point of order as to whether it would be right for any Minister or member to criticise the judgment of the Supreme Court, which would amount to a disparagement of the Supreme Court.

The Speaker asked Dr. Ambedkar whether what he meant by 'unsatisfactory' was 'unsatisfactory' from the point of view of the proposals before the Government.

Dr. Ambedkar: My views is that the judgment does not appear to be in consonance with the Article of the Constitution. That is my submission.

The Speaker: I am afraid the Hon'ble Minister will not be right in thus criticising the judgments of the Supreme Court.

Sri Rajagopalachari : I think in the Hon'ble Minister's mind a doubt has arisen on account of the judgments of the Supreme Court.

Dr. Ambedkar: My view is that in Article 29(2) the most important word is 'only'. This means that no distinction should be made only on the ground of religion or caste, etc., the emphasis is on the word 'only'. It does not exclude any distinction being made on grounds other than those mentioned in this Article and I respectfully submit to the House that the word 'only' does not seem to have received the same consideration as it should have.

With regard to Article 16(4) Dr. Ambedkar continued, my submission is this: That it is really impossible to make any reservation which would not really exclude somebody out of it. It is to be borne in mind that there is no Hindu, who has no caste; he is either a Brahmin, Kumbakar or other. There is no Hindu without a caste. Consequently, if you make a reservation in favour of the so-called backward classes, some other castes have to be excluded.

Therefore, in the circumstances of this country it is impossible to avoid reservation without excluding some people who have got a caste, he said.

"On this point, therefore," Dr. Ambedkar continued, "I don't think personally that the judgment of the Supreme Court is a very satisfactory judgment. In this connection I should like to state notwithstanding what the House knows and what I have been telling the presiding judges when I was a lawyer, I am bound to obey the judgement; *but I am not bound to respect it.* This liberty every lawyer enjoys and I must have the right to tell the judge that his judgment is wrong; and I am not prepared to give up that right."

"It has to be borne in mind," Dr. Ambedkar went on, "that Article 46 of the Constitution embodied in the directive principles of State policy have put an obligation upon the Government to do everything possible, in order to protect the welfare and interests of the country and in regard to the backward classes and such other classes who are for the moment unable to stand for themselves, for instance, scheduled castes and scheduled tribes.

"It is, therefore, incumbent not merely on the Government but upon this Parliament as well to do everything possible to see that Article 46 and the intentions behind that Article are fulfilled and if that fulfilment is to be given I cannot see how one can escape the amendment proposed so as to prevent Article 29(2) and 16(4) being interpreted in the way in which they have been interpreted. That is why the necessity for amending Article 15 of the Constitution.

"Now I come to the provisions of Article 19 in discussing which considerable excitement arose in the minds of members.

"First I propose to say that in amending Sub-Clause 3(1) of the Article it is proposed to add three new heads. They are, friendly relations with foreign States; public order and incitement of offence.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The question is asked, what is the necessity for introducing the three new heads. The necessity for introducing them has arisen out of certain judgments which have been delivered both by the Supreme Court as well as by the various provincial High Courts."

As instances, Dr. Ambedkar quoted the judgments in the case of Ramnath Thapar, Brij Bhushan's case, Master Tara Singh's case in the East Punjab and several other cases in the Punjab, Patna and Madras High Courts.

In these cases, which involved the validity, Dr. Ambedkar continued, in view of the provisions contained in Sub-Clause 2 of Article 19 of the Constitution, courts had already held that none of the Acts involved were valid although they might have been valid before the Constitution came into existence and all those laws were now null and void in the light of the Fundamental Rights.

"I would ask the House to consider what is the effect of these decisions of the Supreme Court and various provincial High Courts on the citizens. If many of the Sections of these laws were to be held as void as have been recently declared by the High Courts and Supreme Court what would happen to the country ?"

Dr. Ambedkar particularly referred to Section 4 of the Press Act under which provincial governments had power to enforce certain restrictive measures on freedom of Press and expression if there was an incitement or encouragement or even a tendency to that for committing offence or murder and violence.

If the decision of the Supreme Court and the provincial High Courts were to be upheld, would members of the House be content that everyone in the country by virtue of the Constitution would have the right to preach murder and violence? How could then public order be maintained? How could then the security of the State be maintained? Therefore, it should be open to Parliament to make laws for the maintenance of public safety and the security of the State. If there were no such power to Parliament, in view of the interpretation of the Constitution by the Supreme Court and provincial High Courts, unfettered freedom of speech and expression would only create public disorder in the country, he said. That is clearly the justification for amending Article 19 of the Constitution.

U. S. Constitution Compared

Comparing the Fundamental Rights in the U.S. Constitution and the Constitution of India, the Law Minister stated that although there was no apparent restriction in the freedom of speech and expression in the American Constitution, the Supreme Court of the United States had interpreted those fundamental rights consistently with reference to the security of the State. Limitations on the Fundamental Rights had been imposed in practice if not explicitly mentioned in the text of the Constitution at least by implication. Nobody in the United States claimed that the Fundamental Rights were absolute or that the Congress had not the power to limit or regulate them.

"In our country," went on Dr. Ambedkar, "we are in the midst of a paradox. We have Fundamental Rights. We have limitations imposed on them; and yet the Supreme Court and the various Provincial High Courts have said that we shall not limit the Fundamental Rights."

What was the attitude that the Supreme Court had taken in this country in interpreting the Constitution, he asked. *The Supreme Court had said that they would not recognise the doctrine of "Police Power" which was prevailing in U.S.A.* The reason why the judges of the Supreme Court did not propose to adopt the doctrine of "Police Powers" was that the Constitution had incorporated specifically the heads in Sub-Clause (2) under which Parliament could impose restrictions on the Fundamental Rights as to the freedom of speech and expression.

As the Parliament had expressly laid down the heads under which these limitations would be allowed they themselves would not add anything to any of the heads.

"Therefore, as the Constitution itself does not authorise Parliament to make law for the purpose of public order, according to them, Parliament has no capacity to do so and they will not authorise parliament to do this."

Press Law

In the case of Press Emergency Law, they had also said the same thing. "Personally, I take the view that there is ample scope for recognising the doctrine of implied powers and I think our directive principles are nothing else than provisions which contain implicitly in them the doctrine of implied power.

"These directive principles," he emphasised, "are nothing but obligations imposed by the Constitution upon the various Governments in this country that they should do certain things. If these are the obligations of the State how can the State discharge these obligations unless it undertakes to legislate to give effect to them. If the obligations necessitate the imposition and enactment of laws it is obvious that the fundamental principle of the Directive Principles implies that the States with regard to matters mentioned in the Directive Principles have the implied powers to make laws.

"Therefore, my contention is this that so far as the doctrine of implied powers is concerned, there is authority in the Constitution itself to permit Parliament to make legislation although it may not specifically be covered by the provisions contained in the Chapter of Fundamental Principles.

"On account of the decisions of the Supreme Court that this Parliament has no capacity to make law in certain heads, the question before the House is, can we allow the situation to remain as it is as created by the judgments or will we endow Parliament with power to make law? At this stage I do want to make a distinction and I do so for the reason that Dr. Mookerjee said that we are taking away the freedom of the people.

"I think it is necessary to make a distinction between the capacity to make a law and the enactment of a particular law. The question whether any particular law encroaches upon the freedom of the people is a matter which can be considered when the law is made. Today

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

are not dealing with the law. We are only dealing with the capacity to make law."

Foreign States

Taking up the third category, namely, friendly relations with Foreign States, the Law Minister said at present they had a law enacted in 1932 dealing with the matter. It was true that law had not come for adjudication before the Supreme Court or any High Court and it had not so far, been declared ultra vires.

"But in view of the Rules of interpretation adopted by the Supreme Court that nothing was within the capacity of Parliament to legislate unless that particular head of legislation was mentioned in Sub-Clause (2) and as friendly relations with Foreign States did not find a mention in Sub-Clause (2), I do not think it requires an astrologer to predict that when the question comes before the judiciary they will follow the same rule.

"It was for this reason they had thought it necessary to include a new head of friendly relations.

"There was some amount of confusion in the minds of people about the meaning of the phrase 'maintenance of friendly relations'. Most of the members were under the impression that if this category was added they would not be in a position to criticise a Foreign State. That was a complete misunderstanding of the position. It did mean nothing more than the extension of the principle of libel and defamation, that they should not do anything, say anything or circulate anything which would involve a Foreign State in any kind of ignominy."

Trade and Profession

Clause (3) (ib) sought to amend the article relating to trade and profession. It permitted a State to make different classification between private persons carrying on trade and the State carrying on the same trade. The necessity for the introduction of the amendment arose on account of the judgment of the Allahabad High Court regarding the U.P. Government's scheme of nationalisation of motor transport, under which certain territory was monopolised by them and certain other territories were left to private bus owners.

Clause 4 of the Bill introduced a new Article 31A. What the Article suggested was to permit a State to acquire what were called estates, and, secondly, if any legislation was undertaken to acquire an estate, nothing in the Fundamental Rights should affect such legislation.

Power to President

Great objection had been taken to the procedure in which certain laws had been saved by the ninth schedule. Prima facie, it was an unusual procedure. All the laws fell under Article 31A, *i.e.*, they were laws which were intended to acquire an estate. Whenever a law was made for the acquisition of an estate, neither the principle of compensation nor the principle of discrimination should stand in the way of validity. From the point of view of sentiment there might be objection but from the practical point of view, "I do not understand how they should not be declared legal." The only other method would be to give power to the President to revise these laws and restrict them and to bring them strictly in conformity with the provisions of Article 31.

Amendment to the Article 372 had extended the power of the President to make adaptation of any existing laws for another year. On account of pressure of other business it had not been possible for the Government to examine all the existing laws in order to find out how many of them were not inconsistent with the Constitution. The period of the adaptation had been extended by one year so that means might be found out in order to see which laws were not inconsistent and a consolidated order might be issued hereafter.

Amendment to Article 376 was to enable Government to deal with the cases of four non-national Judges continuing in service from one High Court to another.

Nehru's Reply to Criticism

The State or Parliament, Sri Nehru maintained, had the right to impose restrictions on individual freedom in the interest of public order or friendly relations with other States.

Sub-clause (2) of Article 19 itself lays some restrictions on the statement of freedom of speech and expression, but this was merely indicative and not by any means an exhaustive list of restrictions, stressed the Prime Minister.

Referring to revival of the old repressive laws that had been invalidated by the Constitution, the Prime Minister said that there was not much fear in the present day context of things of misuse of these laws which were already half dead. He hinted that all these laws might be suitably revised, although he was not quite categorical about it.

Prime Minister Nehru said that he had brought forward the Bill with full conviction and wished to proceed with it. Not only members of Parliament but newspapers in India and even in foreign countries, he said, had talked about this Bill having introduced all kinds of restrictions on the Press and individual. One member had described the measure as one treating the Constitution as a scrap of paper.

Was it even good sense talking this way about this measure, saying that this swept away the right of the people and that the executive was arming itself with all kinds of powers? These had nothing to do with this measure. He would ask the House to understand the measure as it was and not to import other considerations. He wanted the House to consider the measure coolly and dispassionately.

"I do affirm with full faith" said the Prime Minister, "that far from changing the Constitution these amendments give full effect to the Constitution as we intended it to be (cheers). I say with full faith that what is implicit in the Constitution, what we discussed then again and again in the Constituent Assembly and what is implicit in every Constitution, is said here in the course of the amendments. This measure had nothing to do with making fresh laws. That is for the Parliament to do—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

for this Parliament or some other Parliament that may succeed it. Therefore, to talk of the executive trying to grab power is completely outside the mark. Whatever it decides, it has to decide in terms of the Constitution."

Speaking about the amendment to Article 19 (2), namely, introduction of the words "friendly relations with foreign power, public order and incitement to offence," Sri Nehru said that in his speech he dealt with only the principle underlying them and not the wording. He had no doubt that if better wording was suggested, it would commend itself to the Select Committee. He would rather lay stress on the principle underlying it and not the wording. As regards the legalistic aspect of the measure, there were better lawyers than he who could deal with it more effectively. This morning the House heard a "very able, exhaustive and illuminating address from my colleague and Law Minister," and he would therefore put before the House the broad approach to the question only. Article 19(2) itself was a restriction on the bald statement in 19 (1) (A).

No Complete Freedom

"There is no such thing as hundred per cent freedom for individuals," remarked Sri Nehru, "to act as he likes in any social ground. This idea of individual freedom arose in the days of autocracy in every country where autocratic ruler or group of rulers suppressed individual freedom. *In democratic society the idea of individual freedom should always be balanced with social freedom and relationship of individuals with social groups.* The basic concept of individual freedom was given in Article 19(1) and Clause 2 was a restriction on the bald statement of freedom."

Sri Nehru contended that the restrictions in 19(2) "are not the only possible restrictions," but was an indication of restrictions that might legitimately arise. There were hundred and one social restrictions on individual freedom and the restricting sub-Clause (2) did not contain an exhaustive list. Normally speaking, it might not have been necessary to say very much about it: but because some doubt was cast about "other implied necessary and inevitable" restrictions, it became necessary to make it clear.

Every State had to defend itself against external and internal enemies. No constitution could possibly take away that right of the State. It could only take away the right of undue and unfair exercise of such powers.

The amendments, Sri Nehru said, did not make an iota or atom of real change in the Constitution. They only sought to bring about what was implicit.

Referring to the use of the words "friendly relations with foreign powers." Sri Nehru said that there was no act at present covering restrictions in regard to this matter. But whether there was an act or not, however much an individual might enjoy freedom, if he did something which might result in a war, it was a very serious matter, No State in the name of freedom could submit to action which might result in a wholesale war and destruction. It was an implied power of the State to stop anything like that happening. It might be that the State might do something wrongly or rightly; but no one could take away the power of the State to prevent a great catastrophe happening.

Sri Nehru said that in view of India's policy of friendship with other nations, it became necessary that "we should not encourage activities which will lead to the injuring of our relationship with other powers."

Some members had referred to the bitter criticism of individuals and governments by Peking Radio and some newspapers abroad. He thought that some Indian newspapers had sometimes used strong language, but he did not wish to interfere. But a time might come when they might shoot off the danger mark or injure the international interest or relationship with those powers. It was then for Government to come in and the Parliament should determine to what extent it should go.

Public Order

As regards public order, Sri Nehru said that they were merely indicating the power of Parliament and removing certain doubts, cast by the judgment of the Bihar and the Punjab High Courts. It was quite possible ultimately in the course of time that certain conventions regarding interpretations could be established by the Supreme Court which would remove doubts from the public mind. At present, doubt persisted.

Even if the Supreme Court brought certain measure of uniformity, it would be confined to a particular issue. It could not be brought in the course of two or three months. It was desirable in public interest to define clearly the policy which was implicit in the Constitution. The word "incitement to offence" no doubt covered a wide field, covering both minor and major offences. But he would remind the House that they were not enacting any law. At the moment, they were dealing with the broad powers of Parliament. It was difficult to make a list of offences, the incitement of which could be restricted, and incorporate the list in the Constitution as a schedule. When Parliament dealt with a specific law, the members would see to it that there was no opportunity for misuse of the provision by Government.

As regards the laws which the Bill would revalidate, Sri Nehru said that to what extent a particular law was valid or not would depend upon whether it was valid or not in terms of the Constitution as amended. But looking at the practical aspect of the question, India had been functioning for over three and half years as an independent country, while those judicial pronouncements had come only in the course of the last few months. But Government had hardly ever used most of those laws. Parliament could put an end to them or have something in a revised form as it chose; but, from the practical point of view, those acts were not alive. And, if not wholly dead, were half dead. Generally speaking, there need be no fear of any misuse of them.

Freedom of Press

"So far as I am concerned and Government are concerned," said Sri Nehru, "we believe firmly in the freedom

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Press. But there is another matter. We talk of freedom of the Press, but how much freedom of the Press have we got today. One thinks that the freedom of the Press only means suppression or lack of suppression by Governmental authority. But when huge Press chains spring up, preventing all individual freedom of the Press, when practically the Press in India is controlled by three or four groups or individuals, how much freedom of the Press is there? (Loud cheers).

Sri Deshabandhu Gupta: "The remedy is to dissolve these chains.

Sri R. K. Sidhva: "Pass my Bill."

Coming to the validation of Zamindari Abolition Acts, Sri Nehru said that the object of the Constitution was deliberately to take away the question of zamindari and land reform from the purview of the courts. The Bihar High Court applied to land reform Article 14, which said that the State should not deny to any person equality before the law or equal protection of the laws.

The majesty of the law, said Sri Nehru, was such that it looked with an even eye on the millionaire and the beggar. Whether a millionaire stole a loaf of bread or a begger, it sentenced him alike.

But the millionaire had not much incentive to steal a loaf of bread, while the starving begger might perhaps have and this business of equality before the law might very well mean, as it had come to mean often enough, making rigid the existing inequalities before the law. But that would be completely opposed to the whole structure of the Constitution.

True, the Allahabad and Nagpur High Courts held a view contrary to that of the Bihar High Court. But the important point was that there was confusion and doubt. "Are we to wait for this confusion and doubt gradually to resolve itself while powerful agrarian movements grow up?" he asked.

This question of land reform, he said, was most intimately connected also with food production. Neither the poor zamindar nor the poor tenant could do anything about it if there was uncertainty and instability. Therefore, these long delays and arguments and repeated appeals and all that are dangerous from the State's point of view, the security point of view, the food production point of view and from the individual point of view, whether it was that of the zamindar or tenant or any intermediary."

Amendment to Article 15

Referring to the amendment to Article 15, Sri Nehru said: "For my part, this amendment is not intended to be a communal amendment or to help in any way a communal approach to this problem. But we must distinguish between a communal approach and the approach of helping one of our backward brothers and sisters. Although it is my amendment, thinking about it I do not particularly like the words "backward classes of citizens." I hope the Select Committee may find a better word.

It is the backward individual citizen we should help. Why should we brand groups and classes into backward and forward. It is a fact that certain groups and classes are backward, but I do not wish to brand them as such. Perhaps a group or class which deserves greater sympathy from this House are the tribal folk.

Sri Nehru continued: "We have many of our colleagues here representing the Scheduled Castes and they help us, not only in our work, but keep us up to the mark in regard to the necessities of the Scheduled Castes. But we have very few persons in this House who speak for the Scheduled Tribes. Therefore, it should be the particular concern and care of this House to look after the interests of the Scheduled Tribes and to advance them in every way (cheers). When we add these words, or may be any other words, to Article 15, we certainly include the Scheduled Tribes."

Nationalisation

As regards the amendment necessitated by the Allahabad High Court's judgment on nationalisation of public transport services in Uttar Pradesh, Sri Nehru said, "We have been following a mixed policy. We encourage private enterprise and at the same time, we extend the activities of the State in regard to these matters. This is a process which is going on all over the world; even in a country like the U.S.A., which is more committed to the individualistic and particularly capitalist form of State than any other country. In counries situated like India, where private enterprise, howsoever you might encourage it is limited in its scope and resources, inevitably the State has to come in and the State must have the power to nationalise completely or partially."

Sri Nehru said that he was rather surprised when Pandit Kunzru asked why Government wanted to make these changes when there was the Preventive Detention Act. Sri Nehru said that surely, Pandit Kunzru and the House did not like the use of the Preventive Detention Act all the time or, at any time for the matter of that "unless one is compelled by some circumstances to do it for a short while. So to make that as a stand-by is a dangerous thing. We want to put an end to it, not to use it as far as possible."

Manbhum Satyagraha

The 30th April issue of the *Sakti* (Strength) and the 13th May issues of the *Nava-Jagaran*, the Bengalee-language journals published from Purulia (Manbhum) and from Jamshedpur respectively has tried to make us understand the cause or causes of the Manbhum Satyagraha Movement and the Jharkhand Movement respectively. In pp. 4, 5 and 6 of the former is published a statement, dated 24th April last, of Shree Atul Chandra Ghosh, Director of the Satyagraha Movement, describing how officialdom in Bihar has been allowed to run amuck. *The leaders of the Satyagraha Movement, one-time colleagues of Babu Rajendra Prasad in our fight for freedom, have been charged with theft and rioting; the Bihar Police lathi-charged a Satyagraha meeting at Jhaldah; later we came to know that Ministers were present at some of these meetings, and, it has been asserted that they encouraged the police by their silence on these*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The report in *Nava-Jagaran* (New Awakening) spoke of the conference held at Ranchi on the 28th and 29th April last with a member of the Central Legislature as chairman. The conference reiterated previous resolutions demanding the setting of Jharkhand Province or State out of Bihar to be constituted by the major portion of the Santhal Pergannahs and Chota-Nagpur. In course of the main resolution passed at this conference, the words "Biharee Imperialism" were used, indicating the common link between the Satyagraha Movement and the Jharkhand Movement, though these were separately organized under the leadership of persons who were not generally agreed on principle except that of impatience with wrong.

The present controllers of the Congress regime in Bihar are opposed to both these movements. For, if these succeed, their rule of grab will end. Therefore, have they raised the cry of what has come to be known as "Provincialism" or "Linguism"—both the words being cover for maintaining their grip on the power and profit of the State. This has been brought in pp. 8 and 9 of *Nava-Jagaran* where Shree Sailajananda Pal illustrated his contention by instancing the state of things in the Dhalbhum Sub-Division. 70 per cent of its population are "tribals"; the "higher" class have Bengalee as their mother-tongue; the "lower" class follow them generally.

This writer also refers to "Biharee Imperialism" to explain part of discontents prevailing in the area, and says that the use of these words demonstrate that Biharee leaders have failed to conciliate the minorities, including the "tribals." We are sorry to have to comment on this sorry development. We have made no secret of our sympathy for the Jharkhand Movement and allied Movement for the setting up of "Linguistic" States as affording the most easy method for building up the peoples' culture based on the language which they learn from their mother. Gandhiji had early in his career recognized this fact. And it was his initiative that divided India on linguistic principle. His successors have miserably failed, and created difficulties that maim them for many a forward move. The sooner they recognize their error the better for all concerned.

The Two Pictures

While the Indian public has for sometime been doing its best and worst to expose the many sores in their body politic, to present themselves as great sinners against some "inner light," we are upheld by the thought that we are not worse than others in the world. The *Newsweek* (New York) of April 8 last has an article entitled "Time for a Moral Spring Cleaning?" which is illuminative.

"Like a drunk the morning after, the United States woke up last week with a frightful hangover, took a quick look at the mirror, and shuddered. Harry S. Truman said that what it saw was only an opitical illusion. And yet that bleary face in the mirror looked so much like the face of corruption that millions of Americans were revolted.

There had first of all been revelations of favoritism in the RFC, and then along had come the disclosure of Federal job selling in Mississippi. And now the Kefauver inquiry had uncovered scandalous alliances between the underworld and big-city political machines.

Was the nation disintegrating morally? As conservative a commentator as Anne O'Hare McCormick, famous foreign correspondent of *The New York Times*, felt impelled to ask the question. But the fact that she asked it—and that millions of Americans were asking it—gave a clue to the answer. For a nation which could be shocked by itself probably was a nation with sufficient inner strength to reform.

It wasn't question of passing a law or throwing a couple of crooked politicians in jail. Democratic Sen. J. William Fulbright of Arkansas pointed out that the shenanigans in the RFC, which his committee had uncovered, were not illegal. They were immoral. To Fulbright, the appalling thing was that no one in this agency seemed to recognize the immorality.

Calling for a moral revival in government, Fulbright declared :

"This question of the moral strength of our people is not just an internal domestic matter. It has grave possibilities in our international relations. Without confidence in their government, the people will not make the sacrifices necessary to oppose Russia successfully. [Arnold J.] Toynbee, in his well-known historical study, demonstrates clearly how the vast majority of great civilizations have been destroyed, not as a result of external aggression, but as a consequence of domestic corruption.

"A democracy can recover quickly from physical or economic disaster, but when its moral convictions weaken it becomes easy prey for the demagogue and the charlatan. Tyranny and oppression then become the order of the day."

"The brightest aspect of the situation was that Americans had begun to realize its seriousness," Mrs. McCormick said: "The outside observer of this buoyant, teeming, restless land, buzzing with talk and electric motion, could call it many things, but not decadent."

We turn to the Soviet Union, the Mecca of Communists. Within four years of Lenin's victory discontent with the leadership and material conditions had broken out. Many will find parallels between Lenin and Nehru in their dilemmas. We cull this story from what an eminent British historian and jurist, Leonard Schapiro, said :

"Next to Lenin, who had by then almost retired from public life, the best known figures in the revolution and in the civil war were Trotsky, Zinoviev, Bukharin, Kamenev and Rykov. Fifteen years after Stalin's appointment as General Secretary all these men and many more had been hounded to their deaths as traitors, leaving Stalin as the undisputed autocrat of all Russia. It was no accident.

This, Stalin's first really important appointment, certainly put into his hands all the weapons he needed to consolidate his own personal supremacy over his rivals. But the emergence of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the dictatorship of one man over the Party was an inevitable consequence of the circumstance of Stalin's elevation.

The appointment of the new General Secretary by the Central Committee elected at the 11th Party Congress in 1922 marked the end of a bitter struggle inside the Party. It had begun in 1920. The end of the civil war found the Russian Communist Party in a state of ferment. The ruthless dictatorship of the small Control Committee headed by Lenin had been tolerated while the struggle for survival lasted. But after the defeat of all armed opponents of the Bolshevik dictatorship, the rank and file of the Party began to assert themselves. They complained that all local initiative in the Party was being stifled and that they were expected to carry out orders without having any say in Party policy. They criticised the growing bureaucracy, the selfishness and corruption of Party leaders, and their indifference to the interests of the workers. They resented the fact that appointment from the centre to party organs was replacing local election. The small Communist minorities who controlled the trade unions by chicanery and by force, were clamouring for more power and for greater independence regarding Party control.

But the discontent with the Party leadership within the Party was nothing compared to the hatred of Communist rule outside the Party. The peasants rose in thousands and were with difficulty put down by the Red Army. In Kronstadt the sailors of the Baltic Fleet mutinied against the Party dictatorship.

A clear gulf divided the revolt inside the Party from that outside it, in the country as a whole. The dissident Communists wanted more freedom for themselves: they had no intention whatever that it should be extended to anyone else, to the Socialist Parties, for example, who commanded a growing support in the trade unions and among the peasantry. (Zinoviev in 1921 admitted that any free trade union election would give a 95 per cent victory to anti-Communist, Moderate Socialist Parties).

Yet, had the discontented Bolsheviks paused to think, they might have recalled that as far back as 1902 Lenin had already formulated his Party policy: the small disciplined leadership, the obedient rank and file, implicit obedience to the Party line, the surrender of all personal judgment. Now, in 1920, having followed Lenin to the violent victory of a small minority over the great majority, they revolted against the main factor in that victory.

So far as the Socialist Parties were concerned, their opposition was to dictatorship as such. While they were able to voice their opinions, they demanded freedom for all Socialist Parties. Their demands echoed throughout the weary country.

Lenin was faced with clear alternatives: either he would yield to the demand in the country and modify the rigours of his dictatorship, or he could preserve that dictatorship by restoring strict discipline in his Party, and by quelling the opposition throughout the country to his rule with the aid of increased terror. He unhesitatingly chose the latter course. His policy in 1921 was at the time and has been ever since portrayed by Soviet historians and their echoes in the West, as designed to save Soviet Russia from counter-revolution.

It was, however, not counter-revolution which then threatened the Communist dictatorship, but ordinary, moderate trade union and agrarian Socialism. The anti-Communist White Armies had been defeated by November, 1920. The threat of Allied intervention no longer existed.

The new policy began early in 1921 with the wholesale imprisonment of the Socialists still at large and the final supression of the Socialist Parties. The next step was the re-organization of the Communist Party itself.

At the 10th Party Congress in March, 1921 Lenin eliminated from the secretariat of the Party three men of comparatively moderate views—Serebriakov, Krestinsky and Preobrazhensky. They favoured more freedom of discussion inside the Party and stricter control over the Party officials. They were replaced by new men of Lenin's choice, headed by Molotov, a close associate of Stalin since 1912. The year of office revealed that these new men were not up to the task.

At the Party Congress in 1922, the delegates still dared to be openly critical of the Central Committee and actually outvoted it on a proposal that three of its severest critics should be expelled from the Party. Their offence had been that they complained to the Communist International of the treatment which they were receiving in Soviet Russia. Such "indiscipline" called for the sternest measures, and the best man for the unsavoury task was Stalin. There is nothing to suggest that his appointment in April, 1922, as General Secretary was otherwise than with Lenin's full approval.

Where Molotov had failed, Stalin before long succeeded. The party of obedient automata which he built up by a system of espionage, terror and control of key appointments, was realisation in practice of Lenin's dream of 1902. The many veterans of the revolution who revolted against Stalin's system in the years which followed, found, too late, that control of the party machine gave him all the power he needed to brand criticism as indiscipline, and indiscipline as treason. Their fate was predetermined on 4th April, 1922."

In India, Communists are found loud in their protest against Congress dictatorship. They should be reminded of this episode in their spiritual home's history, and some of the more impulsive amongst our Socialist party leaders should stop to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

think before they feed the people further with their adulterated communism.

"Social Action"

We desire to thank M. Lallemand of the Indian Institute of Social Order, Poona 1, for sending us the first number of this Magazine. From a glance through its pages, we get the impression that it stands for certain values which the Communists have been doing their worst to debase. The writers are not stand-patters; one of them, N. Nevett, takes a detached view of this danger. He quotes Douglas Hyde, an ex-Communist, as saying: "The most evil thing in communism is that it claims some of the best men and moulds their minds and twists their consciences so that they can be used for the worst." This is indeed a great tragedy and will be repeated among us unless our young men and women can be inspired with a noble cause.

All the same he points to the real danger:

"One is saddened to find that none of the contributors on leaving Communism found peace and tranquillity and are once again left with a terrible void in their life. Unlike the Communists who are doubly anchored, they are left drifting, like ships in cross currents with no definite port in view. But it is false to state that 'the true ex-Communist can never again be a whole personality.' This he could be were he to embrace a beilef which would fulfill his aspirations for social justice, true liberty, and happiness."

Sri Aurobindo's Politics in Pondicherry

Now that Sri Aurobindo is beyond the controversy of Indian politics, it is worthwhile having a record of his ideas on the same, as these were indicated by him to Joseph Baptista, a devoted adherent of Lokamanya Tilak. The letter he wrote on January 5, 1926, has been publicized by the *U. P. I. News Agency* on April 20. Sri Aurobindo wrote:

"I came to Pondicherry in order to have freedom and tranquillity for a fixed object having nothing to do with the present politics—in which I have taken no direct part since my coming here, though what I could do in my own way I have constantly done—and until it is accomplished it is not possible for me to resume any kind of public action. But if I were in British India I should be obliged to plunge at once into action of different kinds. Pondicherry is my place of retreat, my cave of *tapasya*,—not of the ascetic kind,—but of a brand of my intention. I must finish that, I must be internally armed and equipped for my work before I leave it."

In the matter of work itself Sri Aurobindo wrote: "I do not at all look down on politics or political action or consider I have got above them. I have always laid a dominant stress and I now lay an entire stress on the spiritual life, but my idea of spirituality has nothing to do with ascetic withdrawal or contempt or disgust of secular things. There is to me nothing secular; all human activity is for me a thing to be included in a complete spiritual life, and the importance of politics at the present time is very great. But my line and intention of political activity could differ considerably from anything now current in the field. I entered into political action and continued it from 1905 to 1910 with one aim and one alone, to get into the mind of the people a settled will for freedom and the necessity for a struggle to achieve it in place of the futile ambling Congress methods till then in vogue."

The letter, which was in reply to Mr. Joseph Baptista's communication asking Sri Aurobindo to give a lead by taking up editorship of the organ of the Party that was to be a Social Democratic Party also reveals Sri Aurobindo's idea about Social Democracy. He said: "Now I believe in something which might be called Social Democracy, but not in any of the forms now current, and I am not altogether in love with the European kind, however great an improvement it may be on the past. I hold that India having a spirit of her own and a governing temperament proper to her own civilisation, should in politics as in everything else strike out her own original path and not stumble in the wake of Europe. But this is precisely what she will be obliged to do if she has to start on the road in her present chaotic and unprepared condition of mind. No doubt people talk of India developing on her own lines, but nobody seems to have very clear or sufficient ideas as to what these lines are to be. In this matter I have formed ideals and certain definite ideas of my own, in which at present very few are likely to follow me, since they are governed by an uncompromising spiritual idealism of an unconventional kind and would be unintelligible to many and an offence and stumbling block to a great number."

Gandhi Smarak Nidhi (Memorial Fund)

It is a happy decision that the Trustees of this Fund have taken to spend their one crore twenty-one lakhs of rupees within a period of ten years. It shows that they have faith in their own people instead of holding within their fist the fund that was created to better them, mentally and materially. As a part of this new scheme they have decided to construct four Gandhi Memorial Museums at Delhi, Wardha, Sabarmati and a suitable place in South India.

We have our doubts about the utility of such museums. And we are glad to notice that our feeling is echoed by our contemporary of the Allahabad *Leader* which we share with our readers:

"Even today the ruins of the monasteries, Stupas and stately columns, erected by Ashoka represent the glory that was India under Buddhist influence, centuries ago. The Gandhi Memorial Museums will keep the memory of the Gandhian era ever green in the mind of posterity. The Saint of Sabarmati and Sewagram and the Martyr of Delhi will live in history for centuries without any tangible memorials. But the Gandhi Memorial Museums, if they become live institutions for the study and propagation of Mahatma Gandhi's principles of life, can contribute a lot to the moral and spiritual redemption of humanity. The proposal "to make all necessary arrangements for the suitable protection and preservation of places" associated with Gandhiji should be implemented as a sacred duty of the nation. But the real spirit of Bapu lives on in his message of constructive work, for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which there is ample scope in the villages. The construction of Memorial Museums should, therefore, be accompanied by vigorous constructive work in the villages, if the nation wants to pay its real homage to the memory of Bapu."

The MacArthur Difficulties

The world does not appear to appreciate the difficulties that have been precipitated for the Atlantic Powers by MacArthur's dismissal. The London *Daily Express'* Washington correspondents quoted at the third week-end of April headlines appearing in the American press which shows that they have been feeling very sore over the affair. Some samples are given below :

"Impeach Truman before we become a British Crown colony.

"Suggest Britain give Hong Kong to Red China too.

"Remove Britisher Acheson and all his pink friends.

"We are victims again of another Munich and English commercialism.

"A double-column front-page editorial of the *Times Herald* said : 'Morrison of Great Britain greeted the news of MacArthur's dismissal with the statement that the way is now open for discussing a ceasefire in Korea. The bribe is ready. Anything to save Hongkong.' The editorial said that Mr. Truman's 'mean and small mind' is dominated (among a list of others) by 'the British Socialists' eagerness to sacrifice every principle to save their Hong Kong trade'."

"There has also been a flood of newspaper cartoons, continues the correspondent. One shows a jovial Stalin leaning out of a window of the Kremlin waving a front page of the news on Gen. MacArthur and shouting: 'We Wonski.' Another shows a new great seal of the U.S.A.—an eagle with an Acheson moustache grasping a 'betrayed MacArthur' in one claw, 60,000 American casualties in the other and the front door of 10 Downing Street pinned on its chest."

"In hundreds of daily newspapers across the U.S.A. Americans are reading that 'the greatest scandal in history' is to be traced in London.

"Columnist Walter Winchell who makes this charge says: 'The forces which caused MacArthur's dismissal are in London. London blackmailed the White House with threats to break up the Atlantic Alliance. The White House caved in. By a secret agreement between the U.S.A. and Britain the Chinese Nationalist Government was to be thrown to the wolves'."

In Japan there appears to be a feeling of real concern. Emperor Hirohito broke a 2600-year tradition by personally presenting himself at Gen. MacArthur's headquarters and expressing his people's reaction to the unthought-of phenomenon.

The *Nippon Times* says : "The feeling of loss and bewilderment is still strong among the Japanese people at the prospect of having to part with the great leader who has been the wise counsellor and guide during the entire period of Japan's growing years as a democratic nation."

"A Word to Business"

"Businessmen must have received a rude shock when Mr. A. D. Gorwala, former Director of Civil Supplies, Bombay, instead of criticising the Government as usual, turned his guns on them and told a few stinging home-truths. Giving his impressions of his recent country-wide tour, Mr. Gorwala said that "everywhere the common people believed that today business was synonymous with dishonesty and such an opinion was 'deleterious to the future of business in India'." He warned businessmen that unless they ran their business on honest lines and forced the dishonest among them to do it too, destruction would overwhelm them all and engulf the rest of the people, good and bad. This sort of thing, Mr. Gorwala said, was not only ruining us but would make the younger generation dishonest and unscrupulous. Also corruption, he added, would concentrate economic power in the hands of a few, defeating the object of economic equality and at the same time sowing seeds for its own destruction.

"Gone are the days when businessmen labouriously built up goodwill and jealously guarded the good name of their firms. The war years and the post-war period saw an undignified scramble for grabbing as much money as possible resulting in blatant exploitation, profiteering and scandalous tax-evasion, with the result that the name of the businessmen is mud in the common people's opinion. As Mr. Gorwala has pointed out, not one business association has even passed a resolution denouncing the evil of tax-evasion and urging its members to pay taxes promptly. These associations do not exist merely for demanding rights and privileges but there is also a certain responsibility on them to enforce high standards of business ethics. It is the duty of the law-abiding section of the business community, who want to maintain business integrity and standards as high as possible, to expel these unsocial elements from their ranks if public confidence is to be restored in them."

The above quoted from the *Bombay Chronicle* of a recent date should enable Big Business to appreciate the writing on the wall. Dr. Gorwala is no wild-eyed agitator anxious to confiscate other people's property. His words come from a friend.

Somnath Temple

Our Rastrapati, Babu Rajendra Prasad, laid amid pomp and ceremony the foundation-stone of this famous temple in Saurashtra. The modern Indian is not impressed by these restorations of image worship, though they appreciate the poetry found in it. This habit of the sceptic found expression in the word-picture of a correspondent on the journey to the ceremony as he described one of the leading figures, India's Food Minister, as "a romanticist of ancient glory" who found in the "history of the Aryans" a vast "source-book for his novels and plays." He brought out "the irony" of the thing that this revival of a 12th century scene (Christian Calender) was made through means of "most modern of vehicles—an airship." The topic is discussed in the same spirit though it

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"enshrines racial memories" much as it has excited the Pakistani Press which senses in this ceremony an insult to a Pan-Islamist hero—Sultan Mahmud of Ghazni.

Food and the Refugee

The "refugee" problem created by the partition of India has a special character of its own. But the worsening food situation has heightened it, and given its solution an urgency. But the Assam Government has failed to implement the Centre's policy. This has come out in course of a telegram sent by Dr. Choitram Gidwani which exposes the Assamese obscurantists. Doctor Choitram P. Gidwani, who recently undertook a tour of Assam, has sent the following telegram to the Prime Minister, Pandit Jawaharlal Nehru, after the Prime Minister's broadcast on the food situation:

"I have visited Assam recently. Displaced agriculturists stated, large areas of waste land suitable for paddy cultivation were available there, but were not being alloted to them owing to the discriminatory attitude of the Assam Government. This land settlement policy was announced in the Press Note issued by them on May 6, 1949. This Note stated that the question of settlement of refugees on Government lands which have been surveyed and have been found insufficient to settle landless people of the province is out of question altogether. Such a policy has resulted not only in hindering the rehabilitation of displaced agriculturists, thereby causing misery to them, but also affects the 'Grow More Food' campaign. Request that you may kindly take all necessary steps to see that this policy is reversed in the national interest."

Ireland to be United?

Eire has refused to join the Atlantic Pact and to place her naval ports and air bases for the defence of West Europe. Thus has she set Washington and London a-thinking whether it was at all wise to force division on Ireland. A London news, dated March 17 last, throws light on the subject:

"Secret diplomatic moves have been taking place between Britain, Northern Ireland and the Eire with a view to settling all outstanding problems between the three countries, including that of partition.

"The U. S. Secretary of State, Mr. Dean Acheson, is reported to be playing an important part in these negotiations. He is likely to meet Mr. Macbride, Eire's Foreign Minister, in New York in a few days.

"Mr. Attlee, presumably under U. S. pressure, is anxious to find a solution that would put the whole of Ireland at the service of the Atlantic Pact nations in the event of a third world war.

"Discussions towards this end have taken place in secret in Dublin and in Whitehall, with Mr. Richard Stokes, Minister of Works, prominent as an intermediary.

"A possible solution is a Federated State of Ireland, with each of the two States responsible for its own territory, but with an overall direction to which both States would be a party."

Man-power Work of International Labour Organization

A report prepared by the International Labour Office for submission to the meeting of the Organization's Governing Body reviews its migration and other man-power activities.

It has been summarized in the I. L. O. News *Service* of April, 1951.

"The report described the work of the ILO's Italian Migration Field Mission at Rome, the Migration Field Mission which was established at Bonn in November, the Asian Field Office and Technical Training at Bangalore, India, and the Latin American Manpower Field Office at Sao Paulo, Brazil.

"The report disclosed that a Migration Field Office would be opened shortly at Vienna to facilitate and develop migration, especially of Volksdeutsche, from Austria. It also described a project for a manpower field mission in the Near and Middle East.

"The Bonn Mission, the report revealed, was negotiating with the Federal German Government in an effort to find suitable candidates to emigrate to Canada for work in hard rock mines. The ILO's assistance in recruiting European workers for these jobs had been requested by the Canadian Metal Mining Association.

"A wide range of technical assistance work in the migration and manpower fields was described in the report."

Nisith Chandra Sen

The death at 71 of this eminent lawyer will be mourned by a large circle of friends.

Nisith Chandra did not confine himself to law alone. Early in youth he came under the New School of politics associated in Bengal with Bipin Chandra Pal and Chitta ranjan Das. He was the son of Chandi Charan Sen, author of *The Begums of Oudh*, a classic in Bengali language. And imbibing the air of freedom in his family of Brahmo traditions, as a student at London where he had been sent to qualify himself as a barrister, he, along with the late Rajat Nath Roy, Surendra Nath Haldar, B. Chandra Chatterjee, decided to devote himself to the new politics. As a defender in courts of revolutionary parties he followed C. R. Das.

More than thirty years later he was elected Mayor of Calcutta, filling the position made worthwhile by C. R. Das, J. M. Sen-Gupta and Subhas Chandra Bose.

RENEWAL OF SUBSCRIPTIONS

Subscribers, whose subscriptions expire with the current issue of *The Modern Review*, are requested to renew their subscriptions, quoting their respective serial numbers, before the 15th instant, by Money Order. outstation cheques should contain -/6/- extra for collection. Otherwise, unless countermanded, the next issue will be supplied to them by V.P.P. considering that they desire it so.

At present V.P.P. is more costly than before, hence it is preferable to remit subscription by Money Order.

Subscribers are requested to honour such V.P.P. as it causes substantial loss to us.

WHERE AGGRESSION PAYS AND WHERE IT DOES NOT

It Pays in Kashmir : It Does Not in Korea

By C. L. R. SASTRI

"Aggression cannot be allowed to succeed. It cannot be appeased, rewarded or ignored. To meet it squarely is the price of peace."—Secretary of State Dean Acheson : Major Foreign Policy Speech : April 18, 1951.

"If history has taught us anything it is that aggression anywhere in the world is a threat to peace everywhere in the world. When that aggression is supported by the cruel and selfish rulers of a powerful nation who are bent on conquest it becomes a clear and present danger to the security and independence of every free nation."—President Truman : *Radio Address* to Americans on U. S. policy in the Far East : April 11, 1951.

Events are moving fast in the world—almost with supersonic speed, as it were—and high-ranking Generals and satraps are falling like ninepins. Some of "the Captains and the Kings" of yesterday are to-day no more than mere names—or will be when the smoke clears away and the dust settles down. This is not to suggest, however, that they will not possess a "nuisance value" (of a kind not totally unfamiliar to us) until even their most perfervid admirers and fanatical partisans will be driven, by the inexorable stress of circumstances, to see the utter futility of it. Reputations once lost cannot, normally, be revived by any amount of artificial respiration. He who had been, until a few weeks ago, a sort of White Mikado of Japan no longer bestrides the narrow world like a Colossus. In the manner of the fabled Mulciber he has been thrown, by an angry Jove (or, rather, Harry), "over o'er the crystal battlements" of heaven; and has with dramatic suddenness,

"Dropt from the zenith like a falling star,
On Lemnos the Aegean Isle."

"The Caesar of the Pacific"

Nor can anyone legitimately complain that the Aristotelian requirements of tragedy have not been fulfilled in this instance. It is no mean altitude from which General MacArthur has been hurled down. There was, as must be admitted by friend and foe alike, something Roman in his proud sweep to power—something Roman, too, in the swift tragedy of his collapse. He has had what in modern nomenclature is called a tremendous build-up: legends have sprung up about him, and it is not inconceivable that in other days poets would have erupted into verse and celebrated his triumphs in some

"Stretched metre of an antique song."

Legends, however, do not always approximate to exact truth. Personally I cannot bring myself to believe that he belongs to the race of military giants, the Rommels and Rundstedts of the last war or the Hindenburgs and Ludendorfs of the last war but one. Luck, I am certain, has played a none too inconsiderable part in the extremely colourful career of this much-boosted "Caesar of the Pacific."

As a soldier, then, it is my conviciton that his skyrocketing into fame was the result more of a favourable concatenation of circumstances than of incontestable genius or of unremitting toil. Auto-suggestion may have had its share, too. He has all along been flamboyant to a degree: he has always loved to strut with the mien of a conquerer. The time has never been when he has not looked upon himself as "a man of destiny." But the snag about "men of destiny," if we examine the matter closely, is that a point not seldom arrives in their glamorous lives when the *evil* portion of their destiny assumes the dominant role—the good, apparently, having exhausted itself, having become a spent force. During such dark periods the mechanism of their fate is, so to speak, in reverse gear; and the ultimate result is scarcely in doubt. In our hero's horoscope that dark period must be deemed to be in the ascendant now.

"His Finest Hour"

Some meed of praise, however, cannot justifiably be withheld from him even by his most captious critics for his meritorious work in Japan after the conclusion of hostilities. That was, without question, "his finest hour." As the overlord of a vanquished nation he evinced qualities rare in a soldier, and, to be perfectly candid, not too common even among administrators "to the manner born." No wonder that the Japanese have showered such a wealth of affection upon him. He had been magnanimous towards them—extremely so, in fact—and magnanimity invariably pays handsome dividends, although few politicians appear to be aware of this pregnant truth.

To that extent—and it is no small extent—General MacArthur has shown himself to be a much abler politician than most professional ones. The Japanese—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of all people—are no fools and if they adore him (as they undoubtedly do) they certainly must have abundant reasons for doing so. His final parting from them was very, very poignant, indeed. Honesty compels us to recognise him as one of the world's authentic statesmen. So far as his administration of Japan is concerned one may graciously acknowledge that the hour had produced the man.

My Theme

But neither the life and development nor the decline and fall of General MacArthur is the theme of my present article. The theme of my present article is far other. It is nothing less than the monstrously glaring disparity in U.N.O.'s reaction to the North Koreans' aggression in Korea and Pakistan's aggression in Kashmir; and it has to be borne in mind that while the first has not *yet* been satisfactorily proved the second cries out to heaven to be avenged—Pakistan herself, the United Nations' Commission in Kashmir, and Sir Owen Dixon, the ex-Mediator of the Indo-Pakistan dispute about that enchanted land, having all agreed that there *had been* such an aggression. There are, and can be, two opinions as to who were the aggressors in Korea—the North Koreans or the South Koreans. Yet the United Nations plunged into war in that region, and plunged into it with lightning speed, throwing the helve after the hatchet, as it were. They acted first—time, obviously, being of the essence of "cold war" strategy—secure in the belief that reasons could be concocted for their action afterwards. Apart from other considerations the very alacrity of their action in Korea gives rise, justifiably, to the suspicion that the whole affair had been pre-arranged, had been stage-managed, and that they had been waiting only for some signal, so to speak, to get going into action. This aspect of the matter needs stressing because there has been so much "democratic" ballyhoo about the North Korean aggression. Within so few as 24 hours of that so-called aggression the United Nations passed a resolution condemning it with bell, book, and candle, and issued orders for their troops marching into Korea to punish the aggressor and to restore the *status quo*; and there are stories afoot that General MacArthur marched his soldiers into Korea *even before* the passing of that resolution—which, presumably, is the most fitting answer of the "democracies" to "totalitarianism."

It is now nearly four years since our friendly neighbour aided and abetted the tribal raids into the lovely Valley of Kashmir; and not only has Pakistan not been named the aggressor but, *very nearly*, India, the complainant in the case, has been pointed out, by the World Organisation, as the villain of the piece. *This* is the theme of my present article.

The Super-"Democrats"

But General MacArthur finds a place in it, not only because his sudden fall from grace has a "topical" value of primary importance, but also because in any detailed discussion of the theme I have chosen for myself he figures prominently both as the Commander-in-Chief of the United Nations' forces in Korea and as the undisputed leader of that super-"democratic" camarilla within the general "democratic" set-up which unreservedly sponsors the waging of a "totalitarian" war against "totalitarianism," regarding no means unworthy of that pre-eminently worthy end. *In effect*, they wish to start the universally-dreaded World War III on their own account in order (forsooth!) to forestall the Communists from originating it on theirs. The idea, evidently, is that a new global war is not a detestable thing in itself; and that it can even be a highly meritorious thing—provided, of course, that it is the "democracies," and not the "dictatorships," that are responsible for it. It is a moot point, if a scrupulously fair debate is conducted on this interesting topic whether the "dictatorships" are really panting and perspiring for an "over-all" war—and it may not, in this connection, be quite out of place to record the fact that, while hundreds of thousands of soldiers of the much-vaunted "democracies" are fighting in Korea, not a *single* Russian soldier has, as yet, been alleged, by the Soviet's stoutest opponents, to have taken part in the current battles there.

The Pot and the Kettle

The crushing reply to this is not that, though this contention is correct, the hand behind the Korean imbroglio is none other than the Kremlin's. It is a two-edged argument, and those who employ it ought to be the first to recognise that it may very well recoil on their own heads. I am, let me interpolate, neither a Communist nor a crypto-Communist and I am not taking upon myself the odious—or the odoriferous—task of defending the Soviet against its traditional enemies. But I am, I hope, a fair-minded person and it is my firm conviction that, in this disgusting "cold war" business, Russia has been more sinned against than sinning. I believe that there are many others besides myself who share this view: the age-old practice of giving a dog a bad name and hanging him can be carried too far. The Russians, doubtless, have much to answer for before the bar of heaven: but (let us say it *sotto voce*) so have the *soi disant* champions of the "democracies."

It is high time that the pot ceased calling the kettle black: more particularly when, on occasion, the pot has been stripped of all its pretensions and shown to be the blacker of the two. The denunciation, in unmeasured terms, of the Soviet Union by the "Western democracies" has, of late, assumed the dimensions of a veritable racket. But these stalwarts, in the excess of their crusading zeal, seem well-nigh to have forgotten that it is not possible to fool all the people all the time. Too much cleverness has

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dangers no less than too little. After the unmentionable atrocities (and probably we have not been told the half of them) committed by the Americans and the South Koreans in Korea they (these stalwarts) have for ever lost the right to cast a pebble, let alone a stone, at the Communists and their "fellow-travellers." They had better begin by trying to remove the beam from their own eye before attempting to extract the mote from the eye of their opponents.

Kashmir : Latest

The Kashmir dispute, after a nerve-wracking delay of nearly four years, has now reached the penultimate stage. During this long interval many of us have, I suppose, contrived to learn by heart the salient points connected with it. Even I, the least dependable as regards such Gargantuan feats, of memory, have, perhaps, managed, *malgre lui* to store away a few relevant details of this much-discussed controversy in some dark corner of my brain. To discuss it anew would be perilously akin to flogging a dead horse. In addition, it is my belief that all this learned lore has become, from the Indian point of view, a sheer waste of energy. Learned or unlearned, it is the brutal truth to say that we have lost all along the line. "What avails the sceptred race, what the form divine?" What avails our being cent per cent right? The question is no longer one of right or wrong. The question has been removed from the plane of moral values to that of the exigencies of "cold war" strategy. Lake Success has ceased to be U.N.O. forum. It has become a subservient tool in the hands of the United States and judges each issue presented before it not on its intrinsic merits but as it fits into the design of the aforementioned strategy. Everything else goes by the board. The U.N. is but a handmaiden of the U.S. and the U.S. is interested only in one object —the outwitting of the Soviet Union by herself and her extensive ring of satellites. That being so the Indo-Pakistani dispute over Kashmir takes on a much wider significance than it originally possessed : it has, so to speak, "broken its birth's invidious bar" and has attained the status of an international complication. When our beloved Pandit took the matter to the U.N. four years ago, in the confident anticipation that his troubles would at last be at end, he could scarcely have visualised the maltreatment it was ultimately to receive at its hands. Looking at the shape in which it has now emerged and contrasting it with its pristine form he may very well be led to exclaim, with the old lady in the ballad :

"O deary me ! this is none of I !"

The Original Issue

The Pandit has reason to be chagrined: he has been the victim of his own " pathetic fallacy"—the "pathetic fallacy" of placing implicit trust in Pakistan's *bona fides* as well as in the *bona fides* of Western statesmen : the same, be it remembered, that had been instrumental in partitioning our country by way of a parting kick. With that exasperating *penchant* of his of being excessively amiable before the *wrong* kind of people he took the Kashmir issue to Lake Success when there was absolutely no obligation on his part to do so and when he could have solved it out of hand, as it were. *He simply could not let well alone.* He asked for trouble—and has got it, in abundant measure. The "pathetic fallacy" of believing that wrath can be turned away by soft words has repeatedly been proved to be impractical, yet he appears not to have taken the lesson to heart. Even goodness must have an edge, said Emerson. Voltaire similarly gave it as his confirmed opinion that magic words and incantations would surely bring down a flock of sheep *if there were a sufficient quantity of arsenic behind them.* Our distinguished Prime Minister, obviously, does not share this view. But even a worm will turn and he was constrained to utter the following words on the floor of our august Parliament on March 28 in answer to the latest resolution passed by the Security Council on Kashmir.

The Pandit Hits Out

Replying to the debate on demands for grants to the External Affairs Ministry he took occasion to characterise the latest Anglo-American resolution as a "fantastic theory" and lashed out against Kashmir being regarded as a "no-man's land," the sovereignty over which was indeterminate. As such, he said, it was unacceptable to India. It departed from the earlier U. N. resolutions, all of which clearly accepted the legal accession of Kashmir to India. It was fundamentally "wide of the mark." It ignored the past, was based on a wrong approach, and was "dangerous and distored." He declared that Kashmir was "juridically and politically" an integral part of the State of India. India, he maintained, could not agree to a vacuum being created in Kashmir "for the sake of satisfying Pakistan or her sympathisers." Nor could she agree "to leave Kashmir unprotected or ungoverned or allow any outside authority, civil or military, to take charge of the country." He stoutly defended Kashmir's accession to India. It is something arising from the Indian Independence Act and the negotiations that preceded it and is fully in accord with all that has happened in relation to many other States. This accession, he reminded his critics, took place when India was still a Dominion of the Commonwealth and the Act of Accession was accepted on behalf of the Crown by the then Governor-General, Lord Mountbatten. Apart from accession, he proceeded, it has to be remembered that India today is a continuing entity "taking over the rights and liabilities that rested in the old India."

The Crux of the Matter

One excellent point he made was that, irrespective of accession, we should have had the obligation to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

protect the people of Kashmir against aggression. Kashmir has at no time been recognised as a State under international law but has throughout been an integral part of India. "The partition made no difference to our responsibilities in regard to Kashmir as long as it did not deliberately accede to Pakistan." He legitimately complained that so much heavy weather was being made over the proposal to have a Constituent Assembly in Kashmir *the while turning the blind eye to the continuous threat of war that is being hurled upon us by Pakistan from day to day.* The sting, however, is in the tail, and Pandit Nehru deserves our encomiums—in full measure—for the following beautiful outburst :

> "We went to the U. N., *not* to determine the accession issue or where the sovereignty lies. We did *not* go there to seek arbitration; *but* to complain about the *aggression* of another State, which was likely to lead to international complications and probably affect international peace. *Evidently the sponsors of the joint resolution before the Security Council have a short memory and have forgotten how the matter came up before the Security Council and the history of tragic events that preceded it.*"

His Parthian shot was this :

> "The U. N. utilised the position of our having made a reference in this matter to *widen the scope of its enquiry* and, despite the protest of the Kashmir Government, we, in order not lower the prestige of the U. N., gave every facility to the U. N. Commission; *but until this moment neither the U. N. Commission nor the Security Council has suggested that the question of accession was arguable.*"

All this wanted saying very badly and it has now been said. *Rem acu tetigisti.* If only Panditji's speeches and statements had *always* been to the point as this was !

Fresh Light

The Anglo-American resolution could not have been other than what it was if we bear in mind the consistent co-operation that Britain and, latterly, America, have extended to our friendly neighbour. Readers of Mr. E. M. Forster's celebrated novel, *A Passage to India*, would not have failed to mark his pronounced bias in favour of his Muslim hero, Dr. Aziz, and his equally pronounced antipathy towards the Hindu, Prof. Godbole. This bias for the Muslims and this antipathy towards the Hindus is almost endemic in them. We should feel that there was something inherently wrong, something poignantly unnatural, if things panned out otherwise. They did once—just once—when Mr. Attlee delivered his historic speech in the House of Commons on March 15, 1946, warning the Muslim minority in our midst against disrupting the unity of our country; and we know how soon he was made to eat his words.

The British attitude towards Kashmir is partly explained by a remarkable reference to it by General Sir William Morgan who is on tour in the United States explaining Britain's defence programme. He is now Chairman of Britain's Research Policy Committee. Speaking in New York of the possibility of trouble in the Persian and Iraqui oilfields he declared, with almost a lump in his throat, that there was not nearly enough British military strength in that area. He went on :

> "We cannot lose that oil. If there is a showdown we will have to find something from somewhere to go and sort it out. In the old days we just sent up an Indian brigade. We cannot do that now. India and Pakistan are so busy arguing with each other that they have no men for anything else. *That is the main reason for sorting out Kashmir.* We must get Pakistan and, probably, Indian help, too."

This statement, it is clear, fairly lets the cat out of the bag. So long as Kashmir is allowed to continue as an apple of discord between them, pinning down their military forces and retarding their economic development, it brings up an inevitable weakening of Britain's position—*materially* in the Middle East, and *diplomatically* in her relations with Russia as well.

Mr. James Burnham's Thesis

The recent Cultural Congress at Bombay has spotlighted the personality of the American publicist, Mr. James Burnham, even if it has spotlighted nothing else. He is the author of the book, *The Coming Defeat of Communism*, which has been published both in England and in India. In the English edition *but not in the Indian*, we find his views on Islam which may throw some much-needed light on the Anglo-American reaction to the Kashmir dispute. Mr. Burnham writes :

> "The Mahomedan faith has proved a difficult barrier to the Communist ideology and Communist methods of action . . . The strategic significance of the Mahomedan areas is striking. Not only do they comprise the greater part of the Near East but also much of the northern coastland of Africa, Pakistan and sections of China and Indonesia."

He goes on to postulate :

> *"A special attention to Islamic relations is therefore, not only necessary from the defensive point of view of holding further Communist advance. It offers also major offensive possibilities."*

No wonder the scales have been heavily tilted in favour of Pakistan. India does not fit into the "war strategy" as Pakistan does.

The Dice are Loaded Against India

From the foregoing extracts it will be evident even to the meanest intelligence how the dice have, from time immemorial, been loaded against the poor Hindu and in favour of the Muslims. The case of the former has always gone by default ; and much more so after the dastardly partition of our beloved Motherland on the basis of the pernicious "two-nation" theory,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a result of which, after losing a sizable chunk of it to the intransigent minority in our midst, the identity of the Hindus has been swamped and submerged by a massive tidal-wave of "secularism" the like of which has never been witnessed anywhere. In the Security Council the word of the British on the affairs of our "vast sub-continent" is regarded as almost sacrosanct and their influence, on the Americans in particular, has been devastating. They have thus been able to spread the infection of their age-old bias towards the Muslims far and wide. They are supposed to be the unchallenged and unchallengeable "experts" on the conditions that obtain over here. The political instinct of the British is marvellous, is in a class alone, and they have consistently banked upon the Muslims being their born stooges. This penetrating insight of theirs into Muslim character has, ere now, yielded them handsome dividends.

Castor and Pollux

Nor, to be perfectly candid, has it yielded less handsome dividends to the Muslims themselves. It has thus been a picturesque two-way traffic. They remind us, in the intensity of their devotion to each other, of Castor and Pollux, the Dioscuri,—always the emblem of twin friendship translated to the stars. Our distinguished Prime Minister should have remembered this when he so gratuitously took the Kashmir issue to the U.N. It was a blunder of the very first magnitude: nor have we, I venture to suggest, seen the last of its repercussions. We have lost Kashmir as irretrievably as we have lost Pakistan. *We have lost Kashmir in another sense as well.* Those who have been reading Sheikh Abdullah's intriguing speeches and statements —especially his more recent ones—with the care and the attention that they so eminently deserve must be forgiven if they evince no great enthusiasm for Kashmir's continuing to throw in its lot with India. If I have correctly understood his homilies to the Yuvaraj and the people of Jammu the eventual fate of Kashmir need cause no undue perturbation in the minds of the Hindus. Even at the time of the memorable "police action" in Hyderabad no Hindu could have "talked at" the Nizam and the Prince of Berar as Sheikh Abdullah has seen fit to "talk at" the Maharajah of Kashmir and the Yuvaraj. The moral is plain as way to parish church.

Muslims Enjoy "Priviliged Sanctuary"

The Muslims have thus, from *auld lang syne,* been enjoying a sort of "privileged sanctuary" in the eyes of their patrons, the British. They may well chant of them the celebrated lines of Burns to the Earl of Glencairn:

"The bridegroom may forget the bride
Was made his wedded wife yestreen;
The monarch may forget the crown
That on his head an hour has been;
The mother may forget the child
That smiles sae sweetly on her knee;
But I'll remember thee, Glencairn,
And a' that thou hast done for me!"

That is, if, by birth and upbringing, they are a grateful people. But Mr. Liaquat Ali Khan, by his open wooing of Moscow a year or so ago, has aroused the suspicion of not a few wary observers that the maiden will confer her favours on the highest bidder and on none else. But the head of the Kremlin is a man of no less guile and appears to have spurned her brazen advances. She is, therefore, back in the Western camp, pursuing her amours as of old.

Argument *Re* Majority

Pakistan's friends have been tirelessly advancing the argument that, the vast majority of people in Kashmir being Muslims, the territory is Pakistan's by prescriptive right, as it were. But this is an argument that cuts both ways, and, unfortunately, we have not had the gumption to take advantage of it. Hyderabad enjoys a preponderating majority of Hindus but the British have never, to my knowledge, suggested to the Nizam that he should, therefore, put himself out of the way and restore his kingdom to its rightful owners. On the contrary, when, at long last, our Government screwed up its courage to the sticking place and embarked on its "police action" in September, 1948, the British did not hesitate, even for a moment, to reveal to the world where exactly their sympathies lay. Nor, when that "police action" came to a successful end, did either our Government or our people "talk at" the Nizam or the Prince of Berar as Sheikh Abdullah has recently "talked at" the Maharajah of Kashmir and the Yuvaraj.

Talking of majorities, in undivided India the Hindus far outnumbered the Muslims; but that did not prevent the Muslims from hectically clamouring for partition so that they might have an entirely separate "homeland" for themselves or their sworn allies, the British, from giving them their full-throated moral support. The inference is irresistible that the Muslims stand to gain either way—whether they are in a majority or in a minority. And when everything else fails our "secularism" can be relied upon to step in and shower favours upon them with no niggardly hand. They are the modern "blessed 'people."

Aggression

There is one more point to be discussed before I conclude my article. It is that of aggression. Now-a-days we hear and read quite a lot about it. The American press, platform, and pulpit, in particular, are full of it. When American meets American that is the staple of conversation. Not their own aggression, of course. The answer to "What is 'orthodoxy'?" is, as we all know, "Our own 'doxy'." But with "aggression" it is apt to be different. Aggression is what the *other* fellow commits. And, needless to say, it cries out to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be avenged! What *we* do is just to try—with atom bombs, if necessary—to repel it so that the world may be made safe for democracy. Sometimes, no doubt, things may so pan out that, anticipating aggression from the other side, we are compelled, in sheer self-defence, to commit a little aggression ourselves. That is part of military strategy—in "cold wars" no less than in "hot." But the essential difference remains. Defensive aggression is poles apart from offensive aggression. It is the adjective that counts, not the noun. It may even be that the first is more "bloody" than the second. But that simply cannot be helped: we shall have either to like it or to lump it. Playing for safety we generally pretend to like it.

The Truman and Acheson Dicta

The two passages I have appended at the top of my article by way of "mottoes" tell their own tale. Their authors are top-ranking politicians. President Truman is the head of the most powerful State in the world and Dean Acheson is second in command to him. As such their words carry far. They are, indeed, worth their weight in gold. Being the men that they are must be considered to have spoken only after mature deliberation. Except in our own hapless country those who occupy positions of responsibility are not given to "thinking aloud." Therefore, if Mr. Truman and Mr. Acheson spoke in the way they did they must be taken to have known what they were about. They assert that aggression should be fairly and squarely met. They are thoroughly convinced that the Communists are the aggressors. I have suggested, earlier in my article, that the question of who committed aggression in Korea in June last, the North Koreans or the South Koreans, is not as simple as it, no doubt, sounds to the Americans and their co-adjutors. The North Koreans have complained that it was their brethren in the south who committed it. *A thing does not necessarily become true because, for their own reasons, the Americans believe it to be so.* Some of us—including myself—are equally convinced that it was the South Koreans, at the instigation of their masters, the Americans, who precipitated the Far Eastern crisis. But we are more reasonable than the Americans and we content ourselves with saying that the point has not, up to the moment of going to press, been satisfactorily proved. Before there had been any chance of its being satisfactorily proved action had begun—with no little assistance, to put it mildly, from these same Americans. No amount of ballyhoo from Washington will convince an impartial student of public affairs that the Korean war started from the North Korean side.

What about Pakistan's Aggression?

What I wish to drive at is that, *in a context where no doubt still lingers about who is the guilty party,* the Americans and their comrades-in-arms, "the Western democracies," have positively gone berserk about what I may call the merciless suppression of aggression; but that, *in a context where the guilty party has clearly owned, in no uncertain terms, to having committed the aggression complained about and where the U. N. Commission and the U. N. Mediator have emphatically said "ditto,"* the Americans and their Western allies have not only *not* cared to name Pakistan as the aggressor *but* have even had the audacity to blame India, the complainant in the case, on several counts.

I put it to President Truman and to Secretary of State Dean Acheson that, in their own words, aggression (*not* the imaginary aggression of Russia *but* the actual aggression of Pakistan) must not be ignored, must not be rewarded. *Aggression anywhere in the world is a threat to peace everywhere in the world.* That being the new "Truman doctrine," I appeal to the President of the United States to act, even at this admittedly late hour, as the man of courage that he undoubtedly is and, forgetting alike the (not inconsiderable) influence that the wily British have brought to bear upon him and the exigencies of "cold war" strategy re-draft the latest U.N. resolution on the Kashmir issue. There is no harm in practising—at least now and then—what one so incessantly preaches. *"Cold War" strategy is not everything: there can be room, even in the present day world, for truth also.* The Americans have, at present round their necks the "putrefying albatross" of beating Russia to its knees. Clamped on by their own choice three or four years ago it may yet whip the Communists together under the hammer and sickle. Far from disrupting them it may act as a cohesive force. But "cold war" strategy is no reason that justice should be denied India and Pakistan be pampered at her expense. Let both the British and the Americans bear these words of the poet in mind:

> "Last, if upon the cold, green-mantling sea
> Thou cling, alone with Truth, to the last spar,
> Both castaway,
> And one must perish—let it not be he
> Whom thou art sworn to obey."

"POSITION OF THE PRESIDENT OF INDIA"

A Further Rejoinder

By D. N. BANERJEE,

University Professor and Head of the Department of Political Science, Calcutta University

III

Mr. Basu has, in a very patronizing manner, taken objection[63] to my reference to the Proceedings of the Indian Constituent Assembly in connexion with my discussion of the question of the nature of our present system of government and, particularly, of the position of the President in it. He seems to think that the knowledge of the "canons" of construction of a Constitution is a monopoly of only one who is licensed to practise as a lawyer in a court of law, and that a student of Political Science "whose sphere of activity is," after all, "limited to the instruction of the young," is totally ignorant of them. Without entering into the discussion of the question whether or not many of these young men are far better informed about constitutional matters than many of those whom he had in his mind by way of a contrast, I may assure Mr. Basu that there is no justification for this attitude of self-complacency or—should I say?—self-conceit. A student of Political Science has also often to deal with the canons of interpretation and construction of statutory and constitutional laws. By the by, Mr. Basu appears to think[64] that the two terms "interpretation" and "construction" are synonymous. Strictly speaking, as Judge Cooley[65] has shown, they are not, although in common use "the word *construction* is generally employed in the law in a sense embracing all that is properly covered by both."

"Interpretation," says† Cooley, "differs from construction in that the former is the art of finding out the true sense of any form of words; that is, the sense which their author intended to convey; and of enabling others to derive from them the same idea which the author intended to convey. Construction, on the other hand, is the drawing of conclusions, respecting subjects that lie beyond the direct expressions of the text, from elements known from and given in the text; conclusions which are in the spirit, though not within the letter of the text. Interpretation only takes place if the text conveys some meaning or other." However, this is a very minor point and we should pass on.

Now, as regards the question of the "cardinal" rules of legal interpretation and construction, I should like to observe, at the very outset, and notwithstanding the fact that I have myself quoted above some of these rules, that there is unfortunately, as will appear from what follows, such a wide diversity of judicial opinions in regard to them in the reports of the proceedings of courts of justice in different countries that one almost gets submerged in a bog, as it were, as one goes through those proceedings and tries to discover from them some well-established guiding principles or definite doctrines. What are considered to be such principles or doctrines will on examination appear to every impartial student to be nothing more than *provisionally* correct. It is, therefore, difficult to say, speaking realistically, that the whole subject of legal interpretation has yet been "placed and kept" on such a scientific basis that it must command a universal assent and respect. There is as yet no "precise and unchanging" yardstick for judges in this field: no possibility of any mechanical application of a measuring rod by them. The length of the yardstick now being used changes, it has been rightly said, from case to case according to the discretion of the judges who apply it. Indeed, the so-called cardinal rules of legal interpretation remind me of what Burke once said in 1775 in the course of his Speech on Conciliation in America :

> "These are deep questions, where great names militate against each other; where reason is perplexed; and an appeal to authorities only thickens the confusion. For high and reverend authorities lift up their heads on both sides; and there is no sure footing in the middle."

Take, for instance, the expression "due process of law" in the American Constitution. Declaring a certain Arizona statute invalid (four of the nine judges dissenting), Chief Justice Taft of the United States Supreme Court said[66] in 1921 that

> "The legislative power of a state can only be exerted in subordination to the fundamental principles of right and justice which the guaranty of due process in the Fourteenth Amendment is intended to preserve."

Thus, "the Court in applying 'due process of law'," remarks Walter Dodd,[67] "is guided by nothing more definite than 'the fundamental principles of right and justice,' and has no standard other than the views of a majority of the judges by which to separate 'permissible from improper legislation'." As a result, one judge, he continues, "because of his training and experience, may have one view as to what are such fundamental principles and how they apply in a particular case, and an equally competent judge may have pre-

cisely oppositive views." Even "the same individual may have different views at different periods in his life as to what is 'permissible' and what is 'improper'."[68]

Again, he says, in effect, in another place that, although Constitutional provisions have been the subject of judicial construction in the United States for a very long time, yet "the supreme court of Illinois in 1895 declared it improper to regulate the labour or hours of women differently from that of men, and in 1910 arrived at precisely the opposite view, *without any change whatever in the state* constitution."[69] "This is," he further observes,[70] "but an illustration of what state courts have done over and over again in order to readjust their views to the changing needs of the community. Had a definite and precise meaning been given to 'due process of law,' such changes of judicial attitude would be more difficult." And what is the effect of all this?

> "We get," says Walter Dodd,[71] "little help from the courts as to the meaning of this term (*i.e.*, 'due process of law') as it is now applied to limit legislative power."

This only shows the value of the so-called canons of constitutional construction!

The position in England is, more or less, similar. For instance, in regard to the question of the use of extrinsic aids in legal interpretation and construction, that is to say, in regard to the question, namely, "what sources of information outside a statute may be used for throwing light upon its meaning," there has been a bewildering variety of judicial opinions. And although it is *now** a fairly well-established rule "that what may be called the parliamentary history of an enactment is not admissible to explain its meaning,"[72] yet there have been many weighty judicial opinions to the contrary. For example, we find in Maxwell[73] that

> "Reference has been occasionally made to what the framers of the Act, or individual members of the Legislature, intended to do by the enactment, or understood it to have done. Chief Justice Hengham said that he knew better than counsel the meaning of the 2d Westminster, as he had drawn up that statute. Lord Nottingham claimed that he had some reason to know the meaning of the Statute of Frauds, because, he said, it had had its first rise from him, he having brought it into the House of Lords. Lord Kenyon supported his construction of the Municipal Offices Act, 1710 (c.25), by the argument that so accurate a lawyer as Mr. Justice Powell, who had drawn it, never would have used several words where one sufficed."

Again, Lord Field "refers (in 1890) to the improbability that the eminent lawyers who framed the Judicature Act, 1875 (c.77), would not have made a certain exception if they had intended it . . . And it has been stated (1892) as a general proposition in ecclesiastical matters that if the law excludes all historical investigation and discussion on antecedent usage in matters of ritual and practice it excludes one source of light upon doubtful questions."

Further, "Lord Westbury, when Chancellor, referred to a speech made by himself, as Attorney-General, in the House of Commons, in 1800, in introducing the Bankruptcy Bill, which was passed into law in the following year, and one of his reasons in favour of the construction which he put on the Act was that it tallied best with the intention which the Legislature (that is, the three branches of the Legislature) might be *presumed to have adopted*."[74]

Moreover, we find in Craies[75] that in *R. v. Bishop of Oxford* (1879), Bramwell and Baggallay, L.JJ., "allowed a speech of the Lord Chancellor in the House of Lords to be cited as an authority as to the construction of a statute"; that, in *S. E. Ry. v. The Railway Commissioners* (1880), Cockburn, C.J., said that "where the meaning of an Act is doubtful we are, I think, at liberty to recur to the circumstances under which it passed into law as a means of solving the difficulty," and himself proceeded accordingly "to quote a speech made by Mr. Cardwell on the introduction of the Bill into the House of Commons, and a speech made by the Lord Chancellor on introducing it into the House of Lords"; that in *Herron v. Rathmines and Rathgar Improvement Commissioners* (1892) Lord Halsbury said that

> "The subject-matter with which the Legislature was dealing and the facts existing at the time with respect to which the Legislature was legislating are legitimate topics to consider in ascertaining what was the object and purpose of the Legislature in passing the Act."

And that, previously, in *Hawkins* vs. *Gathercole* (1855), Turner, L.J., stated that

> "The dominant purpose in construing a statute is to ascertain the intent of the Legislature, to be collected from the *cause and necessity of the Act* being made, from a comparison of its several parts and from *foreign* (*meaning extraneous*) circumstances so far as they can justly be considered to throw light upon the subject."

This "rule expressed by Turner, L.J.," says Craies,[76] "has often been cited as authoritative."

In view of what I have shown above, it is surprizing that Dr. Lushington's dictum[77] in *Gough v. Jones* (1863) that "the most satisfactory mode of construction" is to examine a statute and, if possible, ascertain the meaning thereof "from the statute alone" has failed of universal acceptance, and that judges have often had recourse to matters "beyond the

corners of" a statute for the purpose of ascertaining what the intention of the Legislature was when the statute was passed. The rules which were laid down by the Barons of the Exchequer in Heydon's case (1584), and which "allow, to a certain extent, the *circumstances which led to the passing of the Act to be considered*,"[78] have really become a *locus classicus*. Nor should we fail to admit, honestly speaking, that the so-called "canons" of legal interpretation and construction, not being statutory declarations, have not yet acquired that finality, inviolability and universal acceptability which are sometimes attributed to them by some interested people. Their sanctity, importance, and acceptability depend largely upon the prejudices of some lawyers and text-book writers. Personal equation is a very important factor in their admissibility, particularly in view of the exigencies of advancing civilization and the inexorable logic of facts. This may appear to be a very audacious statement on the part of one who is not a lawyer by profession; but regard for truth and realism compels it.

I shall now pass on to Mr. Basu's cheap attack[79] on me for my reference to our *Constitutional Assembly Debates* in support of some of my views on the true nature of our present system of government. He seems to think that such reference is not permissible under his so-called canons of constitutional construction. Apart from what I have shown before, let him now follow me. Dealing with the question of the "Interpretative Value of Debates in Constitutional Conventions," Professor Willoughby has said:[80]

"When it is necessary and proper to resort to extrinsic evidence in interpreting the (American) Constitution, an important source of such evidence is to be found in the history of the events which led up to its adoption. Of special importance are the recorded proceedings of the convention which drafted, of the State conventions which ratified, and of the public utterances of the men who played an influential part in the establishment of, the Constitution. Resort is to be had, however, to these sources only with caution, and only where latent ambiguities are to be resolved."[81]

Even in regard to the interpretative value of *The Federalist*, he has said:[82]

"What has been said regarding the interpretative value of the debates in the conventions that framed and ratified the Constitution, and the value of contemporary interpretation thereof by Congress and the Executive, applies to the collection of essays published under the title of *The Federalist*."[83]

Secondly, dealing with the question of extrinsic aids in constitutional construction, Judge Cooley[84] has first referred to the "Proceedings of the Constitutional Convention" and then remarked:

> "When the inquiry is directed to ascertaining the mischief designed to be remedied, or the purpose sought to be accomplished by a particular provision, it may be proper to examine the proceedings of the convention which framed the instrument. Where the proceedings clearly point out the purpose of the provision, the aid will be valuable and satisfactory . . ."

Thirdly, we find that in *James* vs. *Commonwealth of Australia*, etc., (1936, A.C. 578), the Judicial Committee of the Privy Council has declared[85] (per Lord Wright, M.R.):

> "It is true that a Constitution must not be construed in any narrow and pedantic sense. . . . The true test must, as always, be the actual language used. Nor can any decisive help *here* be derived from (the) *evidence of extraneous facts* existing at the date of the Act[86] of 1900; *such evidence may in some cases help to throw light on the intention of the framers of the Statute*, though that intention can in truth be ascertained only from the language used."[87]

Thus, according to the Judicial Committee, the evidence of extraneous facts may in some cases help to throw light on the intention of the framers of a statute.

Fourthly, we find that in *re*: *The Central Provinces and Berar Act No. XIV of 1938* Sir Maurice Gwyer, C.J., has observed:[88]

> "The Judicial Committee have observed that a Constitution is not to be construed in any narrow and pedantic sense. The rules which apply to the interpretation of other statutes apply, it is true, equally to the interpretation of a constitutional enactment. But their application is of necessity conditioned by the subject-matter of the enactment itself; and I respectfully adopt the words of a learned Australian Judge: 'Although we are to interpret the words of the Constitution on the same principles of interpretation as we apply to any ordinary law, these very principles of interpretation

79. See Mr. Basu's article in *The Modern Review* for Feb., 1951.

80. See Willoughby, *op. cit.*, p. 54.

81. Nobody can reasonably object to the limitation suggested by him.

82. See Willoughby, *op. cit.*, p. 55.

83. Willoughby has also quoted Chief Justice Marshall in support of his view. In *Cohens* Vs. *Virginia* (6 Wheat. 264) Marshall, C. J., said: "The opinion of *The Federalist* has always been considered as of great authority. It is a complete commentary on our Constitution; and is appealed to by all parties in the questions to which that instrument has given birth. Its intrinsic merit entitles it to this high rank; and the part two of its authors performed in framing the Constitution, puts it very much in their power to explain the views with which it was framed. These essays having been published while the Constitution was before the nation for adoption or rejection, and having been written in answer to objections founded entirely on the extent of its powers, and on its diminution of state sovereignty, are entitled to the more consideration where they frankly avow that the power objected to is given, and defend it."—See *ibid*, p. 55n.

compel us to take into account the nature and scope of the Act that we are interpreting,—to remember that it is a Constitution, a mechanism under which laws are to be made, and not a mere Act which declares what the law is to be':*Att.-Gen. for New South Wales* vs. *Brewery Employees Union*. . . .

"The Proposals for Indian Constitutional Reform, commonly known as the White Paper[89], and the Report of the Joint Select Committee thereon[90] are historical facts, and their relation to the Constitution Act is a matter of common knowledge, to which *this Court is entitled to refer*[91]; and it may be observed that 'taxes on the sale of commodities and on turnover' appeared in the White Paper as a suggestion for possible sources of provincial revenue, and that the suggestion was approved without comment by the Joint Select Committee."

Fifthly, with reference to the question of the use of extrinsic sources in aid of constitutional construction, Kania, C. J., has recently held that such reference is permissible in certain circumstances. In *Gopalan* V. *State of Madras*, he has stated[92], among other things:

> "Our attention was drawn to the debates and report of the drafting committee of the Constituent Assembly in respect of the wording of this clause[93]. The report may be read not to control the meaning of the Article, but may be seen in case of ambiguity. . . . When a question is raised whether a certain phrase or expression was up for consideration at all or not, a reference to the debates may be permitted . . . Resort may be had to these sources with great caution and only when latent ambiguities are to be resolved."

It is evident from this that Chief Justice Kania of our Supreme Court has also accepted the principle of reference to our *Constituent Assembly Debates* in certain circumstances.[94]

Sixthly, it is worthy of note here that in his *Commentaries on the Constitution of the United States*[95], Judge Story has gone so far as to refer to, and quote, in connexion with the question, "who is final judge or interpreter in constitutional controversies," a letter which Madison addressed in August, 1830, to one Mr. Edward Everett and which was published in the *North American Review* for October, 1830. The reason for this was the importance of the man—I mean Madison.[96]

"As a fit conclusion," he writes, among other things, "to this part of these commentaries, we cannot do better than to refer to a *confirmatory view*[97] which has been recently presented to the public by one of the farmers of the Constitution, who is now, it is believed, the only surviving member of the Federal convention,[98] and who, by his early as well as his later labors, has entitled himself to the gratitude of his country as one of its truest patriots and most enlightened friends."

Story was a judge and he was expected to know what was relevant to, and admissible in, a Commentary on the Constitution of the United States.

Seventhly, we find in Willis:[99]

> "What rules of construction does the United States Supreme Court follow in construing statutes and passing on constitutional provisions? *In the main*, the same principles govern the construction of statutes and the construction of constitutions, but a constitution should have a liberal construction and be interpreted so as to carry out its general objects. The courts should endeavor to carry out the real purpose and intent of a provision. This intent must be embodied in the instrument itself. But if a provision is doubtful it may be examined in the light of its *prior* and *contemporaneous history* . . .
>
> "In exercising its functions, the Supreme Court has sometimes been influenced by *historical considerations*, sometimes by analytical considerations, and at other times by philosophical considerations."

It is clear from this that the letter of the law has not always been a determining factor in constitutional construction in the United States.

Lastly, we find in Beard:[100]

> "Those who are called upon to expound the (American) Constitution continually speak with confidence about 'the intention of the farmers' and cite speeches, letters, and papers to prove their interpretation or another, even though their constructions are frequently opposite in upshot. No doubtedly light can be thrown on the meaning of the Constitution by studying the writings of the Fathers."[101]

Again, referring to the use of "the rational method" in interpretation, Beard[102] says that

> "In seeking to discover what can or cannot be done under the (American) Constitution, the *Courts*, the President, Congress, etc., "also resort

91. The italics are mine.

92. See *The All-India Reporter*, August, 1950.

93. Reference here is to Article 21 of the Constitution of India.

94. It may be interesting to note here that only on 9th February, 1951, Mr. M. C. Setalvad, Attorney-General for India, placed before a special bench of the Patna High Court, in connexion with the question of the validity of the Bihar Land Reforms Act, "*proceedings of the Constituent Assembly* and other documents to show that the Constitution-framers had the welfare of the public in mind in permitting States to legislate for the abolition of the Zamindari system."—*The Statesman*, 14th February, 1951. (The italics are mine).

Mr. M. C. Setalvad "whose sphere of activity" is not "limited to the instruction of the young,' is perhaps expected to know something about the "canons" of constitutional construction.

95. Fourth Edition (by Thomas Cooley), Vol. 1, Section 396, pp. 388-93.

to processes of reasoning, and to various claims, assertions, and inferences. They *cite history, both oral and written*; they refer to their memory of what was done or intended. They make use of quotations from the Bible, preceding judicial decisions, acts of Congress, *speeches by statesmen, and official documents* by authorities presumed to be competent."[105]

Moreover, sometimes resort is had to the "spirit" of the (American) Constitution, and sometimes, again, a certain intention on the part of its authors is presumed in constitutional construction, which does not necessarily follow from its text.

Thus, "looking elsewhere for light," says Beard,[106] "judges of the Supreme Court (in the U.S.A.) frequently refer to the 'nature of the system,' 'the spirit of the Constitution,' and its 'general spirit.' Marshall remarked in the Dartmouth College case, with respect to a certain contention, that the framers of the Constitution 'could never have intended to insert in that instrument' an idea 'repugnant to its general spirit.'[106] Long afterward another judge maintained that there are some limitations, not clearly expressed in the Constitution, 'which grow out of the essential nature of all free governments'."

In *Marbury* vs. *Madison*, also, Chief Justice Marshall made as Beard has pointed out,[106] use of the following *assumption* in the judgment of the Supreme Court:

> "That the people have an original right to establish, for their future government, such principles as, in their opinion, shall most conduce to their own happiness, is the basis on which the whole American fabric has been erected."

It is clear from the above that we are now far away from the view that the text of a Constitution is the only guide to its construction, and that the language used in it is the "acid test," etc., as Mr. Basu seems to think.[107] Reference to debates in Constitutional Conventions, to relevant speeches and writings of statesmen, to history, both oral and written, to inferences and assumptions, etc., is permitted, in certain circumstances, in constitutional construction, and my reference, therefore, to our *Constituent Assembly Debates* was perfectly in accordance with reason, with commonsense, and with well-established principles of constitutional construction. Mr. Basu has qualified his statement with the words "unless there is an ambiguity," but, as a clever lawyer, avoided reference to what would, or should, happen if there were any ambiguity, or confusion, or doubtfulness, or uncertainty, about the "meaning" and nature of a Constitution, or any of its provision or provisions. Now what did actually happen so far as I was concerned? There was a sharp difference of opinion between me and some other persons on the question of the constitutional position of the President of India, particularly, in relation to his Council of Ministers, and also on the question of the true nature of our present system of government. I held—as I do even now—certain views on these questions as set forth in my previous articles in this *Review*.[108] In support of my views I referred to our *Constituent Assembly Debates*. Now reference to these *Constituent Assembly Debates* would really mean reference to the views of some people in the Constituent Assembly, and not to the position of the chairs, tables, benches, etc., in the Assembly. And to whose views did I primarily refer? I referred to the views of persons like Pandit Jawaharlal Nehru, Chairman of the Union Constitution Committee of the Constituent Assembly, Dr. B. R. Ambedkar, Chairman of the Drafting Committee of the Constituent Assembly, and of Shri Alladi Krishnaswami Ayyar and Shri K. M. Munshi, members of the Drafting Committee. I also referred to one or two other confirmatory views. Now I need hardly say anything here about the position and influence of persons like Pandit Nehru, or Dr. Ambedkar, or Shri Alladi Krishnaswami Ayyar in the Constituent Assembly. Even then I would not perhaps have referred to their views if the text of our Constitution had given us a true picture of the position of the President in our constitutional system. It did not, or rather could not, do it. The text would only enable us to have a purely technical and legalistic view of the question, and that would be quite untrue to fact. In *Attorney-General for the Province of Ontario and others* vs. *Attorney-General for the Dominion of Canada and another* (A.C. 571, 1912), the Judicial Committee of the Privy Council stated,[109] among other things:

> "In the interpretation of a completely self-governing Constitution founded upon a written organic instrument, such as the British North America Act, if the text is explicit the text is conclusive, alike in what it directs and what it forbids."

As the text of our Constitution, however, was not explicit, and there were uncertainty, doubtfulness and even confusion in the minds of some people about the *real* position and powers of the President under it, I referred to some views as recorded in our *Constituent Assembly Debates* and also to one or two other corroborative views, in support of my own contention. As I have already stated, my action was quite in consonance with well-established canons of constitutional construction and was, therefore, perfectly justified. We should not forget in this connection that British

Constitutional jurisprudence is not the only jurisprudence in the world: There is also such a thing as American constitutional jurisprudence. If, however, it be held that the views of persons like Professor Willoughby, Judge Cooley, Lord Wright, Sir Maurice Gwyer, C. J., H. J. Kania, C. J., Judge Story, Mr. Setalvad, Professor Willis, and Charles Beard are not entitled to much respect as none of them, so far as we know, have ever been members of the Calcutta Bar, I have nothing to say except this that I am in a very good company and that I can well afford to ignore any uniformed criticism of my action.

There is another aspect of the question. The reason why reference to the parliamentary history of a statute is not ordinarily permissible in legal interpretation, say, in a country like England, is that the English Parliament is a "tripartite" body, consisting as it does of the King, Lords and Commons. What happens in one part of the body is not expected to be known although this view has no meaning today to the other parts. Thus in *Miller* vs. *Taylor* (1769) Willes, J., said[110]:

> "The sense and meaning of an Act of Parliament must be collected from what it says when passed into law, and not from the history of changes it underwent in the House where it took its rise. That history is not known to the other House or to the Sovereign."

We also find in Maxwell[111] that the language of an enactment "can be regarded only as the language of the three Estates of the realm, and the meaning attached to it by its framers or by individual members of one of those Estates cannot control the construction of it."

Now this argument cannot apply to our Constituent Assembly as it was a unicameral constituent body. We should not indulge in reasoning in total disregard of local circumstances.

IV

This rejoinder has become unduly long and must have severely taxed the patience of the reader. I could not help it as I had to deal with a number of controversial points raised by Mr. Basu. I have, however, no desire to prolong this controversy further, unless again compelled, as we have gone far away from its central theme, namely, the position of the President of India.

In conclusion, I should like to say that it appears to me that Mr. Basu and I hold different views about the connotation of the term "Constitution" and that this has led to a difference of opinion between him and me. He seems to have been using the term in a very narrow sense, meaning by it only the "written" elements in a Constitution. I have been using the term, except where a technical necessity required otherwise, in its usual sense, implying by it both "written" and "unwritten" elements in a Constitution. Usage, however, is on my side to-day.

"What is the Constitution of Great Britain?" asks Professor Munro. "It is", he himself answers, "an infinitely complex amalgam of institutions, principles, and practices; it is a composite of charters and statutes, of judicial decisions, of common law, of precedents, and usages and traditions. It is not one document, but thousands of them. It is not derived from one source, but from several. It is not a completed thing, but a process of growth. It is a child of wisdom and of chance whose course has been indifferently guided by accident and by high design."[112]

"What is the Constitution of the United States in its present-day significance?", asks Professor Munro again. "Briefly," he himself states, "it is made up of contributions from six different sources. These are: (*a*) the original document; (*b*) twenty-one amendments; (*c*) hundreds of statutes which provide details for the general provisions of the Constitution; (*d*) thousands of judicial decisions interpreting the Constitution and the aforementioned statutes; (*e*) executive orders which fill in the details of statutes; and (*f*) a countless host of usages, customs, precedents, traditions, and even administrative opinions, which have acquired constitutional strength."*

This view is also supported by Professor W. F. Willoughby who says:[113]

> "It is now recognized, however, that, in the case of all countries, there are many fundamental political provisions which are not set forth in their formal constitutions but which none the less must be deemed to be of a constitutional character. Of no country is this more true than of the United States, which, of all countries, is supposed to have a peculiarly inflexible constitution. . . . The most important fact, from the standpoint of the study of government, resulting from this is that only a very imperfect idea can be obtained of the governmental system of a country as it actually exists and functions by a mere study of its written constitution. The constitution considered alone is a dead, inert thing. It is this that makes the study of government, seemingly an easy task, in fact one of great difficulty, requiring in high degree the exercise of the inquisitive and analytical faculties."

And Ogg says:†

> "The truth is that our written constitution—[the] written constitution that has been in operation [for] a few years—has come to be overlaid with, [and] enveloped by, a mass of rules and usages, not [set] forth at all in the basic text, yet contributing in many instances quite as much to making the gover-

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment what it is as anything within the four corners of the formal document. Some of these added features arise from interpretation, supported by judicial opinion. Many rest upon statute. Still others flow only from precedent or custom."

Jurists also support the above view.

"A constitution," says Holland,[114] "is often, as in England, an unwritten body of custom, though, since the assertion of the 'rights of man' which preceded the Independence of the United States and the French Revolution, the written enactment of such fundamental principles has been not uncommon, as well on the European continent as in America."

And Sir John Salmond, a Judge of the Supreme Court of New Zealand, says in his *Jurisprudence*,[115] considered by some people as "a legal classic":

"The constitution (of a State) is both a matter of fact and a matter of law. The constitution as it exists *de facto* underlies of necessity the constitution as it exists *de jure* . . . The constitution as seen by the eye of the law may not agree in all points with the objective reality. Much constitutional doctrine may be true in law but not in fact, or true in fact but not in law. Power may exist *de jure* but not *de facto*, or *de facto* but not *de jure* . . . Nowhere is this discordance between the constitution in fact and in law more serious and obvious than in England. A statement of the strict legal theory of the British constitution would differ curiously from a statement of the actual facts. Similar discrepancies exist, however, in most other states. A complete account of a constitution, therefore, *involves a statement of constitutional custom as well as of constitutional law*. It involves an account of the organised state as it exists in practice and in fact, as well as of the reflected image of this organisation as it appears in legal theory . . . Constitutional practice may alter, while constitutional law remains the same, and *vice versa*."

Finally, in my second article[116] in this series I rebutted a view of Hughes, C.J., quoted by Mr. Basu, with a view of Professors Ogg and Orman Ray, quoted by me. Mr. Basu appears to have demurred[117] to it. My rebuttal, it is gladdening to note here, has the support of no less an authority than Judge Cooley, referred to by Bryce, himself a great jurist and historian, as an "eminent constitutional lawyer."

"We may think," says Judge Cooley, "that we have the Constitution[118] all before us; but for practical purposes the Constitution is that which the government, in its several departments, and the people in the performance of their duties as citizens, recognize and respect as such; and *nothing else is*."[119]

Bryce endorses this view with the general observation:[120]

"The solemn determination of a people enacting a fundamental law by which they and their descendants shall be governed cannot prevent that law, however great the reverence they continue to profess for it, from being worn away in one part, enlarged in another, modified in a third, by the ceaseless action of influences playing upon the individuals who compose the people."

Thus authority is pitted against authority. Let Mr. Basu coolly think over the whole matter. Meanwhile, let me come back to, and reiterate, the point emphasized by me in my first article:[121]

"The Constitution of a country is not to be found in its law alone."

———:O:———

NOCTURNE

By CYRIL MODAK

You are to me a melody
That runs through all my days,
And sweetly thrills, with music fills
My heart to burst in praise!

From every hour as from a flower
Your memory's fragrance spreads;
And every thought desire-fraught
For you its tribute sheds.

While others sleep in silence deep,
And drowsy is the air,
Till inky night melt into light,
I seek your Image fair.

In one caress, Ah! Love, to press
Your beauty on my heart,
With one wild kiss of burning bliss
Become of you a part!

Till like a flood my surging blood
Break floodgates of your being,
And sweep our hearts to heights where starts
All feeling, hearing, seeing!

O sorry waste! . . . I cannot taste
Night's joy-feast and love's wine,
Till I can rest on your dear breast
This sleepless head of mine!

IMPEACHMENT AND DEMOCRACY

Digitized by Arya Samaj Foundation Chennai and eGangotri

By Prof. RAMESH CHANDRA GHOSH, M.A.

As is well-known, the fundamental principles of the Cabinet system of Government are two: the dual executive and the collective responsibility of the Ministers to the legislature. The Constitution of India provides for both these principles. The President is the Head of the State. All executive powers are vested in him and executive actions shall have to be taken in his name.[1] But the real executive is the Cabinet or Council of Ministers who are collectively responsible to the Indian Parliament or more correctly, to the House of the People.[2] We can, therefore, conclude that we have a Cabinet system of Government.

But there are some who have expressed fears that the President may turn out to be a dictator,[3] especially as all powers vested in the President, throughout the body of the Constitution, are legal powers which the Courts are bound to recognise; secondly, because the Ministers hold office during the pleasure of the President[4]; and lastly because, there is no obligation on the part of the President to act always on the advice of the Council of Ministers.[5] Dr. Sen Gupta goes so far as to say that in case of sharp differences between the President and the House of the People, the former may try the same *coup d'etat* which von Hindenburg resorted to in 1932. Therefore, he suggests that the dual responsibility of the Ministers to the President and the House of the People should be put an end to by a "suitable amendment of the Constitution," while Mr. V. N. Srivastava and Dr. B. M. Sharma suggest that it should be made obligatory on the part of the President to act always on the advice of the Ministers. It is submitted that all these fears are groundless and the suggestions are worse than useless. They show a lack of profound insight which led the Constituent Assembly to adopt Art. 75 in its present form.

There are occasions when the President cannot and should not act on the advice of the Council of Ministers. As it is not the object of my article to enumerate the occasions when the President may refuse to act on such advice, I will mention here only a few cases. When there is no party with an absolute majority in the House of the People, and a Coalition Ministry suffers a defeat very soon after the general election, by the withdrawal of the support of a section of the House, and the remedy of dissolution is also not readily available, the President may legitimately exercise his discretion in the selection of the new Prime Minister. A defeated Ministry has no right to advise the President as to the selection of its successor.[6] The President may also refuse to give his assent to a Bill by which a fascist Government tries to subvert the Constitution. He may dismiss the Ministry and dissolve the House of the People. He may refuse to act on the advice of the Council of Ministers when they are

> "pursuing a policy which subverted the democratic basis of the Constitution, by unnecessary or indefinite prolongations of the life of the Parliament, by gerrymandering of the constituencies in the interests of one party or by fundamental modification of the electoral system to the same end."[7]

As Wade and Phillips point out:

> "Even in England, there are some matters which fall to be determined by the exercise of his personal judgment, and in particular the appointment of a Prime Minister, and in some circumstances the dissolution of Parliament."[8]

Normally, the President will dissolve the House on the advice of the Premier; but when an alternative Ministry is possible, the President may well refuse dissolution in such a big country like India with an electorate of over 170 millions.

However, all these do not mean that our President will be a dictator. The Ministers no doubt hold office during his "pleasure"; but, this "pleasure" must be exercised in harmony with the principle of collective responsibility of the Cabinet to the House of the People. For, this principle is a part of our Constitution [Art. 75(3)], and the President, by the terms of his oath, is bound to "preserve, protect and defend the Constitution and the law" and to devote himself to "the service and well-being of the people of India."[9]

The oath naturally reminds one of the sanctions behind the conventions of the British Constitution. There is no doubt now that these conventions are obeyed in the U. K. not because their violations will lead to a breach of the law; for, in that case, there is nothing to prevent Parliament to amend the law; but because the people or their representatives in Parliament want these conventions to be so observed and respected. For, these conventions ensure efficient government and the supremacy of the people. Says Dicey:

"Our modern code of constitutional morality secures, though in a round-about way, what is called abroad 'the Sovereignty of the people'."[10]

To use his words again, these conventions are "intended to secure the ultimate supremacy of the electorate as the political sovereign of the State."[11] Therefore, all breaches of conventions "are far more likely to lead to political action than to proceedings in Court being brought against the offender."[12]

It is to be remembered that the principle of Collective responsibility of Ministers is the most important convention in Great Britain. It has been described as "the foundation of Parliamentary Government as it is known throughout the British Commonwealth."[13] Lord Salisbury regarded it as "one of the most essential principles of parliamentary responsibility." Fortunately for us, this fundamental convention has been incorporated into the body of our Constitution and elevated to the status of a rule of law. Nevertheless, there are some who doubt that it may not function properly as the Ministers "hold office during the pleasure of the President" who is not bound always to act on their advice. An attempt will be made here to show that this doubt is baseless.

Our Constitution not only compels the President to take the oath or affirmation of loyalty to the Constitution, but prescribes punishment for "the violation of the Constitution."[14] If the President violates the principle of collective responsibility of the Ministers to the House of the People, which is a part of the Constitution, he violates the Constitution, unless he can show and maintain that he has done so, for the "well-being of the people of India," or for defending and protecting the great and eternal principles of our Constitution enshrined in the Preamble, *viz.*, the principles of Justice, Liberty, Equality and Fraternity, which the "people of India" have solemnly resolved "to secure to all its citizens." If the people want the President to be a dictator, nobody can prevent him from being that; for he will dismiss the hostile Ministry and dissolve the House of the People and easily secure a pliant majority to have his own way. But in that case, he is not an autocrat, but a true representative and servant of the people. On the other hand, if the people are opposed to his dictatorship, any violation of the Constitution by the President will at once set the great machinery of impeachment in motion against him. The charge may be preferred by either House when a resolution moved after at least fourteen days' notice and signed by one-fourth of the total number of members of the House, is passed by two-thirds of the total membership of the House.[15] When a charge has been so preferred, the other House is to investigate it or cause it to be investigated by a suitable body. The President is entitled to appear personally and to appoint lawyers to represent him. If the investigating House, by a resolution passed by a majority of not less than two-thirds of the total number of members of that House, declares that the charge has been sustained, it will have the effect of removing the President from his office.

Such a system of impeachment prevails in almost all republics for the trial of the Head of the States, and in England, for all persons except the king who "can do no wrong."[16]

In England, impeachment has almost fallen into disuse. The last impeachments were those of Warren Hastings (1788-95) and Lord Melville (1805). An unsuccessful attempt was made by Thomas Anstey to impeach Lord Palmerstone in 1848. Of course, conventions are now observed in Great Britain not because of the fear of impeachment, but because of public opinion; otherwise, as Dicey says, they would be no 'understandings' at all but 'laws' in the truest sense of the term and "their sole peculiarity would be in their being laws the breach of which could be punished only by one extraordinary tribunal, namely, The High Court of Parliament."[17] But it should not be forgotten that though the dread of the Tower and the block exerts no appreciable influence today over the British statesmen, yet even Dicey admits that in the past "the habit of obedience to the constitution" *i.e.*, "the observance of constitutional morality" was generated and confirmed by impeachment.[18] Recently, a good deal of confusion has become noticeable in some writings about the true nature of impeachment. Mr. K. K. Basu has made a wrong statement that impeachment in the U. K. and the U.S.A. had always been based on the violation not of constitutional morality or "traditional maxims of parliamentary Government," but of "an express provision of the Constitution."[19] Another writer, Dr. B. M. Sharma, thinks that even if the President chooses "to effectively exercise some of his powers independently of the Council of Ministers . . . he will not be guilty of violating the Constitution."[20] Dr. Sharma has especially in mind the powers of the President to issue Ordinances under Article 123, and Emergency Proclamation under Article 352 of our Constitution. All these raise the important question: What is 'Violation of the Constitution?' What is the exact scope of impeachment?

In England, impeachment is, of course, a judicial and not like the Bill of Attainder, a legislative proceeding against a Lord or a Commoner. The person may be accused of treason or felony or a high crime or misdemeanour.[21] The words 'treason,, 'felony,' mean offences under statutory or common law; but "high crime" or "misdemeanour" are offences for which no definition is to be found in the statutory or the Common law.[22]

May says:

> "Impeachment by the Commons for high crimes and misdemeanours beyond the *reach of the law* or which no other authority in the State will prosecute, is a safeguard of liberty."[23]

It was a procedure availed of for trying "great political offenders whom the *ordinary powers of law fail* to reach."[24] Anson says that it was one of the main weapons of the commons to gain "control over the conduct of the ministers of the Crown" and, in the seventeenth century it was freely used "as a check on Ministers whose policy displeased them."[25] Keith says that it was used "as a means of bringing ministers of the Crown to account for conduct opposed to the welfare of the State."[26] Impeachment lost its value and fell into disuse in England only when the House of Commons became so powerful "to control and review the conduct of ministers as to make it impossible for them to conduct business without a parliamentary majority."[27]

It may be shown that the same practice obtains in France. In the Third Republic the only case of impeachment was that of Louis J. Malvy, Minister of the Interior (1914-1917). The Senate condemned Malvy without basing its decision on the Criminal Code. In the words of Barthelemy :

> "The Senate proclaimed its sovereignty, affirming that it was not bound by the law and could punish any fault which seemed most just even if not provided for by the law."[28]

Such a tenet receives justification provided the Senate keeps itself within the bill of impeachment passed by the Chamber.

> "The tenet," goes on Barthelemy, "has been traditionally recognised in France since the Charter of 1814, which was itself borrowed from the English ruling. Moreover, it should be noted that if there were no such rule, it would have to be invented, for, without it Ministerial responsibility would be nothing more than a name."

The Constitution of the Third Republic made the President impeachable only for "high treason." Article 68 of the Fourth Republic contains an exactly similar provision though the process of trial prescribed in Article 57 is different from that of the Third Republic. Though no President has been impeached in France, yet Sait thinks "the Constitution obviously intends that high treason should be regarded in the political rather than in the strictly criminal sense."[29] But France has developed a new method for removing an undesirable President before the expiry of his tenure of office although he may not be charged with "high treason." In 1887, Jules Grevy was compelled by Parliament to resign from his Presidentship within a year of his re-election, on account of the sinister influence which he allowed his son-in-law, Daniel Wilson, to exert over him in the distribution of presidential favours.[30]

Again in 1924, another President, Alexander Millerand, was forced by the Parliament to vacate because of his attempt to increase Presidential powers, his participation in election campaigns, his support for a particular political party (the National Bloc), his recalling M. Briand from Cannes by telegram and thus compelling him to break off his negotiations with Mr. Lloyd George. After the election of 1924, M. Herriot refused to form a government at the invitation of M. Millerand, whereupon the President asked a member of the minority to constitute a Ministry. This led the Chamber of Deputies to pass the following resolution:

> "The Chamber, considering that M. Millerand, President of the Republic, has in conflict with the *spirit of the Constitution* pursued a personal policy, considering that he has openly taken sides with the National Bloc; considering that the policy of the National Bloc has been condemned by the country, is of the opinion that the continuance of M. Millerand at the Elysee would injure the Republican conscience, would be the source of incessant conflict between the Government and the Head of the State and a constant danger to the regime itself."[31]

The Senate supported this resolution and so Millerand had to vacate. In France, some of the legal purists regarded these two actions of the Parliament as unconstitutional, for they held that the President was elected for a fixed term of seven years and that his responsibility was legal and not political. Thus Malezieux writes :

> "A deux reprises, en 1887 pour Grevy et en 1924 pour Millerand, le President de la Republique a été contraint de demissionner devant l'hostilite que lui manifestait le parlement. Le Chambre avait decide qu'elle refuserait de collaborer avec tout gouvernement nomme par le president. Cette pratique était sans aucun doute inconstitutionnelle."[32]

But the vast majority of French writers think that

Digitized by Arya Samaj Foundation Chennai and eGangotri

while in neither of these two cases a charge of "high treason" could be legally maintained, yet the action taken by the Parliament was a mere logical application of the theory of ministerial responsibility. As Prelot says:

"Celle-ci est, en effect, la contrepartie de l' irresponsabilite presidentielle. Si aucun homme politique, susceptible de reunir une majorite parlementaire n'accepte de'assumer la premiere, la seconde s'evanouit. Exceptionnelle mais effective, il est done institue une revocabilite indirecte du president."[33a]

Prelot, relying on Vol. III of *Caillaux's Memoires*, observes that had the first World War not broken out, President Poincare would also have been forced to vacate in the same way, in the autumn of 1914.[34] In this connection it may be noted that our Constitution makes the President impeachable not for "high treason," but for "violation of the Constitution"—a term comprehensive enough to include, *inter alia*, the violation of the principle of ministerial responsibility provided for by Article 75(3).

The Constitution of the Union of Burma states the grounds of impeachment very elaborately. Article 54(1) of that Constitution runs thus:

"The President may be impeached for—(*i*) High Treason; (*ii*) Violation of the Constitution; or (*iii*) gross misconduct."

The Italian Constitution of 1947 prescribes impeachment of the President for "high treason or violation of the Constitution."[35] The Constitution of Eire (1937) says: "The President may be impeached for stated misbehaviour."[36] The meaning of these terms, the purpose of impeachment, the nature of the charges, etc., will become very clear if we analyse the system of impeachment prevailing in the United States of America.

In 1804, Judge Pickering of the Federal District Court of New Hampshire was impeached, convicted and removed from office not for any indictable offence but for misconduct on the bench, loose morals, drunkenness, intemperate habits, etc. Article II, Section 4 of the Constitution of the U.S.A. says:

"The President, Vice-President and all civil officers of the United States shall be removed from office on impeachment for and conviction of treason, bribery or other high crimes and misdemeanours."

Article I, Section 3 Clauses 6 and 7 vest in the Senate the sole power to try all impeachments, limit the punishment to removal from office and disqualification to hold and enjoy any office of honour, trust, or profit under the United States," make the party convicted further liable and subject to indictment, trial, judgment and punishment according to law," and require that when the President is impeached, "the Chief Justice of the Supreme Court shall preside." In the U.S.A., the charges are voted by the House of Representatives by a majority vote, that is, a majority of a quorum only.[37] But the most important thing for us to note here is how charges are framed and whether they are all bound to be based on indictable offences. In short, it may be said that the practice in the U.S.A. is the same as in England.

In 1805, Justice Chase of the Supreme Court was charged with misdemeanours, *i.e.*, for conducting himself "in a manner highly arbitrary, oppressive and unjust," for "disregarding his judicial functions," etc. In 1862, Judge Humphreys was impeached, convicted and removed from office for favouring the cause of the Confederacy. In 1868, President Andrew Johnson was charged with "high crimes," "misdemeanours," delivering "harangues," making "unconstitutional declarations," etc. He was no doubt acquitted as was Justice Chase. But five of the eleven articles charged him with the "violation of the constitution,"—an expression which occurs in our constitution. The American Senate agreed that the Chief Justice as the presiding officer, would have the right to pass upon the admissibility of evidence; but, if there was any objection, the right to decide the point at issue finally, was retained with the Senate. The statement of Ben Butler, on behalf of the prosecution, bears quotation. Butler said:

> "We define therefore an impeachable high crime or misdemeanour to be one in its nature or consequences subversive of Government or highly prejudicial to the public interest, and this may consist of a violation of the constitution, of law, of an official oath, or of duty, but an act committed or omitted, or, without violating a positive law, by the abuse of discretionary powers from improper motives, or for any improper purpose."[38]

Again, in 1913, Judge Archibald of the Commerce Court was removed by impeachment for soliciting for himself and friends valuable favours from railroad companies while they were litigants in his court. In 1926, District Judge English was charged with partiality and favouritism. In 1936, Judge Ritter of Florida District Court was removed for "want of integrity," though he was acquitted of the specific charges against him. Under such circumstances, it appears beyond dispute that "high crimes and misdemeanours" include what is called "lack of good behaviour," or, "any act of wilful misconduct or any act which tends to put the office in disrepute," or, as Story says, "for subverting Constitution and introducing arbitrary power."

Whether any offence is impeachable or not, it is for the House of Representatives to decide in the first instance and for the Senate to decide finally, and, as

Corwin points out, "from this decision there is no appeal."[39] But Corwin seems to have endorsed a different view in his another book where he inclines to the opinion of former Justice Benjamin R. Curtis, acting as one of President Johnson's Counsels, that "high crimes and misdemeanours" mean "offences against the laws of the United States."[40] This is obviously not tenable. As Cooley remarks:

> "Impeachment is for the purpose of punishing misconduct. . . . It is often found that offences of a very serious nature by high officers are not offences against the criminal code, but consists in abuses or betrayals of trust or inexcusable neglects of duty which are dangerous and criminal because of the immense interests involved and the greatness of the trust which has not been kept. Such cases must be left to be dealt with on their own facts and judged according to their apparent deserts."[41]

Joseph Story held almost similar views; the only difference was in his thinking that the trial must be held according to the principles of natural justice which he seemed to have found at the basis of the common law. As regards the use of impeachment for trying political offences, there is no difference between his views and the standard opinion in Great Britain. He writes in his usually clear style :

> "Political offences are of so various and complex a character, so utterly incapable of being defined or classified that the task of positive legislation would be impracticable, if it were not almost absurd to attempt it (§ 797) . . . Congress has unhesitatingly adopted the conclusion that no previous statute is necessary to authorise an impeachment for any official misconduct (§ 799)."

After mentioning several impeachable offences like malversations and neglects in office, attempt to subvert the constitution and introduce arbitrary power, etc., Story concludes that

> "One cannot but be struck, in this slight enumeration, with the utter unfitness of the common tribunals of justice to take cognizance of such offences, and with the entire propriety of confiding the jurisdiction over them to a tribunal capable of understanding and reforming and scrutinizing the polity of the state and of sufficient dignity to maintain the independence and reputation worthy of public officers (§ 800)."[42]

Munro's opinion that "general incompetence or bad judgment or the unwise use of discretion are not grounds for impeachment" is therefore, neither correct nor in consonance with the practice that obtains either in England or France or the U.S.A. So great an authority as Hamilton wrote as early as 1788 that the subjects of the jurisdiction of the Court of impeachment "are those offences which proceed from the misconduct of public men or in other words, from the abuse or violation of some public trust. They are of a nature which may with peculiar propriety be denominated *Political*, as they relate chiefly to injuries done immediately to the Society itself."[43] This is still the last word on impeachable offences.

It is therefore submitted that the fears of Dr. S. Gupta, Dr. B. M. Sharma, Mr. V. N. Srivastava and others thinking in a similar way, are groundless. Our Parliament faithfully represents the national will; the President can never become a dictator; for the moment he dares going against such will, he invites trouble on numerous counts. The range of impeachable offences is very wide and "violation of the Constitution" means violation of the cardinal principle of ministerial responsibility, which is not a convention but a law of our Constitution. Not that the President will be impeached now and then. No great nation can afford to get its Head of the State impeached frequently. If impeachments happen in quick succession, it will only prove that the nation is unfit for self-government; for, it fails to produce a great man who will be the symbol of its unity, the centre of all political gravitation, the personification of that elusive entity called the "State." Though the President will not be impeached frequently, he will always work under the sword of Damocles hanging over his head. During a decade or two the President, the House, the People and the Nation will, no doubt, remain conscious of this sword. But with the passage of time and the growth of democratic practice and tradition this consciousness will certainly fade away from our memory. Impeachment will then fare the same fate in India as it has done in Great Britain. The President, like the king in England, will be the great centre of national honour, the fulcrum of all our political and social activities, theoretically vested with a multitude of powers, but actually exercising only a few of them in his discretion, and that, too, rarely, and invariably in consonance with the public opinion.

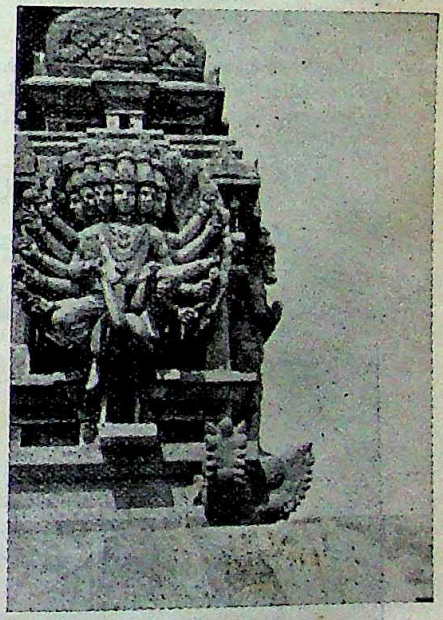
THE SIKKIL TEMPLE

By L. N. GUBIL

The whole of South India is, as it were, a network of ancient temples not only of architectural beauty but also of hoary traditions.



The front view of the Sikkil Temple with the Kalyana Mandapam

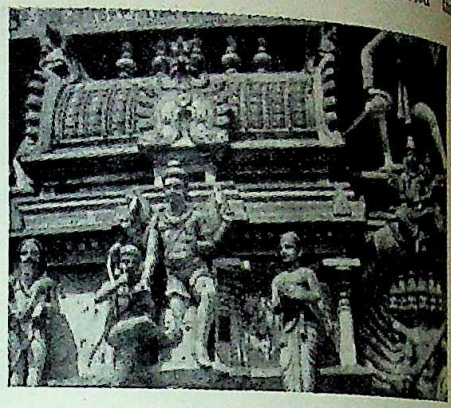
Sanctum sanctorum of Sri Singaravelavar, Sikkil

One of the more important temples worth visiting by any tourist is that at Sikkil near Nagapattinam in Tanjore district. The presiding deity of this temple is Navaneeteswaraswami represented by a Lingam installed centuries ago by Rishi Vashista who moulded the Lingam out of butter called *Navaneetam* from the milk of the divine cow Kamadhenu. The tradition in regard to this is that, as a result of the Kamadhenu having eaten on one occasion the flesh of a dead dog, Lord Siva transformed her into a tiger, subject to her regaining her original form after bathing in the holy tank at Sikkil.

This tank was filled with divine milk by Kamadhenu and hence the tank in the temple is called *Ksheera Pushkarani*. The other popular deity installed in the temple is Sri Singaravelavar so called because of the beautiful and luminous shining form in which the idol is made. The Velayudham is provided in his hand, the symbolic meaning of this being that the weapon is always available for the destruction of evil in the interest of the protection of good.

Architectural workmanship of Sri Subramanya at Sikkil, Rajagopuram

There is also a Vishnu deity enshrined in an adjoining temple. It is stated that Lord Vishnu obtained the blessings of Siva at this place before subduing Mahabali.



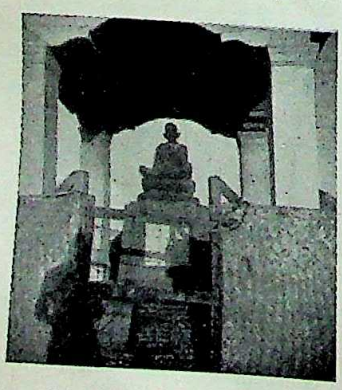
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It may be of interest to note in this connexion that the regular temple was built several centuries ago by a King of Ayodhya called Sri Muchukunda Chakravarti. The renovation work was carried out by a Chola King named Kochin Kannan in the fourth century. The Pandyan dynasty also supported the temple with rich gifts in the thirteenth century. A munificent gift of gold coins by the Emperor of Vijayanagaram in 1350 A.D. can be seen now. The temple deities have been referred to in divine praise by Sri Thirugnana Sambandar in his *Thevaram* and Saint Arunagirinathar in *Thiruppugazh*.

Another view of workmanship in Rajagopuram showing Ravana carrying Kailas Parvat

Architectural workmanship of Kannappa Naimar at Sikkil Temple



The Kaliana Mandapam situate in front of the temple is 300 feet long and 60 feet wide and is used for celebrating the Skanda Shasti festival which attracts thousands of people from adjoining places.

THE GOLDEN SANDS

By M. K. KRISHNAN

Picnic is a pleasant pastime. A drive through jungles and valleys, a dive in rivers and seas, or a repose on sands and grass, brings a lively relaxation to the body and mind of a person who spends his days and nights in the midst of the din and bustle of a boisterous city.

Mahatma Gandhi's statue

Children dig a well

India's sea-shore is even and regular, but there are only a very few places easily accessible where com-

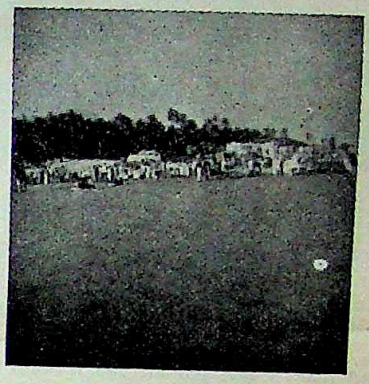
folk can go with their family, take rest, make merry and enjoy week-end holidays. Juhu, one of the healthiest resorts on the sea-shore, is the Brighton of Bombay. On one side the gentle waves toss with silver

Display of sand-art

sprays, while on the fringes palm-groves and brooms grow on the sandy banks making the land lovely where true hearts listen to the music of life.



Fruit-sellers on sands

The calm and tranquil atmosphere of the sandy banks is sanctified by the simple and graceful statue of Mahatma Gandhi, whose life was like the open sea where all could fish as they liked. Children were fond of Bapu and they used to play by his side. Yes, Bapu too was fond of them.

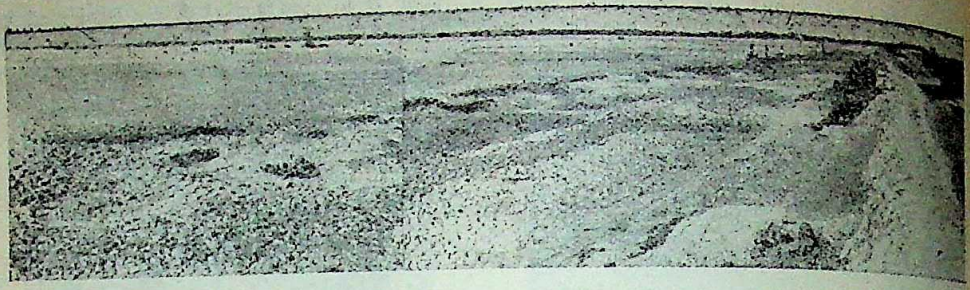
It is a pleasure to watch children at play. How enthusiastically they dig their little wells, how artistically they build their sand-homes, how rhythmically they sing and dance. Some are fond of kite-flying, others like riding, swimming and rowing. Children make Juhu a paradise. One forgets one's woes and worries of life.

Juhu is an open market. Every Sunday all kinds of hawkers gather on the sands and they reap a good harvest on these days. Display of sand-art occasionally pleases the eyes of picnic parties.

The open market at Juhu

Juhu and Versova, side by side, are a lovely stretch of golden sands where weary souls find a sanctuary of quietude and happiness. Lovers find on

Versova sands



the sands a world apart, where no one interferes with their quiet joy, and life seems so lovely and full of romance.

The sun-set at Juhu is magnificent. After his long and tiresome work the red sun retires in the West, and reddens and kisses the breasts of the ocean under the cover of a coloured sky. And "no tears dim the sweet look that Nature wears." One feels while reposing on the golden sands of Juhu that

"The whole of the world was merry
One joy from the vale to the height,
Where the blue woods of twilight encircled
The lovely lawns of the light."

Panoramic view of the lands damaged by the entry of the saline water. The claycy nature of the soil close to the bunds under repair can be seen from the cracks

SAGAR ISLAND—ITS AGRICULTURE AND ALLIED PROBLEMS

By MURARI PROSAD GUHA, M.A.

Transport and shelter are the two limiting factors to visit *Sagar Island*. Only during winter the river route is more or less safe for a journey and the choice there is limited too. They are the irregular launch and the numberless *sampan*-like boats at Diamond Harbour, common to the eye at all the coastal habitations. In other seasons, specially during the rains, the launch stops and the only means of transport is the boat and accidents

Diamond Harbour from our launch

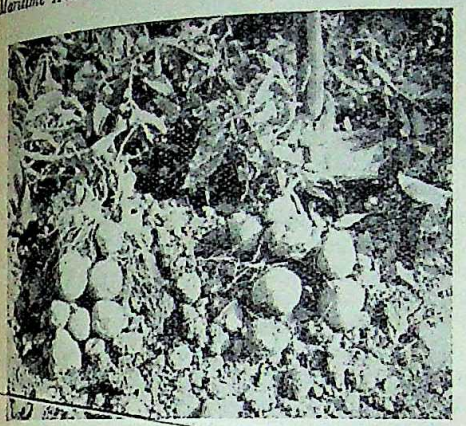
are not rare. The land and river combined route is a bad road up to Kakdwip (at the end of the mainland) that is on the way of a new birth of being metalled, and from there to cross the river for the northern end of the island. During seasons other than winter the waves are high and fearsome and even the toughest swimmer may have to think for them. During winter it is more or less calm.

We reached the island's northern end—mud point—Kachuberia, the conventional steamer ghat in a launch from Diamond Harbour in the evening just before sunset. But here unlike Diamond Harbour there is no jetty and a countryboat lifts the passengers and literally throws them on the quagmire. The shore is a real bog with knee-deep sticky clay even during the driest months. Bare-legged we crossed this and reached the bank to wash the mud with difficulty.

The only road worth mentioning, the district board road, runs from here and goes straight south to Sagar point where the island is washed by the Bay of Bengal and where the *Sagar Mela* annually takes place on the *Paus Sankranti* day (this year on 14th January). The other routes are the tops of the embankments that protect the cultivable lands from the entry of saline water.

These embankments are the vital links of the present-day Sagar Island. Every year some embankments give way to the forcing waves of the saline river water and the crop is lost, the soil becomes barren due to salinity and takes years to come to the original condition. In some years the damage becomes terrible and this was the case last year. You can see from the photograph how it has damaged the crop after breaking the embankments. The repair has started. This breaking of embankments will continue because the tidal water level has risen but not the land of the Sagar Island where cultivation started premature.

The system of land management is peculiar here and there is a story behind this and let me draw the background to you.

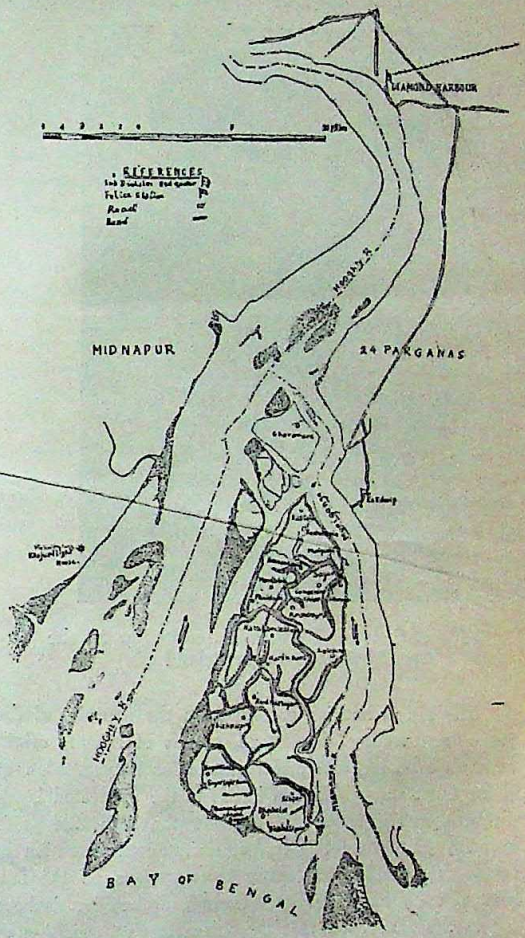


Where the Ganges meets with the sea (*Sagar Sangam*) and between 21 deg. 36 min. and 21 deg. 56 min. N. and 88 deg. 2 min. and 88 deg. 11 min. E. lies the Island of *Sagar* deriving its name from the legendary *Sagar Raja* of the *Mahabharata*.

The history so far traced tells that this island

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



was a base for maritime power of Maharaja Pratapaditya, our illustrious forefather. After his downfall its glory was lost and nature took the task of taking the island to her laps. (*History of Indian Shipping and Maritime Activity*, 1912, pp. 218).

The good yield of potato plants raised from seeds supplied from Government cold storage

After so many years of decline and fall of empires the Britishers desired to clear the island in 1810 to benefit navigation. Some attempts failed. In 1818 a company was started with a capital of 2½ lakhs and concessions from the Government. The management made a good progress but a gale in May 1833 frustrated everything. Some European gentlemen again undertook the task and made a good headway in cultivation of paddy and production of salts with Government's permission, although storms came and passed in 1842, 1848 and 1852. The rent-free term was extended up to 1863. Most of the lands in the northern portion was cleared and the rest remained jungle except the area of the light-house established in 1808 at the southern end of the island. But again natural calamity stood in the way and cyclone and storm waves in 1864 and 1867 called attention of the authorities. Leaving aside the enormous destruction only 1,500 persons survived out of 5,600 in 1864 cyclone. It was settled to erect a place of refuge, in each of the five estates, now unions, in the form of a tank surrounded by 16½ feet high embankments and all homesteads should be within a mile and connected with embanked paths. These embankments have risen still higher and is still present. With these and other minor conditions the estates were granted rent-free in perpetuity in 1875. (*District Gazetteer*—Bengal).

From then it went on developing with migrated population mainly from Midnapore and also 24-Parganas, some of whom were released criminals as at that time the island was not a paradise. The last European sold it to a Bengalee Raja, and the Zamindary flourished with clearing of jungles and its conversion to rice fields. Today only a part in the south-east is a reserved forest (4027.88 acres) under the control of a ranger at Sikarpur. The forest is meant for timber, etc., needed for the local population to construct their houses and for their fuel. Culturable waste land in 1944 was 7051.98 acres but during these few years more lands have come under the

Map of Sagar Island

plough. Today there is no ferocious animal in the island. The population went on increasing as will be revealed from the census figures and it is still on the increase due to more migration and new birth and is ideal for the rehabilitation of displaced persons :

Year of census.	Area in Sq. miles.	No. of villages (no town).	Total population	Density per sq. mile.
1921	84	15	19,445	231
1931	205	45	31,505	154
1941	224	46	44,941	201

The climate of the island is ideal for the closeness to the sea. The ten years' average maximum temperature is 89.8 F. in May and minimum 59.9 F. in January

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(Stats. Abs. W. Bengal 1948, pp. 58), and the variation is never sharp. The health is quite good, only cholera comes every year with the Sagar *mela* and there is a permanent cholera hospital at the *mela* grounds to prevent spreading. Malaria was more or less absent before the flood of 1943 and is not of serious nature even now.

The author (*right*) with his colleague on the way to Sagar Island

The soil is alluvial, created from the deposits of the rivers surrounding the island, and is of recent origin and this is one of the main reasons for impregnation of saline water through broken bunds to the cultivated lands frequently. The main land is below the high tide point at many places and this has necessitated the creation of bunds to control flood. Many investigations on the reasons of entry of saline water through broken bunds have led to the conclusion that through nature's deposition of silt the level of the island will have to be raised by breaking bunds in a planned way and rehabilitating the people thus displaced, so long the block is exposed to tidal water.

Aman paddy is the main crop in the island and although the soil is very much suitable for double cropping, as has been found from crops raised in the island specially for cultivation of potato, wheat, oilseeds, sugarcane and jute. The lands are fertile and though no manure is used the average yield of paddy obtained is 30 mds. per acre provided no natural calamity damages the crop. The main difficulty in growing potatoes, other vegetables and *rabi* crops is cattle tresspass. The condition of cattle is very poor and they are not stall-fed and left to their destiny after the harvest of paddy. This can be solved if a two-pronged drive is given, first by growing oilseeds like mustard and groundnut—which it has been found to give good returns in the island—and secondly utilising the oil-cakes by stall-feeding the cattle. If cattle tresspass is controlled economic and high-yielding crops like potatoes can be grown round the homesteads with success. This year a good crop was raised from seeds supplied to the cultivators of the island from the Government cold storage.

The main difficulty is transport of seeds and manures as there is no all-weather road and the only road from the mud point to the *mela* ground about 25 miles long is also not in order. Main transport is with manual labour and in boats through the few *khals*.

Near the thana at Muriganga is a post office and there is a ferry station. Close to the forest office is a rice mill. In addition to this, there is only one high school at Mandirtala and no place for recreation in the whole island consisting of agriculturists mainly. Like European and American growers they deserve some incentive in the form of subsidy for the marginal produce where the law of diminishing return operates. Seeds and manures may also be subsidised and bonus for high yield may be made available to them as also concession for transport of seeds and manures from the mainland.

The land system complicates the land management. The saline water always tries to enter to deprive the tiller of its produce and the zamindar is reluctant to repair the damaged bunds in time and though this is his obligation he cannot be forced for this fault. Last year there was a great loss and you will find that up to the long distant villages from the spot where the labourers are mending the damaged bund, nothing survived.

Something is to be done for Sagar to make it a golden island in these days of food crisis and this something cannot come through coercion but through co-operation and co-ordination and above all with a mind to bring good to the toilers of the *soil*.

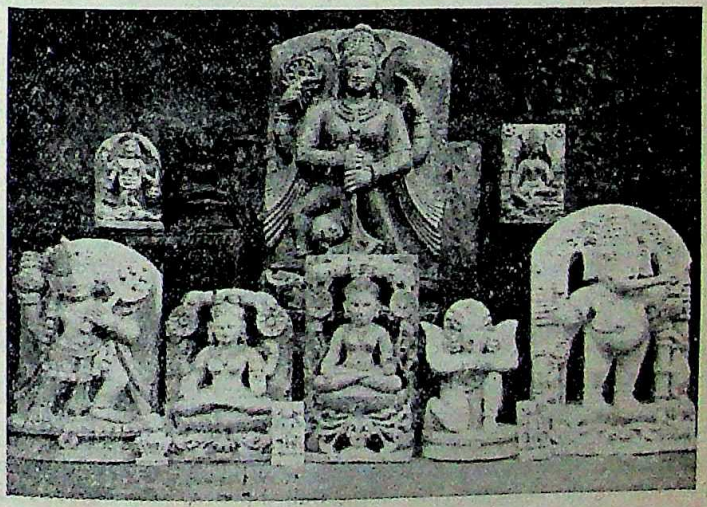
A SCULPTOR AT WORK

By DURGA PRASANNA DAS

The towering and impressive remains of the ancient art of sculpture in India that have defied the vagaries of time

Mahishamardini by Damodar Maharana

always lead an observer to amazement. They prompt a spontaneous sense of respect and unequivocal praise for the deserving artists who put these superb specimens of beautiful figures and gorgeous temples into shape, and serve as brilliant finger-posts to India's glorious past.



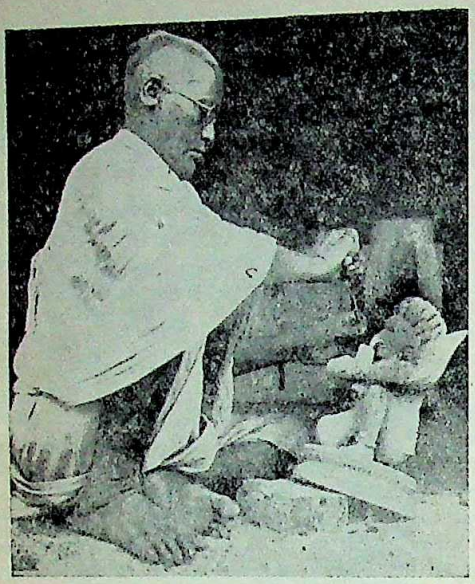
The following revealing lines from *The Discovery of India* by Pandit Jawaharlal Nehru give an accurate idea as to the way such magnificence thrived at particular centres of culture in ancient India :

"One rather extra-ordinary development emerges from the Jataka accounts. This is the establishment of special settlements or villages of people belonging to particular crafts. These specialised villages were usually near a city which absorbed their special products and which provided them with the other necessities of life. The whole village worked on co-operative lines and undertook large orders."

Bhubaneswar which has since been created the new Capital for the Government of Orissa was undoubtedly a foremost city of this type. The ancestors of the few remaining 'Maharana' families of sculptors in this city had evidently settled there as interpreted above.

It is encouraging to note the references made by Sj. Chintamoni Acharya, the present Vice-Chancellor of Utkal University, in his book in Oriya, *Bhubaneswar*, in favour of the sculptor Sri Damodar Maharana for his work, his profound knowledge of the ancient *sastras* connected with the art and its application. The surname 'Maharana' connotes the heritage of exalted craftsmanship in wood or stone for the person bearing the same. Sri Damodar Maharana has very rightly inherited the artistic zeal of his ancestors and unlike others of his tribe, sticks to it in the face of the revolutionary tendency of social economy during the last few decades. Monetary considerations alone could have hardly gone as long a way with him as this in respect of his art and I do not disbelieve him when he affirms that he derives greater aesthetic satisfaction than material benefit at the perfect completion of his work. It is, however, true that people are few who appreciate the artistic beauty and thought in his work and still fewer are those who are really inclined to weigh them liberally.

He was born during the eighties of the last century and his father Harischandra Maharana was a success in artistic sculpture of no mean repute. It is interesting to hear the artist claim that Chandramoni, one of his forefathers, was one of the architects of the famous Bhubanes-



Images of Goddess Durga with Ganesha, Garuda, Lakshmi, Kali and Hanuman

war temple which was built in the 9th century under the aegis of King Jajati of the Kesari dynasty. It is a great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

The sculptor at work

joy and consolation for the old man to find his son Sri Padmalav Maharana imbibing the art.

Sri Damodar and his son mainly confine themselves to the carving of images of gods and goddesses and also miniature temples. These vary in shape and their make-up change according to differing concepts in the *sastras*. The time taken for the completion of a work greatly depends on the size and the intricacies involved, but is ordinarily between one and four months for images of perceptible size. A miniature temple usually takes about a year for completion.

The type of stones needed for the work are—*Dalimba*, *Kanda*, *Baula-mala* and *Muguni*. They are obtained from Khandagiri, Udayagiri, Bahratpur, Malipada and Ghatikia in the district of Puri. The black variety of stone locally called *Muguni*, which has the strongest elements for bigger images, is mostly indented from Nilgiri in the above district.

The cost of these priceless products of art varies from Rs. 10 to Rs. 1500 and sometimes more. In some cases the cost of the stones is borne by the purchaser. Some of the outstanding specimens of the artist's and his son's work, it is reported, find place in the museums at London, Calcutta, Patna, Bhagalpur, Ranchi and Cuttack, etc.

——:O:——

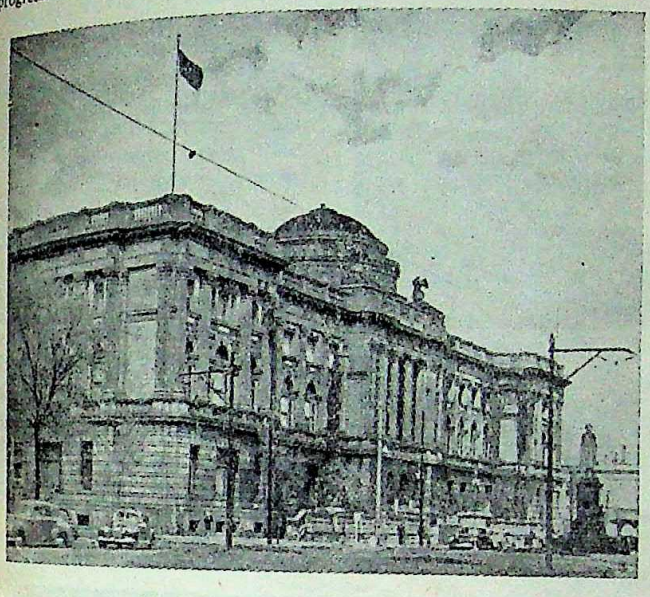
MILWAUKEE : A CITY OF MUSIC AND CULTURE IN THE AMERICAN MIDWEST

By ALFRED G. PELIKAN

Visitors to Milwaukee, an inland American port city in the midwestern State of Wisconsin, are impressed by the many beautiful homes and gardens. Gardening and landscaping have flourished in the past ten years and this may well be due to the natural beauty and richness of the land. The harbor, considered one of the most beautiful on the Great Lakes (a chain of five large lakes which serves as an inland water route for industry and commerce) is bordered almost entirely by parks and parkways, and 163 inland lakes are within one hour's drive from Milwaukee. The sunken gardens and botanical conservatory in Milwaukee's Mitchell Park and the numerous garden clubs in the city and suburbs show that the community is well aware and appreciative of the beauty of its setting.

Great care has been taken by civic societies and public health and safety commissions to keep the city clean and safe. For health and safety, Milwaukee holds a place among the 13 largest cities in the United States. Milwaukee is one of the leading cities in health, fire, and crime prevention, and low death and accident tolls. In 1937, because Milwaukee had won the top health award with such frequency and regularity, the city was temporarily omitted from competition so that other cities might have a chance at the prize. During the same year Milwaukee was placed first in the national safety contest, and has been recognized five times as the "safest city" in the national traffic safety contest. The local Association of Commerce conducts one of the largest industrial safety training programs in the United States.

Numerous public playgrounds, social centres, and an excellent school system are greatly responsible for the city's low crime rate, the lowest of any metropolitan city in the United States.



The Milwaukee Vocational School was the first of its kind in the nation and is noted for a progressive program and varied curriculum. The vocational school has attained international recognition as one of the world's largest vocational schools under one roof. Its staff of 300 teachers have instructed an annual average of 35,000 students. More than 50 courses are taught in the day and night schools in apprenticeship, special adult classes, rehabilitation, nursing, and technical subjects.

Marquette University, Milwaukee State Teachers College, Milwaukee Downer College for Women, Mount Mary College, and the University of Wisconsin

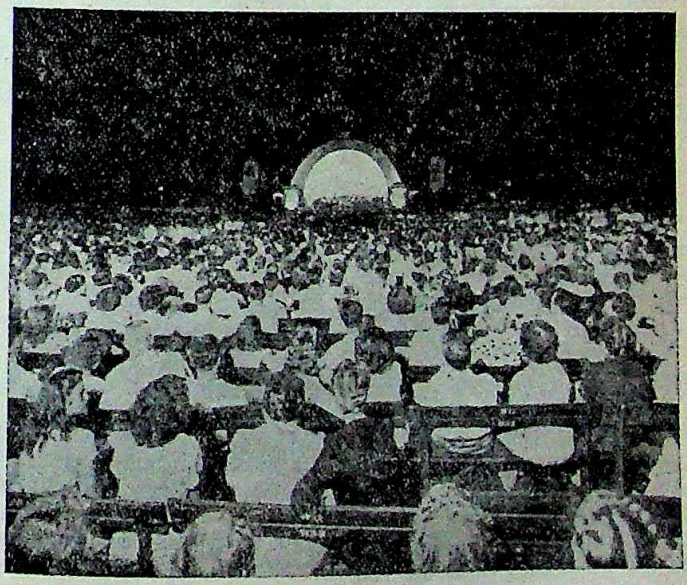
Extension Division represent the institutions of higher learning in Milwaukee. Among the private schools, the Layton Art School ranks as one of the most progressive in America.

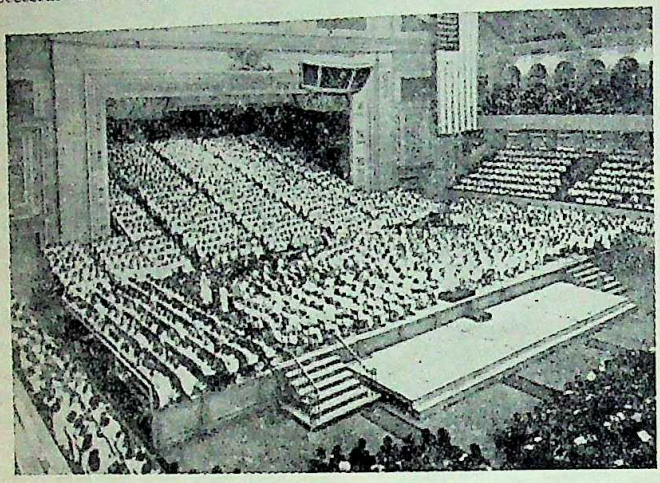


The Milwaukee Public Museum

In 1938 Milwaukee received the Washington Park Temple of Music as a gift to the people of Milwaukee from a local philanthropist. This Temple of Music includes not only the outdoor orchestra shell itself, but also all the necessary equipment, a seating arena for approximately 10,000 people, and a very fine amplification system. The people of Milwaukee were enthusiastic about the idea. The series of yearly concerts continue to be well attended and are self-supporting through the interest of the local citizens.

The Milwaukee Art Institute carries on an extensive program of exhibitions and lectures. The permanent collection which includes excellent paintings by many European artists and a collection of etchings and engravings by the Old Masters, is shown at certain times of the year. Eighty-seven loan exhibitions were shown in 1949 varying from fifteenth century Flemish masterpieces to the stimulating and instructive Bauhaus (a school founded in Germany in 1918 by Walter Gropius to create a functional experimental architecture) Exhibition organized by the Museum of Modern Art in New York City. The most notable work of the Milwaukee Art Institute, however, is its active educational program. A total of nearly 600 children attend the free art classes each Saturday. Many local cultural clubs of Milwaukee meet regularly at the Institute.

The Milwaukee Public Museum is rated highly in size and importance of its scientific exhibits. It is one of the largest locally supported museums in the United States. It maintains extensive exhibits in all the various branches of the natural sciences, anthropology, and history, and emphasizes in its exhibitions the construction of environmental groups and the use of murals. The Museum has exceptionally interesting collections of firearms, early typewriters, aboriginal pipes and smoking customs. In addition to its exhibits the Milwaukee Public Museum maintains a number of other public services, notably lectures, loan services to schools and other organizations, and an identification service. Last year the Museum rendered service to approximately 3,250,000 people.



The Washington Park Temple of Music in Milwaukee is the scene of many summer concerts

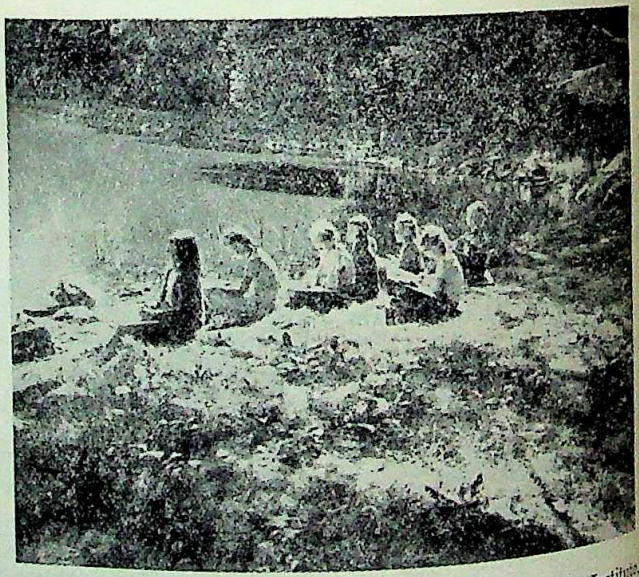
Milwaukee's Zoo is one of the largest in the United States in number and variety of animals, and the only zoological garden in America or Europe successful in raising polar bear cubs in captivity.



Children of the Milwaukee Public School Chorus sing to a capacity audience in the auditorium of that American mid-western city

The Wisconsin Players, the leading drama group in the city, produce several plays each year. The local theatres also present legitimate stage productions, current successes from the New York stage, Shakespearian plays, and musical comedies.

The Civic Music Association of Milwaukee devotes its attention to working with the musical groups of the city and to promoting musical development in community life. Besides bringing noted singers and musicians from all over the United States to Milwaukee, this Association sponsors the Young Peoples' Orchestra of Milwaukee, which offers young people the opportunity to perform and study the great masterpieces of music.

The name "Milwaukee" comes from the American Indian language, "Mahn-a-waukee Seepe," meaning "gathering place by the water," Milwaukee's lake-front parks are still the gathering place for "Music Under the Stars," the annual musical program presented during the summer months; for the Midsummer Festival in July, the Italian Festival Days, and the Chicago Symphony Opera Season.

Today Milwaukee is the music centre of the State of Wisconsin. Each year a summer music festival is held on the lake front, attracting thousands of visitors, and which features good music and colorful pageantry. In this annual "Harvest Festival of Many Lands," 22 nationalities are represented, wearing native costumes, playing traditional games, and singing folk songs. Music groups from all over the State of Wisconsin take part in this music festival. Two days of the festival are given over to folk dances, singing and band music. Many of the old German singing societies also take an active part in the festival. The Greeks, members of the Orthodox Greek Church, sing their old hymns and chants to the accompaniment of clarionet, violin, mandolin, and "bouzouki" (lute). A Croatian women's chorus participates in the festival as well as three Jewish singing societies, and an Italian opera chorus which sings both in Italian and English.

An art class for children, sponsored by the Milwaukee Art Institute, sketching at the shore of a park lagoon

In Milwaukee more than 20 groups study music under the State of Wisconsin Recreation Department's direction; they include instrumental classes, orchestras, bands, glee clubs, harmony clubs, and a Mexican and an Italian chorus. The work of the Recreation Department is valuable in preserving the folk music of the

Finns and Italians in the northern region of the State not reached by any other agency.

The Biennial public school music festivals have become noteworthy events in the cultural activities of the community. The performances of choruses of school children, coupled with instrumental music, supply programs which have become the pride of Milwaukee.—From *Think*

SHRIMANT BALASAHEB PANT PRATINIDHI : CHIEF OF AUNDH
24th October, 1868—13th April, 1951

By Prof. O. C. GANGOLY

The death of Shrimant Bhavanrao *alias* Pant Pratinidhi, B.A., Chief of Aundh (in the Satara District) at Bombay, after a brief illness, removes a charming personality, an erudite savant, a talented artist, a person of varied culture, a patriot, and a servant of the people, of unique distinction and talent. The glittering gallery of our Indian Rajas and Princes, mostly sparkling with diamonds and velvets, robes of honours and titles, showered by the British Government to lend them artificial halos, have hardly put forth real personages of culture and talent, except with rare exceptions here and there. The Chief of Aundh had undoubtedly provided one of these rare exceptions. Never hobnobbing with the powers that be, all his honours and distinctions have been won on the basis of his own qualities of head and heart, and of his great services to the people and the country.

He came from a family famous for traditional loyalty to Shivaji, the liberator of the Deccan from the incursions of the Moghuls, a loyalty which dates back to the time of the valiant ancestor Parshuram Tryambak, who was appointed 'Pratinidhi' or Viceroy of Shivaji.

When the Silver Jubilee of Pant Pratinidhi Balasaheb was celebrated in 1933, many distinguished people from all parts of India sent him their tributes. The message of Sir Jadunath Sarkar ran as follows :

"Being a Viceroy of the Chhatrapati, you are a protector of our honour and an abode of noble qualities. May you live a long life of full hundred years for the welfare of your subjects, for the promotion of fine arts and for the delight of your well-wishers".

Educated at the Deccan College, Poona, he graduated in 1894 and began his apprenticeship in practical affairs as Secretary to his father Shrimant Shrinivas Rao (who was a veritable saint in his habit and thoughts), to whom he succeeded on the *guddee* in 1901.

Throughout his life he has liberally contributed to public and educational causes to the utmost limits of his small resources (the gross revenue of his state never exceeding Rs. 500,000). To the Benares Hindu University he paid a donation of Rs. 10,000. He was responsible for contributing the princely sum of Rs. 100,000 (in instalments), for the national enterprise of editing and publishing the critical edition of the Mahabharata undertaken by the Bhandarkar Oriental Research Institute, Poona. The Raja Saheb had actually paid Rs. 69,000 up to the merger of his state with the Government of Bombay, which undertook to pay off the balance out of the income of his state. Thus he died with the satisfaction that his promise for the donation has been fulfilled. Other educational causes also received his patronage. Thus, the well-known Historical Research Institute of Poona received from him an annual grant of Rs. 300.

Shrimant Balasaheb Pant Pratinidhi, Chief of Aundh

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He was not only a lover and patron of the fine arts, but a practical artist of great talent himself. A brother artist, the late M. V. Dhurandher, paid a very high compliment to the Raja Saheb :

> "A patron of Indian artists and himself an artist of exceptional merit, Balasaheb is really a prince among artists".

He himself contributed many illustrations to the critical edition of the Mahabharata and had many other illustrations by other artists executed under his direction and at his own expenses. He was a learned connoisseur of the Indian fine arts and collected numerous examples of paintings, sculptures and other works of art, some of which he collected from Europe during his visit to the foreign countries.

He organized his valuable collection of Indian and European paintings and sculptures, for which he constructed a beautiful Art Gallery at Aundh, displaying his collection with great skill and design, as an effective instrument of visual education. In many ways this beautiful gallery of art is unique and of great national value. Some of the historical portraits of important personages of Mahratta history are valuable data for visualizing Indian history. In addition to the art gallery, the Raja Saheb used to maintain a sculptors' studio, employing several sculptors who were continually carving statues from large blocks of marble, provided by this patron of Art.

Being an erudite scholar of wide interest, his library of books is a monument to his wide scholarly interest. By the year 1934 he had purchased books on Art of the value of Rs. 34,000 and acquired paintings by old and new masters of the value of Rs. 35,000. He had visited most of the important cultural monuments of India and his studies are embodied in several books and publications, of which the most important are his richly illustrated handbooks on the Ajanta Caves and the Ellora Caves. His interest in archaeology is proved by his restoring and rebuilding the famous Bindumadhab Temple and the Panch Ganga Ghat at Benares.

His deep and critical knowledge of the Sanskrit language and culture is attested by the many books that he published, of which the most outstanding are his edition of *Su-sloka-Govinda*, and *Chitra-Ramayana*, embellished with many beautiful pictures.

His great enthusiasm for the Sanskrit scriptures led him to help and finance the famous editions of the Vedic texts published by the Svadhyaya Mandala of Aundh under the able editorship of Pandit Sripad Satavalekar and other scholars.

But his greatest contribution to the culture of India was his practice of the Sun-cult and the demonstration of the therapeutic qualities of the sun's rays. He developed a scientific application of the solar treatment and composed a work called *Surya-namaskars*, in which he expounded the principles of the doctrine. Many people believe that his long and active life, full of work and energy, was entirely due to his practice of the Sun-cult, an ancient system long anticipating the recent European practice of sun-bathing. He was a very able exponent of the doctrine and several times lectured on the topic at various Universities.

He was in robust health during the greater part of his life, undertaking strenuous physical exercises to keep himself fit for his usefully active life of service and culture.

He was a frequent contributor to the Maharatta journals and his other literary works include a volume on *Sivaji, Bhavani-Sahasranama* and his own Autobiography in two volumes, in which he has freely criticized men and things in India and abroad which he saw a good deal during his long and active career.

He was a warm friend and a generous host, a man of large heart and larger sympathies. It is rare to find among the Princes of India such a personality of outspoken frankness and of deep sincerity. He was the first Raja in the Deccan to introduce democratic Government in his State and carried out all possible reforms for the economic development of his State. He introduced primary schools in all villages of his State and initiated many new industries extending his liberal support for all industrial schemes. The Ogalewadi Glass Works, the Aundh Soap Works and the Kirloskar Engineering Works owed their foundations and maintenance to the Raja Saheb's liberal financial assistance. His enthusiasm for social reform was endorsed by Mahatma Gandhi :

> "Aundh has a liberal-minded Chief who, with wise Ranisaheba, deserves congratulations for abolishing untouchability from his State" (*Harijan*, 25th. March, 1933).

A great protagonist of the doctrine of Swadeshi, he was simple in his habits and dress, exclusively confining himself to cloths and textiles made in India. It is to be hoped that he will be honoured by a full-length biography of his life, so full of rich and distinguished services to India and to Indian culture. India, indeed, has lost one of her able and talented sons whose life provides a valuable model for all to be inspired for emulating the services of one who helped a great deal to build up a new and free India.

THE FESTIVAL OF BRITAIN

By Major D. GRAHAM POLE

It is a very odd experience to go to an exhibition well primed up in its theme, to take careful note of all that one sees—and then to find, on coming home, that all the notes and all the impressions have flown right off from the theme to compose themselves into an entirely unforeseen and breath-taking picture! This is what happened when I visited the South Bank. The Exhibition sets out to be an object lesson but the question that it leaves in the mind is the riddle of the Universe. Or, if this is too presumptuous, the more specific riddle of the future of mankind on this planet.

First to deal with the theme. The theme of the exhibition is to tell the story of British contributions to world civilisation in the arts of peace. The story to be told is in two parts—The Land and The People—and accordingly the exhibition site is cut in two. There is an Upstream sequence (the Land) and a Downstream sequence (the People). A route is marked out for you and you are invited to begin with The Land. Here there are seven sections and in the first geology takes you back a thousand million years in time. At that far-off date, the first islands were emerging and the rocks of north-west Scotland and the Outer Isles were formed. But by the third section mechanisation has reached the land. Even the village blacksmith! And, by the seventh, you are contemplating the speed of modern transport and the wonders of the new London Airport—from which large quantities of freight and four thousand passengers will take off from the land 'every hour of the day or night.'

The culmination of the Upstream sequence is of course the already famous Dome of Discovery. Embracing the preceding sequence—and in fact embracing or at least looking at all aspects of Science, pure and applied—it is the peak of the Exhibition. Indeed, since it is impossible in one or two visits to take in everything that there is to see, visitors who are pressed for time might well be advised to confine their attention to the Dome—and then to seek refreshment in the Royal Festival Hall, of which more later. It is a good idea, too, to read in advance the official guide-book. In that way the visitor will be able to track down any section of special interest either in the Exhibition at large or in the Dome of Discovery, for the Dome alone has eight sections to itself.

The most spectacular exhibit in the Dome of Discovery is the radio telescope. It was not functioning when I was here although there were intermittent and mysterious noises near the roof of the Dome which I felt sure were connected with it. This radio telescope sends signals to the moon. The signals take about two and a half seconds to reach the moon and are reflected back to the earth. And these reflections can be seen in a tube.

Though I did not see these lunar reflections, it was worth while trying to do so. On asking the way, I was courteously directed to 'Outer Space.' This is the very top-most gallery of the Dome. A moving stairway carries visitors all the way up, but the stairway was the other side of the Dome and I decided to try the ordinary stairs instead. (*Ordinary* stairs... To digress for a moment, there are no ordinary stair-cases in the Exhibition. Stair-cases, over-head promenades approached by stair-cases, are one of the most important features of the exhibition's architecture. They are worth looking at for their own sake. Oh the endless stairs one has climbed by the time one has been round the place. In the Dome they are steel and strong and insubstantial, shoot out platforms at sharp angles, and add immensely to the strange Wellsian scene).

Once arrived in Outer Space it was essential to sit down and rest. I walked round the gallery and found a bench at the other end. It was an exciting spot from which to view the Dome. A globe like a moon hung just ahead of me. Behind and just below was a tremendous object like a crystal. On this gigantic crystal, the spaces between its angles were filled in with drawings of other crystals. They were extremely lovely to look at. I could see the shapes of jewels, stars, flowers, even lace d'oyleys. Crossing the little gallery and looking over Outer Space I saw a giant telescope. It was a strange looking thing with a basis which on one side was like a pyramid and on the other like a curving Cleopatra's Needle. A wheel was set upon this base and from this rose the telescope proper. But even this appeared fantastic. The first third of its length was like a metal waste-paper basket while the rest of its length was open-work. Five circles of metal held this part of the frame together—and between these circles were squares of wire, in which wires crossed diagonally from corner to corner. What an amazing object and what, I wondered, was the purpose of the diagonal wires... Continuing along the gallery and looking across the Dome, it was clear that the display had three focal points: the giant crystal, the giant telescope, and a Totem pole.

Crystals for some reason—oh that I knew any Science—are the key-note of Outer Space. There is a whole series of them, growing out of one another and hollow like a cave (most disappointingly marked 'No Entry') as a prelude to a peep-show depicting the scene as it probably appears on various planets. I would have loved to linger here but one had to take one's place in a queue and keep moving. Uranus looked like a landscape of sky-scrapers with a full moon hanging above. Loveliest of all, I think, seemed Saturn. Clouds floated across pink and brown cliffs. And a huge wide shaft of golden light—like an orange rainbow with a blue line running through it—curved round the side of the picture.

Leaving Outer Space I descended to the next gallery and went in search of some shapes, in coloured wire, which I could see suspended above some drawings. From a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

distance, they suggested trumpets, cradles, saddles, jewels. And I was astounded to discover that they were in fact diagrams demonstrating some exalted mathematics. The note on the drawings—aside from commenting somewhat unkindly that only mathematicians were expected to understand them—drew attention to 'the inherent beauty of mathematical concepts.' How far, I wondered, does mathematics enter into beauty? Could a concept, which can take shape in wire, take shape in music too?

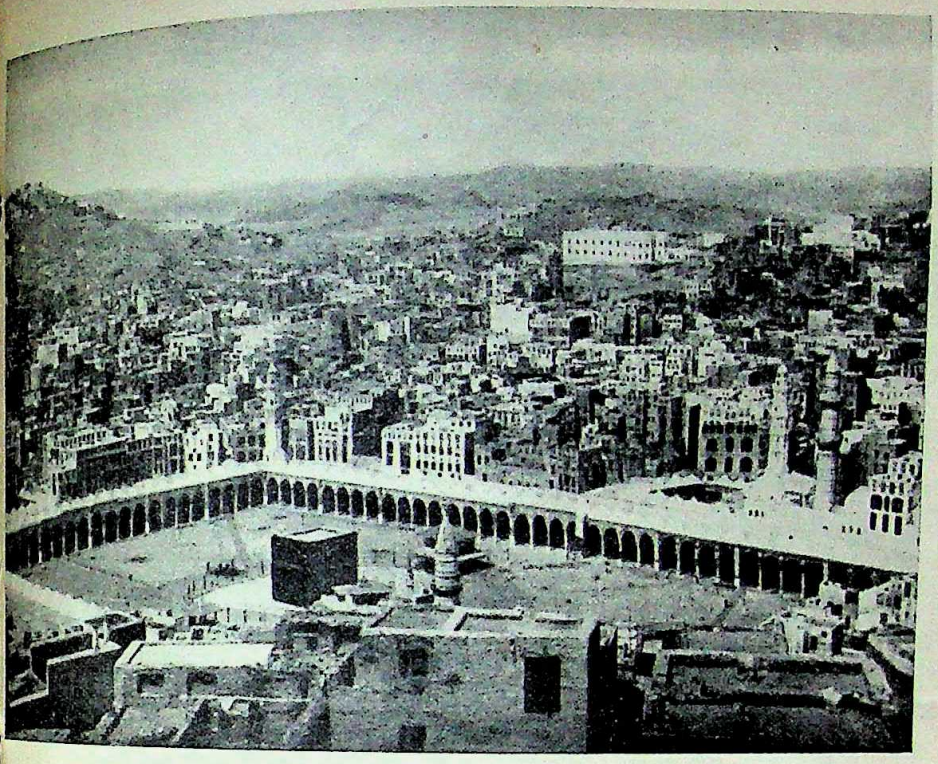
Anyone who visits the Dome of Discovery and begins, as I did, at the top, will leave the floor display for another visit. But the shapes he has seen will influence him. Coming out into the sunshine (we hope) he will survey the Exhibition scene, the examples of modern art set about the grounds, with a more practised eye. He on honey dew has fed and drunk the milk of paradise—and what will he think of the first sculptured group that meets his gaze, a group of a man and a woman, with heads sawn off before they quite reach the top and with holes in their backs? This sculpture is not by Henry Moore but there is one of his near the York Road Entrance, in the same mood, only it seems more powerful.

It is the lay-out of the Exhibition—and its sculpture—which sends one's thoughts off into the future and into speculating as to the direction the human race is taking. Anyone who visits the Exhibition on a crowded day and plods from one restaurant to another seeking the shortest queue will have plenty of food for speculation. He may traverse the whole exhibition space, absorbing the lay-out and the decor, and as most of the sculptures are placed near the restaurants he cannot escape them either.

To consider first the setting of the Exhibition. In the nature of things an exhibition, unless it be enclosed in a single space like a Crystal Palace, will not be architecturally satisfying: separate pavilions, varying in size and purpose, will not like eggs scramble into a whole. Moreover, at the South Bank, the architects found the site bisected already by the overhead Hungerford Bridge. So evidently they decided to make a virtue of necessity. There would be no attempt at unification. (The only feature that runs the whole length of the site is the walk along the river front). The overhead bridge would mark the division between the two sides of the Exhibition, The Land and The People. On The Land side the Dome of Discovery would be the centre of attention and on that of The People there would be the Royal Festival Hall. For the rest, the Exhibition would depend on a number of close-ups and on its staircases for visual interest. Last but not least, a lucky accident was to give the Exhibition its theme song! It had been decided, for reasons of sentiment, to retain the old Shot Tower which had stood on the South Bank for over a hundred years. It would now find itself close by to the Festival Hall. And to balance this, on the other side of the Exhibition, some genius had the brilliant idea of erecting the Skylon close to the Dome of Discovery. This Skylon is described in the guide book as 'a vertical feature in steel and aluminium'. But it stands on wires and shoots straight up into the sky like a rocket heading for the moon—and at night it blazes into fairyland!

I made some notes of one or two of the close-ups which seemed especially striking. Entering the Exhibition by the Station Gate, the visitor is met by a medley of strange shapes. On the left is a white circular building and on the right is a strange Wellsian construction never till now encountered. A white iron mast pierces up through a grey crown from which several wires, like the ribbons of a maypole, descend to support a swirling tapering white sail-curve, rather like a collar in shape. Through this collar you pass to the first section in the Exhibition, The Land of Britain. The circular building and the white collar both in a segment of the Dome of Discovery.

An amazing vista, if too much of a close-up, is the view from the Harbour Bar restaurant. Right across the scene on the south side runs a raised white bridge, curving past the front of the Festival Hall and round past the Shot Tower. The base of the tower is painted white with a black collar. The tower itself is like a light-house with a platform at the top. Above the platform is a fan which this is the aerial of the radio telescope which beams messages to the moon. Visitors are allowed inside the Tower. (Looking aloft, I saw a network of stars hanging in the darkness. For a moment I thought the Dome of Discovery must be putting on an act. But of course from the bottom of a well you can always see the stars...).



The decor of the Exhibition is white and glass. Flags everywhere, streaming from masts which chime in with those on the river, add colour. So do large dishes of tulips. On the Waterloo side variegated coloured screens shut out the drabness of surrounding streets. And occasionally, just to add more colour, one comes on a painting shape, mounted on wood and leaning against a pavilion. But the prevailing impression is of white and glass.

The Dome of Discovery is white. The Royal Festival Hall is white and glass. From the air the Dome looks like a mushroom but from the ground the over-large roof is seen to tilt upwards from the door level. Slender flying white buttresses give support all the way round. In front of these buttresses white steel ladders, stretch from the ground to the edge of the roof and encircle the Dome in a pattern like sound-waves. This wonderful Dome is not to survive the exhibition which seems a great pity. But if it were reprieved, where could it be put up? Its architecture would not blend with that of any previous age. (It would look best in a field where it could be for a marquee; or at the North Pole where its white painted steel would accord with the ice and the bears).

If the Dome is quite unlike the architecture of any other age, so is the Royal Festival Hall. And not only the Royal Festival Hall to remain: it is the first of "a number of great buildings, which will form part of a co-ordinated design" and which the Government and the London County Council are planning to put up.

The appearance of the Royal Festival Hall, at first sight, is intolerable. It looks like the very latest design for an up-to-date bee-hive with what relief there is to the eye situated mainly on the roof. This is because the greater part of the walls is of glass. In architecture glass is flat and grey and expressionless. (A glass wall facing west must look gorgeous at sunset. But the Festival Hall has its long front on the river, looking north; and on the west, though perhaps not for ever, it is darkened by the Hungerford Bridge).

However once inside the Festival Hall it is all exhilaration. You feel as if you were on a gigantic liner as you are met by the many round white metal pillars supporting the roof. A liner, with the space and variety which is the principal adventure of modern building. The stair-case has a metal rail and glass panels instead of bannisters. To the left of the stair-case and across it as you mount up to the hall proper—such a long pull-up! This seems inevitable in modern architecture if you are to have several perspectives at once—you look into a glass restaurant on two floors, with an exciting inside stair-case connecting the floors. And looking across the restaurant and through the outer glass walls, you see the river. On every floor you see the river! And, aside from all this, in a design which there was no time to take in as one was swept along with the crowd, there are so many opening spaces. Spaces to sit and have tea at little tables. Spaces for bars. Spaces just to sit comfortably and smoke. Spaces in which to promenade.

The concert hall itself is a dreadful disappointment. Perhaps, after all this passage through light and perspective, a sense of claustraphobia is inevitable. It seems like a monotonous brown cave and the eye is disturbed by the ugly design of the boxes. With no visible means of support they jut out from the wall in a kind of lozenge pattern. This may give the inmates an uninterrupted view but gone is the grace and neighbourliness of the old familiar style. An added irritation is that they have for decoration a brassy milled edge which picks up the light. Of the hall's virtues as a vehicle for music, much has been said in its favour though it is too soon to judge. The acoustics, it seems generally agreed, are perfect. But what will be the psychological effect of the hall on the performers? Perhaps it is worth quoting the music Critic of the *Spectator*. He says:

> It is a hall "which, like the rest of the Exhibition, faces the fact that we live in 1951, however unpalatable that may be to many; a hall, moreover, whose acoustic characteristics favour the kind of music that has been written, and will in all probability continue to be written, by the composers of the Machine Age—bright, clean and not impossibly large, like the hall itself, and often 'functional' in character." (I did not see the hall as bright and clean. It oppressed me as brown and hard...).

This Critic feels we must face the fact that we live in the Machine Age. It is reflections like these, prompted by the Exhibition, that send one's thoughts racing round the riddle of present-day existence and whither it is going. What has the Machine Age to do with modern art? Is it revulsion from the Machine Age that is driving many of these artists into strange wildernesses from which they return with their fantastic compositions? It may be so—and yet the baffling thing is that these modern works of art seem completely at home in the grounds of the South Bank Exhibition.

A sculpture by Henry Moore is the first thing anyone sees who enters the Exhibition by the Chichely Street gate. As all the world knows, he is the sculptor who creates women with heads like turtles; men whose torsos begin perhaps with the semblance of a human form but whose arms may continue far beyond the length of the body and even end in a huge bony square. He is the most criticised of all our moderns and yet Sir Kenneth Clark, a former Director of the National Gallery, refers to him as our 'greatest living sculptor.'

An article on the work of Henry Moore, with illustrations, is published in the Penguin Modern Painters series. From this it appears that Moore's revolt is not against the Machine Age. It is against traditional art, which stems from Renaissance Europe, because 'in art,' says the writer, 'these values have decayed into a set form.' (I think the forms are only set where the faith is gone! A modern artist, Moira Forsyth, is making the most glorious stained glass windows...). And so Henry Moore's escape is the old familiar one of back to Nature. Only it is not the face of nature. It is the force and energy of primitive life which propels him. It is 'the mess and muddle and fecundity of life which he finds wonderful and mysterious.' Well, a man must live by the light which has been given to him. But one cannot help feeling that such an attitude towards nature is better expressed in poetry than in a visual art.

But if Henry Moore and his school are going back to nature, other artists, whose works appear in the Exhibition, are escaping into abstractions. Of these I noticed two different kinds—some really abstract and others just abstractions! Of the truly abstract, one I liked and one I didn't. The one I liked was set in a pool. It was of green copper, folded wings or folded reeds it recalled, stretching straight up above the water. The other had a good rhythmical design. But it was white and heavy in stone and suggested a ponderous flower. As for the abstractions, I think they are nonsense! I will describe one. An incredible iron contraption, it was called a bird-cage. The base was like a tilted ironing board on a tripod. Above there was a large open iron picture frame, with a long iron noose, iron sticks like the sticks in a telephone post, and a ball at the end of a chain. All these huddled to one side of the frame. The other side of the frame was empty. (This kind of thing, throwing a few impressions together, may be very new in art but is very old in poetry. Unimportant poetry).

One last comment before I leave these sketchy comments on modern art. I wish the genuinely 'abstract'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

artists would escape from the machine world into the world of pure science.

I have left very little space in which to write about the other half of the Exhibition, The People. The chief reason is that it did not appeal to me in the least. Its principal exhibits are Homes and Gardens and The Lion and The Unicorn and both, to my mind, are flops. To begin with one is antagonised by the guide-book which announces that the Homes and Gardens Pavilion takes the past as read. In one's home, of all places, to take the past as read! And when, in England, there is a long and lovely tradition in furniture-making. Next it was obsessed with the modern problem of space. One seemed to wander through one bed-sitting room after another until one had the feeling that most of the population were condemned to live eternally in cramped quarters. No imagination came into the picture. There was no hint as to how it is possible, by means of colour, to soothe the spirit with the illusion of space—which in cramped quarters is the most important thing of all.

As for The Lion and The Unicorn, it was just a jumble. At one end of a not very long pavilion you were greeted by a whimsical lion and unicorn in string. At the other end, you saw the White Knight from 'Alice Through The Looking Glass.' In between these two were a selection of oddments which were there to suggest our native genius. But nothing could make an impression because the atmosphere was torn by at least three loud-speakers all blasting away at the same time. One caught words from a Shakespeare play or from 'Alice' and most trying of all, a series of medallions, depicting various types of British people, took turns to light up and to speak in exaggerated accents.

Lost in this howling atmosphere were one or two beautiful things. There was a very lovely stone cross, with figures and beasts and birds carved up the sides. There was also an attractive mural which told the story of the growth of liberty in England. We began with Saxons round a tree and ended most oddly with the freedom of Pakistan and India. (But I hope Indians will be amused at finding themselves next to Mrs. Pankhurst). The best panel of all went to Wesley. He could be seen preaching from a brightly painted cart with an extremely stylised little church in the background. The climax of the painting was the lilac tree. It had huge mauve blossoms shaped like little Christmas trees. (It is the only painting of which I made notes. But the Wilks panel must have been good too for I see that I have scribbled a line 'that villain Wilks'!)

The tremendous effort that has been put into the display in the Dome of Discovery, the careful, exhaustive scientific approach—all this sticks out a mile in comparison with the sketchy nature of the exhibits in Homes and Gardens and The Lion and The Unicorn. Inevitably one comes away with the feeling that the future is with Science. Artists may go back to nature, psychologists may poke their fingers into the springs of character until it seems as if man has no integrity and no free will. But man, thank God, has no chance of wresting the final secrets of the universe. To return once more to Outer Space. 'Bigger and better though our telescopes become,' says the guide-book, 'it is now believed that a point will be reached in space beyond which they will never be able to penetrate, because the universe is expanding at a speed greater than that of light.' May the universe expand *ad infinitum* and as man learns more of the immensity of the heavens, may it bring peace to his machine-distracted soul.

Westminster, London, May 1951.

———:O:———

A WEEK OF HISTORICAL CONFERENCES AT NAGPUR

By Dr. CHARU CHANDRA DAS GUPTA, M.A., P.R.S., Ph.D. (Cal.), Ph.D. (Cantab)

Nagpur, the capital of Madhya Pradesh, became the venue of a week of historical conferences during the last Christmas holidays. The Indian Historical Records Commission, the Indian History Congress, the Numismatic Society of India, and the Museums Association of India held their annual meetings here recently. These are the four most important and well-known historical societies in India and, as such, their meetings are very important to Indian historians. The meetings were held at the University Convocation Hall and Nagpur Mahavidyalaya. The delegates were stationed at the Assembly Rest House and the hostel of the Nagpur Mahavidyalaya. The Reception Committee made excellent arrangement for the board and lodging of the delegates.

The opening ceremony of the Indian Historical Records Commission was performed at the University Convocation Hall on the 25th December at 10 A.M., by His Excellency Shri Mangaldas Pakvasa, the Governor of Madhya Pradesh. He delivered a short, lucid and learned address. In it he said that the Indian Historical Records Commission was first established in 1919 and started on its career as an official organisation. Being financially unproductive it became an easy victim of retrenchment during the years 1931 to 1936. But later on graduates became an organisation in which official as well as non-official elements were mixed up. He said that the Indian Historical Records Commission was a body of scholars engaged and interested in discovering old records and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

manuscripts in which India was so rich due to the antiquity of its history. He further said that the records formed the very foundation of India's history. They were the raw materials by means of which India's past could be properly reconstructed and visualised. He then said that in India much had not yet been done towards the study of these records. Then he said about the establishment of the Regional Survey Committees to make a countrywide search and survey for the collection and preservation of records. Then he spoke about a scheme which had been initiated with the objective of getting the most important old records published in the form of selections on the pattern of the selections from Poona Residency Records and Peshwa Daftar Records.

It was decided that the Hon'ble Maulana Abul Kalam Azad, the President of the Indian Historical Records Commission, would inaugurate its meeting; but owing to various other pre-occupations at New Delhi he could not come to Nagpur to do this pleasant work. However, he sent a printed copy of the English translation of the Hindustani speech which he prepared to read at this inauguration-ceremony. In it he said that the Indian Historical Records Commission dealt with all sorts of historical documents. He said that the National Archives of India contained a vast collection of records and documents; but systematic series began from the year 1672 A.D. Some of the latest documents are as late as 1949. From the point of view of quantity the Indian collection is one of the biggest collections in the world. Records are the basis of history and can alone give authenticity to our knowledge of the past. During the 19th century European states adopted the convention that all state records should be opened to the public after a lapse of 30 years. If the historical records are to be utilised to a great extent, it is important that they should not only be preserved but also systematically arranged and classified. He suggested that there should be an intimate co-operation between the National Archives of India, universities and learned societies, to undertake and to fulfil the work of making the records known to the scholarly world in a scientific manner.

The reading of the papers was then taken up. The Indian Historical Records Commission published in advance not only the summaries of the papers but also the papers themselves in the form of a volume. As usual, the number of papers was very limited. It seems that there should be more papers for reading at the annual meeting of the Indian Historical Records Commission. Moreover, it is not easily understandable what purpose is served by publishing the papers in a book-form in advance. They should be published after they were read and discussed so that the authors might get a chance to improve their articles according to the discussions which were held on them.

However, the papers which were read were all quite interesting. The following is the list of those papers : (1) *Charles Desvoeux at Achin* (1772-73) by S. N. Das Gupta; (2) *The Correspondence of Modave* by S. P. Sen; (3) *A French Account of Commerce in India in 1774* by R. C. Mitra; (4) *Fateh Nama Gum Khalsa Ji Ka* by Sita Ram Kohli; (5) *A Tiruchirapalli Grant of Vijaya Ranga Chokhanath of Madhurai* by K. R. Venkataraman; (6) *Notes on Communications in the Early 19th Century* by Arun Kumar Das Gupta; (7) *Gangadhar Sastri* by Kali Kishor Datta ; (8) *A fresh patta of the time of the last Chauhan Ruler of Sambalpur-Athargarh* by L. P. Pandeya; (9) *Danger to Jhansi in 1774-75* by T. S. Shejwalkar; (10) *Oudh and the Question of Salt Tax in 1867* by Nanda Lal Chatterji; (11) *Note on Some Unpublished Letters of William Smyth* (1658-1664) by S. Natarajan; (12) *The Recorder's Court at Madras* (1798-1801) *and Some of Its Findings* by C. S. Srinivasachari; (13) *Boundary Disputes between the British and Mayurbhanj in the 18th century* by Tarit Kumar Mukherji; (14) *Visual Telegraph, Calcutta to Chunar* (1816-28) by R. H. Phillimore; (15) *The Old English Correspondence in the District Collectorates, Bengal* by Tapan Kumar Roy Chowdhury; (16) *The Mukhbiri-Sadiq of Lucknow* by K. Sajunlal; (17) *A Nishan of Muhammad Akbar, heir-apparent of Shah Alam Bahadur Badshah Ghazi* by A. H. Nizami; (18) *Parwana relating to the Sanad of Sardeshmukhi given to Sahao Chatrapati by the Moghul Emperor Muhammad Shah Badshah* by B. W. Bhat: (19) *Contemporary Biography of a fifteenth century Sufi Saint of Bihar* by S. H. Askari; (20) *Records from the Rajania Family of Wai* by G. H. Khare.

The Indian History Congress began its session on the 27th December last. A speech of welcome to the delegates of the 13th Indian History Congress was delivered by Lt.-Col. Pandit K. L. Dubey, Vice-Chancellor of the Nagpur University. This address of welcome, though warm in character, is naturally short. In it he spoke about Nagpur which has been for millenia a meeting-ground for the diverse cultures that had built up India into what it was to-day. He also told about the moral responsibilities of historians to the country.

The inauguration-ceremony of the Indian History Congress was performed in a specially erected pandal by Dr. Rajendra Prasad, the President of the Indian Republic. It was a signal honour to the Indian History Congress that the President of the Indian Republic inaugurated it. He gave a well-thought-out, provoking and learned address. In it he said that he had no pretensions to scholarship but had a genuine interest in history and particularly in Indian history. Then he spoke about the importance of Sevagram, the place where Mahatmaji used to live, in the contemporary history of India. He criticised the current view that there was no historical material available in India; on the contrary, he believed that the vast amount of material which was found in the form of inscriptions, coins, stone sculptures, clay figurines, pottery, beads, etc., and the vast literary materials threw a flood of light on the past of India. Then he said about the importance of not only the political but also the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

religious, cultural, literary, industrial and commercial history of India and the good work which was being done by the Bharatiya Itihasa Parishad and the Indian History Congress. Then he discussed the question of the nature of history. According to him :

> "The commonest view of history is that it is a record of the past and that its main concern is to disinter from the graveyards of time the facts and figures that once were but are not to-day."

He considered this as the most inadequate appreciation of history. Then he gave an idea about the view of history by such well-known writers of antiquity as Polytius and Cicero. He also said that the great Roman historian Livy believed that the great events in human life were determined by fate. He further told that as against the concept of fate there was the concept of environmental determinism and determinism by heredity. According to him, true history must be found in a reconciliation and synthesis of various forms and factors which operated on and through human beings. According to him, Kautilya in his *Arthasastra* mentioned as sources of history Purana (myths and legends), Itivritta (events), Akhyayika (tales), Udaharana (biographical quotations), Dharmasastra (cultural life) ,and Arthasastra (material life). According to him, this view was not only comprehensive but also very original. Kautilya has made a happy blend of the idealist and metaphysical theories of history as well as the materialistic theory of history.

After the delivery of this brilliant speech of inauguration the presidential address of Dr. H. C. Roy Chowdhury, Carmichael Professor of Ancient Indian History and Culture, Calcutta University, was read by Mahamahopadhyaya Prof. D. V. Potdar, one of the past presidents on account of the regrettable absence of Dr. Roy Chowdhury due to illness. In it he spoke at the outset about the historical importance of the city of Nagpur. Then he advised to speedily publish the comprehensive history of India which had been started by the Indian History Congress. Then he spoke about the recent excavations carried out by the Indian Archæological Department at Arikamadu near Pondicherry, Brahmagiri and Chandravalli in the Mysore State, Sisupalgarh near Bhubanesvara and certain old sites near Delhi. He regretted at the non-publication of the Annual Report of the Archæological Survey of India and the Annual Report on South Indian epigraphy though he rejoiced at the publication of *Ancient India* which was the Bulletin of the Archæological Survey of India. He also spoke in high terms about the work done in the domain of mediæval and modern history by the Indian Historical Records Commission. He also expressed joy at the publication of the journal entitled *Indian Archives*, the revival of the Indian Records Series, the arrangements made for the regional surveys of records in the provinces, and the writing of a history of the Indian armed forces in World War II under the auspices of the Ministry of Defence. Then he spoke about certain important publications on ancient Indian history in the current year.

After the delivery of this presidential address the Indian History Congress was split up into five sections with a President over each section. It is important to note that the presidential addresses of all the sections were not printed in advance. It would be better if these sectional presidential addresses were printed in advance.

Section I (from the earliest times to 711 A.D.) was presided over by Dr. A. D. Pusalkar, Assistant Director and Head of the Department of Sanskrit, Bharatiya Vidya Bhavan, Bombay. This presidential address is entitled *Some Problems of Ancient Indian History*. In it he referred to the recent discovery of an exceptionally well-preserved granary at Mohenjo-daro. Then he spoke about the severe stricture passed on the excavators of the Indus Valley Civilisation by Wheeler and Piggott. According to him, the period of the Rig-Veda may be carried back to the 4th or 5th millennium B.C. or even beyond, and it ran to the 2nd millennium B.C., later followed by subsequent Vedic literature. According to him, Harappa culture is a phase in the composite Indian culture inaugurated by the Rig-Vedic people. According to him also the Rig-Vedic people were autochthonous in India whence they spread in all directions. He believed that the Aryan problem required further study by the scholars. He next took up the question of the Indus script and he dealt with the question of the decipherment of the Indus script. Then he took up the question of the hiatus of over a thousand years in Indian history between the destruction of the Harappa sites and the early historic period of the 4th century B.C. In this connection he referred to the efforts made by the Indian Archæological Department to bridge this gap by carrying out excavations recently at a place called Tilpat near Delhi. According to him, the beginning of Tilpat went back to centuries before (6th-5th centuries B.C. He also referred to the recent excavations at Hastinapur where a grey painted pottery like those of Ahichhatra and Tilpat had been found. According to him, Dr. Lal of the Indian Archæological Department also surveyed about 15 ancient Mahabharata sites in the upper Gangetic Valley in search of this ware with equally successful results. He dealt with the importance of the Puranas from the historical point of view.

A number of interesting papers were submitted to each section for the purpose of reading, discussion and publication. A list along with the summaries of these papers was published. The following is the list of papers read in this section : (1) *Agriculture in the Ancient Tamil Country* by Dr. A. M. Ariakiaswami; (2) *Some Aspects of Social History as Gleaned through Jaina Grihyasutra* by Prof. Radha Krishna Chaudhury; (3) *Numerals in Indian Kharosthi Records* by Dr. G. C. Pande; (4) *A Glimpse into the Dark Period of Orissa*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

History (from the time of the Nandas till the 4th Century A.D.) by Sri Sushil Chandra De; (5) *Some Royal Seals from Excavations at Rajghat (Banaras)* by Sri K. Deva; (6) *The Age of the Vishnu Purana* by Prof. V. R. Dikshitar; (7) *Vidarbha Architecture, Sculpture and Idols of Talegaon Dasasar* by Shri V. A. Ghate; (8) *A Note on Protected States in Ancient India* by Sri Bimal Kanti Majumdar; (9) *Is Punaura the Birth-place of Sita?* by Sri K. K. Mishra; (10) *Some Puranic and Vedic Traditions and the Ancient Middle East* by Dr. Raj Bali Pandey; (11) *The Date of Tivaradeva of Mohakoshala* by Sri S. N. Rajaguru; (12) *Vindication of the Matsya Purana List of the Andhra Kings* by Prof. Gurty Venkat Rao; (13) *Ancient History of Vengi* by Prof. R. Subba Rao; (14) *Traces of Aryans in Mohenjo-daro and Harappa* by Swami Sankarananda; (15) *Early Brahmi Inscriptions in Mahakosala and Orissa and their Survey and Decipherment* by Sri L. P. Pandeya Sharma; (16) *Some Joint Notices of Woman and Sudra in Ancient Indian Literature* by Sri Ram Sharan Sharma; (17) *Kalidasa and Buddhist Sanskrit Literatures* by Dr. V. S. Agrawala; (18) *Coins of Gautamiputra Satakarni* by Dr. M. Rama Rao; (19) *Coins of Satakarni IV* by Prof. Miss M. Vaidehi; (20) *Indradyumna—the Founder of the Jagannath Temple at Purusottam Kshetra* by Sri Sadasiva Nath Sarma and Sri Baikuntha Nath Sen Gupta; (21) *The Ganga Era* by Prof. V. V. Mirashi; (22) *The Pandava Dynasty of Mekala* by Prof. V. V. Mirashi; (23) *Srimad Bhagavata—the Place of its Origin* by Dr. J. N. Banerji : (24) *Is the Bhabru edict of Asoka rightly named ?* by Sri Satya Prakash ; (25) *The Arya-Manjusri-mula-kalpa on Chandragupta I* by Sri Kailash Chandra Ojha ; (26) *The Original Version of the Samba Legend* by Sri Dilip Kumar Biswas ; (27) *Some Occupations and Professions in Buddha's days* by Sri Yashpal Agarwal ; (28) *Sanskrit Elements in Early Tamil Literature* by Prof. K. A. Nilkantha Sastri; (29) *A Note on Uparika and Udranga* by Dr. Sudhir Ranjan Das; (30) *A Note on verse 22 of the Aihole Inscription of the time of Pulakesin II* by Dr. G. C. Roy Choudhury.

Section II (711-1206 A.D.) was presided over by Dr. B. C. Sen of the Calcutta University. The following is the list of papers read at the meeting of this section : (1) *Some Aspects of Administration According to Kannada Works of the 9th and 10th Century A.D.* by Prof. C. S. Dikshit; (2) *The Battle of Uratti* by Dr. T. V. Mahalingam; (3) *Later Reference of the Hunas* (7th Century A.D.-12th Century A.D.) by Miss Pushpa Singh; (4) *Some Notes on the Kayasthas of Early Medieval Kashmir* by Sri Sunil Chandra Roy; (5) *Balavalabhi-Sahajanga* by Dr. Dinesh Chandra Sircar; (6) *Udamana Malladeva—A Forgotten King of Mithila* by Prof. Radha Krishna Chaudrury; (8) *Ugraditya's Kalyanakaraka and Bhoja Bhatta's Campaigns against the East Coast* by Sri R. Narasinha Rao; (10) *Lakulisa-Pasupata and their Temples in Medikval India* by B. P. Majumdar; (11) *The particle ni in Bengali inscriptions of the twelfth century* by Dr. Sukumar Sen; (12) *The Date of Pallava Paramesvara II* by Sri N. Lakshmi Narayan Rao; (13) *Sculptures in the Main Temple at Baijnath* by Sri M. S. Vats; (14) *A 13th Century Bengali Poet in the Island of Ceylon* by Sri P. C. Majumdar.

Section III (1206 A.D.) was presided over by Dr. A. B. M. Habibulla, Head of the Department of Islamic History and Culture in the Dacca University in Eastern Pakistan. In it he dealt with the dynamics or trends of this period of India's history. Then he gave us an idea of the original research work which had been done in this period for a little over a century ago and also criticised certain view-points of that period. According to his view :

> "The mediaeval period characterised by the introduction of the Muslim element in Indian life thus came to be regarded as something separate from the main current of India's history."

According to his view, this has a pernicious effect on the approach to the Indo-Islamic history. So he pledged here for a proper sense of perspective in object and method of enquiry. Herein he also called for the examination of all kinds of original sources. Then he spoke about certain lacuna which existed in the history of this period and for which research was necessary. He also spoke about fields of work other than the political one. There were only three papers read in this section. They are the following ones :—(1) *Theocratic and Secular Elements in the Indo-Islamic State* by Prof. S. R. Sarma; (2) *A Fifteenth Century Shuttari Sufi Saint of North Bihar* by Prof. Syed Hasan Askari; (3) *The Gajapati Bhanudeva IV* by Dr. N. Venkataramanayya.

Section IV (1526-1764 A.D.) was presided over by Dr. Yusuf Hussain Khan of Osmania University. In the presidential address he said that the Moghul State was a culture state per excellence. According to him, the Moghul emperors were deeply concerned with the well-being of the people of the country and did not make any distinction between Hindus and Muslims. According to him :

> "The Bhakti movement of the fifteenth and sixteenth century represents the first effective impingement on Hindu ideas of Islamic culture and outlook."

According to him, the contact between India and other Asiatic countries was revived after the establishment of the Mughal dynasty. Then he spoke about considerable industries in India, apart from agriculture, which attracted the attention of foreign travellers. The following is the list of papers read at this section : (1) *Two Forgotten Mughal Subadars of Orissa* by P. Acharya; (2) *Fresh Light on the History of the Gond Rajas of Deogarh* by Dr. Y. K. Deshpande; (3) *Seal stamps of titles of prominent members of Jadhaw of Scindhakhed in Berar* by Sri D. B. Mahajan; (4) *Some Aspects of Education in India under the Great Mughuls* by Sri P. N. Ojha; (5) *1761 Panipat and the Nizam* by Prof. V. Raghavendra Rao;

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(6) *Revenue System during Muslim Rule in Orissa* by Sri Bhabani Charan Roy; (7) *Raja Mansingh and the Final Conquest of Orissa by the Mughals* by Sri Bhabani Charan Roy; (8) *Political Offences in Aurangzebs' India* by Prof. S. P. Sangar; (9) *Notes on Balasore and the English in the first half of the 17th Century* by Dr. J. N. Sirkar; (10) *A Rare Silver Coin of Muhammad Shah and later Indo-Afghan Relations* by Sri A. K. Bhattacharya; (11) *Maharaj Bharmal and Bhagwant Das of Amber—Their Relations with the Moghul Court* by Sri Satya Prakash.

Section V (1764 onward) was presided over by Dr. Nanda Lal Chatterji of the Lucknow University. In it he deplored the attitude of the British historians writing the history of India during the British period. According to his opinion, the dynamic and scientific approach to the history of modern India will have to be achieved in planned stages and by co-operative effort. The following is the list of papers read at this section : (1) *A forgotten battle—an episode in the life of Sadova, a pretender of Sadasivarao Bhau* by Sri M. S. Agaskar; (2) *The Indian President* by Sri Parag Baneri; (3) *A note on the imposter of Sadasiva Rao Bhau* by Dr. V. S. Chitale; (4) *Anglo-Russian Commercial Rivalry in 1812* by Sri R. N. Chowdhury; (5) *Wazir Ali's Family* by Dr. K. K. Datta; (6) *Resumption of rent-free tenures for assessment by the Company's Government* (1819-50) by Dr. H. R. Ghoshal; (7) *The Plunder of Bharatpur* by Dr. Hiralal Gupta; (8) *Why Shirajuddola Hated the English* by Sri R. S. Krishnaswamiengar; (9) *An experimental period in the history of the British in India* by Sri R. S. Krishnaswamiengar; (10) *Diwan Pandit Jivaji Samraj—A hitherto-unknown Deputy of Peshwa in Kathiawar* by Dr. M. R. Majumdar; (11) *A little-known event in the History of Travancore : The Quilon Plot* by Dr. B. N. Mehta; (12) *The Oudh Treaty of 1837* by Dr. Sri Nandan Prasad; (13) *Haidar Ali—the Forerunner of Indian Nationalism* by Sri D. S. Achutta Rao; (14) *Reform of the military bazars in the time of Cornwallis* by Sri Sacchidananda; (15) *The Penultimate Campaign of the Poligar War of 1799-1801 (The Panchata-Kurichi Campaign of February-May, 1801)* by Prof. S. C. Srinivasachari; (16) *A Controversy on the nature of Indian Debt* by Prof. Amales Tripathi; (17) *The Arms Act of 1878* by Prof. H. Vedantasastri; (18) *Foreign Trade in India, (1767 A.D.), from the Memoir of John Law of Lauristan* by Dr. R. C. Mitra; (19) *A Critical Review of the Administration of Mysore State from* (1920 to 1941) by Dr. K. N. V. Sastri; (20) *The Foreign Policy of the Indian Union (Retrospect and Prospect)* by Sri G. B. Pandya; (21) *Ram Mohun Roy—the Forerunner of Free India's Foreign Policy* by Sri Bimla Prasad; (22) *Sirajuddaula's Expedition against Calcutta in June, 1756* by Dr. V. P. S. Raghuvanti; (23) *Ramshastri—A Revaluation* by Dr. V. D. Rao; (24) *Peshwa-Nizam Meeting at Edalabad* (1741 January)—*Its Significance* by Sri V. G. Dighe.

There was also the 40th annual meeting of the Numismatic Society of India. It was inaugurated by H. E. The Governor of Madhya Pradesh. The presidential address was delivered by Dr. V. S. Agrawala of New Delhi. One feature of this address is that it was delivered in Hindi. The following is the list of papers which were read at this session : I. Dr. A. S. Altekar : (1) *A Unique Kushano-Roman Coin;* (2) *A New Kshaharata Coin;* (3) *Recent Numismatic Discoveries in Bihar;* (4) *Some Forged Silver Kushana Coins;* II. Prof. V. V. Mirashi : (1) *A Coin of Chatu Mana;* (2) *The Coins of a New Saka Dynasty in Hyderabad;* (3) *The Legend on the Apratigha Coins of Kumaragupta;* III. Dr. S. L. Katare : (1) *A New Coin of King Sata;* (2) *A New Coin of Yajnasri Satakarni;* IV. P. L. Gupta : (1) *Gold Coins of Kumaragupta III;* (2) *Identity of Prakasaditya;* (3) *Copper Coins of Ramagupta;* V. A. K. Narain : *A New Western Kshatrapa Coin;* VI. Satya Prakash : *Interesting Numismatic Finds at Naleswar;* VII. C. R. Singhal : *Some New Coins from the Prince of Wales Museum.*

The Museums Association of India also held its annual meeting here. It was inaugurated by H. E. The Governor of Madhya Pradesh. The presidential address was delivered by Dr. N. P. Chakravarty, late Director General of Archæology in India. There were only two papers : (1) *The Preparation and Display of a Whale Skeleton* by Mr. V. L. Devkar; (2) *On the Use of Museums for the Illiterate in India* by Dr. C. C. Das Gupta.

The Reception Committee also arranged an excellent exhibition of historical materials. The credit for this organisation should go to Dr. H. N. Sinha, Principal, Nagpur Mahavidyalaya and the Local Secretary of the Reception Committee. The delegates were also taken one day to the well-known place called Ramtak where there is a temple sanctified with the names of Rama and Sita. All thoroughly enjoyed this excursion.

SARAT CHANDRA DAS

India's Pioneer Explorer to Tibet

By V. G. NAIR

How many people in this country know the remarkable life-story of the late Babu Sarat Chandra Das, of the Bengal Educational Service, India's pioneer explorer who journeyed twice to the Forbidden Land of Tibet about seventy years ago, in search of her hidden secrets—the topography and the mysteries of Tantric Buddhism? Perhaps a few among the millions who are acquainted with the Indo-Tibetan relations during the British administration of India.

Sarat Chandra Das undertook these perilous journeys to the Hermit-Kingdom of the Dalai Lama when such ventures were extremely difficult and fraught with dangers to human life. Although his explorations in Tibet were crowned with lasting success in promoting the centuries-old Indo-Tibetan cultural relations and in further bringing to light the unknown secrets of that land of snow, these goodwill missions unfortunately culminated in the arrest, tortures and barbarous execution of his Lama benefactor, the learned and venerable Sengchen Dorjechan, the old Minister and tutor of the then Panchen Lama of the Tashi Lhumpo monastery, the second dignitary in Tibet. The Lhasa Government's allegations against the old Minister was that he harboured in his monastery an Indian envoy of the British Government and helped him to carry away the national secrets of Tibet to foreign lands.

The adventures of European travellers to the unexplored regions of Tibet in the nineteenth century against the persistent Tibetan policy of absolute exclusion imposed on them by the Lhasa Government, Lhasa's reign of terror and assassination over all the intriguing explorers, Moscow's wooing of the 13th Dalai Lama for establishing Russian supremacy in the Hermit-Kingdom and the subsequent two British expeditions from India which finally opened the closed doors of the forbidden country form interesting chapters in the history of exploration in Tibet. And in these annals of Tibetan exploration, Sarat Chandra Das occupies the foremost position as the pioneer explorer of modern India. He was our foremost missionary of goodwill and fraternity to the people of Tibet during the latter part of the nineteenth century.

Sarat Chandra Das was born in the town of Chittagong, in 1849, in a Hindu family of the Vaidya or medical caste. He received his early education in the Presidency College, Calcutta. While serving in the Engineering department of the College in 1874, he was appointed Head Master of the Bhutia Boarding School opened at Darjeeling by the Government of Bengal. This was a turning point in the life of Sarat which brought his lasting renown. During his stay at Darjeeling, he applied himself to the study of Tibetan language and its literature in which he became exceedingly proficient.

Between the year 1874 and 1878, Sarat Chandra Das deeply fell under Tibetan influences. He made short trips to Sikkim and explored the country. In his investigations, he received considerable help from his colleague and friend Lama Ugyen Gyatsho, who was attached to his school as a Tibetan teacher. This Tibetan Lama was born in Sikkim. He had received instructions in the use of surveying instruments and had done useful work during his jouneys to Tibet.

Lama Ugyen Gyatsho was once deputed to Shigatze and Lhasa with tribute from his monastery. He was then asked to ascertain whether permission could not be obtained for Sarat Chandra Das to visit Tibet. Reaching Shigatze, he expressed the matter to Lama Sengchen Dorjechan, the old Minister of the Panchen Lama, who was also anxious to have an Indian Pandit from India to teach him Sanskrit and Pali. He readily invited Sarat Chandra Das to visit Tibet and issued a passport for him. Further for ensuring his personal safety in Tibet, the Minister entered the name of Sarat as a student of theology in the Grand Monastery of Shigatze.

Shigatze is the second capital of Tibet. It derived its name from the legendary mountain Sumeru mentioned in the Buddhist scriptures and in the Hindu Puranas. Famous for its Tashi Lhumpo monastery, it is the seat of the Panchen Lama, the second Grand Lama of Tibet. The Panchen Lama does not possess any political power but is considered even superior in rank to the Dalai Lama himself. The present Panchen Lama owing to differences with the Lhasa Government was reported to be an exile in Communist China.

Lama Sengchen Dorjechan, the Minister of the Panchen Lama, was a noble and saintly person of great virtues and profound learning. In those days, none in Tibet was held in higher esteem and veneration than he. He was a devout Buddhist and desired to reform the Buddhist religion which then prevailed in his country. He was eager to learn English and the Indian languages. He was also interested in Western sciences and in its discoveries. He had sent various Buddhist images and ritualistic utensils to India and had deputed several Lamas of his monastery as missionaries to this

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

country.. He was a man above sectarian differences and international prejudices. He strove for the noble ideal of universal brotherhood as preached and lived by Lord Buddha. Consequently he had created many enemies among the conservative, irreligious and fanatical Lamas of Lhasa, who waited for an opportunity to bring about his downfall.

As fates had decreed for the old Minister Sengchen Dorjechan, Sarat Chandra Das accepted his invitation, and started on his first mission to Tibet in June 1879, accompanied by his companion Lama Ugyen Gyatso, the Tibetan teacher of his school. He reached Shigatze and remained there for six months as the guest of the Minister. During his stay there, he made a rich collection of works in Sanskrit and Tibetan which he brought back to India. He also explored the country north and north-east of Kanchanjinga, of which nothing was previously known to us. He establisded friendly relations with the Minister and his colleagues. While departing for Darjeeling, the Minister requested him to visit Tibet again and instruct him further in the study of Indian languages and Buddhism.

In November 1881, Sarat Chandra Das undertook his second journey to Tibet again accompanied by his faithful companion Lama Ugyen. He reached Shigatze and remained there for some months as the guest of the Minister, his old benefactor. He taught the Minister English and Sanskrit and in turn learnt from him Tibetan and Lamaist Buddhism. One day, Sarat begged his pupil and Guru to have him a sight of Lhasa, the most sacred city in Tibet. At that time, the exclusive policy of the Lhasa Government forbidding all foreigners was strictly in force. After some hesitation, the Minister consented and persuaded his nephew, the Governor of Gyantze to take Sarat to Lhasa for a few days in the retinue of his wife. Accordingly, Sarat Chandra Das was sent to Lhasa by the Governor of Gyantze, in the guise of a Tibetan Lama. He lived at Lhasa in the room of a monastery and was cautious to move about the city frequently. He also visited other parts of Tibet and returned to India after an absence of nearly a year. Sarat Chandra Das was the third Indian to visit Lhasa. The first two were Nain Singh and Kishen Singh, independent explorers, who visited the city in 1866 and 1880.

A year passed after Sarat's return to India. Somehow, the news of his visit to Tibet and his entry into the Forbidden City of Lhasa leaked out to the Tibetan Government. Lhasa accused the Minister Sengchen Dorjechan for assisting an Indian spy of the British Government to enter Tibet and carry away her national secrets. The old Minister who was the most venerable figure among all the Lamas of those days was thereupon denounced as a traitor and dragged to Lhasa where he was beaten daily in the public market place. He was then condemned to death. His execution was carried out in June 1887 in the traditional way of sinking the victim in the Brahmaputra river till he became lifeless. His limbs were then severed and thrown separately into the water. His unfortunate relations, the Governor of Gyantze and his wife, were put into prison for life and their estates confiscated. Several other persons who helped Sarat Chandra Das were mercilessly mutilated and murdered.

Thus ended in tragedy the noble life of Tibet's most venerable Lama of the nineteenth century who had to suffer martyrdom because of his unbounded love for Western sciences and for the Indian languages. This grim tragedy has been recorded in their works by the Rev. Ekai Kawaguchi of Japan who subsequently went to Tibet and lived there for three years and also by Lieut.-Colonel L. Austine Waddell, of the Indian Medical Service who accompanied the British Expedition to Tibet during the years 1903-1904.

Gyantze from where Sarat proceeded to Lhasa in the company of some Tibetan ladies lies in the heart of Tibet. It is situated about 130 miles from the Indian frontier, 145 miles from Lhasa and 213 miles from Siliguri, which is only fourteen hours' journey by train from Calcutta.

The monumental literaty works of Sarat Chandra Das are so enormous that its value to research students cannot be over-estimated. A complete list has been printed in the Centenary Volume of the Asiatic Society of Bengal edited by Dr. Hermle. Besides a large number of translations into English of Tibetan texts, Sarat Chandra Das has edited in Sanskrit the poem, *Avadana Kalpalata*, of Kshemendra which he discovered in Lhasa, and in Tibetan a historical work of great value another giving the history of the pre-Buddhist or Bon religion of Tibet and a handy volume of English-Tibetan Dictionary. Two of his English works which are difficult to obtain in these days are (1) *Indian Pandits in the Land of Snow* and (2) *Journey to Lhasa and Central Tibet.*

Sarat Chanra Das visited Peking in 1885 in the company of the Honourable Colman Macauley, a Secretary of the Bengal Government, for obtaining the necessary permission from the Chinese Government to the projected embassy in Tibet. He returned to India after several months. As a mark of his services to geography and exploration in Tibet, he was given the title of Rai Bahadur by the Government of India and made a Companion of the Order of the Indian Empire. His faithful companion Lama Ugyen Gyatsho also received the title of Rai Bahadur. And the name of Minister Sengchen Dorjechan who sacrificed his life for furthering the cause of Indo-Tibetan relations will remain supreme among the greatest martyrs of the world. May his soul rest in peace!

SOME ASPECTS OF THE UNION PUBLIC SERVICE COMMISSION

By Prof. GUR PRASAD SRIVASTAVA, M.A., LL.B., D.P.A., D.F.A. & D.

The Government of India Act, 1919[1] had provided for the establishment of a Public Service Commission, but it did not come into existence for seven years. The Royal Commission on the Superior Civil Services in India of 1924 also recommended for its establishment.[2] Thereupon, a Public Service Commission was established in 1926. After 1st April, 1937 it came to be known as the Federal Public Service Commission. The new Constitution of India has renamed it as the Union Public Service Commission.[3]

So far the Public Service Commission has consisted of three members including the Chairman. But the number of members has not been fixed by the Constitution and the President is empowered to determine it. The Government of India Act, 1919, stipulated that the members were to be appointed by the Secretary of State in Council for a period of five years and he alone could remove them before the completion of their term.[4] But the Act of 1935 provided that the Chairman and other members of the Commission should be appointed by the Governor-General in his discretion provided that at least half of the members should at the date of their appointment have held office for at least ten years under the Crown in India. Moreover, he, in his discretion, determined the number and conditions of service of the staff of the Commission. The Chairman of the Commission was ineligible for any office under the Crown in India after retirement. All the above provisions have been kept intact with minor alterations and adaptations to the changed circumstances of the new Sovereign Republic of India. As for example, the place of the Secretary of State has been taken by the President of the new Republic.

Article 316(1) of the new Constitution provides that the President would make the appointments of the Chairman and other members. The draft constitution had provided that "at least one half" of its members should have a service qualification of ten years. But the Constituent Assembly changed the above expression into "as nearly as may be one half" in its second reading of the Draft Constitution.[5] Emphasizing the need for the service element the Chairman of the Drafting Committee said that "obviously nobody could be a better judge in this matter than a person who had already been in the service of the Crown."[6] As the number of members has not been fixed, the President has been empowered to make regulations determining the number and conditions of service of members of the Commission.[7] The President would also determine the number and conditions of service of the staff of the Commission. Moreover, the Chairman is ineligible for further employment under Government, although other members are not so debarred. The same article fixes the tenure of members at six years and the age of retirement at 65 years whichever is earlier, provided that a member can always submit his resignation to the President in writing. Moreover, no member is re-eligible for office on the expiry of his term. Article 317 provides for the removal of a member from office in certain conditions. It also provides that the Chairman or any other member of the Public Service Commission shall only be removed from office by order of the President on the ground of misbehaviour after the Supreme Court, on a reference being made to it by the President, has, on inquiry held in accordance with Article 145 of the Constitution, reported that the Chairman or member should be removed from office. In the meantime the President may suspend such a person. A member would be deemed guilty of misbehaviour if he becomes interested in any way in any governmental contract or agreement or participates in any way in its profit or in any monetary benefit arising from it otherwise than as a member and in common with the other members of any incorporated Company. The same article also provides that the President may by order remove from office the Chairman or any other member of the Public Service Commission if he is adjudged an insolvent or engages during his term of office in outside employment or is declared infirm in mind or body. But obviously the President is to act in this matter in consultation with his Cabinet.

The Royal Commission of 1924 recommended[8] that the Public Service Commission should possess two categories of functions, first, with regard to recruitment and second, with regard to some quasi-judicial matters, such as discipline and control of the Civil Service. But according to the Indian Statutory Commission the Public Service Commission performed four functions.[9] Firstly, it advised the Government on recruitment matters. Secondly, it held competitive examinations. Thirdly, in case of recruitment by selection it received applications, interviewed the candidates and submitted a list of those eligible in order of merit. Fourthly, in cases of promotion from the provincial service it considered the moral and physical qualities of candidates and advised, the Governor-General in Council about their suitability for promotion. The Government of India Act, 1935, provided that the Commission should conduct competitive examinations for the civil service. The specific matters in which it was to be consulted were firstly, methods of recruitment to the Civil Service and secondly, principles of

appointment to the civil service and promotions and transfers from one service to another and also the suitability of candidates for appointment, promotion or transfer. Morover, it was also the duty of the Public Service Commission "to advise on any matter so referred to them and on any other matter which the Governor-General in his discretion might refer to them."[10]

Article 320 describes the functions of the Union Public Service Commission. Firstly, it will conduct examinations for appointment to the services of the Union. Secondly, it shall be consulted in the following matters:

(a) On all matters relating to recruitment to the Civil Services.
(b) On the principles to be followed in making appointments, promotions and transfers.
(c) On all disciplinary matters affecting Government Servants.
(d) On any claim for costs incurred by a Government servant in defending himself against legal proceedings instituted in respect of his public acts.
(e) On any claim for the award of a pension in respect of injuries sustained by a person while serving the Government.
(f) To advise on any matter so referred to them and on any other matter which the President may refer to them.

Thirdly, it shall also be its duty to assist two or more States, on their request, in the recruitment of their administrative personnel. Fourthly, Article 321 of the new Constitution provides for the addition of functions of the Public Service Commission by an Act of the Legislature. This Article is based on the sovereignty of the legislature in the new Constitution of India.

But it has also been provided in Article 320 that the President "may make regulations specifying the matters in which either generally, or in any particular class of case or in any particular circumstances, it shall not be necessary for a Public Service Commission to be consulted." Moreover, it shall also not be consulted as respects the manner in which effect is given to Article 16 dealing with equality of opportunity in matters of public employment and also to Article 335 dealing with the claims of scheduled castes and scheduled tribes.

Thus we see that the picture of the Union Public Service Commission which emerges from the present study is not wholly satisfactory. In fact, one finds that most of the provisions of the Act of 1919 and the Act of 1935 have been kept intact, the word 'President' being substituted for the Secretary of State. The result of this has been that most of the defects of the old Public Service Commission have also not been eliminated. But, however, a reform of the Public Service Commission can be undertaken on the following lines in order that it may compare favourably with the Public Service Commissions of other progressive countries like Great Britain and the United States of America.

Firstly, there should not be a fixed tenure of members. In Great Britain, the Civil Service Commissioners are appointed by the king during pleasure. This insures their independence from the executive Government. But the framers of our Constitution have not gone beyond the Government of India Act 1919 and that of 1935 and so the defect continues.

Secondly, in Great Britain, the Civil Service Commission performs all the executive work relating to recruitment. The Public Service Commission did not possess this power under British Rule in India. But strangely enough, in the new Constitution also the President has been authorised to make regulations ousting the jurisdiction of the Union Public Service Commission in some matters.

Thirdly, the Civil Service Commission in Great Britain has been free from political influence since the Palmerston Incident of 1857. But this was not the case with Public Service Commission under British Rule. Even now the complete independence of the Public Service Commission from political influence has not been assured.

Fourthly, the President has been empowered to determine the number of the members of the Commission. Therefore, it is possible that it might be changed from time to time according to President's whim. Moreover, it would give the President a great power over the Commission. In order to avoid these consequences it would have been better if the constitution itself had fixed the number.

Fifthly, the number of Civil Servants in the Commission is very large. This matter also bears out the statement that the new Constitution is a reproduction of the old British legislation with minor changes and adaptations. Nobody can deny the utility of Civil Servants on the Commission but to say that nobody could be a better judge in this matter is to condemn the democratic system of Government itself. In fact not more than one-third of its members should have been Civil Servants. Moreover, it should have been definitely provided that the Chairman would be non-official.

Finally, in Great Britain, the decisions of the Civil Service Commission in regard to age, health, character and ability of candidates are subject to judicial review. This should have been provided here also in order to ensure impartial selection.

But there is no cause for despair as the root cause of all evils of our political system, *i.e.*, foreign domination has been removed from the Indian soil and our institutions would not work under any handicap now. The defects, as they are gradually realised in the course of working of our Governmental machinery would, no doubt, be removed by amendments of the Constitution.

THE INDIAN IRON AND STEEL INDUSTRY

By JAMSHED MATHUR

In the days of the infancy of the iron and steel industry Thomas Carlyle prophesied :

"The Nation which gains control of iron soon acquires the control of gold."

The truth of this is borne out by the fact that, perhaps the best measure of the industrial prosperity of a nation is indicated by the production of these metals. A glance at Table I suffices to show where our country stands in relation to the World's industrially advanced nations. We produce less than one per cent of the total world production. Yet, Ancient India was renowned for her iron crafts !

TABLE I

Country	Pig Iron production (*Million tons per year*)		Crude Steel production (*Million tons per year*)		Per capita
	1940	1949	1940	1949	
World	104.6	..	143.4	150.5	
U.S.A.	41.8	48.0	59.8	69.6	860 lb.
Germany	20.6	7.0	25.1	9.0	
U.S.S.R.	15.4	..	19.5	25	
U. K.	8.3	9.6	13.4	15.6	520 lb.
France	4.5	7.0	5.5	9.0	
Belgium	2.2	3.6	2.2	3.8	
Japan	2.9	1.6	6.3	3.1	
India	2.0	1.5	1.4	1.4	8 lb.

The famous "Damascus" blades are said to have been forged in India, while the Delhi iron pillar which has survived the violence of natural agencies and the fall of kingdoms through the past 1500 years is a standing monument to the skill of its makers. However, it is obvious that though the art of extracting and shaping iron, generally as wrought iron, was well-known, judged by modern technique it was extremely crude—perhaps not very much different from the practice followed to this day by the aboriginals of remote Singhbhum.

Sporadic attempts to establish the industry on a modern basis were made during the latter half of the last century. In 1830 the East India Company erected a blast furnace at Porto Novo (Madras State) but the attempt failed. The government failed again to establish iron works near Naini Tal (U. P.)between 1862 and 1877. The next attempt was made in 1875 by the Barakar Iron Works, whose blast furnaces at Kulti were reopened by the Bengal Iron and Steel Co. This concern was later amalgamated with the Indian Iron and Steel Company whose original furnaces were at Hirapur. With the discovery of the vast deposits of high grade iron ore and good quality coking coal in Bihar at the advent of this century, and the establishment of the Tata Iron and Steel Company in 1911, the steel industry was placed on a sure footing. In 1923, the Mysore works commenced production of iron and has made steel since 1936. The last to enter the field was the Steel Corporation of Bengal in 1938 with its works at Burnpur.

The iron and steel industry has the distinction of being based entirely on indigenous materials. Prospecting has shown that quantitatively and qualitatively India probably excels any other country in her resources of iron ore, chiefly hematite. The most important deposit is in the Bihar-Orissa belt embracing Mayurbhanj, South Singhbhum, Keonjhar and Bonai. The major manufacturers draw their supplies from this source whose reserves have been estimated at 8,000 million tons of extremely high grade ore containing 60 to 68 per cent Fe. Deposits of the same high quality occur in the Central Provinces, with reserves estimated at 875 million tons. The Bababudan Hills of Mysore, with reserves of 150 million tons of 55 to 60 per cent Fe. content, supply the works at nearby Bhadravati. A considerable deposit of inferior grade magnetite exists in Madras State together with one of high grade hematite of about 100 million tons in Sandur State. In passing it may be mentioned that the U.S.A. utilises one of 50-55 per cent Fe content while Germany has used one of 20 per cent Fe content. Hence, we are fortunate in possessing the world's richest hematite in virtually inexhaustible quantity.

However, the position as regards good quality coal suitable for the manufacture of metallurgical coke allows for no complacency. Reserves of this are estimated at 750 million tons which may not last for more than 65 years. Coking coal is obtained almost entirely from the Jharia Coalfield; of the ten million tons mined annually only a third is used for metallurgical purposes. A more rational exploitation of these deposits with a view towards conservation is imperative. The other grades of boiler and gas coals required by the steel industry are available in the Raniganj (Bihar-Bengal), Bokaro-Karanpura (Bihar), Talcher (Orissa) and Central Indian fields. The Indian Coal Fields Committee (1946) has estimated total reserves of bituminous coal at 16,500 million tons, the bulk of which occurs in the Bihar-Bengal area.

The third major raw material are the fluxes, limestone and dolomite, used in the blast furnace and in basic steel making. These are obtained from Gangpur in Bihar and also from the Central Provinces. Flourspar is imported.

Manganese ore is often a part of the blast furnace "burden," or in the form of ferromanganese or spiegeleisen it is used in the making of special steels. India is among the world's main suppliers of manganese ore. There are large deposits in the Central Provinces,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bombay and Madras but the main producers of the steel industry draw their supply from deposits in Orissa.

The last essential requirement are the refractories. The refractory industry is well-established on or near the Bihar-Bengal coalfields where suitable raw materials for the making of fire-clay, silica, chrome bricks and shapes are available. Magnesitic refractories have been developed from extenive deposits in Madras and Mysore. The capacity of this industry is 250,000 tons per year, which is adequate for the present demand.

By far the leading steel producers in our country is the Tata Iron & Steel Co. The plant is ideally situated 150 miles west of Calcutta on the main B.N.R. line, roughly midway between the coalfields and the ore belt. Within a radius of 120 miles of the town almost every raw material is available. Compare this with the U.S. steel industry situated on the coalfields of Pennsylvania but obtaining their iron ore from the Lake Superior district over 700 miles away. An even more glaring example of the capriciousness of nature is given by the Russian industry located on the iron ore deposits of the Urals but obtaining coal from the Kuznets Basin no less than 1500 miles away. We are indeed fortunate that our iron ore and coal deposits occur almost together. The Tata plant has the reputation of being the twelfth largest steel plant in the world and the largest in the British Commonwealth. Taking the Indian operating blast furnace capacity as just over 2 million tons pig iron per year, with their five furnaces Tatas contribute approximately 63 per cent. They possess 67 per cent of the finished steel capacity, but in the peak year 1941 they produced 839,000 tons of the total production of 1.1 million tons, that is, 76 per cent of the total. A large variety of rolled steel material including structural sections, rails, bars, plates, black and galvanised sheets, tin plate, railway wheels, tyres and axles, etc., is produced. In 1934, they developed a special alloy steel for the construction of the Howrah bridge, the third largest cantilever bridge in the world. During the war, special steels ranging from straight carbon and high speed tool steels to high alloy aircraft and stainless steels were manufactured, including bullet-proof plate and armour-piercing shot steel. A recently developed product is high silicon sheet steel for the manufacture of motors, dynamos, transformers, etc.

The Indian Iron and Steel Company together with the Steel Corporation of Bengal comprise the second largest unit. The two blast furnaces at Hirapur supply pig iron to the neighbouring steel furnaces at Burnpur, while associated with the two blast furnaces of the old Bengal Iron Company (now I.I.S. Co.) at Kulti, 10 miles away, are the largest and most modern iron foundries in the country. SCOB makes products similar to Tatas, while Kulti specialises in the production of centrifugally cast iron pipes and railway sleepers. The Indian Iron & Steel Company accounts for 35 per cent of the pig iron capacity in India.

The Mysore Iron & Steel Works at Bhadravati contribute 2 per cent of the pig iron capacity, with a single blast furnace of 80 tons per day capacity. The plant has the distinction of being the only one using wood charcoal instead of coke in the blast furnace "burden."

Other producers are the Government Ordnance Factories at Ishapur, Kanpur and Meerut and also the J. K. Industries (Kanpur) and the National Iron & Steel Co. (Calcutta), each of which have either small open hearth furnaces or a few electric furnaces for making special steels.

Another feature of the iron and steel industry is the Re-rolling industry making products which the main producers are not equipped to produce. The most important of these is the Tin Plate Company of India Ltd., situated 3 miles from the Tata plant from where they obtain the black plates which are converted into tin plate for the metal box and container trade. This is the only works of its kind in India; with a production of 67,000 tons (in 1949) it meets almost all the country's demand. Another important industry located at Jamshedpur is the Indian Steel Wire Products Ltd. who manufacture a wide range of light rod, barbed wire, wire nails and bolts, nuts and rivets. The present capacity is 60,000 tons per year. Specialising in railway requirements as points, signal material, sleepers, special bolts and nuts is Guest, Keen and Williams Ltd. of Howrah, whose output is 48,000 tons per year. Conveniently situated at Nagapatam (Madras State) for the reception of imported billets and to supply markets far removed from the works of the main producers, is the Indian Steel Rolling Mills Ltd. The annual production of 18,000 tons includes bars and light rods. Finally we have the Eagle Rolling Mills at Kumardhubi (in Bihar coal-fields) producing light sections and bars. Besides the above-mentioned large plants there are approximately 130 mills in various parts of the country. The total capacity of the re-rolling industry is 500 000 tons; but production, chiefly from imported billets, does not exceed 60,000 tons per year.

Table II gives the installed pig iron capacity of the industry. Production in 1941 touched the 2 million

TABLE II

Company	Pig Iron capacity tons/year	Finished Steel capacity tons/year
Tata Iron & Steel Co. Ltd.	1,250,000	850,000
Indian Iron & Steel Co.—		
Kulti	328,500	
Hirapur	584,000	350,000
Steel Corporation of Bengal	29,200	40,000
Mysore Iron & Steel Works	...	24,000
Ishapur Ordnance Factory	...	1,200
Total ..	2,191,700	

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tons per year mark but is now 1.5 million tons per year. The consumption of pig iron apart from steel making is about 130,000 tons per year, half of which is used for the production of railway sleepers, another 25,000 tons for pipes and fittings, and the remainder for other foundry purposes. Pig iron imports have been negligible, limited only to special qualities. In fact, since 1923 India has been one of the few important world suppliers. In 1938 exports chiefly to Japan were 629,000 tons. Exports declined sharply in war years, and with the expected increase in demand for foundry iron in the country the exportable surplus is bound to decrease. Since 1943 there has been an export of ferro-manganese (produced by Tatas) to the U.S.A.; 11,000 tons were exported in 1946. This is a step in the correct direction, since it is more profitable to convert our rich manganese ore to ferromanganese rather than to export it in the raw condition.

Turning to the steel production we find that the finished rolled steel capacity is approximately 1¼ million tons per year (Table III). The peak production was 1.1 million tons in 1943 which has languished to

TABLE III

Year	Labour cost/ton finished steel at TISCO	Average output/ worker/annum
1939-40	Rs. 33.5	24.36 tons
1948-49	Rs.90.8	16.3 tons

900,000 tons on the average. On the basis of that for the first half of this year the anticipated production is 920,000 tons. In contrast to this, the industrial panel assessed the demand for the coming years at 2½ to 3 million tons per year. Hence, there is a deficit of 1½ to 2 million tons. Thus, though we may be justly proud with the fact that in 1939 we produced 78 per cent of the total consumption of rolled steel compared to a mere 24 per cent in 1926, it is obvious that our production will fall increasingly short of the demand when our ambitious projects and development plans get under way.

The future of the steel industry is clearly one of expansion in order to meet the present deficit and cater for future requirements. The government have in mind the erection of new plants, possibly in the Central Provinces and in Orissa. Foreign experts have suggested the erection of two plants each of 500,000 tons capacity and with provision for doubling the capacity. The cost of such a plant is estimated at Rs. 85 crores and the time of erection and operation as 8 to 10 years. Meanwhile, each of the major producers has drawn up expansion plans. The Tata Company propose to raise their steel capacity by 200,000 tons at capital cost of Rs. 12 crores, provided government assist in financing the programme by means of a substantial long-term loan. In the past years government has agreed to grant loans of Rs. 3½ crores to the SCOB and Rs. 1½ crores to the I.I.S.C.O. to enable them to undertake renewals and increase production of steel by 200,000 tons. The Mysore Iron and Steel Works, a State enterprise, has proceeded with its expansion schemes with commendable speed. By 1952 the production of pig iron is expected to rise from the present 28,000 tons per year to nearly 100,000 tons, leading to a trebling of the steel production. On the whole, it has been estimated that with government help and at a cost of 30 crores steel production can be increased by 500,000 tons in 3 to 4 years. This will enable the country to wipe out the immediate present shortage. The importation of half a million tons steel a year at an average cost of Rs. 400 per ton involves a heavy annual drain of some Rs. 20 crores in foreign exchange which we can ill afford.

The immediate problem crying for solution is regarding the efficiency of the industry. Largely because of deterioration in equipment and the intransigent attitude of labour, production has barely risen over 80 per cent of the installed capacity compared to over 95 per cent in the U.S.A. Besides, the labour force in an Indian Steel Works is about three times that in a modern works elsewhere. As Sir J. R. D. Tata said at the annual company meeting :

> "There is obvious scope for a considerable reduction in the number of men and a corresponding increase in their earning power."

As for the productively of labour the figures given in Table III need no comment.

The economic structure of a modern nation is largely dependent on its iron and steel manufacturing potential. We possess prodigal reserves of raw materials and there is no reason why we cannot build up an industry comparable to that in the Ruhr or Pittsburg. The foundations have already been well laid; it is up to the present generation to build upon them.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

CRISIS IN CIVILIZATION: *By Rabindranath Tagore, Visva-Bharati, Calcutta, 1950. Pp. 18. Price Re. 1.*

A few months before his death, the Poet wrote one of the most poignant essays which ever came from his pen. The world was in the midst of war, and all that the West had so long stood for in human civilization, seemed to be crumbling before our eyes. In spite of the surrounding darkness, the Poet reconquered his faith and proclaimed once more that the spirit of man would surely prove victorious in the end.

At a time, when the darkness seems to be enveloping us from all round, it is perhaps good to bear company with the Poet once again, and we do feel grateful to the publishers for having made the celebrated essay available once more in its new form.

THE POLITICAL PHILOSOPHY OF MAHATMA GANDHI: *By Gopinath Dhawan. Published by Navajivan Publishing House, Ahmedabad. 1951. Pp. viii + 407. Price Rs. 6.*

This is the second and revised edition of a book published five years ago. Gandhiji never personally wrote any political or economic treatise. He was an intensely practical man; and his ideas shaped themselves even in the midst of work, undertaken on a national scale. Scholars should feel grateful to Dr. Dhawan for having delved into the thousands of pages which Gandhiji wrote in his life-time, and for having successfully formulated out of it a consistent social and political philosophy.

There are several points which strike one as the prevailing characteristics of Gandhiji's system of thought. He was never static in his life, he was ever-changing, and the change was progressively in the direction of radicalism and a greater appreciation of the oneness of the entire human family. Throughout the numerous extracts which Dr. Dhawan has quoted in his book, one cannot fail to be impressed by this living and growing character of Gandhian thought.

Gandhi, the man, has become very dear to us today. But mere hero-worship will not carry us anywhere unless we pin our faith on what the man stood for, and unless we try to put into personal and collective practice new ideas with which Gandhiji experimented in the midst of a world darkening under the shadow of war.

From that point of view, we should regard Dr. Dhawan's book as a timely and very useful contribution.

NIRMAL KUMAR BOSE

HISTORY OF MYSORE AND THE YADAVA DYNASTY: *By G. R. Josyer. Pp. 318. No price stated.*

The title of this work is a misnomer. The author seeks to present "handily and readily" "the history of Mysore from early times and of its progress under the Yadava dynasty" (Preface). But the entire history of the territory from pre-histiric far down into mediaeval times is summarised in about twenty pages (pp. 3-24) included under the singularly inappropriate title of the *The Dim Past*. By far the greater part of the work is concerned with the history of the present ruling house of Mysore from its traditional beginning in 1399 till the year 1950 when the present Maharaja was installed as *Rajapramukh* of the newly-created Mysore State of the Indian Union. The dynasty, as is well-known, passed through a series of singular vicissitudes through the period of its early struggles, its supersession by Hyder Ali and Tippu Sultan and the assumption of administration of the State by the East India Company from 1831 to 1881. Since then, thanks to a succession of able rulers and administrators and their Dewans, the State has made phenomenal advance in educational, economic and (latterly) constitutional development. Of this long period the author gives a readable and valuable account in course of which he does adequate justice to the memory of two of Mysore's able, but unfortunate sovereigns, *viz.*, Maharani Lakshammanni and Maharaja Mummadi Krishnaraja Wodavar.

It is however unfortunate that the work should be throughout lacking in historical references. Some of the extracts quoted by the author might have been abridged, or even omitted, without lessening the force of his arguments. What is worse, he occasionally quotes mere tales as sober history, witness his quotation of a Mahabharata story as "a vision of ancient Mysore" (p. 7) and his repeating the stories of adventures of some early kings of the Yadava dynasty (pp. 29-35). His judgments of historical characters are sometimes marked by want to balance, e.g. his comparison of one of the early kings with Richard I of England (p. 35) and of another with "Queen Elizabeth of England, Louis XIV of France, Augustus of Rome, Akbar of Delhi and Krishnadeva Raya of Vijayanagar" (p. 41), and his finding in a letter of queen Lakshammanni to the East India Company a reflection of the spirit of Queen Victoria and of Empress Maria Theresa (p. 99). The author's view that Alexander's invasion in 327 B.C. (*sic.*) marked the dawn of modern Indian history (p. 7) is unsound, while his statement on the same page that Alexander's "Governor" sent his ambassador Megasthenes to Chandragupta Maurya

Digitized by Arya Samaj Foundation Chennai and eGangotri

Court is wrong. To the list of errata given at the end, the author might have added Napolean (p. 64), Metcalf (p. 170), Jahagirdar (p. 174), and the date 1833 (p. 100). Apart from occasional lapses in composition (pp. 18, 51), the author's mannerisms of style are sometimes irritating to the reader. On p. 72 he writes, "Once again Maharani Lakshmmanni's efforts failed, like Bhagiratha's second effort to bring the waters of the Ganges for the consecration of the ashes of his ancestors. With Job-like patience she waited urging the British now and again like a Laputian flapper . . . . .". On the following page he says: "Nawab Hyder Ali was not an anointed sovereign. Tippu Sultan was not an anointed Sultan. Their usurpation of the administration did not destroy the monarchy, though it might have made it a figurehead, just as General MacArthur in present-day Japan is the supreme administrator but has not ousted the Mikado." The value of the book would have been enhanced by the addition of a bibliography and a map. Paper, print and the general get-up are exrellent.

U. N. GHOSAL

ADLER'S PLACE IN PSYCHOLOGY: *By Lewis Way. George Allen and Unwin Ltd., London. 1950. Price 18s. net.*

Both Adler and Jung substantially helped Freud in spreading psychoanalysis at the beginning but in course of time both of them separated from him and each sought to establish his own school of thought. On the whole Jung seems to have attracted a larger number of adherents than Adler. Mysticism thrives easily in India and therefore amongst a certain class of people Jung's speculative writings are more widely read here than the scientific contributions of Freud. Adler's theories are very little read and scrutinised.

There has been much controversy about the validity and the reliability of the different points of view enunciated by Freud, Jung and Adler. The book under review has discussed de novo the old criticisms that have been made against Freud's psychoanalysis. No new argument has been advanced but that does not detract from the value of the book which lies mainly in presenting and evaluating the Adlerian standpoint. That task has been very well performed. The assumptions and implications of the theory have been clearly delineated and one who wishes to acquaint himself with Adler's views cannot do better than go through this volume, next of course to reading Adler's original writings. The author has drawn attention to the philosophical and sociological background of Adler's theory. Pushed a little further this may lead Adler's followers to travel the same road to mysticism which Jung and his followers have already reached. The chapter dealing with the comparison of Adler's views with the other prevailing schools of psychology like Behaviorism, Gestalt, etc., is an exceedingly interesting one.

The book is written in an elegant style and needs close and attentive study. We unhesitatingly recommend the book to all students of Psychology.

S. C. MITRA

KNOW YOUR MIND: *By Dr. G. D. Boaz, M.A., D.Phil. (Oxon), Reader in Psychology, University of Madras. Published by S. Viswanathan. 1949. Price Rs. 3.*

The author had contributed from time to time articles on Psychology in the Sunday Supplements of the dailies. This book is the outcome of a collection of these articles. He invited questions relating to psychological difficulties that his readers usually had met and attempted in his article the solution of such problems on the basis of psychological tenets. The book, as it is published now, is therefore in the form of questions with answers. He has sifted and classified these questions under fourteen different heads, e.g., Childhood; On adult behaviour; Love, marriage and sex; etc., The answers have been given lucidly in a simple language easily to be grasped by all. In making it popular, the author has advisedly avoided the tortuous path of theories and controversies. The questions have been admirably answered. The more the book is read, the more will it spread the 'mental hygiene' sense among people. The book is a handy memorandum to other psychologists who, also, usually meet with similar queries from men under stress.

D. GANGULY

GURUDEV TAGORE: *Some essays collected and edited by R. Narasimhan, M.A., General Secretary, Tagore Society, Madras. Hind Kitabs Ltd. Pp. 132. Price Rs. 3.*

The book is in the form of a symposium on Rabindranath in which thinkers like Tan Yun Shan, A. Rama Iyer, D. Gurumurthi, K. R. Kripalani, G. Ramachandran, James H. Cousins, Sisir Kumar Mitra, Nolini Kanta Gupta, Benoy Kumar Sarkar, Krishnalal Shridharani, K. S. Ramaswami Sastri and Indira Devi Chaudhurani have joined. They have shown Rabindranath as poet, thinker, dramatist, artist and humanist. The most significant article is by Professor Tan Yun Shan, who has given an account of the Poet's visit to China in 1924 and told us how he was instrumental in bringing the two ancient civilizations in close contact again and thereby giving a great impulse to China's literary renaissance. The book will repay perusal. The foreword by C. P. Ramaswami Aiyar is illuminating.

B.

AT THE CROSS ROADS: *The Autobiography of Nripendra Chandra Banerji. A Mukherji and Co., Calcutta. Pp. 318. Price Rs. 8.*

This book of reminiscences of a man who was formed by the Bengal "Swadeshi" Movement (1904—1910) is pleasantly written touching the surface of the mighty forces that were making Bengal and through her India. The writer came under the influence of the Dawn Society and of its venerable founder, Satish Chandra Mukherji. The influence of this age abided with him with its call to sacrifice and grimness. Though he could not make the choice that he made 15 years later when he joined the Gandhian Non-co-operation Movement, the latter showed the tendency of his mind. During this interval he acted as a teacher of youth in Government Colleges, and the episodes described by him show the spiritual conflict he was going through. Gandhiji released him from this dilemma. But in politics he was not happy, being incapable of making the compromises that an effective politician must make. And after wanderings in this field he reverted to his natural vocation—education. Journalism as editor of the Calcutta *Servant*, of the *Rangoon Mail*, of the Calcutta *Eastern Express*, fell naturally into this line.

The best part of the book is the description of life in Bengal's country-side including small towns. It gives an idea of Bengalees in their home activities till then accepting the British dispensation. Then came

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the "Swadeshi" Movement which roused these complacent people to the shame and indignity of alien rule. This awakening made possible all that has happened during the next 45 years. Nripendra Chandra was a witness to this great change in a people's life.

SURESH CHANDRA DEB

A HISTORY OF MAITHILI LITERATURE (Vol. 1): *By Dr. Jayakanta Mishra, M.A., D.Phil., Lecturer, Allahabad University. Tirabhukti Publications, 1 Sir P. C. Banerji Road, Allahabad. 1949. Pp. 472. Price Rs. 15.*

Dr. Jayakanta Mishra has contributed substantially through this volume to the building up of a historical survey of modern Indian Literature. Maithili as a distinct branch of that literature extending from the fourteenth to the middle of the nineteenth century is treated in this volume. The shifting of literary activity from Eastern India to Nepal and then back to Mithila proper, with consequent emphasis on lyric, dramatic and prose forms, is provocative to the scholar and it presents grounds of investigation. Similarly, Nachari songs and Champu forms in modern times will seem to be curious to a Bengali reader.

Coming to early Maithili literature, Dr. Mishra has declared that the Bauddha *gans* have the greatest claim to be considered as old Maithili specimens. If we have to depend on philology mainly, the matter should be studied dispassionately, without the least trace of any special pleading. As days pass on, and as claims are being filed by the different East Indian languages, the question is assuming the form of a "problem." The sooner the question is settled once for all, the better for a proper perspective of the growth and development of modern Indian languages in the Eastern zone. With Jyotiriswara we are on firmer ground, and we feel quite at home with Vidyapati Thakura, that is, middle of the fourteenth century.

Dr. Mishra has fully taken into account the contemporaries and successors of Vidyapati, and this part of the book shows his great interest and diligence. But the dramas in Nepal again present a fertile topic for discussion, and the Assamese dramas of the period invite a comparison. Be it said to the credit of Dr. Mishra that he has spared no pains in presenting a connected and documented account. Dr. Suniti Kumar Chatterjee's commendatory introduction will be perused with interest in evaluating the work of Dr. Mishra.

P. R. SEN

THE TALES AND TEACHINGS OF HINDUISM: *By D. S. Sarma, M.A., Principal, Vivekananda College, Madras. Published by Hind Kitabs Ltd., 261-263 Hornby Road, Bombay. Pp. 176. Price Rs. 3.*

The distinguished author of this book is well known for his popular works on Hinduism and allied subjects. His books are among the best to popularise the fundamentals of our faith among the English-knowing Indians. The present book, intended to be used as a text-book in High schools, consists of two parts. The first part gives an outline of Hinduism, its scriptures and teachings, and ascertains its place among the religions of the world. This part is meant for detailed and serious study. In the first chapter the learned author shows that Hinduism is the oldest of the ten living religions of the world and its fundamental scripture, Rig-Veda, is the oldest religious work. In this chapter he has clearly pointed out how Hinduism has taken the wind out of the sails of all the religions that it has met with through out the ages and concludes, "It thus assimilated Buddhism in ancient times, withstood the onslaught of Islam in the middle ages and has outlived the propaganda of Christianity in modern times".

The second part of the book, recommended for non-detailed study, gives a brief account of the famous stories and legends contained in our immortal epics, the Ramayana and the Mahabharata as well as the Bhagabata and other age-old Puranas. In this part two chapters are devoted to the *leelas* of Krishna and the last two to the four famous legends of Dhruba, Prahlada, Harishchandra, Savitri and Satyabana. The exposition is so elegant and impressive that the readers cannot leave without finishing it. The chapters on Hindu scriptures and the teachings of Hinduism are highly interesting and instructive. A perusal of them is sure to stimulate the minds of the younger generation for a deeper study of our religion. Now that we are politically free, it is high time for us to broadcast the principal tenets of our faith and to prepare ourselves for cultural liberation.

Rightly does the thoughtful author regret in the preface and observe: "It will be an evil day for India and her civilisation if the boys and girls in our schools were allowed to remain ignorant of the purity and heroism of Savitri and Sita, the resoluteness and indomitable faith of Dhruba, Prahlad and Harishchandra or of the earthly careers of those Great Ones whom we regard as divine incarnations."

SWAMI JAGADISWARANANDA

APARTHEID IN SOUTH AFRICA: *By P. S. Joshi. Printed by Diamond Fields Advertiser Limited, Currey Street, Kimberley, South Africa. Price not stated.*

Mr. P. S. Joshi has already made his mark as a writer on the problem of racial relations. The book under review, a very readable slender volume, deals within its narrow compass with the various aspects of the colour question in South Africa. The author shows how unjust and untenable the theory of "Herrenvolk" is and warns in unmistakable terms that it is pushing the Union of South Africa to the edge of the precipice. A very valuable Appendix gives, among others, a list of discriminatory laws against non-Europeans in South Africa since 1910. Students of racial relations will find the book very useful. For the exponents of apartheid it will be a bitter pill to swallow.

Apartheid is territorial segregation of the Blacks from the Whites. The policy of apartheid, if pursued to its logical conclusions, will lead inevitably to the disintegration of the Union of South Africa. It is therefore dangerous to the wrong-doer no less than to the wronged. The Indians in South Africa, already reduced to "a helpless, voiceless and voteless minority" with many fundamental rights denied to them, are facing the most immediate danger by the application of apartheid. Segregation is a shrewd device to achieve their repatriation without compensation. Yet the self-same Indians did much to make South Africa what she is today.

The creed of apartheid violates and suppresses human rights and freedom. It aims at perpetuating the domination of a microscopic white minority over the non-white majority in South Africa. This 'new barbarism,' more terrible than that of ancient times, is against all accepted canons of justice and fairplay. It denies a full life to the non-whites. To quote Mr. Joshi, "Under the pretext of civilisation, the Bantu has

robbed of his freedom, the Coloured of his heritage and the Asiatic of his equality."

The champions of apartheid like Dr. Malan refuse to hear the faint murmurs of life, albeit faint, in the placid waters of colonial Africa. A number of incidents in recent times point to the rising temper of the African people. Dr. Malan's government as well as the Opposition are "heavy with the wine of racial superiority" and unless sanity prevails, they are sure to be overtaken by Nemesis.

SUDHANSU BIMAL MOOKHERJI

BENGALI

SARAT PARICHAY : *By Brajendra Nath Bandyopadhyay. Ranjan Publishing House, 57, Indra Biswas Road, Belgachhia, Calcutta-37: 1951. Pp. 130 Price Re.1-8.*

This little book is a valuable addition to the not very extensive literature on the late Sarat Chandra Chatterji, the great novelist of Bengal and Modern India. Sri Brajendra Nath Bandyopadhyay has treated the subject with his usual detachment and his adherence to attested facts, and the result is a very reliable source-book for certain aspects of Sarat Chandra's career, his ideas and his literary output. The main facts of Sarat Chandra's career are first stated, with copious relevant quotations from persons who are or were in a position to attest to facts of Sarat Chandra's life and to give an account of the development of his mind, and Sarat Chandra's own statements as in letters, published lectures and other documents have also been utilised. These last form a particularly valuable series of documentations for Sarat Chandra. As can be expected from Sri Brajendranath, there is a well-documented bibliography in chronological order of the writings of Sarat Chandra so far available in print. These form over 43 items. This is followed by a good and a useful selection from Sarat Chandra's hitherto unpublished letters to some of his friends and relations, which give us valuable glimpses into Sarat Chandra's career and personality. There are two plates, one a fine portrait of Sarat Chandra and the other a reproduction of an autograph letter in Bengali. On the whole, *Sarat Parichay* will remain a valuable contribution to the study of this great literary figure of Modern India whose influence has now extended far beyond his own province and whom through translations readers of Hindi and other Indian languages have also made their very own, as much as readers of Bengali in which Sarat Chandra's original literary output is enshrined.

SUNITI KUMAR CHATTERJI

HINDI

JEEVANKA SADVYAYA : *Translated by Haribhan Upadhaya. Navajivan, Prakashan Mandir, Ahmedabad. Pp. 182. Price Re. 1.*

This is an excellent rendering from *Economy of Human Life*, first published about a couple of centuries ago, but the authorship of which has been attributed from Brahmin Dandmis to Lord Chesterfield. The book has been published in most of the important languages of the world. It was translated for the first time into Hindi, however, only some years back. The present is the second edition. The book is full of wise observations on man's various duties, social relationships, search for true happiness and virtues and vices. It is, thus, a great help in character-formation. The translator incidentally mentions that the book was a great favourite of Pandit Madan Mohan Malaviya, who recommended it frequently to his friends, particularly to the young among them.

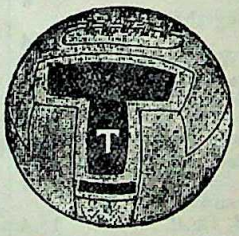
SANGHARSHA AUR SHANTI: *By Shri Swami Karapatriji. Dharmasangha Shikshamandal, Sanmarg-Bhavana, Town Hall, Benares. Pp. 256. Rs. 3.*

The author's works not being available now in the market the publishers have planned to bring out a series of publications, embodying the later writings of the author with the previous ones of the great thinker. This is the first volume. It deals with prayer, world peace, culture, religion, study of scriptures, etc., suggesting several ways for overcoming storm or conflict, within and without, and entering into true peace. A useful manual for all spiritual aspirants.

GUJARATI

BHAGWAN SATHE VATCHIT: *Published by Manilal K. Desai, B.A., LL.B., Advocate, 100 Bhuleshwar, Bombay. 1948. Paper-cover. Artistic jacket. Pp. 24.*

In this very small booklet whose title is—Talks with God—Mr. Desai's late father has set down 51 dicta addressed to God and has put in the forefront His omnipotence and helpfulness.



URMILANUN SWAPNU AND OTHER POEMS: *Bhai Shankar Kuberji Shukla. Printed at the Adarsh Printers, Rajkot. 1947. Thick paper-cover. Pp. 76. Re. 1.*

It is said that Urmila, the wife of Lakshman, insisted on going into exile with her husband, Rama and Sita, as was ordered by Lakshman to remain behind. She obeyed but immediately fainted and did not regain consciousness till Lakshman returned fourteen years after and roused her. The poet has drawn an imaginary picture of their talk—rather dialogue after their happy union and has an opportunity of describing the adventures of Sita, Hanuman, Bharat and other characters in the Ramayana. It is a sober, steady performance, so are the other poems.

What is Democracy ?

Two political terms, Democracy and Communism, now designate the two rival political systems which divide all mankind into two great camps. George Godwin writes in *The Aryan Path*:

Communism has been very clearly defined, both in the works of Marx and in Communist Manifestos and expositions of later writers. We consequently have a very clear and precise idea of what Communism is as a political philosophy. We also know by experience during the post-war years by what methods its exponents seek to impose their philosophy upon the world.

The Communist sees human society as an antithesis in which the wicked Capitalist oppresses the victimized wage-slave, a description once true, but, in the main, no longer so. The object of Communism is the capture of political power by the proletariat, the abolition of private property, and the complete subjection of the individual, as an individual, to the State.

The question is: What do we mean when we use the term Democracy?

Unlike Communism, Democracy is not a closely-reasoned political philosophy, with a single prophet and a holy book. Democracy has no Karl Marx, no *Das Kapital*. It is a general conception of the relation of the individual to the State. It is amorphous and in perpetual flux, changing with historical changes, meaning one thing to-day, another yesterday.

In general terms, Democracy has always meant some system in which power rests with the majority of the people, as opposed to the rule of one, or of an oligarchy of the superior few.

In antiquity it worked successfully in the form of the City state, but under conditions which would be held to-day to invalidate it. For Athens and other Greek City States tolerated the institution of slavery. Moreover, the classic form of Democracy was never subjected to the test of quantity, being designed for a comparatively insignificant social and political unit—the city.

A repeat pattern is discernible in all subsequent forms of Democracy from that of Rome to the emergent cities of Flanders and Germany in the Middle Ages. As cities became absorbed into states, democratic ideas were subjected to new tests, for what may be suitable for a small political unit may be unsuitable for a large one. One fundamental change which came with the growth of nations was the substitution of indirect for direct representation. The citizen no longer expressed himself in person, but through his nominee. The nearest thing to the old system of Democratic political function is to be found today in Switzerland.

The central ideal of modern Democracy, theoretically, at least, is the widest possible measure of personal freedom for the individual, equality before the law, and political power, that is the right to vote.

The citizen who possesses the vote derives from it a sense of political effectiveness. He feels that he can bring to bear personal pressure, that he can function to make or unmake governments. In a true Democracy this would, indeed, be the case. But with delegation has passed control, for the voting of any one political party into power is in a real sense the surrender of political power by those who voted it in. A government, under a Democracy such as the English, can retain power for considerable periods after it has lost the confidence of the majority which returned it to power.

The truth would appear to be that the sense of political power conferred by the vote is largely illusory and that the endowment of a political party with a mandate to govern is, in fact, a surrender to a small group of supreme power, within that party. Sorel said many years ago:

"The modern State is a body of intellectuals which is invested with privileges, and which possesses means of the kind called political for defending itself against the attacks made on it by groups of intellectuals eager to possess the profits of political employment."

Bertrand Russell has also suggested the illusory nature of the vote as an instrument of political function. The truth would appear to be that the possession of political power, whether wielded with absolute one-man authority, as in the case of Hitler, Stalin and Franco, or by a cabinet on the British pattern, engenders power appetite and propensities in individuals thus invested which were not apparent before their accession to power. It would therefore appear to be the case that beneath democratic forms may exist autocratic, or quasi-autocratic power, the State, as represented by the Cabinet, or central committee of the party in power, taking to itself, little by little, more and more of the liberty of the subject, drifting by force of innate psychological trends towards the dictator or autocratic mentality. Bertrand Russell said:

"It has become increasingly difficult to put trust in the State as a means to liberty, or in political parties as instruments sufficiently powerful to force the State into the service of the people."

The present-day trend in countries vocal in their adherence to Democracy, in particular Britain and the United States, is towards the infringement of the rights of the individual and the enthronement of the State at his expense. To believe that this trend is peculiar to Communism is to be deceived by appearances. The price of the planned State is the freedom of the individual. It involves also the creation of a new caste system, one based, not on wealth, but on that privilege which belongs to the official who is armed with State authority.

Democracy tends today towards the so-called Welfare State.

Can the Welfare State, with its perpetual preoccupation with material goods, overestimate their importance at the expense of the things of the spirit ?

Is poverty, divorced from actual want, a great evil? If so, the teaching of the sages of all time has been grievously wrong. May it not be that poverty, divorced from actual lack of the necessities of life and redeemed

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

from the fear of war, provides a better soil for the flowering of the human spirit? And is it not significant that mankind's greatest teachers have been those who renounced material possessions, from Christ to Gandhi?

Can there be any true Democracy without freedom of conscience?

Modern warfare has introduced a new ethical problem, namely, the right of the State to force a man or woman to take part in total warfare, either as combatant or otherwise. In nothing else is the issue of State *vs.* Individual brought so sharply before the tribunal of men's consciences.

Conscription, hated but endured, by European peoples, was considered, even in the lifetime of this writer, as something alien to the British democratic way of life.

Today we have conscription in the two western democracies of Britain and the United States, so that throughout the West the so-called Democratic states have assumed this power over their subjects, overriding the protests of those who have pleaded conscientious objections to all forms of life taking in the name (and this may well seem strange) of the State religion. Their fault is that they accept the Christian commandment: "Thou shalt not kill," literally.

The whole horrible story of this overriding of the individual by the democratic State has been told by Denis Hayes in *Challenge of Conscience*, a fully-documented presentation of the facts. This is a book that reveals how far Britain has travelled towards the methods she condemns in the Totalitarian States.

Below the surface goods of many of the State's activities in the modern Democracies are evils similar to those execrated in the Communist lands.

Today, those who use this term should consider what they mean by it, and we who hope for the liberation of the common people of all lands from all ideologies and national hatreds and rivalries, should have a care just now and consider whether Democracy is indeed drifting towards a masked form of Totalitarianism—and take thought, too, as to what we can do about it.

The Role of the Navy in Free India

A correct reading of Indian history shows that the sea has played a very important part in it. S. P. Sharma writes in *The Indian Review* :

The important role that the sea has played in Indinn history was wholly overlooked by the British during the period of their rule in this country. Accordingly, they gave a wrong interpretation of the subject, and popularised it too through the schools and colleges that they recognised in the land. Now that they have left, however, it becomes urgently necessary to correct the mistake they made, and to see Indian history in proper perspective. Their view, indeed, was vitiated by two factors. As successors to the Moghals, they inherited certain notions of the latter in respect of defence strategy. The Moghals were essentially a land-power interested in the security of northern India. Danger threatened only from the north-west, and they accordingly devised security measures in that quarter. The second vitiating factor for the British was, paradoxically enough, their own sea-power which shielded India for them for over a century. In fact, the Royal Navy was so immeasurably strong during the period that the British seem to have taken the fact for granted and forgotten all about it. Hence it is that they did not develop the Indian Navy as they did the Indian army; their own navy was always able and available to ward off danger to India from across the seas.

Indeed, while invaders from the land-side were absorbed into the local population in due course, and completely Indianised, those from across the seas, like the British themselves, were able to impose their will on India, and to influence her destinies in peculiar manner, while keeping themselves aloof and superior by virtue of their foreign bases. In this manner Britain which ruled the waves all through the 19th century remained unchallenged in her Indian seas by any other power. But towards the end of the century, Japan by means of her occupation of Formosa and the U.S.A. by getting the possession of the Philippines, entered the Indian Ocean as naval powers. On the Arabian Sea side also, certain developments were taking place. France occupied Madagascar, and from Diego Suarez, the great port and base on the island, could control the sea-routes of the Indian Ocean from the west. Germany occupied Tanganyika and Italy came into Somaliland, both the countries thus securing coast-lines on the Indian Ocean. Nevertheless, Britain may be said to have been all-powerful on the seas.

World War I eliminated Germany from the Indian Ocean; but after 1918, France built a powerful naval base at Diego Suarez, and Italy began to develop Massawa on similar lines. In the east, Japan, who had obtained certain mid-Pacific islands by virtue of the Treaty of Versailles, developed naval bases on them, as, for instance, in Truk and Yapa. Clearly, Japan was looking southwards in her schemes of expansion. The U.S.A. also became a Pacific power, developing a great naval base at Pearl Harbour in the Hawaiian islands. Naturally, Britain relished none of these developments.

In order to strengthen her own position in the Indian Ocean, Britain constructed a powerful naval base at Singapore.

She thus stood sentinel at the entrance of the Indian Ocean, issuing a silent warning to all those who might presume to question her might in the region. She also inaugurated the Royal Indian Navy in 1934 so as to have at the elbow a small force capable of expansion as circumstances demanded.

Such was the naval pattern in the Indian Ocean when World War II broke out. Within a short time thereafter, Italy moved into the Mediterranean and the Red Sea, thus depriving Britain of her most direct route to India, and obliging her to take the longer one round the Cape of Good Hope. Japan which was already in command of the coastal waters of China up to Canton, coolly moved south and in record

dealt a series of telling blows at the United Kingdom and the U.S.A. so that she was able to occupy the whole of south-east Asia and to oust both those powers therefrom. It is now known that if she had chosen to attack India, we had practically no defences worth the name. But she probably felt she had bitten off more than she could chew, and that her lines of communication across the wide seas were long and extended enough already. In any case, the American fleet appeared about this time at the Coral Seas, and she withdrew without visiting India. Her submarines however continued to infest the Bay of Bengal and the Arabian Sea and to take a heavy toll of merchant shipping there.

Not merely history but also current events have proved how vitally important are the surrounding waters in influencing the destinies of India.

Even if she were not threatened by any naval power, the very fact that the Indian Ocean becomes the scene of conflict for other powers will suffice to paralyse her foreign trade. The import of strategic material might be held up, and her very security affected thereby. It is thus very essential for her safety that she should contemplate a sort of Munroe doctrine for the Indian Ocean. Among the countries of south Asia skirting the Indian Ocean, she is the most dependent on the seas for foreign contacts; for on the north, her land-route is very difficult and does not encourage heavy commercial traffic. Besides, she is almost equidistant from the east and from the west. And lastly, her children are found scattered all along the fringes of the Indian Ocean, and she would naturally like to maintain social and cultural contacts with them, by keeping the intervening seas free and open.

A peep into the future seems to reinforce the same lesson for her as is taught by history, geography and economy. The power of the United Kingdom, both naval and political, is dwindling in the Far East, but that of the Commonwealth in particular, that of Australia, is increasing. The U.S.A. is today all-powerful in the region, and has a direct approach into the Indian Ocean from the south. Japan, for the time being, is prostrate; but what with her energy and her traditions, it is inconceivable that she should continue to be so for a long time. And being an island, she may be expected to pay special attention to the revival of her fighting and merchant navies. As for China, she has a naval past of worth and renown; and what with her new Government, she may be expected to develop her navy at no distant date and to enter the Pacific and Indian Oceans. Burma, Pakistan and Indonesia are other powers in the area which are likely to emerge with strong navies. But India's interests do not conflict with those of any of them. Conditions in Indo-China are still unsettled; but all that India desires is to have friendly neighbours who will leave her to her own way of life.

On the side of the Arabian Sea also, the developments that are taking place are worth noting. The Middle East, with its oil resources has become a focal point in global strategy. The U.S.A. is very much interested in the area no less than the United Kingdom. But a third party is also waiting to enter the lists: this is the Soviet Union. From time immemorial, the Persian Gulf has had vast strategic importance. Germany before World War I even thought in terms of a Berlin-Baghdad railway in order to reach the warm waters of the Persian Gulf by circumventing the Royal Navy in the Mediterranean Sea and the Red Sea. Today the position in the Soviet Asia is changing rapidly. Countries backward so far are developing industries and are likely to call for a sea-outlet for trade purposes. And the Persian Gulf is the readiest they can think of. The question in short is when is the Soviet likely to inter the Indian Ocean as a naval power, in addition to Britain and America?

The role of the navy in a scheme of India's defence is practically determined for her in this manner by circumstances.

India has no aggressive intentions against any other country; but it would be folly to assume that other countries will be similarly disposed towards her. She must therefore keep the powder dry. Besides, if the Indian Ocean becomes a battle-arena for others, she even as a non-beligerent, should be able to protect her own foreign trade. That would be a difficult and delicate task; but not one of her seeking. And if she does not possess the power to undertake it, the power to see that the needs of her security are respected by others, she will indeed have to regret it.

Don Quixote

C. Jinarajadasa writes in *The Theosophist*:

Every one knows the meaning of the word "quixotic," which is a course of action that shows a certain want of mental balance and adjustment to reality, though it may have behind it a very good moitve. This conception has arisen from reading the English translations of the Spanish work *Don Quixote*, whose author is Cervantes. Incidentally let me mention that the word in Spanish is pronounced *Quihote*, with an accent on *ho*, Qui pronounced as Ki. It is pronounced in French *Don Quichotte*.

Readers usually get an idea of the hero of the romance as definitely crazy, doing all kinds of outrageous actions, like tilting at a windmill, imagining that the moving sails are some kind of enemy charging at him. He also imagines that peasant girls are princesses and titled ladies.

Don Quixote is always accompanied in his adventures by his squire, Sancho Panza. Sancho does not realize that his master is crazy, and believes in the offer made to him that his master presently will make him the governor of an island.

Don Quixote is described as thin and gaunt, a tall man, who has had his head turned by reading innumerable stories of the knights of antiquity who went

out to seek adventures and met with various magicians. While to all Don Quixote appears as a ludicrous figure, nevertheless there is something striking about this madman. There is a certain idealism in him, for he goes out seeking adventures as did the knights of old, claiming that he is a Knight Errant whose task is to rescue captive maidens, put down cruelty, and battle against injustice.

Now, it is a strange thing that in what is known as Latin America—a phrase used to designate all the countries of South and Central America, Mexico, Cuba and Porto Rico, whose colonizers were from Spain, as also Brazil, whose colonizers were from Portugal—in nearly every home there will be found a picture of Don Quixote, and sometimes a statuette. He is always depicted as tall and thin, standing and reading a book, waving one arm declaiming, and careless of his dress with one of his long stockings hanging down. Once in Mexico when I went through the weekly market and came to the part where pottery was being sold, I found a statuette of Don Quixote. It was evident, therefore, that this crazy man had a certain attractiveness about him.

Why should almost every home in Latin America have a picture of this crazy man? It is only when one lives in the homes of Latin Americans that one penetrates a little into the feeling behind the respect given to the crazy hero. That respect is so great that a special condensed edition of the great work of Cervantes has been prepared for the use of schools in Mexico, with very graphic illustrations of certain incidents in the story.

The true reason for the high regard paid by Latin Americans to Don Quixote, the crazy man, is due to the fact that in spite of his madness he represents a certain ideal of what Jesus Christ proclaimed in Palestine.

It is quite easy to note in Roman Catholic countries that outside the churches and cathedrals there are always beggars. That church is the most powerful in the world, and yet Roman Catholicism, as also all forms of Protestantism, has not been able to teach their adherents the significance of Christ's commandment: "Forasmuch as ye have done it unto one of the least of these My brethren, ye have done it unto Me." In spite of churches and hierarchies, and monasteries and nunneries, very little has been done to root out poverty, disease and degradation. I say "very little," for I know well how certain monastic orders of monks and nuns have with the greatest devotion tried to help the poor and the sick. But what they have done is almost like a drop in a bucket. What is noticeable is the attitude of callousness of the religious-minded men and women who go to church and pray to God, yet whose conscience is not pricked by the contrast of wealth and poverty in a so-called Christian civilization. Of course, the same contrast exists in Hindu and Buddhist civilizations. Evidently the religious conscience of mankind has many atrophied spots, so that no response can be obtained from them.

In the romance *Don Quixote*, this crazy man, who sets out on what he calls adventures, again and again proclaims that he belongs to the ancient band of chivalrous knights founded by King Arthur, and that he has taken the vow to aid those in need and to put down the oppression of the weak by the strong. He says: "My office is no other than to avenge those who suffer injustice, and to castigate the proud. If you can inform me that you have any work for me to do in this locality, you have only to tell me and I promise you by the order of the knighthood which I have received, to give you full satisfaction according to your wishes." Again: "Friend Sancho, recollect that I have been born by the will of heaven in this year of iron to transform it to the year of gold. It is for me that dangers, great actions and valorous deeds have been reserved. It is I who have resuscitated the Round Table, the twelve knights of France and the nine of fame. I have to abolish the memory of tyrants." Elsewhere he says: "Well is it that many possessions and rest were invented for weak men of the royal court; but work, inquietude and arms were invented for those whom the world calls Knights Errant, of whom I am, though not worthy, the least." Again he says: "I seek adventures in order to offer my arms and my person for the most dangerous fate that may appear before you, in order to aid those who are weak and in need."

Each knight of the old pledged himself to valorous deeds in the name of his lady of adoration; all the time his work of adventure is to put down evil, remembering that he is doing the work of God, but also as an offering to his lady.

It is because of this strange idealism of a madman, who tries to live the ancient teachings of Palestine, that the peoples of Latin America, while they smile at his crazy adventures, have their hearts touched by the idealism of deeds that should be done by the followers of a religion, but are not done.

One very striking element in the romance is the contrast between knight and squire.

The knight is the idealist, though he is crazy. Sancho, the squire, is the materialist whose first thought is, "What am I going to get out of all this?" He is all the time thinking of the good things of life, especially his meals, and of making a nest for himself. Sancho represents, to Latin America, the man of the world whose first interest is himself, while in contrast Don Quixote is the idealist, though he does crazy actions.

A long poem by Roberto Nieto of the Republic of Colombia, with the title, *Oh, Sancho*, says as follows regarding Don Quixote and Sancho:

"Oh Sancho! You have not died! In the midst of the motley restless crowds of each day I have seen the reflection of your face in the noisy gabble. But how changed you are, and with what elegance! You have changed the pack-saddle for gloves, and instead of riding on a sorry nag, you drive in a car. Casting

one side the garb you wore, you have now the trappings of a gentleman. Good Sancho, who can discover in your present outfit the base lackey of once upon a time?

"But your uncouth nature has not changed; today, as yesterday, it is matter incarnate. What to your eyes is our bitter savage war with grief and pain? Only a fair. You are still the same; still come from your lips the empty good-natured outbursts of laughter. With your bourgeois stride you strut proudly among the learned.

"Meanwhile Quixote overthrown in battle rolls in the dust with his broken lance, invokes the lovely Dulcinea, and dreams of a far-away island.

"When you come on the scene, the world bows before you; for in this bizarre and outlandish age only one light shines—that of your genius.

"Ye comrades of Don Quixote, ye brave paladins who tread the bitter road to the trumpet-tunes of warlike horns, defying the wrath of Destiny! your mission is ended. Do you wonder? Sheathe the sword that defended your ruined ramparts. And salute in Sancho, the lackey without blemish, the heroes of the future.

"What matters the ideal? Wounded and withered, as are yourselves, in the fearful reverses in the tenacious struggle, the ideal lies dead on the bloody field of battle."

Cervantes' great classic appeared in Spain in 1605. The first English translation by Shelton appeared in England in 1612.

Evidently Butler, the author of *Hudibras*, had read Shelton, for we have Dr. Johnson writing as follows:

"The poem *Hudibras* is not wholly English; the original idea is to be found in the history of Don Quixote, a book to which a mind of the greatest powers may be indebted without disgrace."

Don Quixote knows when he sets out on his mission of succouring the distressed that he must first be knighted by one who is already a Knight. Cervantes describes the ludicrous manner in which the crazy man achieves knighthood. He has then, according to the rules of chivalry. to take a new name. He ceases to be Don Quixote de la Mancha (Mancha being a small estate of his family) and calls himself "the Knight of the Sorrowful Countenance." It is this knightly name of Don Quixote that is used by the Brazilian poet, Filinto de Almeida, in his Portuguese sonnet on the hero. The sonnet is exquisite and tender in sentiment; to translate it into bald prose is like offering dried rose-petals instead of a living rose. But at the moment that defect cannot be rectified; here is what de Almeida wrote:

"Meanwhile, whoever sees him forlorn and stunned, with his astonishing helmet and incredible armour, beaten and stoned in so many combats, will call him a Knight, but of the Sorrowful Countenance. What matters? The hero dreams on ever, grave and saddened. And if to dream so is near to insanity, he is strong and happy in the armour of his dream, and so dreaming he marches down the centuries.

"Leave him alone to go on his way, though we laugh at him, as he battles for justice and combats crimes. Leave him with his illusion and its great inglorious effort. For it is such gallant lunacy that makes him so sublime. Awaken him never; leave him drunk with his golden pertinacious ideal which no suffering shall lessen, so as to dream of glory, love, justice and loving-kindness. For only who knows to dream thus is worthy of the name—*a Man.*"

The word "quixotic" conveys no meaning in Latin America.

Miracle Man with Unrivalled Power

Everybody in this country is aware of the fact that India's unrivalled and greatest palmist, Tantric Yogi vastly learned in the Astrology and Astronomy of the East and the West, gifted with supernatural power of predictions, permanent President of the Internationally famed Baranashi Pandit Mahasabha of Benares and All-India Astrological and Astronomical Society of Calcutta.

RAJ-JYOTISHI

Jyotishsamrat Pandit Sri Ramesh Chandra Bhattacharyya, Jyotisharnab, Samudrikratna, Jyotish-shiromani, Raj Jyotishi, M.R.A.S. (Lond.), has won unique fame not only in India but throughout the world (*e.g.*, in England, America, Africa, China, Japan, Malaya, Singapore etc.) and many notable persons from every nook and corner of the world have sent unsolicited testimonials acknowledging his mighty and supernatural powers.

This powerfully gifted great man can tell at a glance all about one's past, present and future, and with the help of Yogic and Tantric powers can heal diseases which are the despair of Doctors and Kavirajas, can help people to win difficult law-suits, and ensure safety from dangers, prevent childlessness and free people of family unhappiness. His three important predictions (prediction about the British victory on the very day—2nd September, 1939—of the declaration of last World War, prediction of the achievement of independence by the Interim Govt. with Pandit Jawaharlal as the Premier made on the 3rd Sept., 1946, and prediction regarding the future of India and Pakistan which had been sent to the Prime Minister of India on the 11th August, 1947 and subsequently published in various Newspapers) have proved correct to the detail, amazed people the world over and have won for him unstinted praise and gratitude from all quarters including His Majesty George the Sixth, the Governor of Bengal and eminent leaders of India. He is the only astrologer in India who was honoured with the title of "Jyotish-Siromani" in 1938 and "Jyotishsamrat"—Emperor among astrologers and astronomers—in 1947 by the Bharatiya Pandit Mahamandal of Calcutta and Baranashi Pandit Mahasabha of Benares —a signal honour that has not been endowed on any astrologer in India so far.

Panditji is now the Consulting Astrologer to the Eighteen Ruling Princes in India.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji." **Her Highness The Dowager 6th Maharani Saheba of Tripura State says :**—"He is no doubt a great personage with miraculous power." **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt., says :**—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son." **The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt., says :**—"On seeing my son, his prophecy about my future is true to words." **The Honourable Chief Justice Mr. B. K. Ray of Orissa High Court says :**—"He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot, says :**—"The wonderful power of calculation and Tantrik activities have struck me with greatest astonishment." **The Hon'ble Justice Mr. S. M. Das, Keonjhar State High Court, says :**—"Panditji has bestowed the life of my almost dead son." **Mr. J. A. Lawrence, Osaka, Japan, writes :**—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2723, Popular Ave., Chicago, Illinois, U. S. America :**—"I have purchased from you several Kavachas on two or three different occasions. They proved satisfactory." **Mr. K. Ruchpaul, Shanghai, China :**—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Etia, Govt. Clerk & Interpreter in Deschang, West Africa :**—"I had orderd some Talismans from you that had rendered me wonderful service." **M. B. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon :**—"I got marvellous effects frrom your Kavachas on several occasions", etc., etc. and many others.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. **Price Rs. 7-10.** Special for speedy action **Rs. 29-11.** Super powerful with extraordinary effects **Rs. 129-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special for speedy action **Rs. 34-4.** (The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha). Super powerful **Rs. 184-4.**

SARASWATI KAVACHA.—For success in examination and sharp memory. **Rs. 9-9,** Special **Rs. 34-4.**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-4.** Special **Rs. 34-2.** Super powerful **Rs. 387-14.**

Jacob Epstein—Art With A Bite In It

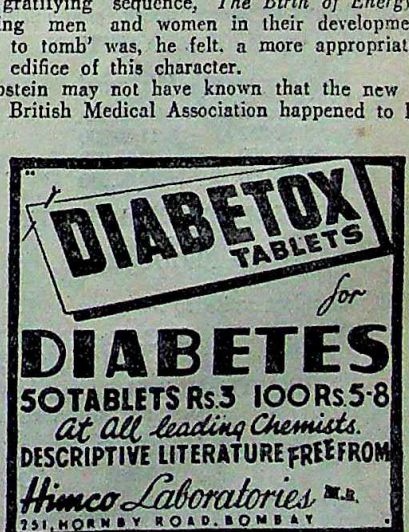
On the occasion of the seventieth anniversary of the world-famed sculptor Jacob Epstein, Alfred Werner writes in the *Jewish Frontier*, March, 1951 :

About fifty years ago, on the corner of Hester and Forsythe Streets in Downtown Manhattan, Jacob Epstein lived in a small room which contained an iron bedstead, a diminutive stove, and his easels with sketches and paintings of Ghetto types on them. By cooking his own meals and paying only $4 rent, he was able to make ends meet on $12 a month, and he was content to make just that much by selling his sketches. He lived this way by choice, for when his parents, middle-class business people from Russia, moved to better uptown quarters, Jacob refused to join them. They shook their heads: "Meshuggah!", but allowed him to live in his own fashion. And he was so content on the East Side that even his one excursion to the country ended in failure: "It is only in the Ghetto where there is human nature that I have ideas for sketches," he confessed.

The East Side provided him a wide choice of subjects. There were all the pushcar peddlers, sweatshop workers and patriarchs. Many of them became immortalized in the pages of Hutchins Hapgood's book on the ghetto, for which Epstein drew the illustrations.

Epstein did not become famous for these drawings, though they revealed his great power of observation. At the age of twenty, Epstein already mastered the art of expressing himself through a few swiftly suggestive bold lines. But the body of his entire work, from these early sketches to his latest creation, *Youth Advances*, a massive male figure made for the 1951 Festival of Britain, is permeated with a profound humanity which one may ascribe to his formative years on the East Side. Once, looking backward from the peak of his fame, he remarked: "Rembrandt would have delighted in the East Side." And he added gratefully: "I imagine that the feeling I have for expressing a human point of view, giving human rather than abstract implications to my work, comes from these early formative years."

Today Epstein, who celebrated his seventieth birthday last November, is a patriarchal gentleman living in modest comfort in a small ivied house in London's Hyde Park Gate, cared for after the death of his wife by one of his daughters. Though there are still many Britons who fail to understand his work, the time has long since passed when London policemen, summoned to an Epstein exhibit, were not sure whether they had been called to protect or to destroy the strange stones that went under the name of "Modern Sculpture." Anti-Epstein riots have long ago ceased to be the vogue. His recent *Lazarus* left visitors baffled, but angry comments were rare. On the occasion of Epstein's seventieth birthday a number of British papers and magazines devoted their columns to an appraisal of his work. Surprisingly, not a single American art magazine or general periodical used the occasion to pay tribute to the genius of this native of New York City !



In a country as conservative as England iconoclasts have few opportunities, and since 1905, the year of his arrival in Britain, until today, Jacob Epstein has never stopped breaking images and destroying beliefs not acceptable to him. As a teen-ager he had attended the life class at the New York Art Student's League, but he had spent more time in the Durand-Ruel Gallery where he sated himself on French Impressionists and Post-Impressionists, as well as American rebels of that day like Winslow Homer, George Innes, Albert P. Ryder, and Thomas Eakins.

When he went to study at the Beaux Arts School in Paris he passed his time in a rage of work. One day he earned the scorn of Bougereau. Unwilling to take criticism from this old-fashioned academician, Epstein covered his work when the master came in. "Ce sauvage Americain !" Bougereau exclaimed, and this unflattering nickname stuck to Epstein for the rest of his Paris student days.

One day this "barbaric American" made a trip to London without anticipating that he was destined to become a Londoner, and a British subject. What kept him in England was not the British Museum, with its vast collection of ancient Egyptian and pre-Phidian Greek art, and its Polynesian and African arts and crafts. There is no question that these treasures had a decisive influence upon Epstein the sculptor. But in England he met his future wife. Their first regular income did not come from Epstein's commissions. During the day he would plunge his hands into the wet, cool clay. But, more important for the budget, he worked at night as a model in an art school to make a few shillings.

Epstein was only in his mid-twenties when in 1907 fame came to him *via* a nation-wide scandal. He had been commissioned to decorate the facade of a new building, just acquired by the British Medical Association. Horrified at the thought of modeling surgeons with side-whiskers, Epstein rejected the idea of doing a series of famous medical men and proposed, instead, an artistically more gratifying sequence, *The Birth of Energy*. This, depicting men and women in their development from 'womb to tomb' was, he felt, a more appropriate theme for an edifice of this character.

Epstein may not have known that the new building of the British Medical Association happened to be oppo-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

site the offices of the National Vigilance Society, or if he knew, he did not care. At any rate, he spent fourteen months carving a series of eighteen nudes. All of them were artistically beyond reproach. Above all, they were not mere decorations stuck upon the walls, but blended perfectly with the building itself. And one of the statues was of a woman in advanced pregnancy.

Public opinion was shocked. How could a father expose his daughter to this alarming sight? The philistines of the Vigilance Society fumed. How could any pure-minded young man let his fiancee behold these "obscenities?" One of the enraged critics, Father Vaughan, even went so far as to make the most of the fact that Epstein then lived in the Bloomsbury section, London's Greenwich Village. While some bigots, supported by the conservative press, loudly clamored for the removal of this "indecent" statuary, unexpected help came to Epstein from no less a person than the Bishop of Stepney, Dr. Cosmo Gordon Lang, later to become Archbishop of Canterbury. Inspecting the figures, he saw nothing indecent or shocking in them. Some of England's outstanding writers and critics likewise sided with Epstein: "Had Michelangelo ever disguised sex?" they asked.

In him there was the same disturbing turbulence that once expressed itself in William Blake, that un-English Englishman who asserted that exuberance is beauty, and that the gateway of excess leads to the Palace of Wisdom. He felt compelled to create sculpture that expressed emotions and ideas but did not try to duplicate nature. Thus he took upon himself the task of the 20th century artist, to disentangle the eternal from the ephemeral, to capture its structure and essence.

It is not surprising then that artistically conservative people found most of Epstein's work repulsive. Most women, for instance, felt affronted by his large statue, *Genesis*, which symbolizes motherhood, not realizing t the artist had no intention of making the millionth tion of a chorus girl Venus. Genesis is the eternal val woman, the fertile mother of the human race, as dormant fullness of parenthood. Yet one superficial called this sincere and deep homage to maternity in marble"—as though any artist would spend mon even years of intense concentration merely to confu amuse the public.

Adam is a more recent work. Quite intentiona Epstein deviated from the orthodox traditional vie God created Adam in His image, as a composite Gregory Peck and Van Johnson. Mindful of Darw *Descent of Man*, Epstein intentionally made this Adam resemble a hairless gorilla beating his breast. the artist's adversaries failed to notice a significant de Adam's head is thrown back to indicate that he is differ from other animals, that he alone of all creatures received the breath and the spirit of God.

Three times he carved Christ, and three times was abused because he clung to his aesthetic convictio His first Christ originated during World War 1: an e giant-sized figure in bronze, eleven feet high. The is wrapped in cerements, one hand points to the gap wound in his other hand. While the forehead is high serene, the mouth looks tortured, the eyes full of sor A decade ago Epstein said about this version of Chris

"It stands and accuses the world for its grossn inhumanity, cruelty, an beastliness—for the World (World War I), for the new wars in Abyssinia, Ch Spain, and now our new great war (World War II).

"I should like to remodel this Christ. I should l to make it hundreds of feet high, and set it up on s high place for all to see, where it would radiate its wa ing, its mightly symbolic warning to all lands. The

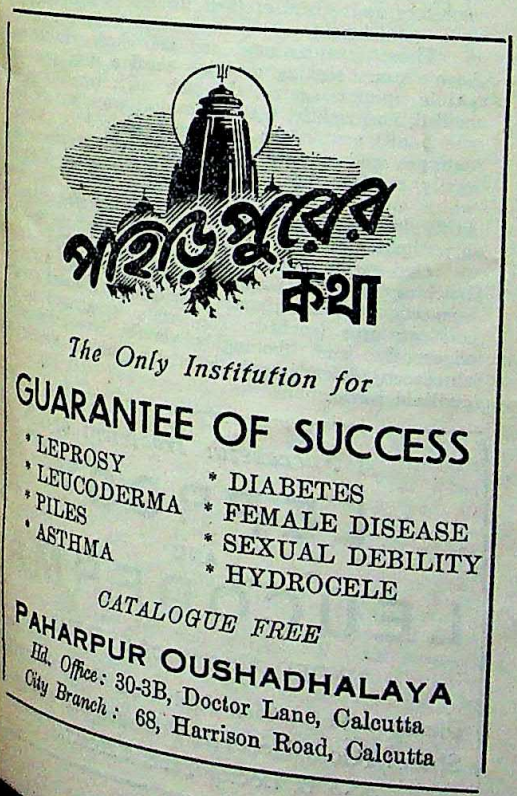
—the Galilean—condemns our wars, and warns us that 'Peace, Peace!' must be still the watchword between man and man."



Another presentation of Christ was the *Ecce Homo*. This is a colossal stone carving—a huge head bearing a crown of thorns, thick sad lips, sightless almond-shaped eyes, and two great hands tied with a rope. This time nearly everybody was incensed, and among the most outspoken critics were members of Parliament. But, to their great embarrassment, the dean of St. Paul, Dr. Walter Matthews, defended the figure: "It gives the impression of great strength, very different from the weak, sentimental representations of Christ with which we have been made familiar."

The third Christ, the *Consummatum Est*, caused the greatest outcry. To many people it was, and remains the "most shocking" and "repulsive" of the three. But there were also people to defend it. Alfred Bossom, member of the Royal Institute of British Architects, was one of them. "It makes you think," he said. "What I mean is, his work can't be ignored. You can't pass Epstein's sculpture without noticing it. It may annoy you, or charm you, or shock you, but it produces a definite reaction, and I like that—art with a bite in it."

Epstein is well aware of the general opinion about him. He was told by a gallery owner than an angry visitor had exclaimed: "I should like to take Epstein out to a butcher shop and have his hands chopped off." He knows that a confused and bewildered British Prime Minister almost fainted as he was unveiling one of his monuments in Hyde Park. But the artist also knows that, as time goes on, more and more people will understand his motivation, and agree with him. One cultured New Yorker said at the time of the *Adam* controversy: "To me, Adam is as if he were not made by a man, but by mankind." Even more strikingly to the point is the defense of another admirer: "It seems to me Epstein is rejected because, after all, he is inferring that the blasphemer may be in hearts other than his own."

Epstein is extremely honest, and much too outspoken for his own good. He is not, and never was, a wealthy man. Philistines of many countries would have gladly forgiven him his "monstrosities," and even paid him excellent fees, had he consented to portray them flatteringly in stone or bronze. An art patron who commissioned Epstein to portray a well-connected aristocratic lady was infuriated when he discovered that he had made her look as she actually was, a middle-aged schoolmarmish woman, instead of a live Venus. And when a certain Duke requested that his likeness be carved in the gala uniform he had worn at the coronation of George V, the artist sternly refused to portray him in a majesty he did not possess, and insisted that the Duke wear ordinary clothes. Yet Epstein did not waste his art of portraiture on socialities and aristocrats alone. Among the men who posed for him were the novelist Joseph Conrad, great in all his sickness and loneliness; the exiled Albert Einstein whom he showed in a sweater with his wild hair floating in the wind; and another exile, Haile Selassie, a tired man with deeply melancholy eyes.

Twentieth century sculpture has gone far beyond Epstein who stands at the beginning of the road. But without Jacob Epstein there might have been no Henry Moore. As for such abstract or semi-abstract young

Englishmen as Robert Adams, Barbara Hepworth and John Skeaping, and like-minded artists of the same generation elsewhere, they are grateful to the old man for having been provocatively revolutionary in a period when art was still complacently Victorian.

It is impossible to foretell how much of Epstein's work will withstand the strain of future criticism. To the generation of 1970 or 1980 he may be a "traditionalist." But even the most conservative estimate of his accomplishments cannot minimize his place in the history of art. He chased the "faiseurs de beaute" out of the temple of plastic arts; he clearly demonstrated to the world that it was the sculptor's task to translate the laws of human anatomy into organic sculptural terms, rather than into their naturalistic equivalent. To achieve these ends a great idealism and a primevally strong personality was required. It required a Jacob Epstein, one who like the giant Antaeus of Greek mythology gains his strength from having his feet firmly planted on the earth, that same earth out of which we come, unto which we return, which "shall endure forever . . ."

Lynching's Changing Pattern

Henry Lesesne observes in the *New York Herald-Tribune*, April 3, 1951, that mob violence in the South is meeting a new quality of law enforcement :

Atlanta, Ga.—A rather frequent complaint of editorial writers on Southern newspapers and the Southerners generally is that newspapers in other parts of the country seem only too willing to devote space in their news pages to Southern mob outrages when they occur, yet are not inclined to devote a similar amount of space to activities in the South which are aimed at curbing mob or terroristic activities.

For instance, recently the Legislature of Georgia, reversing its attitude of the two previous years, enacted a strong anti-Klan law somewhat like the one the Alabama Legislature adopted in the summer of 1949, and it is very likely that the Legislature of South Carolina will approve a similar statute in the coming weeks. The failure of the Eastern press to take much note of this has produced quite a few editorials of the aforementioned type.

The South—remember "Tobacco Road"?—is naturally sensitive on this score, and it has come to regard itself as the nation's whipping boy. But no one familiar with news values could argue that a legislative action in Georgia prohibiting the wearing of masks has a wider appeal among all classes of readers than a rather spectacular lynching or one of the more bloody inter-racial massacres. The sensitivity of the South in this respect is also evidenced by the fact that it will argue endlessly, not without some logic, over just what constitutes a lynching.

It is a fact, however, that the people outside the South who read the details of a mob outrage or racial crime are seldom ever made aware of the denouement, simply because it is not as shocking as the crime itself. All the foregoing is by way of a preface to two significant developments on the Southern scene: (1) The pattern of mob violence in Dixie has been changing in recent years, and (2) Southern public opinion has also become so sensitive to lapses in legal machinery that a new quality of law enforcement is emerging at last to make lynch mobsters and others of their ilk less certain of immunity from punishment.

Those organizations and individuals who for years have been seeking to bring about a more enlightened public opinion against the mob spirit have always contended, and rightly, that a record of arrest and conviction and punishment is the strongest possible deterrent to mob outrages and masked terrorism. But it comes to mind easily that in the summer of 1946 a group of masked white men lynched two young Negroes and their wives in Walton County, Ga., and despite the most exhaustive investigation there has never been so much as an arrest.

One easily recalls, too, the famous Greenville County lynching in South Carolina a few years ago. Thirty-odd suspects, all taxi drivers, were quickly rounded up after a Negro was lynched. The state prosecuted the case vigorously and thoroughly, yet the jury acquitted the threescore defendants in a verdict which shocked the civilized world.

Natyacharya SISIR KUMAR BHADURI says :

"I have found 'Swarobin' useful before performance on the Stage, particularly when the voice is uncertain."

Since the 1930s there has been a dramatic decrease in the number of lynchings. In 1950 there were only two such crimes—exactly the average for the last four years. However, as the Southern Regional Council, a bi-racial organization of Southerners, recently pointed out, the small number of lynchings in 1950 is not particularly significant.

In the first place, lynching has become, not without reason, to be identified with racism, and the notion still prevails that the number of lynchings serves as a barometer of race relations. This isn't necessarily the case, when it is considered that white men may lynch other white men and, perversely enough, they may murder, rather than lynch, a member of the minority race. The technical definition of lynching may exclude the most horrible inter-racial slayings—for instance, the case in Mississippi last year of three escaped white convicts slaughtering a whole Negro family.

The change in the pattern of lynching has come slowly over a long period. Gone is the day of the spectacle of large mobs acting openly and publicly proclaiming their objective. The lynch mob has been replaced by very small groups who conspire in secret and dispose of their victims without any fanfare. This development has, naturally, widened the already wide field for argument over just what does and what does not constitute a lynching.

The Southern Regional Council calls attention to the fact that there were more bombings of Negro-owned homes in 1950 than there were lynchings. There were many more Negroes needlessly shot by policemen acting "in the course of duty." There were more abductions, more floggings, more actions designed to terrorize and intimidate, many of them committed by members of the Ku-Klux Klan or persons concealing their identity behind a reasonable facsimile of the regalia of the hooded order.

The real significance of the 1950 record of lynchings, painstakingly kept by Tuskegee Institute, is neither in the small number nor in the deviation of lynching from the classic example. The thing that is noteworthy is that most of the participants in the 1950 lynchings have been caught, tried and convicted. One need only review briefly the record of the two cases classified as lynchings by Tuskegee, which readily admits there is no really foolproof definition of a lynching.

Charlie Hurst, white, thirty-nine-year-old rolling-store operator of Pell City, Ala., was mortally wounded on February 22, 1950, in his front yard by a group of unmasked men. They had come to his home at bedtime and tried to force him into their car. Hurst's nineteen-year-old son, who came to his assistance, was also wounded. Hurst had previously told his son that "it looks like the Klusters are after me." There were no charges against the victim. The Tuskegee report concludes that "it seems the mob got 'the wrong man'."

The other lynch victim in 1950 was Jack Walker, a forty-year-old Negro laborer living near Gay, Ga. His body was found on August 18 in a creek near the Flint River by a group of fishermen. He had been shot to death by three men for whom he worked. According to the Tuskegee report, Walker knew too much about illegal whisky traffic.

Now as to what happened subsequently: One of the mob members in the Pell City slaying has been sentenced to five years in prison; one committed suicide and three other accused men are awaiting trial. A Georgia court has sentenced all three of the men implicated in the Negro slaying—two of them to life imprisonment and one to a term of three to five years.

Late in 1950 a group of Klansmen shot up a Negro resort near Myrtle Beach, in South Carolina, and in the shooting, somehow, a Conway policeman in Ku-Klux garb

..will he thank you when he's older ?

He's the apple of your eye and there's nothing you would not do for him now, but are you also laying the foundations for his future?

was fatally wounded. The sheriff arrested the Grand Dragon and others on charges of attempting to incite a riot and, although the grand jury failed to indict them, the fact that arrests were made, and so quickly, was generally considered a milestone in deterring such acts of violence and terrorism.

As evidence that the indifference, sanction and even downright co-operation extended to mobs by police officers in the past is less frequently condoned now, one might recall the case of the sheriff of Dade County, Georgia, and his deputy, who in 1950 were convicted by a jury of conspiracy with a masked mob in the flogging of seven Negroes and who were given the maximum penalty provided by law—jail sentences of twelve months each and fines of $1,000 each.

Last December a group of white men went to the home of a Negro in Greenwood County, South Carolina. The Negro called to his fourteen-year-old son for help, and the son answered the call, armed with a shotgun. A white man was killed. The Negro boy was arrested on a murder charge. The Negro boy subsequently was acquitted by a directed verdict, and thirteen white men, arrested on charges of criminal conspiracy, pleaded guilty and were sentenced to one year imprisonment each and fined $500, their sentences to be suspended upon serving two months and paying $200.

Tuskegee keeps a record of prevented lynchings as well as lynchings. It reports that during 1950 lynchings were prevented by peace officers in at least seven instances —six in the South and one in the North. Southerners interested in stamping out mob violence have long contended that the peace officer is the key to racial tensions and that the remedy lies in the professionalization of the police to the extent that they can view racial conflicts with a degree of objectivity.

A step toward the realization of this goal is seen in the recent establishment of a modern pioneering police college in Louisville, Ky., aimed at raising professional standards, with special emphasis on police work with racial minorities. The institute, under the sponsorship of the University of Louisville and the City of Louisville, serves all the South, and carefully chosen police officers from a number of Southern states are now attending courses under subsistence scholarships.

UNDER THE WEST BENGAL GUESTS CONTROL ORDER, 1950

- Ordinarily, on the same occasion on the same day the number of guests including the host or hosts should not exceed 25.
- On the occasion of a funeral, 50 guests are permitted excluding members of the household.
- On the occasion of a marriage, 50 guests excluding members of the household are permitted at each of the two meals on any one day.
- To guests exceeding the above numbers, only the following kinds of food and no other, rationed or non-rationed, can be served on all occasions :

  liquid refreshments, nuts, fruits (fresh or dried), potato (boiled or fried), preparation of gram or gram products, sweet potato, bananas tapioca and groundnut cake flour with or without gur, salt, ghee, oil or vegetable oil products but without admixture of any controlled cereals.
- The prevailing notion that non-rationed or non-controlled food can be served to any number of guests is erroneous.
- The Order operates throughout West Bengal.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

MESSRS. BOOKS OF THE WORLD, PUBLISHERS & BOOK-SELLERS, 31, Grosvenor House, CALCUTTA

ROUND THE WORLD

By **Mr. J. N. SINHA**

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind." —*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know." —*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

TO BE HAD OF:—

The International Journal of Sexology

Containing scientific and educative papers contributed by authorities in all countries of the world and of equal interest to doctors, lawyers, educationists, sociologists and others.

A recent verdict on the Journal,

"Of the sexological periodicals new appearing, it would perhaps not be invidious to give pride of place to **The International Journal of Sexology**, because in a world that is becoming more and more nationalistic it makes a brave appeal to a wide internationalism. Editors in twenty countries under the Managing Direction of Dr. A. P. Pillay in Bombay form an imposing team. ... The journal provides a genuinely literal platform for facts and discussion, and gives due regard to the problems of the Eastern as well as the Western world..." (Alec Craig in *Plan*, London, January '51).

tea
the way you drink it

You drink it leisurely in bed, still half-dreaming, and you are a king or a god with the day ahead of you, bright and rich with promise.

You drink it over your morning paper, almost unthinkingly, but deep down you know that this is a good, satisfying beginning to another day.

You drink it hurriedly at breakfast before rushing off to work and it punches power into you: you are armed, you are ready to begin.

You drink it at work and fatigue drops off like a cloak.

You drink it when you come home and the evening takes on a glitter and a sparkle.

You drink it alone or with friends. It is always satisfying, always cheering, always refreshing.

রামানন্দ চট্টোপাধ্যায় ও অর্দ্ধশতাব্দীর বাংলা

শ্রীশান্তা দেবী প্রণীত মূল্য ৬৲ মাত্র

ইহা কলিকাতা বিশ্ববিদ্যালয় হইতে বর্ণপদক পাইয়াছে।

P-26, Raja Basanta Roy Road,
CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photo-graphs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

—*Amrita Bazar Patrika.*

THE MODERN REVIEW

AUGUST 1951

VOL. LXXXX, No. 2 WHOLE No. 536

PRC LIBRARY KANKHAL

NOTES

Prospects for the Coming Election

The elections for the Parliament and the State Legislatures are coming near. The contest will be as between the Congress and a whole host of opposition groups, of which there are no less than fourteen odd in West Bengal alone. There is schism within the Congress, both open and furtive. There are elements within the main body of the Congress itself, that are getting restive due to their confidence in leadership being increasingly lowered.

Apart from the splinter groups, which up till now have not been able to form effective opposition coalitions, there are the Hindu Mahasabha, the Socialist Party and the Krishak-Mazdoor-Praja Party led by Acharya Kripalani. The so-called Progressive Group and the Leftist parties are even now negotiating with all and sundry to form election combines in order to conduct an effective campaign against the Congress. They have had some petty successes in District and Local Board elections, mainly due to the action of recalcitrant local elements that are dissatisfied with the arbitrary and high-handed methods of the Congress.

The Socialist Party has issued an election manifesto, the substance of which is printed elsewhere in the editorials of this issue. Acharya Kripalani is touring the country on behalf of his party and the K.M.P. party has also issued a manifesto. Acharya Kripalani's speeches have been mainly directed against the Congress, in and out of office.

Dr. Shyamaprasad Mookerji's campaign is also directed against the Congress. His main plank is the question of appeasement of Pakistan. Hindu Mahasabha leaders are not much in evidence. The Communist party has come out in the open and is carrying on its propaganda throughout the country through a highly-skilled dissemination of news, views, propaganda articles and cartoons by the channel of its personnel that has infiltrated into almost every newspaper in India. The Party Politburo does not seem to have received any definite instructions as yet from Moscow.

The rest of the contestants, whom we have termed 'splinter groups,' have only localized influence and significance. In some provinces, like the State of West Bengal, they have as yet only considerable nuisance value, and where their influence is manifest, there will be a very considerable chance of violence and disruptive activities during the elections. None of these parties have any All-India significance, but if the proposed coalitions materialise then there is some likelihood of their affecting the Parliamentary elections to some appreciable extent.

All these parties, the major groups and the splinters are actively canvassing the support of disaffected Congressmen, the Have-nots or Have-littles within the party in power, as also the few genuine Congressmen who have stood aloof, with distressed minds, as silent spectators of the acts of perfidy against the nation being perpetrated by the dishonest ones in the Congress. Indeed the main strength of disruption lies in the corruption and malfeasance that is rife within the Congress, the administration as well as the body-politic. Honest men there are galore, inside the Congress, but they are powerless and are chewing the bitter curds of frustration in silent despair.

The Congress has issued an Election Manifesto, and the Congress Government has had a Five-Year Plan prepared in draft, a few copies of which have been circulated with discretion, so that there might be as little considered criticism and as much of empty fanfare as possible. And the A.I.C.C. has capped the Congress Manifesto with a bombastic proclamation, which in substance means that the A.I.C.C. is willing to accept and nominate for election "good men" from outside the Congress, provided the said "good men" are such congenital morons as to be willing to sell their very souls to that assemblage of pompous dictators who sit tog-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A.I.C.C. with the notorieties that have reduced the once noble edifice of the Congress to a veritable Augean Stable! We shall consider all the manifestos in due course. But before that let us confess to a mind charged with dismal forebodings. Unless a miracle happens, we do not see how chaos can be averted in the elections and its aftermath.

The makers of the Constitution and the members of the Constituent Assembly have made an appalling mess of their jobs, and the High Courts—or at least some prominent judges—have completed the disaster. Today the Four Freedoms—indeed a hundred times four—are for those criminals who wage war against the nation and the social structure. Honest men are at the mercy of the corrupt ones who have filled the administration with their minions. The case of the Satyagrahis of Manbhum in Bihar is so shameful as to force us to hold down our heads. We know Pandit Nehru or Babu Rajendraprasad have no time to cogitate on the prostitution of justice in corrupt governments, but what has happened to President Purushottamdas Tandon's principles? In the Manifesto itself, the issue of linguistic readjustment between Bihar and West Bengal has been evaded in a fashion that is not only cowardly but flagrantly dishonest as well.

The crying need in the Congress, both Official and National, is a purge of corruption. Corruption has permeated into the very vitals of it, right from the top to the bottom. Ministries, administrative services, the Working Committee, the A.I.C.C. all need to be rid of those vile elements. *The Public Services Commissions have been reduced to fraudulent farces, nepotism and favouritism is rife everywhere.* So until such time as we see a determined move on the parts of the Congress Governments and the Congress bodypolitic, we shall take the Congress Manifesto in the same light as a prospectus of a shady company promoter. If the ricketty Congress of Nehru, Tandon and their satellites and sycophants is to be reconstructed, then let them implement their declarations of faith into actual deeds. We are unable to gather any inspiration from the Manifesto as it stands, but we have substantially reproduced it *infra*, for record and for the judgment of our readers, whom we request to judge for themselves as to whether any of the noble sentiments, pious wishes and plans for the coming of the millenium contained therein, are ever likely to materialize unless the entire structure of the Congress, political and administrative, be deloused, disinfected and rebuilt from the very foundations.

The Manifesto of the Praja Party, at the very first sight, betrays a bewildering lack of consistency and weakness in its treatment of the most vital problems of the day. Two of the most burning problems for our country, *viz.*, nationalisation of industries and abolition of zemindary have been practically evaded. Both these points show confused thinking. The third point of vital importance, *viz.*, the formation of linguistic provinces have been completely ignored. An air of Marxism has been injected in the manifesto, but a Marxist stand on the burning problems of industries and land has been avoided. Undue disparity between the lowest and highest income groups is admitted, but the framers of the manifesto have remained content only with a barren appeal to the good wishes of the people, knowing fully well that wishes of the people, unaided by State power, means little. In their urge to support democracy, they have laid emphasis on small units and greater decentralisation, but have totally ignored the defects of this step as revealed in the working of the Panchayat system in the U.P. Desire to strike a balance between a strong Centre and a thorough decentralisation has been expressed, but the golden mean has been left undiscovered. Decentralisation of industries has also been emphatically spoken of, but the exact structure that will bring about a synthesis of both big and small industries is missed. Too much trust has been laid on co-operation with Pakistan, about the fruitfulness of which most people have much doubt. Foreign policy of the present Government has been supported. Nationalization of major industries has been opposed by singularly muddle-headed arguments. The real objective, seems to be to give sop to the rapacious Labour-Caucus that is a part of the Party. Heaven help the Nation if they come into power!

The Socialist Party Manifesto is more bold and definite, but inexperience, woeful disregard for realities, fanaticism and finally frustration is writ large all over it. The Land policy aims at victimisation of all middle-class tenant farmers as well as large landholders—for unless there is victimisation of the bourgeoisie how can Marxian fanaticism be satiated. We for ourselves, neither possess land nor do we hold any brief for landlords but we consider forcible acquisition of anyone's property without compensation to be against all civilized moral codes. The other projects regarding land, industry, etc., seem to be permeated with an atmosphere of unreality.

Caution is the watchword of the much vaunted Five-Year Plan. Perhaps that is born out of the hard realities of the last four years' experiences. There is no bold display of imagination, neither is there any evidence that the Planning Commission has ventured beyond the secretarial dossiers of the development departments of the Central Government. We had only a cursory glance through the draft plan—for obvious reasons—but it seems to be a rather expensive plan.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Plan has been presented by the Commission as a Draft Outline. "Planning in a democratic State," says the Commission, "is a social process in which, in some part, every citizen should have the opportunity to participate. To set the pattern of future development is a task of such magntiude and significance that it should embody the best thought of the country and reflect as fully as possible the impact of public opinion and the needs of the community." The Draft is "intended to be a document for the widest possible discussion" *and therefore its circulation has been restricted as far as possible*!

The distribution of expenditure in the first part of the Five-Year Plan, which has been worked out in detail, is shown by broad categories:

First Part of the National Plan, 1951-52 to 1955-56

(Rs. Lakhs)

	Central Government	*Part 'A' States*	*Part 'B' States*	*Part 'C' States*	*Total*

ESTIMATE OF INTERNAL RESOURCES FOR THE PLAN

(Rupees crores)

CENTRE	
1. Surplus on Revenue Account	130
2. Resources normally set apart in the Revenue Account for development expenditure under civil aviation, broadcasting, education, etc., for grants to States for GMF and development, for rehabilitation of displaced persons, etc.	118
3. Resources available from Capital Account for development:	
(*a*) public loans	35
(*b*) small savings and unfunded debt	250
(*c*) others	78
4. Resources available for railway development	30
5. Total Resources available to the Centre	641
6. Assistance to States assumed in the preparation of their Plans	211
7. Resources available for the development expenditure of the Centre	430
STATES	
8. Surplus on Revenue Account	81
9. Resources normally set apart in the Revenue Account for schemes of expansion under social services, agriculture, irrigation, electricity, roads, etc.	275
10. Resources available from Capital Account for development:	
(*a*) public loans	79
(*b*) others	45
11. Assistance from the Centre assumed in the preparation of the Plans of States	211
12. Resources available for the development expenditure of the States	691

The surplus of Rs. 81 crores on revenue account in the States over five years is to be secured by raising additional resources of the order of Rs. 213 crores. There will still be a gap of Rs. 372 crores over five years in the first part of the plan.

The Congress Manifesto

The following is the substance of the draft election manifesto :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The achievement of independence and the establishment of the Indian Republic concluded one phase of the Indian people's struggle for emancipation.

It was the high privilege of the Congress to serve the cause of the country and of the masses of our people and lead them to success. The Father of the Nation told us to value the moral and ethical basis of national life and made this the condition of political action. He emphasised that means were as important as ends and the means we adopt ultimately shape the end which follow.

Even during our struggle for independence, its content was not merely political freedom, but also the freedom of the masses from exploitation and want. The provision of basic material needs of food, clothing and shelter as the first essential, to be followed by the provision for cultural growth.

The last Great War put an end in many ways to the old world that we knew and posed entirely new problems; the partition of India left a bitter legacy behind. Our civil and military services had to be organised afresh and the very large foreign element in them replaced by Indians. India's relations with her neighbour country, Pakistan, have, in spite of our best efforts, continued to be abnormal and have raised and are still raising difficult problems.

Because of the multitude and complexity of the problems, the country has had to face since the achievement of independence, our economic progress has not been satisfactory. Millions in the country still lack sufficiency of food, clothing and shelter. The objectives of the Congress, which have been embodied in the Constitution in India, still remain, in a large measure, unrealised. The time has come for our struggle for emancipation to enter into its second phase of realising those objectives, without which political freedom can have little meaning for most of us. Economic progress must, therefore, be given first priority, subject only to the maintenance of the freedom and integrity of the country.

The key to the character of the future economic and social organisation of the country and its motive power is provided in the Congress constitution, which has as its objective the establishment in India, by peaceful and legitimate means, of a co-operative commonwealth based on equality of opportunity and of political, economic and social rights, and aiming at world peace and fellowship.

Thus the objective as well as the method is one of co-operation and the avoidance, as far as possible, of competition and conflict. This conception of social organisation inevitably leads to the secular State in which every individual has equal rights and opportunities, and the removal of barriers which may divide the people into opposing groups on the basis of religion, caste, class or region.

The application of this principle in the national sphere would lead to social progress and peace and would strengthen the nation. Its extension to the international sphere leads to an independent foreign policy basing itself on the promotion of world peace.

The progress of the country with limited resources, such as India is at present depends on the most effective utilisation of such resources for the various aspects of national life and activity. The Congress welcomes, therefore, the functioning of the Planning Commission and considers that the method of planned development is essential for progress and must be continued.

But such planning, in order to be effective, must have full support and co-operation from the public. Planning must include and might not be held up by some backward sector.

In India today, stress must inevitably be laid on the progress of the rural areas and the people, who live there.

The first and vital step has been or is being taken to free the land from the burden of old and out-of-date agrarian systems of tenure. The abolition of zamindari, jagirdari and the like must be rapidly completed.

Small and uneconomic holdings are not the way of rapid advance in agricultural production. The line of advance should, therefore, be co-operative farming with the object of making the whole or a substantial part of a village, a unit of co-operative management.

The conditions of agricultural labour should be improved, especially, in the lower wage pocket. Opportunities for work and employment in small-scale and cottage industries should be afforded to them. They should be given preference in allotment of land to newly-reclaimed areas, which should be worked on co-operative lines.

The preservation of milch and draught cattle and upgrading of cattle breeds are important for increasing the supply of milk and improvement of agriculture. Increasing attention will have to be paid to this.

The burden on the land of too many people subsisting on it has to be reduced by the diversion of part of this population to other vocations. Some of these can be absorbed in large industries but, in the main, scope for absorption will come through small-scale and cottage industries.

It is not possible to pursue a policy of 'laissez-faire' in industry. This has been rejected in most countries and is peculiarly unsuited to present-day conditions in India. It is incompatible with any planning. It has long been the Congress policy that basic industries should be owned or controlled by the State. This policy should and must be progressively given effect to.

A large field for private enterprise is, however, left over. Thus, our economy will have a public sector as well as a private sector. But the private sector must accept the objectives of the national plan and fit into it.

The progressive extension of the public sector in the field of what is now the private sector must depend on various factors, including the results achieved, the resources available and the capacity of the country at the moment. The test should always be what serves the social ends in view.

No vested interest or inherited privilage should be allowed to come in the way of the country's economic progress, nor should we allow ourselves to be distracted by slogans and doctrines which sound attractive but which might lead to a worsening of the condition of our people.

The general objective of economic progress has to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

translated into concrete programme in close relation to the needs of the people and the available means and resources. The first consideration must always be to avoid a breakdown of any point in respect of whatever is essential for the life of the community.

This necessitates a system of controlled distribution in regard to commodities which are in short supply. It is also of the highest importance to keep prices from rising and to endeavour to reduce them. Many of our difficulties to-day are due to a high and rising price-level, and economic development has been seriously hampered because of this.

Therefore, it is of essential importance to follow firmly a price policy aiming at first, a prevention of a further rise, and secondly, to reduce present structure of relative prices as between agricultural commodities 'inter se,' and between them and manufactured articles.

If prices have to be held and reduced, some measure of controlled distribution becomes essential. In the matter of food, the fate of millions of people is bound up with the presence of a nation-wide system of controls. But for these controls, the threat of famine might have materialised in different parts of the country.

We must endeavour to create conditions of relative abundance of articles which are necessary for the masses. As this happens, these controls can be progressively dispensed with.

But till we have an adequate supply, we must cooperate to make the controls function more effectively. Hesitancy and opposition to controls themselves produce weakness in their working. It is true that controls have led to corruption. The way to deal with this is to make the controls effective and to improve their administration.

Considerable progress has been made in the development of scientific research and the application of science to industry. This must be continued and adequate provision made for technical education.

Top priority has been given and must continue to be given to river valley schemes which are basic for the development of agriculture and power supply.

In regard to heavy industry, priority should be given to those industries which are considered of basic importance, such as steel, heavy chemicals, fertilisers and machine tools.

Any all-round development of the country on a significant scale must strain its resources to the utmost necessitating the need for much larger savings on the part of the community. In order to build a better future we must be prepared to suffer hardships at present.

The achievement of economic equality and social justice must proceed side by side with economic progress. The post-war shift in relative prices has, to some extent, rectified the disparity between the rural and the urban sectors.

Direction of public expenditure in the interest of social welfare and the imposition of estate duties in succession should be fully availed of as a means for the removal of inequalities. The tax structure should be examined and other methods explored for bringing about a reasonable relationship between the minimum and the maximum incomes, both in the private and the public sector, in keeping with the economic conditions of the country.

Inequalities have been accentuated during recent years largely in consequence of illegitimate gains from black-marketing, tax evasion, certain forms of speculation and other anti-social activities. To give immediate relief to the people and to promote social justice, these evils should be curbed with a strong hand.

The concern of the State for safeguarding the rights and interests of labour has expressed itself in several advanced measures of legislation. There is, however, much room for improving the implementation of these laws. Housing for workers is of great importance and should be encouraged by the State to the best of its ability and resources in co-operation with the employers and the workers.

A rise in the standard of living of the workers is not only desirable in itself, but leads to greater productivity. The 'per capita' productivity in India, when compared to some other countries, is low. This may be due to a variety of causes which must be investigated. It must be borne in mind, however, that without higher productivity, the interests of the nation as well as of the workers must suffer.

The machinery and procedure relating to arbitration and adjudication of disputes should be so improved as to secure fair settlements, based on the principle of social justice and with the least expenditure of time and money. Legal technicalities, formalities and appeals should be reduced to the minimum.

Considerable improvement has been made in our railway services. The Chittaranjan Locomotive Works have been established as a State enterprise for the production of locomotives. The Hindusthan Aircraft Limited are also producing railway wagons. The objective is to move towards self-sufficiency. Progress is being made in this direction, though it will necessarily take time. Continuous attempt has to be made to bring about further improvements in administration and for the convenience of passengers, more especially those travelling in the lower classes.

In some States, transport services have been nationalised resulting in greater efficiency and convenience to the public. This policy should be continued.

The public services and methods of recruitment have to be conditioned and adapted for the purposes of the national plan. Special training should be given, where necessary for the purposes of the nationalised or public sector of our economy. It is essential that high moral standards should be maintained in our public work; and while good work should receive commendation, bad work should be condemned. An effective machinery for this should be devised.

There has been frequent reference to corruption and there is little doubt that various forms of corruption exist as social evils to-day. Every effort must be made to put an end to this evil and some form of summary method must be devised to deal with such cases. At present, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

real difficulty in dealing with these matters is due to the dilatoriness of procedure in departmental inquiries and judicial proceedings in the law-courts, and the standard of proof required, which often leads to the guilty escaping punishment.

The importance of education and public health is well recognised, and yet, no marked advance can be made in them so long as our resources are limited. At the same time, it is necessary to direct education in the right channels and remove many of the evils from which it suffers today. Education should be looked upon as something which trains the intellect and builds the character of the student, and not merely as a means for employment. What the next generation will be, depends upon the education given now and the importance of this cannot, therefore, be exaggerated. Our system of education should not be divorced from the productive aspect and other needs of the community, but should be related to and be conducive to their fulfilment. The principles of basic education, *i.e.*, learning through a craft, should be utilised to the largest possible extent. Even in general education, some form of manual work should form an essential part of the curriculum, without which degrees or diplomas should not be given. An essential part of education should be an appreciation of and devotion to truth and beauty in their various forms.

In regard to public health, considerable progress has been made in the control of epidemic diseases and provision of improved water supply and general sanitation.

The Constitution has laid a special duty on the Government to bring about the economic and cultural advancement of Scheduled Castes and Tribes and other backward classes. Both the Central and State Governments have given particular attention to this important matter. The Congress, under Gandhiji's lead, has always made this social uplift of the backward classes as one of its principal planks and has laboured to this end with considerable success. This work must continue until these classes enjoy the same economic and educational opportunities and advantages as others. In particular, the tribal people have to be helped to develop according to their own genius.

Owing to certain historical and administrative necessities of the moment, certain States in India were classified as Part B, and Part C. States. This classification was transitional and cannot be considered to be permanent. It has to be remembered that certain parts of India have developed differently during past years. Certain border areas, as well as certain areas inhabited by Tribal people, require special treatment. The general policy in regard to Parts B and C. States should be to speed up the removal of differential treatment as rapidly as possible.

One of the major problems before us during the last four years which has demanded and must continue to demand priority and full attention, is that of the rehabilitation of the displaced persons from Pakistan. According to the figures of the last census, 49 lakhs came from Western Pakistan and about 26 lakhs from Eastern Pakistan. Of those coming from Western Pakistan, about 9 lakhs came from rural areas. Rural displaced persons connected with Western Punjab, who owned land or had been carrying on cultivation there, have been settled on land except those who preferred urban occupations. These latter number about 5 lakhs. Of the urban people from Western Pakistan, it is estimated that 13,17,000 have been rehabilitated in some way or other, by finding gainful employment in Government or other services or by being given special training in production at various training centres. Of the remaining, about 2 lakhs of urban dispossed persons did not require or ask for Government assistance.

The problem of displaced persons from Eastern Pakistan became serious early in 1950 and rehabilitation schemes were drawn up. The position was rather fluid, as large numbers of migrants returned to their homes. Of the 26 lakhs that remained, a little over half, 13.50 lakhs have been rehabilitated.

During the last few weeks, a new problem has arisen in West Bengal, where a continuous stream of migrants from Eastern Pakistan is flowing in.

By the end of the current financial year, the Central Government will have to spend about Rs. 140 crores on relief and rehabilitation of displaced persons from Western and Eastern Pakistan. In addition, about 56 lakhs of acres of evacuee and other land have been given to them and about 3,56,000 urban houses, shops and industrial premises have been provided. Of these, 85,000 were new houses constructed by Government.

The question of properties left by displaced persons in Pakistan have remained unsettled, in spite of repeated efforts of Government. This is a vital matter affecting millions of people, which should be settled as early as possible.

As India is a secular State, every citizen has the same duties, rights, privileges and obligations as any other. He has full freedom to profess and practise his religion. It is the particular duty of the State to protect these rights of all minority communities in the country and to give them full opportunities for development, so that they might play their part in the economy and public life of the country.

The women of India in the past, and especially in the struggle for the country's freedom, have played a notable part and distinguished themselves in many ways. They suffer, however, from a number of social and other disabilities. It is important that these disabilities should be removed, so that they may take their full part in the economy and social progress of the country.

Demand for a re-distribution of provinces on a linguistic basis has been persistently made in the south and west of India. The Congress expressed itself in favour of linguistic provinces many years ago. A decision on this question ultimately depends upon the wishes of the people concerned. While linguistic reasons have undoubtedly a certain cultural and other importance, there are other facts also, such as economic, administrative and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

financial which have to be taken into consideration. Where such a demand represents the agreed views of the people concerned, necessary steps prescribed by the Constitution, including the appointment of a Boundary Commission, should be taken.

In regard to foreign policy, India has pursued independent line in her own national interest and in the interest of world peace, and has sought to maintain friendly relations with all countries. This has been a positive policy, and, though sometimes criticised by others, has been vindicated by subsequent developments.

Certain small foreign establishments continue in India. The Congress has declared that these must revert to India, and our policy must be so aimed as to bring this about by peaceful means.

India's policy with our neighbour countries has been very friendly. We have welcomed the recent developments in Nepal. Unfortunately, we cannot say this in regard to Pakistan with which our relations have been full of difficulty. We have repeatedly endeavoured to find a solution of the many issues on which we are at variance, but without success. The chief among these issues is that of Kashmir. In spite of the aggression of Pakistan and the continuous provocative propaganda there, we have endeavoured to find a peaceful settlement in accordance with the wishes of the people of Jammu and Kashmir State. That policy holds and we cannot permit the Kashmir State to be disposed of in any other way.

The K.M.P. Manifesto

The following is the substance of the Krishak-Mazdoor-Praja Party:

It is easy to lay down certain general principles of social and economic reconstruction by which a political party may promise to lay the foundations of a new social order. Every party manifesto contains some excellent principles to which no progressive school of thought can take exception. We know, however, to our cost that the great aims enunciated in Congress manifestoes or in the directive principles of the Indian Constitution have little value because there are no corresponding plans and policies to give effect to them. Above all, the administrative machinery, as it is today, cannot be depended upon for the effective implementation of any plans. Its members have to deal with problems unknown to them before and in a spirit they never cultivated under foreign rule. As it is constituted today the administration lacks efficiency, integrity, and a spirit of service.

The constitution of our party lays down as our objective the establishment of a casteless and classless society free from political, economic and social exploitation. But here we propose to lay down our immediate programme of work. Our first task will be to overhaul the administrative machinery so that the services instead of acting as masters of the people act as their helpers anl servants. The task is urgent because in the complicated economy of today, even the prime necessaries of mere existence cannot be obtained except through a clean and efficient administration. Till a few years ago the State apparatus touched an ordinary citizen's life occasionally and at a few points only. Today, for a variety of reasons, the sphere of administrative regulation and interference has widened enormously. A corrupt and inefficient administration under the circumstances is bound to harm the country and lower public morale. It shall, therefore, be our endeavour to reform the services. We shall also examine to what extent and in what direction it is necessary and possible to reduce the scope of controls and of administrative interference in the citizen's life and work. In some spheres it may be desirable for the State to extend and intensify its activity to bring under effective control anti-social and disruptive forces. The State must also create a separate cadre for economic as distinguished from political service.

There is a general recognition of the fact that the great mass of our people live at a sub-human level. They are short of the vital necessaries of life such as food, clothing, shelter, education, sanitation and medical aid. Our economy is so unbalanced that it leads to the concentration of wealth and power in the hands of the few, exposing the many to unemployment, poverty, squalor and ignorance. No government which does not address itself to the solution of these grave contradictions has a right to the confidence and affection of the people. The situation we find ourselves in today can be improved only by radical changes to be brought about with the full and enthusiastic co-operation of the people. This co-operation, we believe, will be forthcoming in a generous measure if the leadership sets the example in service and sacrifice and is vigilant, earnest and careful, holding the interests of the masses as paramount. But no government is deserving of such co-operation that lacks the will or the guts to put down with a strong hand hordes of black-marketeers and other anti-social elements that have achieved so vicious a stranglehold on our economy.

In the political field we are pledged to democracy, both by the nature of our struggle for independence and by the Constitution framed for free India. But we believe that this democracy cannot function properly and effectively unless there is devolution of political authority and the local units are given reasonable power to shape their own life according to their requirements and genius. We believe that democracy works best in small units. This, however, need not mean a weak Centre. There are internal and international forces working today which necessitate a strong Centre. But a strong Centre, in a democracy, cannot rest for long on weak and helpless foundations.

The vast mass of Indian humanity is in a suppressed condition and yet there are classes, such as the Harijans, the aborigines and the hill tribes whose condition socially and economically is especially deporable. Their uplift shall receive the urgent attention of the State.

Our economic life must greatly improve if the miserably low standard of life of our masses is to be appreciably raised. This can be done by increased production, in all fields. For this increased production, it is necessary that for the time being at least there be an austerity drive to create the necessary capital and to solve our present

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

difficulties. The example of austerity must, however, be set by the leadership in and outside the Government, the administration and by those who today are living in ease and luxury. In the past this austerity drive was sustained by the spirit of Swadeshi. We must review this spirit and impress upon the people the need for using home-made articles in preference to foreign goods, even at a sacrifice which ultimately will replenish the nation .As far as possible no consumer goods should be imported except such as are needed for the health and vitality of the people. Whatever foreign exchange we can build should be used exclusively for the import of capital goods and expert services which we lack. But this lack must be speedily filled so that we may not rely, in a war-threatened world, upon imports from outside for our vital requirements.

With the Industrial Revolution in the West there has been a progressive unbalance in the economy of modern countries. Instead of agriculture being the axis round which industry should revolve, the latter has been the chief concern of modern nations. This over-emphasis on centralised industrial production was made possible by the imperial policies of the Western nations. They got raw materials and food from colonial countries where they dumped unwanted and sometimes injurious manufactured articles. India was one such victim. The loss of balance between agriculture and industry and between the rural and urban economy has now to be restored.

Our agricultural methods are primitive. Our peasants are poverty-stricken and ignorant. There is little incentive to increased and better production. Intermediaries draw away from the cultivator much of the fruit of his labour. Our aim will be to remove all hindrances that impoverish the peasant, creats conditions of serfdom and impede increased production. For this the first necessity is to see that all land belongs to the tiller of the soil with necessary safeguards against its misuse. The place of the robust, self-reliant and resourceful peasant proprietor in our agricultural economy should be recognised. It is, therefore, necessary to check the further sub-division of land below on economic holding. The village cannot survive unless there is consolidation of scattered holdings and further sub-division of land is checked. However, we cannot at present deprive the peasant of his uneconomic holdings. We must, therefore, provide him with facilities for co-operative farming whereby the resources of land, labour, instruments and cattle are pooled. Even the holders of economic units must be encouraged to co-operate for various purposes, specially for the disposal of surplus produce and purchase their necessary requirements.

In recent years the question of landless labour has assumed a critical position. It can be solved only if there are schemes for the reclamation of waste and marshy lands. This reclamation must be speedily undertaken and the land divided either into economic holdings to be offered to landless labourers or worked in big farms on co-operative basis. Landless labour must also find employment in decentralised industry. Where there are big farms worked through machinery and hired labour they must be worked on a co-operative basis or labour there must be organised and so far as possible a scheme of co-sharing must be worked on a co-operative basis.

Our agriculture depends largely on rain. Yet in our streams and rivers we have water enough to make our agriculture largely independent of nature's vagaries. By training our rivers we can secure an assured supply of water to irrigate the land and thus save the agriculturist from the ravages of both drought and flood. This should also help us to get cheap hydro-electric power.

In the field of industry, considering the restricted amount of land available for cultivation in proportion to the population, it will be necessary to encourage cottage and decentralised industry. Our party will, therefore, lay great emphasis on this. Through decentralised industry, we believe, wealth can be widely and evenly distributed. Moreover, decentralised industry avoids a costly and complicated distributive mechanism and greatly reduce, if not eliminate, industrial conflict and unrest. It utilises and stimulates local initiative and skill. It is the only way to provide employment to the largest number of our unemployed and semi-employed population. The guiding principle of our industrial economy will be that whatever can be produced efficiently and adequately through decentralised industry must be so produced, leaving to large-scale production of defence and key industries, such as generation of power, mining and metallurgy, the production of heavy engineering machinery, machine tools, etc. Resources of science will be made fully available for making decentralised production efficient and plentiful, eliminating drudgery. A high priority will, therefore, be accorded to the electrification of the country so as to make available cheap power to the worker in the rural area.

While our bias will be in favour of decentralisation we realise that in the complex conditions of the present-day world, large-scale centralised industry cannot be avoided. For speedy and full exploitation of our resources, it would be necessary to utilise all modes of production, small-scale, large-scale, private and socialised. While some defence and key industries must be nationalised we do not believe in the necessity of the Government directly undertaking and conducting all industrial enterprise. This often creates State monopolies, indifferent to efficiency and cost of production and hence to the consumers' interests. This is more so the case in India where the administrative services are not equal to their own limited tasks. Under nationalisation, labour too in the end fails to get a square deal. Wholesale nationalisation of industry would ultimately create State capitalism inimical to democracy. Therefore, an increasing sector of centralised industries instead of being in private hands will be socialised and run by autonomous corporations or by co-operatives representative of various interests including the State. Some centralised industries would serve as auxiliaries to decentralised industry providing the latter with efficient implements to increase its productive capacity. The distinctive competition between centralised industry and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

decentralised industry will be discouraged by, among other measures, assigning to each its definite sphere. The large-scale private enterprise, in the sector which may be assigned to it in the light of the guiding principles we have stated above, will be subject to social control and regulated in the interest of the common man who is the labourer as also the biggest consumer.

So far, we have talked of production of wealth only. Proper and equitable distribution of the wealth produced is no less important. We have already said that our economy is unbalanced. Extremes of wealth and poverty not only disfigure our economy but are a menace to any prospect of peace and progress. Therein lie the seeds of greed and hate which are fruitful causes of war and violence. Wealth created must, therefore, be equitably distributed. This distribution can be effected even at the source of production through a decentralised and socialised industry and through co-operatives. This is the only way towards a peaceful and non-violent society. For this it is necessary also to prescribe for all practical purposes the minimum and maximum emoluments that a worker in any field of social activity can enjoy. Our effort will be to level up lower incomes and level down upper incomes so that there be some equitable adjustment between the different strata of society and the various vocations. The emolument potential must bear some proportion to ability and utility potential. Our aim will be to see that no worker in any walk of life gets more than twenty times the emolument or the standard wage the labour gets in the field or factory. The minimum wage must be high enough to enable the worker and his family to live a healthy, happy and decent life.

For all this we must devise a new scheme of education suited to our present needs. The intellectual bias given to our education by our foreign masters who needed cheap local talent in the administrative field needs to be modified. But this need not mean any lowering of the standard of intellectual attainment. Practical education through fruitful co-operative work and activity and the development of the artistic sense will enhance the intellectual capacity of the pupil and make it less theoretical and formal. Co-operative work is the best training for morals. Education will be related to the practical needs of the life of the community. This will not impoverish higher knowledge but will rather enrich it. It will also stimulate original research. But situated as we are to-day, the first great need of the community is a practical kind of basic education for the child and the illiterate adult. It will be our endeavour to wipe off illiteracy in the shortest possible time as had been done in many modern lands, specially in Russia.

There is one question that has affected our economy adversely after the partition of the country and that is the question of the displaced. We could have taken advantage of the enthusiasm of the people for our brethren, who had been made to pay the highest price for freedom, and we could have speedily solved the problem with the help and co-operation of the former. But we got unnerved at the immensity of the problem and allowed local and provincial considerations to weigh with us. The large-heartedness of the Centre was nullified by want of sympathy of its officers and the apathy of the provinces. The addition of the displaced persons to the Indian population could have been made an economic asset. We could have created with their help model townships and introduced co-operative farming and small-scale industries. However, it is no use regretting post mistakes. Whatever remains to be done must speedily be done, specially with regard to the claims of the displaced persons to their lost property. It must be settled with the co-operation of Pakistan. We recognise the claims of the Muslim evacuees to their property left in India. We expect reciprocity in the matter. However, if this is not possible our Government must settle property claims of the displaced persons on a voluntary basis under mutual guarantees, if Pakistan is agreeable.

We would fain not talk of foreign policy but a party statement is considered incomplete unless this complicated problem also finds a place in its aims and objects. We believe that our foreign policy must spring from, and be directly related to, our home policy. If we are adequately aware of our internal weaknesses and are conscious of the urgent and paramount necessity of building up a decentralised economy that is neither capitalist nor Communist, then the only alternative foreign policy for us is one of strict neutrality. Whatever the inclination of our intellectual sympathies, we must scrupulously avoid any involvement in international commitments which is likely to drag us into a war, either on the side of this bloc or that.

In all this we have concentrated attention on what is immediately possible given the determination and will. We have not talked of any ideology or ism. This we have purposefully refrained from doing. Unfortunately political ideologies have become fanatical creeds over which groups, parties and nations fight. They fight more over undefined, general and abstract terms than facts and substance. Whenever we talk outside ideologies we find that we understand each other better and appreciate each other's efforts at practical reform. In the world today each ideology in practice takes something from the other.

The Socialist Party Manifesto

The Socialist Party has issued a manifesto through its Secretary Sri Limaye. The following are the salient points in the Five-Year Plan therein:

(1) Abolition of zamindari without compensation. The maximum holding per farming family will be 30 acres of average productivity: all land above this holding to be taken over and distributed among peasants and agricultural labourers.

(2) Petty zamindars, however, will be given rehabilitation compensation and proprietors of land possessing more than 30 acres will receive an annuity for 10 years on holdings up to 100 acres.

(3) Village panchayats elected by universal suffrage and the multi-purpose co-operative societies will be the pivot of the reorganized agrarian economy. The panchayats will tabulate the resources and needs of their village

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and prepare a crop-plan which will be sent to their higher organs of the Planning Commission.

(4) There will be a thorough overhaul of State machinery, and the present multiplicity of agricultural departments will give way to an integrated administrative machinery consisting of land commissions on regional, State and Union levels.

The commissions will consist of representatives of village panchayats, co-operatives, the Government and agricultural experts. They will deal with rural credit, technical help, land revenue, irrigation, cottage industries, crop-planning, river training, flood control, export and import of agricultural produce and supply of agricultural implements. There will be as great a diffusion of power and responsibility as possible.

(5) To improve land productivity, land volunteers will be organized who will undertake minor construction work, such as digging of wells and compost pits, draining of water-logged land, and the building of bunds, roads, etc.

(6) A food army raised and equipped by the State will bring new and waste land under cultivation.

(7) All forms of co-operation, including joint farming, will be encouraged; collective farms will be organized on land reclaimed through the food army. Here landless labourers will find work, home and land.

Industry

(1) In order to release the productive power of the community, certain industries will be taken over by the State.

Nationalization of banks and insurance companies will help capital formation; social ownership of key industries —like iron and steel, power, mines, chemical fertilizers and plantations—is essential for planned economic development; taking over of the "derelict" textile, sugar, and cement industries, "which have failed the consumers so utterly," will enable the State to satisfy the basic needs of the common man.

(2) All other industries will be in private hands. State control will be so devised as to remove all restrictions on production and to give an opportunity to those with initiative to explore, experiment and expand.

(3) Emphasis will be not on capital intensive but on labour intensive technique. The world's best technical talent will be availed of.

(4) In the nationalized sector there will be autonomous public corporations competing among themselves and municipal enterprise which will avoid the dangers of monopoly, centralization and bureaucratization.

(5) Workers will be represented on these corporations through their works committee and production committees. In joint stock company concerns workers' participation in management will be compulsory. In proprietary concerns their interest will be safeguarded through a system of double audit. Management, however, will be the responsibility of the proprietors.

(6) Provision will be made for sickness insurance, maternity benefits and old age pensions. The principle of unionship—every worker a Union member—will be introduced and internal democracy within the Union will be safeguarded.

(7) Producers' co-operatives and handicrafts will be encouraged by reserving certain lines exclusively for them. State initiative will break "the stalemate in industry."

(8) Planning machinery will be built from the bottom upwards: Village panchayats, public corporations, local bodies, co-operatives and associations of small manufacturers, workers and "handicraftsmen" will prepare inventories of their resources and their productive capacity, as well as the facilities required to increase productivity.

These plans will be finalized by planning commissions on State and Union levels. On the commissions will be represented all interests, including the consumers. The primary bodies mentioned above will be responsible for carrying out these plans.

There will be State trading corporations which will import and procure all requirements of the nationalized sector and scarce capital goods and industrial raw materials. All products of nationalized industry will be exported and distributed on a wholesale basis by them as well as important raw materials like jute and cotton.

Village produce will be disposed through multipurpose co-operatives which will also buy the requirements of the village on a wholesale basis. Other trade will be in private hands. "State control over it will ensure both traders' and consumers' interests."

In order to avoid corruption and black-marketing, instead of "the present partial and ineffective controls" rational and integrated controls "right from raw materials and capital goods," will be devised. A "democratic check" will be provided by associating consumers and workers at every stage of manufacture and distribution.

Measures of economic equality, such as capital levy, ceiling on income, etc., will change the character of public finance. Public revenue will be so distributed as to bring increasing resources to the organs of administration closest to the people. Public expenditure will seek to augment production and not merely maintain law and order.

To reduce disparities in wealth the State will abolish "all privileges of Princes and their Saliyanas."

Taxation measures and graduated capital levy will be used; to curtail privilege and concentration of property and to bring all incomes within the range of a "floor" of Rs. 100 and a "ceiling" of Rs. 1,000. The floor and the ceiling will rise with increase in production.

All barriers of caste will be pulled down. The scheduled castes and tribes will be settled on reclaimed land. A sum of Rs. 100 crores will be spent over a period of 10 years to provide educational opportunities to scheduled castes and tribes. In public services there will be reservation for them at least in proportion to their population.

All disabilities imposed on women will be removed. They will get equal pay for equal work. A civil code granting equal rights will be framed and there will be reservation for them in such lines as teaching and nursing.

Minorities will have the right to profess and practise their religion and to promote study of their language, script, literature and religion through their educational institutions and cultural associations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Refugee agriculturists will be settled through co-operative land reclamation schemes; middle-class people and artisans will be fostered by the State.

Constitutional changes directed at (1) restricting the property rights enjoyed by a microscopic minority, which stands in the way of community's advance, and (2) expanding the sphere of the people's freedom, will be introduced.

Provinces will be rearranged on a linguistic basis, the boundaries of which will be determined by a boundary commission. All States thus brought into being will have equal status.

India will withdraw from the British Commonwealth and thus redeem the pledge of complete independence.

Administrative reforms will root out corruption, bribery, inefficiency "and red-tapism."

(1) Justice will be made cheap and fact-finding and punitive functions will be separated; (2) Public opinion will be associated at each level of the Executive; (3) There will be periodic departmental meetings of the staff to improve efficiency and abolish red-tape; (4) Talent discovered in the ranks will be offered opportunity of special training and exercise of initiative; (5) Legislative standing committees "will act as vigils"; (6) Promotion and demotion will be based on fulfilment of targets and efficiency audit; (7) An anti-corruption authority will deal with all cases of bribery and corruption; (8) Major offences will be dealt with by special courts.

India's foreign policy will be based on:

(1) Abstention from disputes between "the Atlantic and Soviet camps;"

(2) Collective security arrangements for the belt stretching from Indonesia to Egypt;

(3) Co-operation with such U.N. agencies as might help to increase living standards of retarded peoples and abolish hunger and war;

(4) Opposition to all charters and agreements that bolster up the international caste system of rich and powerful nations on the one hand and the weak and poor nations on the other.

India will also support freedom movements in Africa and Socialist movements everywhere.

Manbhum Satyagrahi's Statement in Court

It is well known in Manbhum how due to a previous intrigue between the local officers and some men of Jhalda, Sri Bibhuti Bhusan Das Gupta, Secretary of the Loksevak Sangha and six workers of the Sangha were arrested at Jhalda on the 22nd April last while they were conducting a peaceful public meeting there. They were charged with the offence of rioting, assault, theft and illegal detention. As Satyagrahis they did not put in a defence but filed a written statement in court—which was held not in public—but inside the jail. They were convicted for rioting and assault and sentenced to six months rigorous imprisonment. The judgment delivered by the Magistrate of Purulia shows how justice can be prostituted in the interest of mean and selfish politics. The joint statement filed in court by Sri Das Gupta and others throws a flood of light on the condition of the people of Manbhum. We publish a substantial portion of this statement which we consider a very important document in the history of the people's struggle against oppression and corruption.

We know this *Sangha*, and have not the slightest doubt that as true followers of Bapu they have observed *Truth* in all their statements and actions. Their punishment is martyrdom, suffered in the cause of humanity. Bapu is dead and so is his beloved Congress, who is there then to offer redress? Even his *Harijan* is silent on this matter.

"We had the duty, as Satyagrahis, to fight against the foreign rule in order to end its autocratic role along with the slavery under foreign domination, we have had our duty also to fight against our countrymen's rule that has become synonymous with misrule and autocratic rule, in order to establish the real "Swaraj," in our country for which we fought so long a period of time. With that conscious sense of duty and responsibility, we have been giving a sincere fight from our Manbhum front against the bankruptcy of this Congress Rule for the last three years; and the Provincial Government also have been fighting against us the Satyagrahis, devising undesirable methods to vainly crush our rightful plans of Satyagraha launched against the misdeeds and falsehood and oppression of the powers-that-be. The Centre have given long ropes to the Provincial Autocracies to do according to their ill-will, and we saw in our own field how the Provincial Government having been aware of this unhealthy state of things, have plunged unrestrained into the unholy games of power-politics and exploitation. So as a last resort, we had to launch Satyagraha to lead Non-violent Crusade against the wrong-doers and to secure civic rights to the People.

This statement of ours is to express our stand as Satyagrahis in a Court under this Swaraj Government. We have realised the necessity of giving this statement, *as we have decided not to defend our case, as Satyagrahis, even though the charges are concocted and not those which the Satyagrahis cherish to break.* If the charges be according to the laws which a Satyagrahi deliberately and conscientiously breaks, the question of defence does not arise herein. But if the charges are otherwise, the question of defence may naturally arise therein in a free country which is ready to secure justice for its citizens. *So, there are baseless charges against us;* the court is sitting with us which is expected to do justice to the case in question; there is a Constitution for India which has assured to have provided safeguards to secure rights and justice the people deserve; and every citizen is naturally expected in this situation to exercise his rights to have justice for him through Constitutional ways, when all those things are there. We are fighting today against the mischievous laws, mal-administration and the misdeeds of the Government. We have waged non-violent fight against the misdeeds of the Government, not only not having met with a single instance of justice being done from the part of the Government in hundreds of appeals for rectification of wrongs done by the Government, but also having met with the Government's attitude of doing more harm, in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the matters in question for which the rectification was solicited.

It may be suggested that, if we defend our case we may at least torpedo the false story of the case by the very instrument of their own, having foiled *the design of the government to inflict punishment on us for untoward charges which we never dreamt to commit;* and that by this, our case may be cleared of all wrong imputations that are made and the opposite party may be exposed therein. By our deliberately refraining from defending our case, we express our protest against the condemnable condition that has come to stay in the field of justice and rule under a National Government.

We know that there is the Bihar Maintenance of Public Safety Act. We unequivocally declare here that we have violated this aforesaid Act with the full consciousness of the action of ours; and we may be considered guilty in the eyes of the unjust executor of that undesirable Act, but we feel ourselves to be not guilty to our conscience and to our sense of duty towards our country and the cause we serve. But here we would do well to mention that such violation on our part of this infamous Act has been made by the holding of many a similar meeting in the recent days, for which the Government have not had the moral courage to take legal actions against us. The Government know that we are on the right and that the Government lack in the moral stand and moral actions.

Hence where the straight way was lacking, the authorities have had to invent, and to take recourse to, many improper and immoral methods to achieve their object. *We have been charged with rioting, theft and making illegal detention of a person* whom we are alleged to have assaulted and robbed. Before saying anything about it as our reaction to it, we would like to say that this is not a question of mere defending the particular case of ours in which our pisition is seemingly at stake, but this is a question *how an entire Government machinery is engaged in unclean practice of cooking false stories to serve their purpose for the reason of which,* defending of the whole position is involved in the question. *What can we gain in fighting our individual cases, in which we are falsely implicated, if the Government themselves are there to enjoy freedom for endangering anybody and everybody they like,* having engaged themselves in doing so with unchecked liberty, by taking advantage of their having Governmental powers in their hands? A very important question also is how the agencies of the *Government dare to concoct a false and baseless case out of an incident that has occurred before the eyes of thousands of people who are there to reveal truth for the sake of truth.* The reason is clear as daylight. Such a deplorable state of things has been made possible to happen openly and daringly in an Independent Country and before the eyes of millions of people to-day, since there is nobody in all the Governmental spheres of India to raise any question for whatever wrongs they commit under this Swaraj life. *The Provincial Government is there as the perpetrators of these evil deeds, and the Central Government is there as willingly silent spectators of all wrong doings of those whom they have had to conduct and control.* In this state of things today, it is not the question of defending only this individual case of ours that matters much in the civic life of our present-day country, regard being had to the broader question involved in the case, but what matters much for us to consider is what has become the general condition of the administrative ways of the country in which such cases like that of ours are possible to be made. So our case is a broad-based case; and the defence for it, in order to have the real justice as required for the same, may only take place in some other competent court than the court we are in—that is, the Court of the people at large. In this present setting of things if this present Court expresses his willingness to administer true justice that the case and the condition of things deserve, then it would have to extend the range of its field of investigation, which, we are compelled to say, it is not competent to do, even though it be willing to do the same. *If it could do so, then it could see that persons have been made accused by conspiracy on the part of the Government of wrongful confinement of a person after robbing and assaulting him, as a reward of their saving the very person from a trouble at some risk.* In such investigation it would have been seen that the peaceful persons are being wrongfully confined in the jail by the very persons who have raided them, without reasons, with deadly weapons and have mercilessly lathi-charged their peaceful assembly. It would also show that these men of power who are the cause of this case are men who have unfortunately undertaken to lead a life in which they have left recorded endless unattended crimes all over the district in the wake of their unfortunate Hindi Imperialism and their ill-conceived autocrative exploitation in Manbhum, having been armed with the power of the Congress regime of the country. *We say all these with due responsibility involved in it and are ready to fully substantiate what we say;* and we think all these evidences are really necessary for arriving at the truth in the case.

We know that the moral and prospering existence of a country consists in its observing the rules of justice in its own life. The Father of the Nation gave us light for it. The Congress of the by-gone days committed itself to it. But now the Congress regime has deserted it in such a pitiable way that the country is on the verge of disintegration to-day. So in this distressing state of things in our country we the Satyagrahis of Manbhum voice out a humble warning from a remote corner of India, that by forsaking justice and justice thus we shall bring in our doom."

Liaquat Ali Khan's Statement

"I am deeply disappointed to read your telegram dated July 17, 1951. Instead of revoking the concentration of Indian troops on Pakistan frontiers, which you have admitted, and thus removing a serious threat to the security of Pakistan and international peace you have proceeded to make a series of allegations and statements unrelated to facts.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"You have asserted that India's policy continues to be to preserve and ensure peace and to avoid war. The use of military force in Junagadh, Hyderabad, and more recently in Nepal, are grave warnings against the acceptance of these assertions at their face value. The continued denial by force of arms to the people of Kashmir of their right of self-determination and repeated threats to the security of Pakistan by massing of Indian troops on its borders are hardly indications of a desire for peace.

"You have referred to a reduction of the Indian Army last year. The facts proclaim otherwise. Your defence budget has risen from 151 crores in 1948-49 to 195 crores in the current year. Last year the original defence budget was 176 crores, but, the revised budget rose to 191 crores. In the current year's budget an announcement was made of a small reduction in the strength of the Indian Army counter-balanced by increase in the Navy and Air Force; but two months later it was reported that even the proposed reduction would not be made. Actual defence expenditure in the current year is thus likely to rise to still higher levels.

"Your allegation that the armed forces of Pakistan were largely massed on Indian frontiers is completely without foundation. This would be borne out by any impartial observer. You have been at pains to distort the significance of expressions of discontent which have appeared in the Pakistan Press over your persistent refusal to allow a peaceful solution through a free plebiscite in Kashmir as propaganda for war against India. At the same time, you have either ignored or belittled the continuous and blatant propaganda for war against Pakistan by the Indian Press, prominent Indian leaders and political organisations. This propaganda has been going on in spite of the Delhi Agreement of April, 1950.

"As any impartial observer will testify, for a long time after the Delhi Agreement, the Pakistan Press strenuously propagated goodwill towards India while the Indian Press and political leaders continued to fulminate against Pakistan and to make attacks aimed at the integrity of Pakistan. When I drew your attention to this violation of the Agreement and asked for action against those responsible for it under Clause C-9 of the Agreement, you pleaded your inability to carry out the obligation undertaken by you.

"You have referred to the recent border incidents which you have reported to the United Nations. These incidents have been magnified by you out of all proportion and attributed entirely to Pakistan.

"I would draw your attention to the statement made by General Nimmo, Chief U. N. Military Observer on July 13 that quite a number of such violations of the cease-fire agreement have occurred on both sides and that the recent incidents were less serious than some of those which occurred in the past. Surely, it would be a gross distortion of facts to treat these incidents as any evidence of a desire for war.

"You have also referred to the no-war declaration. But as you are aware, the proposal for a no-war declaration could not be carried to a conclusion only because of your refusal to agree that if disputes between India and Pakistan could not be settled by negotiation and mediation, they should be referred to arbitration. In spite of the clear direction in your Constitution calling for the settlement of international disputes by arbitration, you maintained that it was beneath your national dignity to agree to this procedure.

"There can be no clearer proof of Pakistan's desire for a peaceful solution of its disputes with India than the proposal I have repeatedly put to you that all our disputes should be settled by negotiation and mediation and failing that by arbitration. Unfortunately you have preferred the threat of use of force in settling disputes in your favour wherever the opportunity has offered itself.

"You have admitted that troops movements have been ordered by you but you claim that these are for defensive purposes. The nature and magnitude of these movements and in particular the forward move of your armoured division and armoured brigade would not lead anyone to feel that their presence so close to Pakistan frontiers is for defensive purposes.

"This plea of defensive purposes loses all validity in the face of the fact that Pakistan had made no troop moves before the concentration of your forces against Pakistan borders.

"There can be no severer strain upon the relations between our two countries than to be subjected time and again to the threat constituted by concentration of forces. I would again urge you most earnestly to withdraw these forces so that this threat to the security of Pakistan and international peace is removed."

Nehru's Telegram to Liaquat Ali Khan

"I am in receipt of your telegram dated July 20. I regret deeply that my message of July 17, which I tried to make as frank and straightforward as possible should have evoked an answer which I can only describe as propagandist.

"Your references to Junagadh and Hyderabad are wrong and irrelevant. Do not propose to discuss these issues because our position in respect of both has been repeatedly explained. Your reference to Nepal is extraordinary and wholly unjustified. The Nepal Government itself has issued a strong protest against it. At the request of the Nepal Government small Indian forces are now cooperating with Nepalese forces near the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

border in rounding up some terrorist gangs engaged in looting and other acts of lawlessness and violence.

"As regards our defence forces, the Central fact is that our Army was reduced in 1950-51 by over 52,000 men. This is easily verifiable. Your reference to our budget figures is irrelevant and misleading as these reflect certain economic factors, such as rise in prices and change in exchange value. We frame our budget every year in the hope of reducing our Army still further.

"If the further reduction in our forces proposed for the current year has not been carried out, this has been due to Pakistan's war propaganda and to the absence of any reduction in her armed forces. You have not controverted our statement that the size of the Pakistan forces has been steadily increasing. Thus while we have been reducing our Armed forces, you have been increasing yours.

"I have neither ignored nor belittled what you say about the Indian Press. Outside a small and irresponsible section there has been no such propaganda as you suggest in the Indian Press. I am quite willing to leave the judgment on this to any impartial student of the Press of the two countries.

"I am surprised that you should dismiss the virulent and persistent propaganda in favour of *jehad* in the Pakistan Press as 'expressions of discontent over' our 'persistent refusal to allow a peaceful solution by a free plebiscite in Kashmir.' Threats of war over Kashmir in the Pakistan Press have occurred almost daily for many months. I would quote only a few extracts from reports of views publicly expressed by persons in Pakistan holding the highest offices:

'You can take it from us, that the day we become desperate and lose all hope of a just solution of the problem, not only the entire Pathan population of Pakistan and the tribal areas will rise up for the *Holy Jehad* in Kashmir, but our brothers from across the Afghan frontier will also throw in their lot with us for the cause.'—(Khan Abdul Qaiyum Khan, Prime Minister of N.-W. F. P.).

'So long as a single Pakistani is alive, nobody dare snatch Kashmir from Pakistan by force—if the problem was not settled immediately the whole of Asia would be engulfed in the flame of war which might lead to a world conflagration.'—(Sardar Abdur Rab Nishtar, Governor of West Punjab).

'I say this with full responsibility that India has now over several months taken up the attitude with regard to Kashmir which deliberately blocks progress along peaceful lines. What does India desire? It has no right to complain if it gets something else.'—(Sir Mohammad Zafrullah Khan, Foreign Minister of Pakistan).

'Prime Minister Liaquat Ali Khan told a Press Conference in Karachi that the Kashmir question cannot brook any delay. He said there were only two courses open to Pakistan to settle the issue—One was to pursue the matter in the Security Council. The second I would not tell you.'

"The charge that India has persistently refused to allow a peaceful solution through a free plebiscite in Kashmir is, as we have repeatedly pointed out, wholly baseless. It is the armed aggression of Pakistan against Kashmir and the continuing presence of Pakistan armies there that has come in the way of a peaceful solution. Progress towards a peaceful settlement has not been made because of the non-fulfilment on the part of Pakistan of conditions under which alone a free and impartial plebiscite could be held.

"In these circumstances, it is difficult to draw any other conclusion from the views of Pakistan's spokesman and the virulent and frequent comments of the Pakistan Press, than that Pakistan is preparing to seek a settlement of the Kashmir dispute by resort to force. This, and this alone is responsible for the wholly precautionary and defensive measures that we have taken. After what happened in Kashmir in 1947, we should be failing in our duty if we did not take adequate steps to safeguard ourselves against a repetition of those events and the far-reaching consequences to which these would lead.

"I would once more affirm in complete sincerity that military movements on our side have not been inspired by any aggressive intent or design on our part against Pakistan. India has no intention whatever of attacking Pakistan or of seeking the solution of any problem by force, but if Indian territory, including Kashmir, is invaded by Pakistan then India will take all measures in self-defence. If, as you say, it is also Pakistan's policy not to attack India, I see no reason why peace between our two countries should be in any way threatened. My proposal for a 'No-War declaration' by both countries was a simple and straightforward one without strings attached. You did not accept this and added many conditions.

"What is needed to ease the present tension is a declaration by your Government that on no account will they attack or invade Indian territory. Even now anyone can contrast the war propaganda and preparations in Pakistan with the absence of any such activities or propaganda in India. If the militant propaganda against India and talk of war in Pakistan cease, I am confident that not only will the present tension ease, but the way will be prepared for a calm discussion, in a peaceful atmosphere, of disputes outstanding between our two countries, and for their amicable settlement."

Liaquat Ali Khan's Invitation

Mr. Liaquat Ali Khan, Pakistani Prime Minister, invited Mr. Nehru to visit Karachi. The invitation was contained in Mr. Liaquat Ali's latest reply to Mr. Nehru, which outlined a fivefold plan for the creation of a peaceful atmosphere and the establish-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment of friendly relations between India and Pakistan.

The Pakistani Premier said that the visit should come off "as soon as the first essential step towards the restoration of a peaceful atmosphere, namely, withdrawal of concentration of forces, has been carried out." Other points of the peace plan are:

1. As soon as the troops have been withdrawn "both India and Pakistan should reaffirm their agreement that the question of accession of the State of Jammu and Kashmir to India or Pakistan be decided through the democratic method of a free and impartial plebiscite held under U. N. auspices."

To this end both Governments should state their readiness to implement without obstruction or delay, the obligations undertaken by them under the UNCIP resolutions of August, 1948, and January, 1949.

These obligations include observance of the cease-fire agreement, withdrawal of armed forces from the State and acceptance of the decision of the Security Council in the event of any difference in regard to the interpretation and execution of these agreed resolutions.

2. Both Governments should also declare their renunciation of the use of forceful methods in the settlement of any dispute and refer such disputes to arbitration or judicial determination if they are not resolved by negotiation and mediation.

3. Both Governments should reaffirm the obligation undertaken by them in the Delhi Agreement, particularly that "they shall not permit propaganda in either country directed against the territorial integrity of the other or purporting to incite war between them, and take prompt and effective action against any individual or organization guilty of such propaganda."

4. Both Governments should make a declaration that they will on no account attack or invade the territory of the other.

Auchinlek's Activities in Pakistan

Statesman's Diplomatic Correspondent at New Delhi reports:

"New Delhi, July 27: Informal discussions have taken place between the External Affairs Ministry and the Deputy High Commissioner for the U. K. over the Prime Minister's recent reference to British military officers in Pakistan.

"An informal approach is believed to have been made by Mr. Garner to obtain an amplification of Mr. Nehru's allegation that British military officers in Pakistan had 'added greatly to the prevailing tension.'

"While it is not known what specific complaints Mr Garner received during his conversations, India's main charge is believed to relate to the activities of F.-M. Auchinleck, who has been in Pakistan since April.

"A complete dossier about the Field Marshal's movements in Pakistan over the past four months, now in the possession of the Indian Government, suggests that his interests may have been connected with more than trade and business.

"Meanwhile the U. K. High Commissioner's Office here is believed to have received from F.-M. Auchinleck an explanation regarding his movements, apparently in answer to inquiries made by the High Commissioner.

"According to Indian sources, bellicose statements about Indo-Pakistani relations have also been made by General Gracey, whose visit to Pakistan was brief, and certain serving officers.

"That Mr. Nehru could not have intended a sweeping statement about British officers generally is evident from the fact that India herself has two senior British Army advisers and British Chiefs of the Navy and the Air Force.

"A *PTI-Reuter* report from Karachi says that Auchinleck had a meeting today with Chaudhry Nazir Ahmed, Pakistan's Minister for Industries, according to a Pakistani Government handout.

"The handout said that the Field-Marshal met the Minister 'to inform him of the progress of the carpet manufacturing concern he was going to sponsor'."

Conditions in India and Pakistan

Especially since the latest ration cut there has been severe criticism of the policy that our rulers, both Central and State, are following. It is said that the land of Pakistan has become by comparison a land flowing with milk and honey. Whatever may be the faults of our rulers—and we are not defending them, Pakistan is not a land flowing with milk and honey. The following statistics are self-revealing:

Unemployment

	India	Pakistan
1948	224,900	77,983
1949	293,043	70,996
1950	314,336	96,439

Index of general consumer prices and food prices:

General
1939=100

	India (Bombay)	Pakistan (Lahore)
1947	263	398
1948	286	444
1949	290	408
1950	295	415

Food
1939=100

1947	302	460
1948	305	497
1949	321	452
1950	334	453

The above informations are taken from the latest issue of the *International Labour Review*, U.N.O.

The Unity of Leftism in India

We share the opinion of the *Behar Herald* of July 7th last. "There are today a dozen Leftist Parties in Bengal, and more will sprout up by December next. These are: (1) The Socialist Party of India; (2) The Communist Party of India; (3) The Krishak-Praja-Mazdoor Party; (4) Forward Bloc of Nanu Ghosh of Howrah; (5) Do of Leela Roy; (6) Do of Shilbhadra Yajee; (7) The Revolutionary Socialist Party of India; (8) The Revolutionary Communist Party of India of Soumyendra Nath Tagore; (9) Bolshevik Party; (10) The Socialist Republican Party; (11) The Democratic Vanguard; (12) The Party of National Synthesis. While the Leftists will be quarrelling among themselves, the Rightist Congress will have an easy victory in the elections."

We desire, however, to ask a question: Why have the esteemed lady and the gentlemen who have felt impelled to captain these shows differed? They are by profession all followers of Marx and Lenin. Are we then to think that like the pre-1917 Russian revolutionaries they differ because they cannot agree to the position of a coma, or a semi-colon at which Israel Zangwill poked fun?

Zemindari Abolition in Madhya Bharat

The Madhya Bharat Zamindari Abolition Act received the assent of President Prasad on June 25 last. The Act which will be promulgated within 48 hours will bring a new era in the history of the newly-created Madhya Bharat State.

More than 8,600 zamindaries, covering an area of 18,636 sq. miles, will be taken over by the Government after the promulgation of the Act. This Act, it is said, would affect 1,21,993 zamindars of the State.

The Patels appointed by the Collectors will take possession of the lands, forests, etc., belonging to the zamindars on behalf of the State Government. The Government have made provision for the grant of compensation to the zamindars, the official announcement said.

The compensation grant would be paid in fifteen instalments. The zamindars have been divided into six grades for the compensation. Those paying an annual revenue up to Rs. 100 to the Government have been placed in the first category, those paying Rs. 101 to Rs. 500 second; Rs. 501 to Rs. 2,000 third; Rs. 2,001 to Rs. 3,500 fourth; Rs. 3,501 to Rs. 5,000 fifth; and above Rs. 5,000 in the sixth and last category.

Zamindars belonging to the first category would receive compensation amounting to 20 times of their net income, the second category 17 times, the third 15 times, the fourth twelve times, the fifth ten times and the sixth eight times. Zamindars whose annual income does not exceed Rs. 3,500 were also to draw a rehabilitation grant to enable them to settle down in other occupations.

The compensatory rates are patterned after those fixed in the Uttar Pradesh and Bihar Acts. These latter are subjects of litigation in the Supreme Court.

Orissa's Financial Crisis

A Cuttack news dated June 21 last told the world that the Governor of Orissa, Mr. V. P. Menon, and the Chief Minister, Mr. Nabakrushna Chaudhuri, are now daily "holding conferences at Government House to find a solution of the financial crisis" which the State is stated to be passing through. It is understood that as a result of the deficit budget of the State during the last three years the State Government had to overdraw to the extent of about Rs. 2 crores 30 lakhs from the Reserve Bank of India against its capital investments. The over-drawings being progressive without any possibility of repayment so far from Revenue Account, the Reserve Bank of India and the Government of India are understood to have drawn the immediate attention of the Government of Orissa and asked the latter to revise its financial position.

Meanwhile the Ministers of Orissa are understood to have been asked not to leave the headquarters but be in readiness to attend a short notice cabinet meeting likely to be held before June 25 to consider the joint report of the Governor and the Chief Minister and finalise the proposals for the resolution of the "financial crisis."

It is considered likely that the first announcement of the crisis and the steps taken to meet will be made in the Orissa Assembly which meets on July 11.

Drastic cuts in expenditure on unproductive schemes and retrenchment are anticipated in the Public Works Department.

Since then, the Governor and the Chief Minister had been to Delhi and the public have been informed that the news created a darker impression of the situation than the facts justified. Now that the old Governor, Janab Asaf Ali, has returned with fresh refreshed, we hope our neighbouring State will share his freshness.

India's Food Problem

During the second Vana-Mahotsav (Tree-planting ceremony) a fresh spate of speeches has been released over the country. Its inaugurator, Food Minister Munshi, fertile of ideas and compact of imagination has not learnt wisdom from the first year's result of his brain-wave.

We do not know who is responsible for the present food scarcity. War and profiteers are there to wreck natural economic relations. But with all this, we are afraid that our Prime Minister with his create for "planned" short harvest to share a part of the blame

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

forgetful of the lesson of American experience in this line.

For the benefit of his advisers we desire to draw attention to a report of the Rockefeller Foundation in which occur words of wisdom that should have a lesson for all of us. We quote these below:

"The capital required (for the better utilization of natural resources), particularly in agriculture, need not at the start take the form of spectacular dams, power facilities and industrial plants. Rather it could consist of thousands of small improvements, such as local water systems, small dams, wells and a variety of other constructions and implements."

India's food problem can be solved not by 'spectacular' planning but by making the agriculturist realize that his habitual practices have grown out of date. We hope our rulers will yet realize the generally incomplete nature of the *experts'* advice.

Animal Husbandry—Its Regionalization

We thank the Central Publicity Department for sending us a reprint of an article from the *Indian Farming* of June, 1950. A summary says that the Indian Council of Agricultural Research was established in 1929. But there was lack of co-ordination amongst its various organs and over-lapping. After 1945, this experience led to certain reforms and the setting-up of Regional Committees which work under the following scheme, the result of the enquiry by a Research Regionalization Committee. We cull the following from the article:

"(i) *Dry Northern (Wheat) Region*—comprising of the Punjab, Wetsern Uttar Pradesh, Western Madhya Pradesh, Madhya Bharat, Rajasthan, and Patiala and East Punjab States Union.

(ii) A. *Wet Eastern (Rice) Region*—comprising of Assam, West Bengal, Bihar, Orissa, Eastern Madhya Pradesh, Eastern Uttar Pradesh and North-east Madras.

(ii) B. *Coastal Region*—comprising of the two coastal strips in South India bordering on the Eastern and Western Ghats, parts of Mysore, Coorg, and Travancore-Cochin.

(iii) *Southern (Millet) Region*—comprising of Jhansi Division of Uttar Pradesh, Madhya Pradesh, Madhya Bharat, Eastern Hyderabad (Deccan), West Madras, Bombay and part of Mysore.

(iv) *Temperate Himalayan Region*—consisting of two sub-regions, *viz.*, the Eastern Himalayan Region including Assam (hilly parts), Sikkim, Bhutan, Nepal and the Western Region including Kumaun, Garhwal, Simla, Kulu, Chamba and Kashmir.

Four Regional Committees were appointed to consider the schemes of research, both current and proposed, with a veiw to fit them in, into the regional plan. The Committee have since made their recommendations and these would now be placed before the Scientific Committees.

Some of the new schemes recommended for consideration on a regional basis are:

(*i*) Setting up Regional Nutrition Centres—one in each region.

(*ii*) Study of sterility in cattle on a regional basis and in various areas.

(*iii*) Study of trace elements and deficiency diseases.

(*iv*) Improvement of wool.

(*v*) Utilization of industrial by-products and unusual feeds for liverstock."

There is, however, another side of the problem which mechanized-minded people in India have been pressing forward for acceptance by the people. Their attitude was reflected in an article in the Nagpur *Hitabada* of June 25 last entitled "Draught Animals—A Major Obstacle to Efficient Food Production," with a second title "Form Mechanization is the Key to Prosperity." The thesis contradicts all the purpose of the work of our Animal Husbandry Department. Our readers should know the process of their thought.

According to the standard rations for livestock in Britain, something like five acres of land is needed to feed a horse. If the total number of draught animals in the world is multiplied by five, we find the staggering total of 1,114 million acres are occupied unnecessarily. The best estimates show that between 3 and 4 thousand million acres of the world are cultivated, which means that an area equal to one-third of the world's cultivated acreage is given over to feeding draught animals. Is it any wonder that the progress of civilisation is so halting and spasmodic when the availability of food—the first essential—has such shaky foundations?

It may be argued that some draught animals do not require five acres for feed. It is just likely that a high proportion occupy a much greater area of rough, uncultivated land. The precise area is not important. The vital point is that almost all land used for draught animals could be made available for human food production. If we reckon only three acres for each draught animal, the result is still shocking.

Here are up-to-date figures of draught animals and tractors in the main regions of the world:

	Draught animals	*Tractors*
Europe	29,982,617	1,300,000
North & Central America	14,558,000	3,214,190
South America	15,155 000	54,638
Oceania	1,076,000	99,759
Asia	148,248,500	27,177
Africa	13,950,000	63 354
	222,970,117	4,759,930

With so great a proportion of the world's cultivable area given over to draught animals, the wonder is that famine is not more constantly recurring than it is in one or other part of the world. Land hunger lies at the root of agrarian unrest in nearly every country. Draught animals are a major cause of land hunger, but their braking effect on human endeavour is, per-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

haps, greater in that they rigidly limit man's own effort. The output of work from a man driving horses or oxen is not more than a quarter of what he would accomplish from the seat of a tractor. Thus, tied to draught animals he cannot earn the reward that is expected to meet present-day standards of living.

Bombay's Milk Plan

For sometime past a pamphlet on the subject has been lying with us written by Sri D. N. Khurody, Milk Commissioner, Bombay, holding a position analogous to that occupied by Dr. L. Sikka, Milk Commissioner in West Bengal. There is an impression prevalent in Bharat that Bombay's Milk Scheme has been made a success, and it will continue to serve as a model to others in Bharat's other States. The pamphlet has helped to justify this impression. The Prime Minister of India by laying the foundation of the new offices of the Are Milk Colony on March 14 last added strength to it, and the Bombay press rose enthusiastically to boost it. Friends have told us that the praise showered is fully deserved. We accept their opinion, and wish that other Milk Commissioners make up their minds to be as active as Dr. Khurody.

Plantation Labour in Assam

In the July issue of *Employment News* appears an article on the subject under the signature of Srijut H. P. Duara, Labour Commissioner. A summary of it is published below:

"Plantation labour comprises nearly one-eighth of the total population of Assam and plays a very important role in the industrial harmony and peace of the State.

"The tea industry is by far the most important industry in Assam. The name of Major Robert Bruce is associated with the early discovery of tea in India, who, in 1823, found indigenous tea growing in Assam.

"The tea industry in Assam employs nearly a million souls scattered over a wide area, spreading from the heart of the State and extending as far as the foot of the Bhutan Hills in the north, Burmese frontier in the east and East Pakistan border in the south. There are at present nearly 1,000 tea estates in the State.

"The tea labour population of Assam consists of emigrant labourers from West Bengal, Bihar, Orissa, Madras, the Madhya Pradesh and the Uttar Pradesh. The Tea District Emigrant Labour Act of 1932 now regulates the condition of recruitment of plantation labour in the tea gardens of Assam. Although some of these emigrant labourers return to their native lands after the expiry of the contractual period, the majority of them have settled down in the tea estates for generations and have become a part of the population of the State.

"When the Congress Government came into power their first and foremost task was to improve the conditions of Plantation Labour and accordingly labour laws, enacted by Government of India, were enforced and extended to all tea estates.

"Recently, the State Government have sanctioned a lakh of rupees for the inauguration of a scheme for the welfare of the Plantation Labour, with a view to bringing about all-round improvement in their standard of living.

"It is proposed to open fifteen centres for the male workers in the first year with a target to open fifty centres in course of three years. For the female workers, fifteen centres are proposed to be opened in course of three years; and for the ex-garden labourers five centres will be opened in the first year with a target to open fifteen such centres.

"In housing, the tea industry in Assam has made quite a good start although there is still a lot more to be done to bring it up to the standard as envisaged by the Royal Commission of Labour on plantations."

Corruption in India

We have been making such a display of our own shortcomings and corruptions in places high and low that we lose sight of the fact that other countries have had these experiences. In issues of this journal we have on more than one occasion drawn attention to how the U.S.A. fared after the exaltation of the War of Independence (1772-87) and of the Civil War (1860-64). Today we refer to Italy and to what one of its makers, Cavour, said. When his friends urged the difficulties caused by corruptions amongst Neapolitans (Naples) he is reported to have said in justification: "It is not their fault, poor people; they have been ill-governed; you must moralize the country; but it is not by insulting of Neapolitans that you will modify them." There is a world of wisdom in these words which rivals of the Congress should take to their hearts.

Recognition of Labour's Dignity

Labour has through struggles and conflicts attained the dignity of a separate "estate" in every State in the modern world more than equal with the others. This has been brought out in the news-item published on May 23 last. Much of the tensions in strikes and lock-out is ultimately concerned with this "dignity" question as the following will show:

"Agreement was reached on a large number of important issues concerning industrial relations at the meeting of the development committee on industries which concluded its two-day session here this evening.

"The meeting discussed various aspects of industrial relations in order to formulate an agreed basis for industrial relations in the country as well

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as future legislation on the subject. It was agreed that industrial relations are not a matter between employers and employees alone but a vital concern of the community as economic progress is bound up with industrial peace.

"While it was agreed that in an economy organized on the basis of competition, private monopoly or private profit, the workers' right to have recourse to peaceful direct action for the defence of their rights and the improvement of their conditions cannot be denied and should not be curtailed unduly. It was generally accepted, however, that in an emergency, as at present, these things should be dealt with on a special footing. The objective should be just treatment of all concerned.

Complete unanimity was reached on the view that the employer-employee relationship should be conceived of as a partnership in a constructive endeavour to promote the satisfaction of the economic needs of the community in the best possible manner. The dignity of labour and the vital role of the worker in such a partnership must be recognised.

"It was also agreed that industrial relations should be so developed that the workers' fitness to understand and carry out his responsibility grows and he is equipped to take an increasing share in the working of industry.

"Members also found themselves in complete accord on the fact that adequate machinery should be provided for arriving at impartial decisions regarding disputes which are found incapable of settlement by conciliation. It was considered advisable to empower labour courts to take cognizance and dispose of any complaints relating to working conditions, health, safety, welfare and kindred matters.

"Reference of disputes relating to such crucial questions as wages, hours, rationalisation schemes, should, as far as possible, be left to be settled by voluntary arbitration, it was further thought.

"The most honourable and patriotic course for both employers and employees, it was felt, would be to agree to submit any present or future dispute or classes of such disputes to arbitration of any person or board of their choice. The number of such agreements would be a good index of real progress in industrial relations in the country.

"It was considered that there was ample need for continuous education of employers and employees as well as the public with regard to their duties and mutual obligations. The conduct of the parties must be in keeping with the objectives of the Constitution and the declared social policies of the State."

Calcutta's Dockers—Their Noble Deed

When a section of the so-called "Leftist" press appear determined by means fair and foul—more by the latter than the former—to stiffen labour's non-co-operative mood, it is a crowning mercy that Calcutta's dockers should have refused to toe this dirty line and risen to accept a challenge to their human instincts.

Between last May 1st and May 20th, the hottest part of this summer's abnormal weather—one lakh tons of foreign food-grains were expected in Calcutta. And it was apprehended that the dockers would refuse to work during these dog days. But as the event showed they were fully aware of their duty.

And the Port authorities are glad that their fellow-workers should have helped in releasing the ships and in moving 90 thousand tons out of this food-grains to Bihar. Thus was a great anxiety relieved both for Calcutta and for Bihar. And they desire that their noble deed should be known all over India inspiring others to similar deeds. We are glad to act on this suggestion, as ours is an all-India organ of public opinion.

Central Aid to Part B States

"The States of Hyderabad, Mysore, Travancore-Cochin and Saurashtra will receive from the Central Government annually for five years, beginning 1950-51, a sum of over Rs. 10 crores in all as grant-in-aid. Following federal financial integration, the Centre entered into agreements with these States which provide for such assistance on a graduated diminishing scale subject to the review of the Finance Commission to be set up under the Constitution.

"Under the above agreement, the Centre will also assume liability for an equitable share of the public debt of Hyderabad, Travancore-Cochin and Mysore. No other Part B State has any public debt. The Central Government's share of the public debt of Travancore-Cochin has been fixed at Rs. 276.4 lakhs and for Mysore at Rs. 470 lakhs. The figure for Hyderabad has yet to be worked out. Privy purses of rulers to the tune of nearly Rs. 4.8 crores annually are already charged to the Central revenues. The two-year and five-year plans now being finalised by the Planning Commission are likely to lead to further substantial Central assistance to Part B States.

"The aid proposed, it is pointed out, is not in the nature of 'compensation' for the loss of 'federal' revenues. It will be recalled that the Krishnamachari Committee laid stress on the principle that there could be no question of compensation for the Centre taking over the 'federal' functions, together with the connected revenue and expenditures, assets and liabilities. The Committee, however, realise that the States which had so far depended to a greater or less extent on their 'federal' revenues would not be able to maintain their existing scale of expenditure in the 'provincial' field immediately after financial integration without special assistance for a transitional period.

"The guaranteed annual recoupment for Travancore-Cochin has been fixed with reference to a 'revenue-gap' of Rs. 280 lakhs. The 'revenue-gap' represents the measure of the immediate transfer of 'federal' revenues and expenditure to the Centre. The computations have been made according to the principles laid down by the Krishnamachari Committee with reference to the 'federal' revenue and expenditure of the State concerned during an agreed basic period. The corresponding figures for the three other States are: Mysore Rs. 345 lakhs; Saurashtra Rs. 275 lakhs and Hyderabad Rs. 135 lakhs (O.S.).

"The grant-in-aid to cover the revenue gap will include the State's share of divisible Central

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

taxes, which at present applies only to income-tax. If in a year the divisible tax share of a State exceeds the annual grant, the State will receive the higher figure.

"When the Centre took over the 'federal' revenues and expenditure of Mysore, Saurashtra, Travancore-Cochin and Hyderabad, it was found these States needed special assistance to maintain their expenditure on subjects in the 'provincial' fields as before the financial integration, in order to avoid any dislocation. In the case of PEPSU, Madhya Bharat and Rajasthan the reverse was the case, federal expenditure being in excess of federal revenues and, therefore, there was no immediate dislocation to their finances as a result of the transfer to the Centre. A similar scheme of financial adjustments between the Central Government and Part A States is being evolved in respect of the merged States. For Part C States the problem does not arise as the Centre is responsible entirely for Central as well as State subjects.

"With these arrangements there is now complete equality between Part A and Part B States in all matters of financial assistance, subsidies, grants, etc., from the Centre. These settlements between the Centre and the States will be reviewed by the Finance Commission under the provisions of Article 280 of the Constitution. The President may terminate or modify the Federal Financial integration Agreements after the expiration of five years from the commencement of the agreements as provided for in Article 278."

The above New Delhi news, dated June 15 last indicated the financial help that the Central Government of India proposes to extend to its B class constituent States. The cases of A class and C class are being separately considered causing not a little heart-burning.

Somnath's Revival

The colourful ceremony that signalized the rebuilding of Somnath has given rise to various feelings in India. In Pakistan there is fury; in Bharat there is elation. But we are concerned with the revival at the same time of the so-called Dravidian-Aryan conflict that has become the stock-in-trade of a certain school of politicians in the Tamil country (South India). The *Sunday Express* of Madras has become its mouth-piece. And in a recent issue, it summarized from various publications what it represents as a true version of the "Mohmed Gazani" episode. We quote portions of the article :

"Mohmed Gazani Never Reached Somnath"

"There is no historical proof to substantiate the legend of the sacking of Somnath temple. In fact, there is no evidence to substantiate the belief that Mohmed Gazani ever reached Somnath.

"It is believed according to legend that the invasion of Somnath took place in 1025 A.D. There are two great contemporary works of history of Gujarat of the same period. One is the great classic *Dvayashraya* by Hemchandra Acharya, and another is called *Prabandh Chintamani*. 'Neither of them mentions even casually the invasion of Somnath.'

"Muslim historians of that period would have jumped at this subject. Even if Gazani had reached Somnath, they would have painted in glowing colours as to how the Kaffir's temple was demolished by the Lord of Gazani. 'But they do make no mention of Somnath.'

"The great Sanskrit scholar and historian of Gujarat, Sri Rasiklal Parikh, writes:

'It is, however, strange to find that no mention of sacking of Somnath is found in the *Tarikh-i-Lamini* of Al-Utbi who was a sort of a private secretary to Mohmed. He wrote a good account of Mohmed's biography, and is definitely known to have lived for years after this event. Rasimuddin and Hamidulla who came more than two hundred years after and have written accounts of Mohmed also make no mention of this account.' (*Kavyanusasana*, Introduction).

"The first Muslim mention is by Ibu Asir in 1230 A.D., Shri Parikh concludes:

'From this absence of reference amongst early Muslim historians, we are driven to the conclusion that this expedition against Somnath must not have been an event of that importance which it is reported to be by later Muslim chroniclers upon whom the modern historians have almost uncritically relied. It might have been just ordinary looting of a marauding army as the places came on its way'." (*Ibid*).

"All evidences prove that the idol of Somnath was of pre-historic antiquity. It stood there before the Aryans came to what they contemptuously called the *linga-sisne-devah*. In their onward barbarous march across India, it would be no hazard to assert that the very first destruction of the ancient Somnath temple built by the Siva-ite Dravidians was perpetrated by the Aryans. Even as the destruction of Somnath and thousands of other temples and idols by the Muslims did not destroy Hinduism, the destruction of hundreds of *sisne-devahs* by the early Aryan barbarians did not destroy Saivism or the traditional Dravidian form of phallic worship, which was, however, common to all early human civilisations and still goes strong in India. Failing in their attempt either to destroy *linga* worship or the higher civilisation of the Dravidians, the Aryans got civilised by the Dravidians and incorporated Indian phallic worship and the whole system of religion connected with it in Brahmanism, which slowly widened into the all-embracing Hinduism. The *linga* worshipped in Somnath was the *linga* discovered in Mohenjo-daro. When the Aryans destroyed Mohenjo-daro they must have destroyed the prosperous Somnath in the same period."

National Library at Calcutta

We draw the attention of the authorities to the following letter received from an eminent scholar of international standing:

"The present administration of the National Library has spent large sums in buying expensive racks from England, replacing quite good serviceable old book-racks. But very little money is being spent in buying most necessary and important books of Indian history and culture. For instance, the following books though published a year ago have not been purchased:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dr. J. Leeuw: *The Scythian Period of Indian History*, published in 1949.
Basil Gray: *Royal Academy Exhibition Catalogue of Indian Art*, published in 1950.
Majumdar: *Vedic Age* (*National History of India*, 1951).
G. H. Gjirue; *Caste and Class in India*, 1950.
Sir J. Woodroffe: *Serpent Power* (4th Edition), 1951.

This list is not exhaustive. Formerly, the Library used to maintain a suggestion book, book for suggestions on the part of readers. This has been stopped. The Library publishes a Report of its administration. But this is not available to the public, so that no criticism could be made."

This system has militated in every way against the usefulness of the library for scholars, therefore this procedure has to be altered.

Massacre of the Innocents in Bengal

The public have learned with admiration how the devoted and thoughtful Vice-Chancellor Mr. Justice Shambunath Mukherji has added another task to his tireless activities for improving the Calcutta University. He has held a conference with the heads of colleges to discover how it was that only 27 per cent of the students who sat for the last Intermediate examination have passed. That over seventeen thousand youths have wasted one year of their lives and all the expenses of study for twelve months and gained nothing in return—except bitterness of soul—is not a matter to be dismissed with one day's thundering in the morning papers and two days' talk in the public parks. It needs probing; but no committee is necessary for discovering the cause, which is well-known to guardians and teachers alike.

The roots of the mischief are two—lack of common sense in the teaching and examination and greed for money as the supreme consideration on both sides. Any honest teacher could have told half of these youths after their test examination (I am assuming for the moment that the test examination is not a sham in most colleges) that judging from their state of preparation they had no earthly chance of passing the University examination three months later. Any honest head of a college should have told them that he was not going to send up such palpably immature candidates. A college venturing to do so would at once lose customers.

But why blame the colleges? The holy mother (*Alma mater*) herself is not sinless in this respect. A Matric examination that does not truly sift those who have received the necessary preliminary grounding for a college course from those who are unfit, brings shoals of lads to the University, and thus swells the University's income in various ways, particularly that "best seller in India," the I.A. English Selections, a paper-cover booklet of some 200 pages, costing Rs. 3, without any illustration or copyright extract that has been paid for. And the University's own Bible Selection too,—which happily few students buy and fewer still read; a note-book sufficeth. If, under the inexorable law of nature, the myriads thus easily entering the colleges, are two years later subjected to a 73 per cent massacre, the University has at least pocketed six lakhs of rupees in fees (of diverse kinds) from these failures alone, without giving them anything in return. After all, the ancients hit at one or two truths in spite of their lack of modern civilisation: the Christian Chhrch has proclaimed *Radix malo-rum est cupiditas* (Love of money is the root of all evils). And Sankaracharya too, with his *Artham anartham bhavaya nityam.*

The path of reform lies in (1) freeing the curriculum of its cumbrous pretentious mass of books (whose mass and cost drives the student to seek refuge in Notes). (2) Holding a commonsense practical test in modern English prose, as an instrument for reading, —and no niceties of grammar or subtleties of aesthetic criticism below the Honours stage. (3) Curbing the natural tendency of the (compulsory) Bengali paper-setter to maintain the dignity of his subject by making it as stiff as the Honours paper in English. (4) Ensuring that the questions are fairly well-distributed over the entire subject or book, and not confined to one corner of it, which happens to be the examiner's special preserve. In 1927, the question paper in Pass Economics III (Indian Economics) was almost entirely confined to Banking,—in which the paper-setter had taken his Doctorate. Such irrational action on the part of the question-setter drives the student to be dishonest; it discourages industry, as leaving everything to chance. A revision (called *moderation*) of question papers by actual teachers of the subjects, before they are printed, is indispensably necessary. The chance of leakage is not ruled out, I admit; but that is a lesser evil than the present freaks and caprices.

Above all, disciplinary action against the inefficient mercenary colleges—which swell the percentage of failure, should be rigorously taken. Mushroom colleges after the first year's trial, should be compelled to die out like mushrooms. And that hoary-headed sinner—with 2,000 youths on the rolls (which was the laughing stock of the British members of the Radhakrishnan Commission) and whose boys pointed out the Sealdah Station third class passenger shed as their Students' Common Room to the Sadler Commission, well, a little blood-letting reducing its numbers to 500 will certainly cure it of its present elephantiasis. The accepted conditions of affiliation, if honestly enforced, can effect this surgical operation.

Assassination of King Abdulla

The assassination of King Abdulla will have consequences far into the Arab world. He became a part of history during the first World War of the 20th century helping to overthrow the empire of the Turks. All seemed hopeful for his family. His younger brother, Emir Feisal, was the instrument through whom the fates found a leader of the Arab Revolt. In Lawrence's book *Seven Pillars of Wisdom,* we get a glimpse of the policy of the British Government, and the betrayal of Arab hopes by Prime Minister Lloyd George and his civil advisers.

Lawrence was an archaeologist, digging into the ruins of the area in Syria, Palestine, Lebanon, Trans-Jordania and the Hejaj. Then unconsciously to himself he got entangled in Britain's far-flung scheme of a vast South-West Asian Bloc with herself as the boss. This required the break-up of the Turkish empire; and Sheriff Hussein, Emir Abdulla and Emir Feisal were its dupes. Lawrence saw before his eyes the wreck of all he had laboured for, and was naturally very bitter with Lloyd George and Clemenceau. And throughout the book he gave the freest expression to it on every conceivable occasion.

In the earlier pages he threw out pen-pictures of men and things that will remain enshrined in the English language. Of Emir Abdulla he had no high opinion; Emir Feisal was his hero. We quote from the book portions that have become relevant today:

> ". . . nothing was futile in the atmosphere of higher thinking and responsibility which ruled at Feisal's . . . Abdullah would sometimes ride a little, or shoot a little, and return exhausted to his tent for a massage . . . He was fond of Arabic verses and exceptionally well read . . . He was also interested in history and letters . . . He affected to have no care for the Hejaj situation, regarding the autonomy of the Arabs as assured by the promises of Great Britain . . . The leaven of insincerity worked through all the fibres of his being. . . . His brain often betrayed its intricate pattern, . . . Yet they never separated into straight desires or grew into effective desires. . . ."

Feisal was driven from Damascus by the French, and the British looked indifferently on. The latter made him King of Iraq. Abdulla, King of Trans-Jordan. But when King Hussein was driven from Mecca by Emir Ibn Saud, they did not raise even their little finger to help their protege. This betrayal explained much of the Arab distrust of British promises; the Palestine episode with a promise for "a Jewish home" in Palestine, was the limit of ignominy.

Abdulla, however, had to pocket it; and in recompense he has been protected by the Arab Legion captained by Glubb Pasha, the best trained and equipped force in Arabia. But this did not avail against Jewish idealism and endurance. The State of Israel was born. The Arab world, however, feels that in the pursuit of his Hashemite kingdom fantasy made up of Syria, Lebanon, Palestine and Iraq Abdulla has been lukewarm in the common Arab fight against Israel. This feeling will minimize the grief that would otherwise have been felt by them.

But the real loss will be Britain's. With Iran threatening her oil interests, there remains none in the Arab world to speak a good word for her or stand up for upholding these. This appreciation of the Arab situation supports our contention that in life King Abdulla had been a stabilizing factor in the maelstrom of Arab nationalism and the creeping inroads of Communism.

"Birth of a Nation Suspended"

Under the above heading Andrew Roth wrote in the London *Daily Herald,* reprinted in the *Leader,* an article indicating the multi-racial elements of the problem.

> "Those who planned the Communist revolt in Malaya fervently hoped that the Malays would help them. Instead, hardly a single Malay has joined them in their jungle hideouts, while 50,000 have volunteered as special constables against them.
>
> "Under the harsh impact of the eight-month-old anti-British rising, the growth of Malayan national consciousness, rapid after the second World War, has accelerated. The Malays, as a people, are waking up. Except for 30,000 aborigines, they are the oldest inhabitants of the peninsula into which their ancestors penetrated 4,000 years ago.
>
> "During 140 years of British rule these hard-working cheerful people have multiplied more than seven times, but even so they are being outnumbered by the Chinese. Predominantly agricultural, the Malays bitterly resent this influx, which began to strength 70 years ago to meet the labour shortage in the tin mines and on the rubber estates.
>
> "Though immigration has officially stopped, the Chinese in the peninsula and Singapore today number about 2,600,000 compared with 1,700,000 in 1931. The Malays number 2,200,000, compared with 1,900,000 in 1931.
>
> "In the Federation the Malays are in the majority, while in Singapore they form a small minority. The relentless increase in the Chinese population makes the Malays feel they may ultimately become strangers in their own land.
>
> "Since the revolt began, Sino-Malay differences have so widened that some leaders darkly foresee that if the British left tomorrow there would be inter-racial violence on a large scale. Recently in parts of the country Malays have been taking their krises (scimitar-like national swords) to sorcerers to be blessed. One of them assured me that the charms were so powerful that they can deflect bullets.
>
> "Asking for special benefits to help them increase their members and ensure their security, the Malays assert with justice that the terrorists are almost one hundred per cent Chinese. With equal truth they insist that the ordinary Chinese have little or nothing to contribute

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

terrorists, while many have actually helped them either by paying 'protection money' or in other ways.

"Of Chinese claims for political rights, made two years ago when the constitutional future of the country was in the melting pot, Malay leaders now suggest that those who gain rights also incur obligations. In a determined effort to bring the communities together, a nine-man Malay-Chinese goodwill committee, with Mr. Malcolm MacDonald, U.K. Commissioner-General in South-East Asia, as liaison officer, has been set up. The leading Malay member is Dato Onn Bin Ja'afar, Chief Minister of Johore and President of the United Malays National Organisation. Dato Onn is personally convinced that the future of his race is at stake. With other leaders he is trying to find a way out. . . .

"Most Chinese in Malaya heartily wish that the terror would end, but they seem incapable of assisting openly in its elimination. Only recently have Chinese miners begun to stop paying 'protection money' to the terrorists. As more of the security forces swing into action more information should begin to come in.

"One significant result of the revolt has been its effect on Malaya's embryo Trade Union movement. Before the outbreak in June, 1948, there were in the Federation 302 trade unions, with 149946 members. Today, with the Communist elements gone, there are only 162 trade unions with 76925 members. But they are unions, not rackets. Aiming eventually to paralyse industry, the Communists early got a grip on the unions by mailed fist methods. Chinese secret societies, with schoolboy thriller names like 'Red Face' and 'Skeleton Gang' and wired initiation rites, also infiltrated, and through them extortion and victimisation boomed."

Later news from Malaya, dated June 18 last, described how a purely Malayan nationalist leader proposed to solve it. We share it with our readers:

"Plans for the achievement of Malayan independence, sketched by the Malay leader, Dato Onn Bin Ja-afar, early this month, have had their strongest critics so far in a section of the Malays themselves, writes K. N. Ramanathan, the *P.T.I.* staff correspondent in Malaya.

"Some observers see in this opposition to Dato Onn from a section of his own community, the working of a "hidden hand," which, they consider is trying to divide the Malays and obstruct the development of national untiy.

"In the ten days that have elapsed since Dato Onn "caused a sensation" in Malaya (to quote one newspaper) by his announcement, public opinion has had the time to consider his plans. The Malays and the Chinese communities have generally welcomed them. The British comment has been cautious. It has expressed appreciation of Dato Onn's approach but has also dwelt on the difficulties of the problem.

"Dato Onn, president of the United Malaya National Organisation, probably the most outstanding leader in Malaya today, said early this month that he would form a political, non-communal 'Independence of Malaya' party to work for the achievement of independence.

"He thought that an independent Malaya would seek to remain within the Commonwealth. . . .

'but there is no such thing as independence in self-government, if it is strangulated by preconditions of what it can or cannot do.'

"The Malayan Indian Congress—one of the three Pan-Malayan Indian organisations in this country—at its annual session during the weekend, adopted a resolution in favour of forming, or assisting in the formation of a Malayan organisation with membership open to all Malayans. He said that the Congress would give him every support.

"The Indian-owned newspaper, the *Indian Daily Mail*, has found it difficult to believe that Dato Onn could be really interested in forming a party for the achievement of Malaya's unity or freedom."

We have a certain feeling that the resident Chinese have lost their chance by aligning themselves more secretly than openly with the "fifth-column" activities of their own nationals.

Soviet Post-War Reconstruction

Prof. Maurice Dodd, lecturer in Economics, Cambridge University, who is a visiting professor at the Delhi School of Economics from January to March, 1951, spoke to members of the Indian Council of World Affairs on the above subject. Speaking on the success of "planning" there during the last 30 years, he appeared to be appreciative of the courage and endurance of Soviet leadership of rulers and the ruled alike. The following extract from the address will give our readers an idea of the various undertakings. We make this quotation from the *Indian Quarterly*:

"As regards the canal schemes: one of the most interesting is the famous Volga-Don Canal, joining the Volga just below Stalingrad with the river Don. It is a difficult engineering feat because of the substantial difference (some 90 ft.) between the levels of the two rivers. The canal will be just over 60 miles in length when it is completed. It was apparently started before the war, but was interrupted by the war; and the intention now is to complete it by the spring of 1952, if nothing in the international sphere occurs to interrupt it again. The importance of this project is that it will provide a continuous inland waterway system from the Baltic to the Black Sea, and one which will link Moscow with the Black Sea, enabling ships, for example, to carry fresh fish from the Black Sea to Moscow. To give some idea of the carrying capactiy of the waterway: it will be capable of taking large cargo ships, and with the deepening of the channel of the lower Don and a raising of its water level, these cargo ships will be able to proceeed from the Volga down to the mouth of the Don near Rostov and into the Black Sea. Diesel-engine ships carrying 500 passengers apiece are to be constructed for the Moscow-Stalingrad-Black Sea service when this canal is completed. Power stations with 2½ million and 1¾ million kilowatts capacity are to be simultaneously built on the lower and middle Volga at Kuibyshev and Stalingrad, and are designed to be completed in 1955 and 1956 respectively. The first of these, the Kuibyshev scheme, will be linked with an irrigation scheme covering 2½ million acres of land.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Finally, what the article from the London *Times* calls 'the boldest in conception and most difficult of all these schemes'—the highly interesting project of the Turkmenian Canal, which will run from the river Amu Darya or Oxus, across the Kara Kum desert to the Caspian Sea. The canal will extend to nearly 700 miles and will bring some 3 million acres of desert under cultivation (mainly for cotton). This scheme is to be completed in the year 1957. The forest shelter-belt schemes will be applied here also, and according to the plan shelter-belts will be planted on either side of the canal, and subsidiary dams and power stations will also be constructed along its route. Like the Volga-Don Canal it is designed to carry cargo ships."

Korea War's Cost to U.S.A.

The Korean war has cost the U.S.A. from $2,000,000,000 to $10,000,000,000 depending on how the main figure is worked out, according to the Assistant Defence Secretary, Mr. McNeil.

And if it continues, he told the Senate Finance Committee, the Armed Forces will have to ask for another $2,000,000,000 to $3,000,000,000 during the 12 months ahead.

Mr. McNeil was reluctant to give an exact estimate of the war's cost to date because of the difficulty of deciding what factors were to be included. He said he could 'prove any figure from two to ten thousand million dollars' depending on what assumptions were used.

Mr. McNeil said afterward that he would try to get the Committee as accurate a figure as possible on the cost of the Korean War.

A Washington news of date July last told us this story. We have read somewhere that the last World War cost about 4 lakh crores of rupees. Mr. McNeil's estimate is rather vague, and he declined to make himself responsible even for any near exact figure. We do not know what the American ruling classes mean by publicizing this huge expenditure of money and men, the latter being about 60,000 in killed and wounded and prisoners taken by the Communists of North Korea and China. It is time they realized that leadership in international affairs cost money.

Europe's Encroachments into Middle East

In the *Hitavada*, Sri M. F. Soonawala threw light on the doings of European powers in the areas washed by the Atlantic in North Africa and the Persian Gulf in Asia. They are on the retreat today, and their burden is being increasingly thrown up on the United States. And she is, willingly or unwillingly, playing her part, this being her destiny, as her politicians and publicists say with pride. She is inheriting Britain's hegemony; and thus do we find her intervening in Persia's oil trouble, trying to mediate between the rising nationalism of Iran and Britain's vanishing capitalistic exploitation.

The most interesting and informing portion of the article, however, is where the writer quotes the British publicist Marvin on the contrast between British and Russian technique of dealing with Asian peoples. He thus summarizes the argument:

"During the 19th century the Russian influence over the Muslims became so great that the latter almost completely identified themselves with their conquerors. One proof of this is to be found in the names of Muslim generals and politicians like General Alikhanoff, the Governor of Merv, General Nazibegoff, Muratoff and last but not the least, Jacob (Yakub) Malik, the present-day Chief Russian delegation at U.N.O., the Suffix 'off' added to the names means 'son'."

And to give added strength to it he quoted Marvin's exact words, written in 1885:

> "The people not only identify themselves with Russians, but the Russians identify themselves with the people. Englishmen would never think of placing their home army under a Sikh or a Maratha, or permitting a Bengali to become a Cabinet Minister. An Indian has practically no career in England; on the other hand, every avenue in Russia is open to the Caucasian. The Armenian, Loris Melikoff, rose there to a position next to that of the Czars. Generals Tergonkasoff and Lazareff, two other Asiatics, commanded Russian troops in the Turkish War of 1877-78, and when Alikhanoff accomplished his famous raid upon Merv, the exploit was acclamied as a Russian exploit, and not as the achievement of a mere native."

Crown Prince William & Marshal Petain

Within a few days have died two leaders of armies of the First World War—Crown Prince William of "Imperial Germany," first son of Kaiser William, and Marshal Petain who beat back the German attacks on the Fortress of Verdun. Both of them have departed from the field of their munificent activities in disgrace. William shorn of his glory, and Petain as the man who made his peace with Hitler. William's come-down was a fruit of Germany's defeat in 1918; Petain's of 1940. He was put up by French appeasers as the most considerable French leader who would be able to save some part of France's glory. History will say whether or not he succeeded in his venture. But this we know that the conquerors of the Second World War did recognize his status and treated him with courtesy. The death of these two men would, in no way, affect the fortunes of their country. Peace to their souls!

ROLE OF VILLAGE PANCHAYATS IN INDIAN ECONOMY

By Prof. C. B. MAMORIA, M.A. (Geog.), M.Com.

Village Panchayats

India has been a land of Village Communities or Gram Panchayats from time immemorial. It is claimed that the syetem was first introduced by King Prithu while colonising the Doab between the Ganga and the Jamuna. There are definite references to the existence of these "Grama Sanghas" in the *Shantiparva* of the *Mahabharata* and in the *Manusmriti*. Kautilya, who flourished in 400 B.C., has also described these Village Communities in his *Arthashastra*. In the Valmiki *Ramayana* we hear of the Janapada, which was, perhaps, a sort of federation of the numerous village-republics. It is also certain that the system was widely in existence in this country at the time of the Greek invasion, and Megasthenes has left vivid impressions of these "Pentads" as he termed these Panchayats. Chinese travellers Hieun Tsang and Fa Hien tell us how India at the time of their visits was very productive, and the people were "flourishing and happy beyond compare." An account of these Panchayats during the middle ages is provided in Sukracharya's *Nitisara*.

The Village Communities which were self-governing little republics all over India flourished under Hindu and Muslim governments and survived the wreck of dynasties and the downfall of empires. Even the Committee of Secretary of the East India Company reported in 1812 :

"Under this simple form of Municipal Governments, the inhabitats of the country have lived from time immemorial . . . The inhabitants give themselves no trouble about the breaking up and division of the kingdom; while the village remains entire they care not to what power it is transferred or to what sovereign it devolves; its internal economy remains unchanged."

"One foreign conqueror after another has swept over India," comments Sir Charles Trevellyan, "but the Village Municipalities have stuck to the soil like their own Kusha grass."

In 1930, Sir Charles Metcalfe described these Village Communities as little republics having nearly everything within themselves, and almost independent of any outside relations:

"They seem to last where nothing else lasts. . . . The Union of the village communities, each one forming a separate little State in itself, has, I believe, contributed more than any other cause to the preservation of the people of India through all revolutions and changes which they have suffered, and it is in a high degree conducive to their happiness and to the enjoyment of a great portion of freedom and independence. I wish, therefore, that the village constitutions may never be disturbed and I dread everything that has a tendency to break them up."

It is interesting to note that the attention of Karl Marx was also drawn to these Indian Village Republics. He writes in his *Das Capital*:

> "The small and extremely ancient Indian Communities which still exist to some extent, are based upon the communal ownership of the land, upon a direct linking up of manual agriculture and handicraft and upon a fixed form of the division of labour which is adopted as a cut-and-dried scheme whenever new communities are founded. They constitute self-sufficient productive entities, the area of land upon which production is carried on ranging from a hundred to several thousand acres. The greater part of the products is produced for the satisfaction of the immediate needs of the community, not as commodities; and production itself, is, therefore, independent of the division of labour which the exchange of commodities has brought about in Indian society as well . . . In different regions of India we find different forms of such communities. In the simplest form the land is commonly tilled and its produce is divided among the members of the community, while every family carries on spinning, weaving, as an accessory occupation. The simplicity of the productive organism in these self-sufficient rommunities . . . unlocks for us the mystery of the unchangeableness of Asiatic society, which contrasts so strongly with the perpetual dissolution and reconstruction of Asiatic States, and with the unceasing changes of dynasties. The structure of the economic elements of the society remains unaffected by the storms in the political weather."

Sir Henry Maine points out that

> "Indian village community was a living and not dead institution and the Indian and the ancient European systems of village communities were, in all essential particulars, identical."

He further observes:

> "That the earliest English emigrants to North America organised themselves at first in village communities for purposes of cultivation."

The Indian villages had evolved a well-balanced social, economic and political system by eschewing the two extremes of laissez faire and totalitarian control. They had developed an ideal form of co-operative agriculture and industry in which there was hardly any scope for exploitation of the poor by the rich. As Mahatma Gandhi has put it, "The production was almost simultaneous with consumption and distribution," and the vicious circle of money-lender economy was conspicuous by its absence. Production was for the immediate use and not for distant markets. The whole social structure was founded on non-violence and fellow-feeling. The Gram Panchayat administered the village affairs either on its own responsibility or as an adjunct to the village Headman or Patel. It also administered justice and peace, maintained local order by watch and ward, provided facilities for education, sanitation and public works such as erection and main-

tenance of public buildings, roads, tanks, wells and the keeping of village tracts in order, provided all other common amenities—social, and economic—of the village life and collected and distributed the charity to the needy and the poor. It derived its finances from the rich and wealthy inhabitants of the village and from other donations. The labour for the works of public utility the village community could get from the village people. In this way it was self-sufficient and self-supporting having little to do with the outside world. In the past, indeed, these Panchayats played a very useful role in developing the village corporate life but unfortunately the advent of the British Rule in India led to their decay and disappearance.

An extreme anxiety to enhance the land revenue to its utmost limits induced the East India Company to make direct arrangements with every individual cultivator, instead of with the village community as a whole. An equally unreasonable anxiety to centralise all judicial and executive powers in their own hands led the British administrators to virtually set aside the village functionaries, and thus deprive them of their age-long powers. These republics, therefore, fell into decay. This decay was further helped by a number of factors. The administration of the village by the agencies of the Central Government, the extension of the jurisdiction of the modern civil and criminal courts of the towns, the new land revenue system, increase in the means of communication, progress of education, police administration, migration of the best and ablest persons from the villages to the towns, the growing spirit of individualism and the break-up of the joint family system—led to the decay and disintegration of the so important an institution like the Panchayats. Thus the self-sufficient nature of the old quasi-democratic rural polity was broken and consequently the village Panchayats as a rural institution sank into insignificance. As R. C. Dutt remarks:

> "One of the saddest results of British Rule in India is the effacement of that system of village self-government which was developed earliest and preserved longest in India amongst all the countries of the earth."

Gradually the British Government took steps to establish such local bodies as could look after their own affairs. This led to the enactment of a number of Acts between 1842 and 1862 resulting in the setting up of Municipalities in the towns but no attempts were made to reorganise or newly start the village institutions, although in urban areas the municipal bodies rapidly increased. Later on, with the systematic attempts and sympathetic attitude of Lord Ripon (1882) a number of sub-district boards were set up in Madras and Assam, and in other provinces powers were wholly concentrated in the hands of the district boards but the start was made at the wrong end because the process did not lead to the federation of smaller units transforming them into large ones but instead it led to the devolution of powers by District Boards to smaller bodies.

The Royal Commission on Decentralisation remarked:

> "The scant success of the efforts hitherto made to introduce a system of rural self-government is largely due to the fact that we have not built from the bottom—the foundation of any stable edifice which shall associate the people known to one another and have interests which converge on well-organised objects."

It recommended that an attempt should be made to constitute and evolve Village Panchayats for the administration of the local affairs, even though the system can be gradually and tentatively be applied to make the village a starting point of public life. Consequently the Government of India passed a resolution in 1915 and issued definite instructions to all the Provincial Governments to give full trial to a practical scheme of Village Panchayats, wherever it could be worked out in co-operation with the people. The Act of 1919 which transferred local self-government to ministers was followed by measures in several provinces leading to legislative enactments. Consequently a number of Acts were passed in various provinces, *e.g.*, in Bengal the Bengal Village Self-Government Act was passed in 1919; the Madras Village Panchayats Act 1920 (replaced and supplemented by Madras Local Boards Act, 1930); the Bombay Village Panchayats Act, 1920 (replaced and supplemented by the Act of 1933); the Central Provinces Village Panchayats Act, 1920; the U. P. Village Panchayats Act of 1920; the Bihar and Orissa Village Administration Act, 1922; the Assam Rural Self-Government Act, 1926; etc., were also passed respectively in the provinces.

Functions and the Working of the Panchayats

For the establishment of Village Panchayats there is no uniform practice and hard and fast rules in India owing to the diverse circumstances and conditions prevailing in the different parts of the country. Thus in Bombay the Village Panchayat Amendment Act of 1939 has made it compulsory to have a village panchayat for every village with a population of 1,000 and above. By the end of January, 1950, the number of such panchayats stood at 3,500, whereas in West Bengal, Uttar Pradesh and Madras every village area is a panchayat area and there has to be a statutory panchayat. In West Bengal there are 5,[illegible] panchayats, in U.P. 34,755 village panchayats and 8,190 *adalati* panchayats; and in Orissa 528 [illegible] panchayats and 173 *adalati* panchayats. Similarly in Baroda, Travancore, Cochin and Mysore and Madhya Pradesh there is a statutory panchayat for every village. Since the formation of Himachal Pradesh the Punjab Municipal Act, the Punjab District Board

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Act, the Punjab Small Town Act and the Punjab Panchayat Act have been applied to this state and fresh incentive has been given to the growth of gram panchayats. According to the Madhya Bharat Panchayat Act, every villager will be a member of a panchayat. A group of such panchayats will constitute a *kendra* (central) panchayat. The heads of these Kendra panchayats will form a larger unit known as *mandal* panchayat. The members of village panchayats will be elected on the basis of adult franchise and the *kendra, mandal* and *nyaya* panchayats will be elected indirectly.

The constitution of the village panchayats however varies from province to province. They usually consist of 5 to 11 members. In some Provinces like U.P. they are wholly nominated, while in others they are elected by voters having property, taxation or educational qualifications. In Madhya Pradesh, the members are elected by adult franchise.

The functions of the panchayats at present are judicial or administrative or both. In Bombay and Madras, panchayats are administrative, *e.g.*, in Bombay, the panchayats have been empowered to exercise control over government properties like open sites, waste lands, vacant lands, grazing lands, trees, public roads under the revenue department. In Madras, the panchayats look after the construction, repair and maintenance of public roads in the village, the lighting of public roads and public places, the construction of drains, as well as sanitation and public health. They also have the power to administer civil and criminal justice, besides registering documents. In Madhya Pradesh, the panchayats perform a variety of functions, such as promotion of public health and medical relief, water supply, lighting of streets, opening of schools. The judicial work of the *gram* panchayats has been entrusted to *nyaya* panchayats. In U.P. wide powers and duties with regard to organisation and maintenance of schools, hospitals, community buildings, pastures, public wells, sanitation, justice, village statistics, improvement in agriculture, commerce and industry, have been given to the panchayats. The list of discretionary functions is also very large and includes plantation of trees, breeding and medical treatment of cattle, organisation of village volunteer force, assistance in agricultural credit, co-operation and famine or other calamity and establishment of libraries and village *akharas*, Control of village streets, waterways and power to effect improvements in them all in village sanitation is vested in the panchayat. In West Bengal, these panchayats have been entrusted with the responsibility of village roads, preservation of tanks, planting of trees and sanitary arrangements in the village.

From the foregoing description it will be seen that the functions of the panchayats are of two kinds, administrative and judiciary. The administrative powers relate to village lanes, ponds, wells, drainage, epidemic protection through vaccination, maintenance of school buildings, night watch, etc. Occasionally they may also arrange for lighting, libraries, improvement of agriculture and handicrafts, organisation of festivals and management of travellers' rest houses.* Thus they do useful work particularly in respect of education, health, conservancy and public works. They have been of special service for maintaining dispensaries for villagers in Bengal; for supplying electricity and for enforcing Town Planning Act in rural parts of Madras; for spreading adult education in U.P., C.P., Berar and Assam; for introducing agricultural improvements in the Punjab and Mysore and giving effect to sociol legislation, such as the Marriage Registration and Child Marriage Restraint Act, the Marriage Expenses Controlling Act in Indore.**

The judicial powers of the panchayats relate to the trial of civil suits for money due on contracts, recovery of moveable property or its value, etc., of a value up to Rs. 200 (the maximum varies in different provinces) and of petty criminal cases wherein they may inflict fines up to Rs. 50. Judicial powers have been conferred on the panchayats in various provinces. In Bengal, U.P., Bombay, Bihar, Baroda, Cochin, Mewar, Travancore the panchayats are empowered to try minor cases like theft, simple hurt, offences of cattle trespass.

Every panchayat is given exclusive jurisdiction and no other court entertains complaints falling within its jurisdiction. The procedure of trial is informal. No lawyer is allowed to appear on behalf of the party. Usually the only punishment which the panchayat can impose is fines. Whatever the functions of the pachayat be it is regretted that where panchayats have both administrative and judicial duties, they have generally concentrated on the latter to the neglect of the former.

Control

In all provinces adequate provision is made in the Act for the control of panchayats. In judicial matters its actions are controlled by a competent authority with power to quash its proceedings, to revise its decisions, to withdraw or transfer cases to the higher courts, and in the last resort to cancel the jurisdiction or to supersede it.

The administrative control of the panchayat is in some cases entrusted to the government agency ranging from a Tahsildar to the Collector or Commissioner; and in most cases to superior local bodies like the Local or District Boards, *e.g.*, in U.P. the panchayats are requested to co-operate with the District Boards which can delegate duties to them. In C.P., the panchayats are controlled by the District

*Blunt, *Social Service in India*, pp. 362-63.

Board subject to the supervision of the Government officers. Again in Madras and Bengal the village panchayats are controlled partly by the Government and partly by the District Board. In many provinces special government officers or regular salaried staff of panchayats like the Registrars and Circle Officers are appointed to supervise over the panchayats and to direct their growth. Where special officers are appointed the panchayats work efficiently as in Madras, Mysore and Baroda. The control is exercised through audit and inspection. The officers have power to cancel its resolutions and enforce performance of particular duties, and in extreme cases the panchayats may even be superseded or dissolved.

Sources of Income

According to the provision made in the Act, nearly every panchayat has a village panchayat fund, to which are credited all allotments, general and special contributions and donations from the Central, and the Local Governments, Municipalities, District and Local Boards. The panchayats also derive their income from some other sources too, *viz.*, all kinds of grants-in-aid, taxes, cesses, rates, tolls, fees and costs, income from property and endowments, sale-proceeds, interest or penalties on arrears, forfeitures, fines and compensations and donations from private persons. In nearly all provinces the panchayats are authorised to augment their income (according to need) and levy fee, tax, or assessment on land with approval of the government or superior local body.

The principal sources of income vary widely from province to province, *e.g.*, in Bengal, the panchayats derive half their income from the proceeds of the Chowkidari tax and one-sixth from the Union rate. In Madras, 46 per cent of the income is derived from house tax, 17 per cent from the markets, cart-stands, and slaughter houses, 16 per cent from the property tax. In the Punjab, special rates and village rates together account for 18 per cent of the total receipts.

Items of Expenditure

As in income so in expenditure, the principal items vary from province to province, *e.g.*, in Bengal (1939-40) out of the total expenditure of Rs. 103 lakhs, Rs. 8.4 lakhs were spent on roads and communications, Rs. 7 lakhs on water supply, Rs. 3.6 lakhs on medical relief, Rs. 8 lakhs on education and Rs. 2.7 lakhs on sanitation, drainage and conservancy. In Madras Province education absorbed the largest amount, it being Rs. 16 lakhs; Rs. 9 lakhs were spent on sanitation, Rs. 7.9 lakhs on lighting and Rs. 3.1 lakhs on road construction and repair in 1940-41, out of a total expenditure of Rs. 65 lakhs.

Many panchayats have also accumulated large balances often disproportionately high when compared to their incomes. It may be possible that the panchayats may be collecting these sums to [illegible] some capital projects in future. Even where this is the case, such a course would mean the postponement of items of minor expenditure but of greater need for some future date. In such cases the better course to follow is that arrangements should be made to give the panchayats financial assistance by way of loans so as to expedite the bigger works for immediate relief and benefit of the people.

Defects in the Working of the Panchayats

The experience of the working of the panchayats has shown that they have not fulfilled the high expectations that were raised about them on the basis of their glorious past. Various reasons have been advanced for the deficiencies in their working. Among them may be mentioned the following as being the most commonly put forth :

(1) That there is faction among the villagers which makes the common acceptance of the decisions of the panchayat impossible. Faction also makes it impossible for a common mind to develop within the panchayat and decisions are coloured by the factious interests of the members.

(2) That there is a lack of proper leadership in the village so that the panchayat becomes a tool in the hands of irresponsible elements in the village population. No respect is possible to develop among the villagers for an institution which is so abused.

(3) That there is indifference among the villagers to the need for the maintenance of proper civic amenities in the village.

(4) That the panchayat is often under the overpowering influence of the big landlord or moneylender in the village and therefore, fails to inspire confidence among the majority of peasants in the village. Further, the powers that are parted with by the Provincial Governments in favour of the village panchayats with a view to training the villagers in the art of self-government are always usurped by this small group. The interests of the small minority are served at the cost of the needy majority. Thus the main ideal of democratic training and exercise of local power for the benefit of the people gets frustrated. Instances have been common where the subsidies given for the village roads or sanitation were spent on the roads in front of the houses of this small group, or only the insanitary and ugly spots near them were attended to while the rest of the village was neglected. Sometimes the funds disappear altogether but the villager cannot dare to call for the explanation of the small group. The villager is loath to come trouble on account of the very scant protection given to him by the distant Central Government and also because he is lost in toil and care for his daily bread.

(5) That the financial resources of the panchayats are very meagre so that they can never hope to look after even the elementary functions assigned to them. Government subsidies go only a little way towards removing this want. Some long works have to be left out on account of their heavy cost, in spite of their urgent necessity. For example, village water-works are in a lamentable condition because they cannot be constructed on the scale required for the population, and even if constructed they cannot be maintained for want of funds or

CC-0. In Public Domain. Mumukshu Bhawan Varanasi Collection. Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repair. Approach roads furnish another example; they cannot be constructed on account of costs of and opposition to acquisition proceedings as well as of the cost of the construction of bridges and culverts.

(6) That the villagers resist the imposition of taxes like the house tax and would rather go without the panchayat than have one and be subjected to taxation.

Rehabilitation of Gaon Panchayats

In order to reconstruct India on peaceful and democratic foundations, it is desirable to establish self-governing Village Communities or Gram Panchayats as of old, with necessary modification to suit the modern conditions. These Panchayats will be very different from the present Local or District Boards which posses limited powers. They will be autonomous so far as their internal administration is concerned, and will be, as far as possible, self-sufficient in regard to at least the basic requirements of life like food, clothing and building materials. They will be linked up with the Taluka, District, Division, Province and country as a whole, for purposes of common policy and interests.

Every village with a population of 1,000 or more and having sufficient income for its needs should be declared a *Gaon* (village) Panchayat, and that villages with population below 1,000 should be grouped together to make a panchayat. Grouping of villages should be undertaken when lying within a radius of two miles and after taking into account the local conditions of those villages and their ability to raise the finances required.

Any person of 21 years of age or above, residing within the Panchayat area, should be elected a member and entitled to vote. No voter should be entitled to vote or to stand as a candidate for more than one Panchayat. There should be 9 to 15 members in a village Panchayat and the electoral roll, like the register of voters for each village, should be prepared by a Patwari, and revised periodically by a Kanungo. The assistance of a few non-officials in the preparation of the electoral roll will be appreciable. It will be opposed to democratic principles if the zamindars and moneylenders should be disqualified from standing as members of the Panchayat, although the legitimate fear of the Kisans is for the Zamindars who as a class have considerable power and influence in villages and dominate the Panchayat. Therefore, it will be desirable that at least three-fourths of the members should be tenants and field-workers. The inclusion of the village artisan, the patwari and the chowkidar would, no doubt, facilitate the work of the Panchayat.

Every village panchayat should be assured of a certain income for the efficient working of its plans. The sources of their income should be:

(*i*) *Fasli Chanda e.g.*, 5 seers after each plough in the village may be charged as *Fasli Chanda* per harvest. Such payments in kind are, undoubtedly, very convenient to the cultivators.

(*ii*) Manual Labour: It is a very natural form of public co-operation. In ancient India, and even now in certain villages of Mewar, public buildings, tanks, wells, etc., were and are constructed by the joint efforts and voluntary and honorary labour of the villagers. There should be at least 5 days of free manual labour after every plough in the village. This will facilitate the work of the Panchayats a great deal without any botheration regarding money and cash.

(*iii*) Private donations, on the occasion of social functions like marriages, sacred-thread ceremonies, etc.

(*iv*) Miscellaneous receipts, in the form of arbitration fees and fines, grazing charges and other special cesses for various purposes. Such cesses must, however, be realised in kind.

(*v*) Capital grants or grants-in-aid for recurrent purposes should be freely provided by the various reconstruction funds set up by the Provincial Governments.

(*vi*) Borrowings may also be allowed in special cases as regards Panchayats whose position is sound.

Each Gaon Sabha should have a Gaon Fund to which shall be credited the following: (*i*) Taxes on the rent payable not exceeding one anna in a rupee, and on rent received not exceeding six pies in a rupee, on trade, calling, and profession, and on buildings owned by persons who do not pay any of the aforesaid taxes; (*ii*) sums handed over or assigned by the Provincial Governments, District Boards, Courts or gifts; (*iii*) portion of rent or other proceeds from the *nazul* property; (*iv*) rent or revenue collection charges; (*v*) income, *adalat* panchayats, fairs and markets; and (*vii*) loans and the existing balance of the village panchayats.

As regards the functions to be followed by the Panchayats two things must be borne in mind. Firstly, the Panchayats should not be the only local authorities for the villages but there would be the District Boards also exercising jurisdiction over them. It is not, therefore, necessary that all the local services for the villages should be provided by the Panchayats. Secondly, the amount of political initiative and talent available in the village is bound to be small and their financial resources too cannot be very large. In view of these considerations it does not seem feasible to entrust the Panchayats with the maintenance of costly institutions whose clientele should be under the District Boards.

Functions of the Village Panchayats should be of three kinds:

Firstly, their own independent functions should be only a few relating to construction and upkeep of village works like roads, wells and tanks, and buildings; lighting, provision of village libraries, reading rooms, gymnasiums and *akharas* and other measures

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of public utility. They should also allot the land to the peasants and collect the Land Revenue on behalf of the village. The regulation of the inter-village markets, celebration of the local festivals, establishment and maintenance of the village primary schools, and the organisation of basic and adult education, and management and care of village grazing lands for the benefit of all the people—should also fall under the ambit of the Panchayats.

Secondly, they should be entrusted by the District Boards with a large number of agency functions in connection with the repairs of Board's buildings situated in the village, distribution of seeds and manures, starting of cottage industries, encouragement of co-operation, and consolidation of holdings, marketing of agricultural produce, improvement in the means of communications, regulation and distribution of water-supply for irrigation purposes, extension of village sites and control of rural housing, regulation of hours of work and conditions of employment in agriculture, making arrangements for the co-operative purchase of raw materials and consumption goods, and the co-operative sale of the articles of village handicrafts, and the regulation of village trade, industry and commerce by organising credit and non-credit co-operative societies under the supervision of the experts.

Thirdly, they should have the right of making representation and complaints to the Government and the District Boards regarding the inadequacy or mismanagement of any of the services which it is the duty of these authorities to provide for the villages. Thus they should have the power to enquire and report about the misconduct of certain officials, *e.g.*, Amin, Vaccinator, Constable, Patwari, Patrol, Peon, Process Server, to contract for collection of taxes and other dues on behalf of the Government and proprietors on payments and to acquire land through the collector.

Lastly, the proper judicial duty of the Panchayats should be conciliation and arbitration rather than adjudication. Conciliation is resorted to by disputants for resettlement of disputes informally, even in the absence of legal revision but if the law recognises it as a regular part of judicial administration, its utility and effectiveness will be greatly increased. To this end in view the law should provide that civil suits shall not be filed in a court, until the plaintiff has tried conciliation with the help of the Panchayat of appropriate jurisdiction. A certificate of failure of conciliation from the Panchayat should be necessary to enable the plantiff to go to a court. When a dispute comes before the Panchayat for conciliation it should summon the parties before it, hear the statements, note the points of disagreements and try to effect a reasonable compromise by arousing their friendly feeling and pointing out the troubles, delay and cost of litigation. No lawyers should be allowed to appear and nothing said before the Panchayat should be admissible as evidence before the courts should the case ultimately go there.

If an agreement between the parties is reached it should be formally recorded and signed and should have the same validity as a formal judgment of a court of law. In cases arising out of contracts the Panchayats may also act as arbitrators. The law can help by providing that debt and other contracts up to a certain value shall compulsorily contain an arbitration clause binding the parties to the acceptance of the Panchayat's award, should a dispute concerning it arise.

Conciliation and arbitration have been the traditional role of the Panchayats. If properly organised they can dispose of a very large number of cases out of the courts. It is said that in Denmark and Norway about 75 to 90 per cent of the suits are settled in this way. The Panchayats should have no jurisdiction in criminal cases.

Supervision of the Panchayats

The duty of inspection of the work of the Panchayats should belong to the District Boards and they should create for the purpose a force of Panchayat Supervisors or Inspectors each of them having under him 40 to 50 Panchayats or fewer. Their qualification and pay should correspond to those of the organisers of rural development work. The District Boards should be allowed to dissolve the Panchayats where necessary. Their initial establishment and supervision should not be the duty of the District Boards. This work should be entrusted to a Panchayat officer maintained in each district by the Provincial Governments who would work in close collaboration with, but independently of the District Boards. He will also act as a kind of Super-Inspector of the Provincial Government supervising the work of the District Boards' Panchayat supervisors and inspectors in relation to these bodies. He will as well report to the Government cases of failure of the District Boards to foster and promote the Panchayat organisation.

Smooth and cordial relations among the Gaon Sabhas will also be necessary. The spread of proper type of education and appointment of honest selfless workers as Panchayat officers for organising and supervising the working of the Panchayats in early stages of their growth appear to be essential factors for efficient working of the Panchayats. These duties can be entrusted to the development staff appointed for the development work in rural areas, instead of Panchayat officers, although the existing system of their appointment should be considerably changed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The rural development officer, on the one hand, should create interest in the village activities for self-help and self-improvement and, on the other, it should represent the village to the Government in the spirit of a spokesman of the former. The Village Panchayat area should be a seat of all public services or a unit thereof. For instance, it must have a veterinary sub-dispensary, a civil sub-dispensary, and it must be the headquarters of the agricultural supervisor, the Sub-Inspector of Weights and Measures, the Head Constable of Police, and the Chief Village Patel for all villages in the group, the beat-guard of the Forest Department; it must have also a small branch of post office, and a secondary school for boys and girls.

During the last 200 years, the spirit for co-operative action and corporate life has been greatly destroyed. Individualism and materialism have replaced community life and moral obligations. The present-day experience of the way democracy is functioning and of party factions even at the top cannot but make one a little pessimistic about the practical working of the existing Panchayat Acts in the provinces. It is certainly a great responsibility on the people's government to see that the provisions of the Act are not misused for the sake of party aggrandisement and for destroying the last traces of the community life. The dangers are not imaginary but real. Finally, let us not lose faith in the innate goodness of human nature and let us share the optimism with Dr. K. N. Katju that

> "What is definitely a poisonous fungus of recent growth of human origin can also be destroyed by human endeavour."

Model Gaon Sabhas for U.P.

The U.P.'s lead to the rest of India in promoting Panchayats all over the State is well-known. Finding that the response of the villages to the scheme has been very encouraging, the Government has now embarked on the second stage in the scheme, *viz.*, establishment of an ideal Gaon Sabha in every tehsil to serve as a model to the other Gaon Sabhas in the district and the State.

These ideal Gaon Sabhas will work to bring about conditions in the rural life as can promote the mental, spiritual, moral, physical, economic and social uplift of the people.

In order to implement the ideal Gaon Sabha scheme, a committee will be set up in each district, consisting of the president of the district board (chairman); district panchayat officers (secretary); president, district development board; president, district congress committee; district inspector of schools; officer-in-charge, P.R.D. in the district; district medical officer of health; district agriculture officer; district co-operative officer; district engineer; district information officer and two others to be co-opted by the committee.

The committee will select a suitable site in every tehsil for the location of the ideal Gaon Sabha. Though the initiative for building up an ideal centre will rest with the committee, actual work will have to be done by Gaon Sabhas and the members of the panchayats. These ideal centres will be given a 16-point constructive programme and the committees will be expected to secure co-ordination and co-operation of the Village Sabhas in its execution.

The aims and objects of this programme may be summed up as follows:

(*i*) To arrange for land for the panchayat house, office of the panchaytai adalat, a hall for meetings, and accommodation, for a library and reading room;

(*ii*) To display in the panchayat house the exhibits of village crafts;

(*iii*) To arrange entertainments with moral and educative background;

(*iv*) To open a dispensary or arrange for a medicine chest;

(*v*) To arrange for the education of adults and children;

(*vi*) To conduct games and exercises;

(*vii*) To hold practical demonstrations to educate the people in regard to sanitation;

(*viii*) To demonstrate how nightsoil could be disposed of and how it could be turned into manure;

(*ix*) To arrange for the construction of roads, drainage, etc.,

(*x*) To arrange for lighting in villages;

(*xi*) To plant shady trees on the road-sides;

(*xii*) To educate people in respect of animal husbandry problems and proper maintenance of the livestock;

(*xiii*) To install cane-crushing and fodder-cutting machines for the village public;

(*xiv*) To introduce compost-making schemes;

(*xv*) To make provision for the improvement of the breed of milch cattle; and

(*xvi*) To organise boy scouts, women uplift societies, etc.

LONDON LETTER

By Major D. GRAHAM POLE

Midsummer Day has come and gone and what seems to many to be the longest year in our history pursues its dismal course. History is full of ironies but it cannot often have happened that in a given year, in a matter of days, its greatest achievement and its greatest failure should be embodied in the person of one man. But such is the present case. 1951 will be remembered in our history books as the year of the Festival of Britain. The Festival it will be recorded owed its inspiration and its success to the organizing genius of Mr. Herbert Morrison. But the year will also be remembered for the crisis which arose in the Anglo-Iranian oil-field. And that crisis it will also be recorded was mishandled from the beginning by the same Mr. Herbert Morrison, now turned Foreign Secretary. Foreign affairs have been the grave of many a reputation. Sir John Simon was too legal and Neville Chamberlain too vain. And Mr. Herbert Morrison? The verdict is: suicide. Hanged himself in his own garters, the garters being the narrow circle of his atrophied views on 'imperialism.'

There have been many important debates on foreign affairs in the House of Commons. There has too for a long time been the assumption that such matters are the concern of the whole nation, to be approached objectively and not from the party angle. On these occasions the House feels entitled to be taken to a certain extent into the Minister's confidence, to be given a survey of the situation and rather more than a hint of the course which the Government proposes to follow. Nothing like this occurred last Thursday when the Foreign Secretary wound up the debate on the Persian crisis. The only hint that the speech gave, it is fair to say, was to the Persians. Plainly they could go ahead without any fear of a check from Whitehall. Mr. Morrison indeed never came down to realities. Instead he spread himself in gibes at the Opposition and the 'imperialism in which they had been brought up' or stooped to a cheap joke about the action of the Persian Government in closing the Oil Company's information bureau. But the most astonishing levity of all was an entirely gratuitous comment about wanting to 'colonize Persia.' This of course brought Mr. Anthony Eden to his feet (with a graceful reference to Persia's long history). But what a gift to Persian extremists was all this irrelevance. For their propaganda hand-outs to the Press, to the world, they have only to garble Mr. Morrison just a very little.

Our modern anti-imperialists are very like Pontius Pilate. All they think they need do is to wash their hands of the past. But who is going to benefit if the Anglo-Iranian Company pulls out? For if ever an 'imperialism' has done more good than harm, it has done it in Persia. An article by Mr. Hilary St. George Saunders has just appeared in the *News Chronicle*. He was formerly Librarian of the House of Commons and is the author of many best-selling War Reports. And since the War he has travelled Persia from end to end, except north of Teheran where he was barred by Russian influence. A competent and sympathetic observer—and the tale he tells is extraordinary.

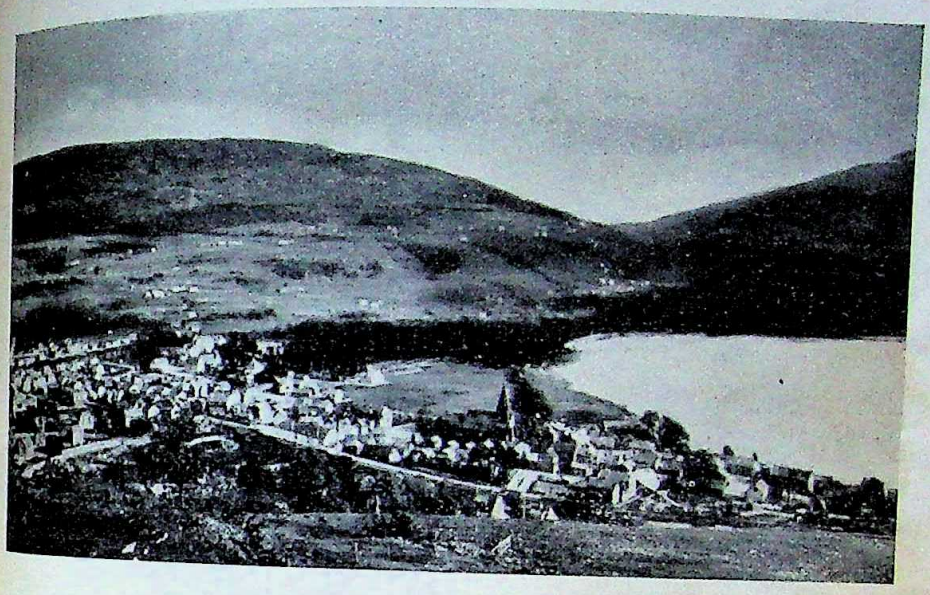
He traces the history of Abadan from the year 1909 when the Anglo-Persian Oil Company first appeared on the island. It was then utterly barren but the land was needed for a refinery to deal with the oil which had been discovered in the hills away to the north. Today Abadan is

> "a town of 170,000 inhabitants, of whom about 165,000 are Persians . . . the most modern town in the Middle East, with drainage, electric light, well-built brick houses, lovely gardens, hospitals, schools, cinemas, everything in fact of which civilisation today is proud."

It is connected by pipe-lines with the seven main oilfields, and around the headquarters of these oilfields other towns are also rising.

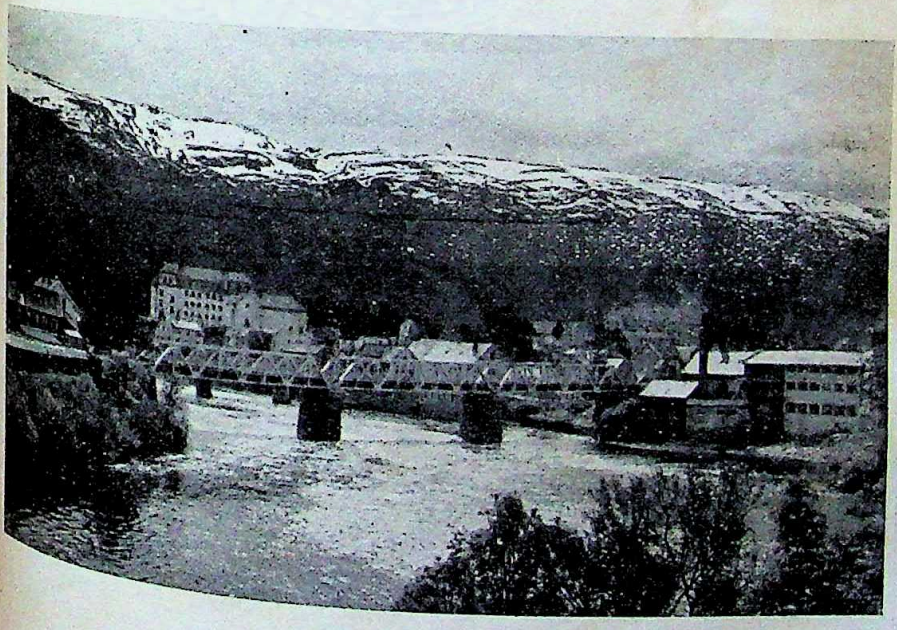
> And "in all these places unemployment, poverty and disease, as it is known in the East, do not exist. In a generation the company has virtually stamped out malaria, small-pox and typhus by an intensive programme of preventive medicine which is unique . . ."

That is what life is like in the Anglo-Iranian concession. Its area, incidentally, is larger than that of the United Kingdom and Northern Ireland put together. So that when the present feverish times are past—and the British finally gone—the Persians will have plenty of object lessons around them from which to come to a just conclusion as to the nature of British 'exploitation.' Conditions in Persia proper are very different. Listen again to Mr. St. George Saunders :



> "Outside the confines of the concession, no public health or other social services exist and the sewers run down the open streets in Teheran and Isfahan and in all other towns I visited and there are no signs of any change. You hardly see a child who is not afflicted with some loathsome eye disease, the peasants are in rags, not one in ten can read or write."

Indeed, in Abadan, the Persians can see the two systems existing side by side. Large parts of it are not under the company's control but in the hands of the local council. And, says Mr. St. George Saunders:



> "They contain the second worst slums I have ever seen or smelt. The first are to be found in Teheran."

In Teheran also are to be found the Persian upper classes. They are described as charming, highly civilised, some would say decadent. They count their wealth by the number of villages they own and it is they who are in control in Persia and who receive the royalties paid by the Anglo-Iranian Oil Company. To a large extent they control the elections to the Majlis. They have plenty of power but will not exert themselves. A 'modest' programme of social services was adopted a few years ago, but they have not implemented it. (It will be remembered that the Persian Prime Minister, in the role of the devil citing scripture for his purposes, the other day conducted foreign newspaper men round the slums of Teheran!)

And it is to these people that we are delivering over our concession and with it the defenceless Persian labourers. How long can such a state of affairs persist? Communism has already found a footing in the Persian towns, in some of which children aged four and five are employed in making carpets at the rate of 4d a day. Communists make it their business to fish in troubled waters . . .

From every point of view it is a mismanaged, mangled business, and no one can feel happy about it. Why could not the Persian Government have agreed to arbitration—and why could not our Government even have drawn up a statement setting out their view of the rights and wrongs of the crisis? In England, the man in the street feels nothing but scorn for our drifting doctrinaires. All his sympathies and respect are with the men on the spot, with the Manager Mr. Drake and the undaunted army of tankers.

Dislocation, unemployment, uncertainty. These are the heritage on which the Persian labourer is entering. The Persians have no tankers. How are they going to manage? And, as the London *Star* points out, the pipelines across Iraq and Transjordan are still the property of the Company. The Company, incidentally, could hardly have conceded more to Persia than it did already and still remain in business. The *Star* gives the split-up of the Anglo-Iranian revenue last year. To the British Government in taxes £26,000,000; to the Persians in royalties £23,000,000. Only £3,900,000 went to the shareholders of which the British Government, the principal shareholder, took half. Well, these figures do not bear contemplating. That a Government should do so well out of a Company and then abandon its servants . . . There are many Scots employed in that company. Thinking of the treatment that has been meted out to them by the Foreign Secretary many of them must be recalling that line from Marmion: 'His cowardice has undone us all.'

The Persians are embarking on an experiment in nationalisation. We in this country have now had several years of it and it hampers our life at every turn. The doctors are being killed off by the strains and stresses of the National Health Service. The local authorities want their hospitals back. The railways want to recover their old identities. The public get bad coal at a higher cost. They pay more for their electricity and gas. More for travel and more for freights. Of one thing we all are certain: nationalisation means redundancy. In this connection it is worth quoting from a letter which Lady Violet Bonham Carter, daughter of the late Lord Asquith, published in the press this week. She referred to three expressions of opinion—none elicited by a tendentious question on her part—and all from workers in a nationalised industry. One was from a miner who told her: "We used to grumble because there were three cars outside—one belonging to the Boss and the others to his two sons. Now we have something like twenty bigger cars and twenty Bosses in them. And not one of them *is* the Boss." Two were from railwaymen. Said the first: "Too many Bosses. We've got twelve in this station where we used to have two—all with new offices furnished and done up 'regardless.' And not one of them knows his business." He was on a northern line. On a midland line it was the same story:

> "We used to use our own judgment in this station—but now we can't settle anything on the spot. Even if we want to put on a few extra coaches we have to telephone . . . There's long delays and then the wrong answer comes back. The railways executive say they can't afford to meet our needs—but look at the waste on what we *don't* need. They've just put a gas-oven costing £40 into our waiting-room. What do they think we want to do on it? Cook turkeys? Why, we only want a gas-ring for a cup of tea."

Too many men. Too much equipment. *Everywhere* one hears that tale.

From time to time the *News Chronicle* publishes a Gallup Poll on the state of political parties in this country. Such a poll was published this week. The question posed to a cross-section of the public was: 'If there were a General Election tomorrow, how would you vote?' After excluding 12 per cent who were undecided, the Conservatives led with 48, Labour came next with 41, the Liberals had 10, and other parties 1. Thus the Conservatives have a lead of 7 points—although last February they were leading by 14. Those who conduct this poll believe that the crucial question is, to what extent are potential Labour voters influenced by the breakaway of Mr. Aneurin Bevan. Accordingly, they analysed the Labour vote still further, and asked:

> "Are you more inclined, or less inclined, to support Aneurin Bevan and his views since he left the Government?"

And 30 were more inclined, 35 less inclined, while 35 didn't know. The most interesting thing about this analysis is that the odds should be so even! How can

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

anyone say 'I don't know' in reply to a question about so catastrophic a personality as Mr. Bevan? It suggests, what I think is pretty obvious since the war, that voting Labour is becoming a habit—just as voting Conservative used to be.

Until the flare-up in Persia put every other topic out of our heads, most people were concerned with the question of the two diplomats who have disappeared. The Foreign Secretary assures us that they can have taken no important information with them. And the general opinion seems to be that they were not very valuable members of society in any event. So, setting aside the extraordinary fact that one of them should ever have been put at the head of the American section of the Foreign Office, the only point of interest that remains is—their motive. If they are gone to Russia, as it seems they must be, why should they choose to go?

Caesar could never understand why men should fear death—and I shall never understand why men should embrace Communism! Anyway as it is practised in the modern world. No free speech. No free press. People torn from their homes by the secret police. Wives not allowed to join their husbands. No one allowed out of the country. Where, in the name of all the gods at once, is the attraction? These defections to Russia are a strange phenomenon. Something has knocked these people off their balance and somehow we must discover what it is. A friend of mine had a curious experience this week. Coming up from Cheltenham in a first-class carriage she fell into conversation with her travelling companion, a man in the thirties who was reading a book by G. K. Chesterton (Chesterton the saint, Chesterton the *individualist*!) Asking him his views on the disappearing diplomats, she was startled to receive the reply that he expected there would be many more such defections. 'We intellectuals,' he said, 'have a lot of sympathy with Communism.' My friend, as it happened, once attended a meeting at which a Polish politician who had been kidnapped by the Russians gave an account of the psychological torture to which he had been subjected while their prisoner. She spoke of this to the 'intellectual.' 'Oh,' he replied, 'we are not in sympathy with *that*. We are more interested in the kind of Communism that is practised in *Burma*.' I leave it to Indians to reflect upon that.

But *are* these intellectuals really drawn to Communism? Are they not, rather, a little mad? Sometimes it seems to me that just as modern art has cut itself off from tradition, has become a head without a body—so it is with these so-called Communists. Kicking away the past is the need that they feel: not the need of Communism for its own sake. And, certainly, there can be no surer way of cutting loose from the past than by getting oneself shut up behind the Iron Curtain. It is to them the great and obvious Escape.

But how will they feel if war comes? It is recorded that James II of England greatly annoyed Louis XIV by his loud admiration of the prowess of the English sailors in a sea-battle in which he and the French were engaging the English in an endeavour to restore James to the English throne. Instead of cheering on his French allies, he kept exclaiming: 'O the brave English!' Will not our muddle-headed escapists have an even more remorseful awakening?

Talk of war, alas, is in the air. The Festival may be brightening up the banks of the Thames but not many people can match its mood of gaiety. An old lift-man remarked to me this morning: 'There don't seem to be the happiness about that there used to be. There certainly don't. Everyone fears that war is coming. In a very real sense, too, there is a feeling that the last war was left unfinished—that there can be no peace, no stability, so long as Russian armies hold down the peoples of Eastern Europe.

How far off is war? If a writer in this week's *Spectator* is correct in his assumptions, then war will come next year. First of all he thinks that war cannot now be averted, not even by Stalin. The reason why this is so, he finds in Russian propaganda.

> No Power, he says, has ever maintained "year in, year out, a campaign of such bellicose and hate-breeding defamation against its opponents . . . Propaganda of so much virulence as that now daily injected into the minds of the Soviet populations is calculated to produce a mental current towards war too strong for even its authors to resist."

That war will come in 1952 he thinks is probable on strategic grounds. In the armaments race which is now being waged, Russia is superior in land forces and in the air: America has a great superiority in atomic weapons. But both superiorites, he points out, are in process of being diminished—'the Russian land and air superiority by the working of the Atlantic Pact and the American atomic superiority by the Russians' quick use of the secrets sold to them by the traitor-scientists—Fuchs, Nunn, Pontecorvo and the rest.' And so he concludes:

> "The Russians could not wait too long lest their land and air superiority disappears; but equally they could not afford to start too early lest they find themselves without sufficient atomic weapons . . . Balancing these opposites, I have long thought that 1952 might be Russia's latest date."

All I have to say about this is that by far the worst part of it lies in what he says about Russian propaganda. What a terrible wrong to have inflicted upon a whole people—to warp and corrode their minds until nothing can turn them from their mission of destruction.

Is there no way of piercing such madness?

Westminster, London, 28th June, 1951.

WHEN CONSTITUTIONS BECOME FLEXIBLE AND CURVACEOUS

Pandit Nehru at his most "Dynamic"

By C. L. R. SASTRI

"'But what good came of it at last?'
Quoth little Peterkin.
'Why, that I cannot tell,' said he,
'But 't was a famous victory'."—*Southey*

THE proverb tells us that out of the abundance of the mouth the heart speaketh. What it does not tell us, however, is that when the heart is full words fail to issue from the mouth—or, for that matter, from the pen. My heart is full just now and, needless to say, my pen is fumbling for words. It all, to cut a long story short, comes back to the age-old question of patriotism. The whole point is that some are born patriotic, while, as unquestionably, some are not: the love of our Motherland is instilled in us at the time of our birth. If, for any reason, it was not so instilled, not all the King's horses nor all the King's men are likely to get it instilled thereafter. It means only that by merely taking thought, so to speak, we may not expect to burgeon into full-blooded patriots. One cannot, that is, inject patriotism into another through, if I may say so, a hypodermic syringe: one has heard of many things but, surely, not of dragooning people into an adoration of the land of their forefathers. If one has to be dragooned into such a state one writes oneself down, not as a man, but as a moron.

Congressmen Spearhead the Anti-Patriotic Hordes

Speaking for myself, I have, let me proclaim it from the housetops, loved my country ever since, in the poet's words, I was

"A six years' darling of a pigmy size."

But the longer I live the more convinced I am becoming that there are enough barbaric hordes in every clime, *and not least in our own*, to whom the love of one's country or, to put it mildly, as unfamiliar as "this goodly frame, the earth, ... this brave o'erhanging firmament, this majestical roof fretted with golden fire" must be to the congenitally blind or the heavenly harmonies of Mozart and Beethoven to the chronically deaf.

Talking of barbaric hordes I have no hesitation in including our worthy Congressmen (the partition-wallahs, indeed and unashamed) among them. *Now*, of course, this testament of faith on my part is in no immediate danger of bringing down the all-consuming wrath of the "many-headed" upon me. It is a mere commonplace—the sky is blue. For instance, asserting that the grass is green or that not bolstered up this proposition. But my supreme merit lies in the fact that I had the prescience to vote for it wholeheartedly even in the palmy days of the Congress when, as the public will recall, it was nothing less than treasonable to question either its wisdom or its nationalism. I had a sort of hunch even in that "dark backward and abysm of time" that that *soi disant* premier political organization of ours would, if left to its own devices, speedily encompass the ruin and desolation of our beloved Motherland. Those who can legitimately boast of having minds of their own, and cannot be accused, by friend or foe, of being "dead from the neck up," as the saying is, will agree with me that from 1920 onwards the Congress has led the country from one irretrievable disaster to another, culminating in the cataclysmic partition of August, 1947. But stay! Did I say "culminating" in the partition of August, 1947? A slip of the pen, gentle reader, a slip of the pen!

Partition not the End of the Story!

But now we know, having lived through four years of so-called "independence," that partition, dastardly as it undoubtedly was, was by no means the end of the story and that, as our ill-luck would have it, in the lowest deep we were destined to discover many a lower one still. It looks, indeed, as though partition had been only the beginning and not the end of the story. Partition, we have found to our utter dismay, was but *one* of the numerous offspring of that frightfully prolific parent, appeasement. "The roses and raptures" of appeasement apparently grow on one; and it is permissible to argue that we have yet to see the last of the wonder progeny of that prolific parent aforementioned. Partition, it is becoming increasingly clear, instead of, as had been fondly imagined by the mass of our countrymen and countrywomen, bringing up the rear of that sinister procession, really formed part of its more prominent vanguard.

"Secularism"

"Secularism" is the *second* offspring of appeasement; and in its sacred name those modern orphans of the storm, *the poor Hindus*, are steadily losing what I may call their "residuary" rights. The post-1920 Congressmen (or, at any rate, the vast majority of them) have, as a direct result of clamping that "putrefying albatross," appeasement, around their necks, had, perforce, to forget what patriotism is and thereby to cease to have any kind of sympathy or fellow-feeling for their Hindu brethren, fearing that it might be a glaring blot on the otherwise spotless escutcheon of their much-vaunted "secularism." This malaise has spread so far, indeed, that the very word, "Hindu," as musical as is Apollo's lute, has well-nigh been expunged, erased, unceremoniously wiped out, from their lexicons, yielding place (*horresco referens!*) to what they doubtless regard as the overpoweringly more enchanting syllables, "non-Muslim." Even after that major surgical operation on our body politic—namely, partition—the Congress's marked emphasis has been on "Muslim" and not on "Hindu", and to this vicious slant of the Congress's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mind must be attributed the continuing grotesqueries of the Congress Government. The latest of these grotesqueries, I need hardly remind my readers, is the Constitution (Amendment) Bill so belligerently sponsored by our distinguished Prime Minister a few weeks ago on the floor of our august Parliament, as a consequence of which our Constitution has become dynamic and flexible and curvaceous.

The Britishers' Stock Argument

It used to be the stock argument of the British whenever we demanded complete emancipation from their crippling suzerainty that, for their part, they would rejoice to transfer power into our hands at the earliest possible moment but that the trouble was that the people were not ripe for self-rule and that, anyway, no eastern country, least of all Ihdia, knew the rudiments of democracy. The implication, no doubt, was that they were loath to leave us to the tender mercies of sheer anarchy. It was, of course, never any use telling them that good government was no substitute for self-government and that how we ruled ourselves after their departure should, strictly speaking, be none of their business. The British (God bless them !) looked upon themselves as the heaven-sent trustees of the "masses"—the mute inglorious Miltons and the Cromwells guiltless of their country's blood—as well as of the "minorities" (meaning, the Muslims, their foster-children); and that sacred trust, we were given to understand, compelled them to stay on here, though, if they consulted their own interests, nothing would please them more than to shake the dust of our "vast subcontinent" from off their feet. Democracy, forsooth is a plant of slow growth in our clime, and the British were there to water it and to nurture it until it developed into a veritable Upas tree—beneath whose umbrageous branches we could shelter ourselves from the raging storms of oppression outside or from "the madding crowd's ignoble strife." If the British were lording it over us it was, obviously, only for our own ultimate good, to familiarise us to the democratic ways of living from which, for ages past, we had, it would seem, been shut out by a malignant fate. The insinuation was that, by immemorial tradition, we could appreciate only the crack of the whip and the whack of the bludgeon, not any softer mode of approach by our rulers, whoever they might, for the time being, be.

Congress Steps into their Shoes

Our political parties, and the Congress in particular, never accepted this preposterous thesis of the wily British. We all protested to high heaven that we were as democratic (as a nation) as any other, and that we could prove it, up to the hilt, the moment the British left our shores. Even if we were not, we contended (plausibly enough), that was no valid argument for their staying on indefinitely in our midst. Much less could that be a valid argument when, as a matter of bare, historical fact, democracy has never been unknown to us or we to it. Eventually the British left our shores—*though not for the reasons that Congressmen love to adduce.* Congressmen affect to believe that the British withdrawal had been necessitated by the overpowering moral pressure that they brought to bear upon them. According to these oracles the British withdrawal was not entirely voluntary, nor did they "bestow" freedom on us: the British went because the Congress (of course, non-violently) drove them away; and the freedom that we now enjoy, or are supposed to enjoy, was "wrested" by that organization from their unwilling hands. In the last resort, perhaps, we all believe what we wish to believe; and I must content myself with simply marvelling at Congressmen's child-like credulity.

Dictatorship

But two facts are indisputable: the British went, and the Government that the Congress has established in the country since that historic date of August 15, 1947 was not conspicuously democratic at its start and has become less and less democratic with the passage of time. At the moment of going to press it bids fair to be nearly as anti-democratic as Hitler's Germany or Mussolini's Italy in the long run. The Government we now have can be called a democracy only with extreme violence to truth: it is a dictatorship rahter and Pandit Jawaharlal Nehru is that dictator. He had once been the idol of the nation. For aught I know he may still be that—for some sections of our people. But his consuming passion (as we are entitled to deduce from the evidence at our disposal) is, obviously, to become a dictator—in reality, if not in name. That is how he has elected, after mature deliberation, to repay his countrymen and countrywomen for their boundless idolatry. We may, if we are so disposed, derive a modicum of consolation from the conjecture that, probably, we get the idols we deserve; probably, also the dictators we deserve. When we elevate mere humans to such giddy altitudes it usually does not take us long to be thoroughly disillusioned. Our essentially weak systems cannot be expected to stand the stresses and strains of that rarefied atmosphere, and in the end we are shown up to be what we are in actual fact as distinguished from the extravagantly fertile imaginaton of those who love us, not wisely, but too well. This has now happened to our beloved Panditji: let us hope that his perfervid admirers will, even at this admittedly late hour, take that bitter lesson to heart and, having taken it, determine to be more circumspect in their adulations hereafter.

At least for the sake of disproving the British thesis referred to above by me the Congress leaders, I am convinced, should have made a firm resolve when they "took over" from our former rulers that they would govern the country in an unmistakably democratic way and bearing in mind the greatest good of the greatest number. The British, as I have remarked, propagated the revolting view that we could not recognise democracy if it was presented to us on a platter. If ultimately they abandoned their stranglehold on us it was not because they suddenly became converts to the opposite

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

while, according to their calculations, the going was good: and, even then, let us remember, not without administering a parting kick in the form of the dastardly partition of our hallowed land, a kick that, as one might say, will ring down the corridors of time as the most shameful act of their hundred and fifty years' rule over us. It was Napoleon's dictum that we should not oblige our enemies by doing as they wish us to do. A kind of self-rule that is not pre-eminently democratic defeats its own purpose; and that purpose is defeated all the more when those enemies can say, unctuously: "We told you so!" Before coming to the Constitution (Amendment) Bill let me take this opportunity of cleansing my bosom of the perilous stuff that has been weighing upon it for so long and charge the Congress Government, in the light of what has transpired since 1947, of never having even toyed with the notion of administering the country in the accepted traditions of democracy. Perhaps we had expected too much of an organization that, ever since 1920, has been used to dictatorial methods and has not been on nodding terms with democratic usage. Strict obedience to the merest whim of an exalted personage has been the rule, not the exception, with the result that an abjectly slavish mentality was assiduously cultivated that could, with difficulty, "break its birth's invidious bar" overnight. A Congress Government could, in the circumstances, mean only that democracy would get short shrift at its hands; but, as I have suggested earlier, it might have done otherwise if only to disprove the British thesis that western concepts of egalitarianism could hardly be transplanted to our soil.

Worse to Come

But worse was to come. The Congress has itself been telling it in Gath and bruiting it about in the streets of Askalon that we, as a nation, are not fit for democracy. It would even seem that it would take ages and aeons for us to fit ourselves for it. In a sense, of course, they may be said to be right. The Congress would have been driven out of office long ago if the country had been democratically-minded. The Congress, however, is still in office and, what is more, strengthening its position by every means in its power, fair or foul. But I can offer another explanation for our present malaise. At the top of the Congress heirarchy is one whom the masses love dearly. If the Congress falls he, inevitably, falls with the Congress; and, much as the masses may like the Congress to fall, they have no wish that their loved one—with all his failings—should fall with it. With the advent of the Mahatma into Indian politics the "exalted personage" cult, as I may call it, has taken deep root in our minds and we love the reigning exalted personage so much that we are willing to turn a blind eye to his, as well as to his party's, manifold shortcomings. We could have "cocked a snook" at the Congress if it had not been for this crippling disability. It has severely cramped our style. In this "exalted personage" cult has lain the root of our trouble. The question of our being fit, or not being fit, for democracy hardly arises in this context; and ("sorrow's crown of sorrow!") for the Congress itself to advertise far and wide that democracy is allergic to us or that we are allergic to democracy is merely to "make the gruel thick and slab." It is merely to twist the knife in the wound. It is not to put too fine a point upon it, the unkindest cut of all. The Congress might have stopped short of *that* indignity at least. But the Congress is power-drunk; and is in no mood to listen to reason.

On this Foundation they Build

In the foregoing paragraphs I have been at considerable pains to sketch the background of the Congress's unimaginably despotic rule over our unfortunate countrymen. The poor Hindus who, on any reckoning, are the only real citizens of the present "India" have been steadily ground down between the upper and the nether millstones of appeasement and "secularism;" and what has not been so ground down is being equally steadily polished off by the draconian legislation that our new "Ma Baps" see fit to enact whenever they find themselves in a tight corner. To this legislation there does not seem to be any end. The British, during their hegemony, were wont to perpetrate some preposterous laws; and, in the midst of the last war, did not scruple to perpetrate some even more preposterous than the general run of them. The British, because they were an alien race, had, to be fair to them, a sort of excuse; and war conditions, we may concede, are an excuse in themselves. But it has fallen to *our own* Government—*and in peace time*—to out-Herod Herod, so to speak. The British can congratulate themselves on having had such apt pupils, pupils that have improved upon their preceptor. They may, not unjustifiably, apply to themselves the well-known lines of Walt Whitman :

> "I am the teacher of athletes,
> He that by me spreads a wider breast than my own proves the width of my own.
> He most honours my style who learns under it to destroy the teacher."

What Price Freedom?

Our country—at long last—gets freedom from foreign domination. But with what result? With this humiliating result, gentle reader, that the common people—you and I, in fact (the legatees of that freedom)—may be deprived even of that much of freedom, *under indigenous rule*, that we had been privileged to enjoy under an alien dispensation. We are being made helots by our own rulers. Can anything beat that in the way of anti-climax? Perhaps there is a kind of poetic justice in it. We had placed too much reliance on the innate good sense and patriotism of the Congress leaders. We even prided ourselves on possessing men of such sterling character, men who could, under all weathers, be trusted to despise low joys, low gains, "disdain whatever Cornbury disdains," as the eighteenth century poet has put it. It almost looks, indeed, as though when these gentry came to power they swore within themselves that the people should jolly well pay for it.

Let me state it starkly. Four years' of Congress overlordship has left a bitter taste of "freedom" in our mouths.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It was—we shall do well to remember—not merely freedom from British domination that we had so incessantly clamoured for: we had clamoured for something much more than that—for freedom *a outrance*, for freedom simply as such. *We had no wish at all to appeal from Philip sober to Philip drunk.* But what has happened is precisely that: the British rarely trod on our corns more cavalierly than our own "popular" (save the mark!) Government has been doing ever since that fateful day when (the gods sleeping) it stumbled into office. I am so full of this grievance that were I to begin quoting chapter and verse in support of it I might almost become incoherent. This article would be in danger of being inordinately longer than it is if I decided to cite instance after instance of Congress's gross misrule—if I decided to pile Pelion on Ossa, as it were. Some such piling may have to be done anyway before I go much further: I cannot, obviously, content myself with simply stating that (thanks to our beloved Pandit) our constitution has at last become dynamic and flexible and curvaceous—*curvaceous, especially.*

Still They Come!

The Congress, having come into power, has all along been straining every nerve to consolidate it and to perpetuate it until "this insubstantial pageant" fades, leaving "not a wrack behind." There is nothing inherently wrong in consolidating one's power—by all *lawful* means: it is when one stoops to unlawful methods that our gorge rises. The snag, of course, is that what, indubitably, would be regarded as unlawful in an individual is only too often considered as perfectly lawful and above-board by "the powers that be." A Government, it would appear, may do *any* unlawful thing it pleases if so be it is politic enough to clothe that misdemeanour in the garb of a *new* law, a *fresh* enactment. A Government, as we are all aware, can legislate: the corollory has, somehow, been taken to follow that it can legislate itself out of harm's way. A Government is subject to law like any other institution; and if it imagines that it is at liberty to embark on any iniquitous course it chooses, merely because of that unique advantage it possesses over other bodies of initiating acts and ordinances (as and when it pleases), then we must gently tell its members that those acts and ordinances come under the category of "lawless laws": a category with which the Congress cannot pretend to be wholly unfamiliar inasmuch as it was the Congress itself that had invented that term with respect to the Rowlatt Act and the innumerable war ordinances of the British. These "lawless laws" are not "laws," properly so called: they are the very negation of laws, they bring the ordinary laws into contempt; and if even then the Government escapes scot-free it is only because of its *zabberdusti*, of its *force majeure*, which are not other names for legality but the very opposite. When such conditions prevail the Government is no longer girt round by a secure shield of unimpugned law: if there is any party in the country powerful enough to eject it the moment it evinces symptoms of going on the rampage, as it were, these lawless laws cannot save its skin and it falls like ninepins. That is all the sanctity that attaches to these mushroom growths.

Had there been a Capable Opposition . . .

If the Congress Government has not so far fallen in spite of a lengthy list of obnoxious laws that it has contrived to pass by dint of its "brute majority," by reason of its familiar steam-roller tactics, it must thank its stars that no opposition capable enough to oust it has as yet arisen: it cannot go about pretending that those laws are immaculate. The various Public Safety Acts, the Preventive Detention Acts, *and now* the Constitution (Amendment) Act form the corpus of the obnoxious laws aforementioned. *Once laws of this nature are enacted it is well-nigh difficult to foresee an end to them*: Governmental appetite grows by what it feeds on, and before one knows where one is another of those mushroom growths stares one in the eye. A vicious circle is formed thereby: there is no opposition worth speaking of to prevent the enactment of those laws, and the laws themselves prevent the formation of such an opposition by their "steel-frame" nature. If such attributes of civilised society as free speech and free assembly are strictly forbidden by a Governmental ukase there is, practically, no scope for an opposition crystallising around the nucleus of vague discontent. Our Congress leaders, smelling disaffection in their vicinity, have, obviously, made up their minds to stifle it at its very birth lest it grow into a lusty child and gradually become, so to speak, a thorn in its flesh. It is panic that is at the root of all this obnoxious legislation: in its heart of hearts the Congress knows that it has had its day and that it has ceased to be. But it is not democratic—has never been so since 1920, as I have had occasion to remark already—and it has no intention of letting go its present advantage. "The Congress must rule for ever!"—that, evidently, is its motto. It has forgotten that nothing in this world is permanent, is imperishable: least of all, the power-drunk and the vainglorious:

> "The boast of heraldry, the pomp of power,
> And all that beauty, all that wealth e'er gave,
> Awaits alike th' inevitable hour:
> The paths of glory lead but to the grave."

Even the mighty British Empire has gone the way of "the many Ninevehs and Hecatempoli!"

Equating of Party with State

There is a deeper reason for these emergency enactments: the Congress believes, or affects to believe, that it is not just *one* of the parties in the country: it believes, or affects to believe, that it is *the* country. I am prepared to concede that it is the largest and the best-organised of our political parties: that, however, is tantamount to saying that it is *the* country. The country is vaster far than a single party, be that party's pretensions what they may. The Congress is in the saddle not because it is the country, but because, as every

CC-0. In Public Domain. Panini Kanya Maha Vidyalaya Collection.

Digitized by Arya Samaj Foundation Chennai and eGangotri

where else, it is the party that commands the greatest following in the country. To be against it is, therefore, not to be against the country as a whole. *Disaffection for the Congress Government is not, on this reasoning, disloyalty towards the country.* That being so no punitive measures need be contemplated in regard to those who cannot see eye to eye with the men in authority.

I am aware that our distinguished Prime Minister is apt to go a step further than even his party and to equate himself with the State. In the recent debate on the Constitution (Amendment) Bill he had some nasty things to say about those who are disloyal to *him*—an attitude unpleasantly reminiscent of *L'etat, c'est moi.* He has been feeling like that for some time past and I, for one, was not at all astonished at his ill-mannered outburst. *It was because he felt he was the State that he accepted the infamous June 3 Plan of Lord Mountbatten "on his sole responsibility,"* as he afterwards confessed (cheerfully) before an emergency meeting of the A.-I.C.C. in New Delhi—convened for the express purpose of "ratifying" his unilateral decision on that momentous question. *It was, again, because he felt he was the State that, without consulting anyone, he took the Kashmir issue to the U.N. It was, once more, because he felt he was the State that he linked the fortunes of the country with those of the British Commonwealth. Lastly, it was because he felt he was the State that he took it upon himself to sponsor the Constitution (Amendment) Bill on the floor of our august Parliament so that it might become dynamic and flexible and approximate to the "curves of life."*

Here we see the gradual progression. *At first the Congress was the country. Now our beloved Panditji is the country.* There is nothing for us but to echo Isabella's celebrated apostrophe in *Measure for Measure* :

> ".....Man, proud man !
> Dress'd in a little brief authority,—
> Most ignorant of what he's most assured,
> His glassy essence, — like an angry ape,
> Plays such fantastic tricks before high heaven
> As make the angels weep."

A Method in the Madness

We all know that Pandit Nehru can fly into a temper like any star of a lesser world, and he was true to form during the Great Debate, trouncing his critics—principally, Dr. Syama Prasad Mookerjee, who has constituted himself "The One Man Opposition" to the reigning authority —in the now famous words :

> "I say any man or any newspaper who says it" (that is, who says that the Constitution (Amendment) Bill curbs the liberty of the Press) "lies and knows that he lies."

When Dr. Mookerjee protested against such an unparliamentary expression Pandit Nehru repeated it all the more vehemently; nor did the Speaker of the House care a "curb" the Pandit's "liberty" when it was fast degenerating into that "licence" which the Pandit disapproves most and for the "curbing" of which in our newspaper editorials he is so righteously anxious.

From temperamental "Leader" to "Dictator" is a not unnatural progression and the present head of our Government can be congratulated on having "made the grade" so successfully. He is now in the true line of succession to Hitler and Mussolini; nor can we help commending his examplary courage in choosing to succeed them after noting the remarkable sequel to those twin dictatorships. But, of course, there is no accounting for tastes. *De gustibus non est disputandum.* I should, however, like to make one suggestion to Pandit Nehru. It is not uncommon for him to lose his temper before a *Hindu* audience: what would be uncommon is if, at some point or other in the proceedings, he did not so lose it. *I am afraid the madness is not without a method.* I have noticed that he *can* control his temper when he is in the mood to do so. Before a *Muslim* audience he has never been known to fly into his familiar tantrums; and whenever he felt that Hindu feeling was rising rapidly against the Muslims it was he, more than any other, who always tried to moderate it, to pour cold water on it, in the Mahatma's famous phrase. Does that not show, convincingly, that our hero's explosiveness is not *just* explosiveness but is part of a make-believe role? We, Hindus, tolerate his temperamental role: our Muslim friends, who, obviously are made of sterner stuff, do not relish the spectacle of a grown-up individual displaying temparamental spasms and generally making a nuisance of himself.

As a certain scribe has remarked, not inappositely :

> "The country is accustomed to the Prime Minister's petulant outbursts but on Saturday's debate in Parliament Mr. Nehru's temper overstepped the limits not only of private propriety but of public restraint. Impulsiveness is a quality forgivable in youth. Mr. Nehru, alas, is no longer young, and much that might have been forgiven him in the bright noonday of his impetuous youth is anomalous today. The Prime Minister's intemperate utterances do credit neither to himself nor to his high office."

This wanted saying badly, and it has now been said.

Indecent Haste

I shall not dilate further on Pandit Nehru's calculated, or uncalculated, outbursts of temper in public. As I have hinted, my own opinion is that these rather too frequent gusts of passion are more calculated than otherwise. Calculated or uncalculated we, in India, have to learn, if we have not already learnt, to put up with them as part of our Fundamental Misfortunes—in regard to which, however, we cannot rely upon anyone to bring any Amendments to "curb" their intensity in the near, or even the distant, future. These Fundamental Misfortunes have been *written into* our constitution and we cannot tinker with them as the Pandit has very successfully tinkered with the corresponding Part III (that, namely, dealing with our Fundamental Rights) of that other constitution over which there had been a great "to-do" in parliament recently. The tactics of the party in power to seek to amend the constitution *so soon (that is, fifteen months) after its creation* are gravely open to doubt; and if the party in power was able so easily to over-ride the Opposition's protestation about the questionability of those tactics

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it was solely because the party could command a "brute majority" and thus could easily wriggle itself out of an otherwise insurmountable difficulty. Fundamental rights, like freedom of speech and of expression, are too precious to be tinkered with in that light-hearted fashion. As Dr. Syama Prasad Mookerjee was careful to point out in his brilliant speech opposing the Bill :

> "When the Constituent Assembly *deliberately* decided to have a *written* constitution and to incorporate in it a chapter on Fundamental Rights it *deliberately* curbed the power of Parliament. *That was the purpose of Fundamental Rights.*."

FUNDAMENTAL RIGHTS

The Lion of Bengal, than whom it is safe to say, there is no abler Parliamentarian in our country at the moment, went on to quote with devastating effect a Chief Justice of the United States Supreme Court in support of his thesis. The Chief Justice said :

> "The very purpose of Fundamental Rights is to withdraw certain subjects from the arena of political controversy beyond the reach of majorities and officials and to establish them as legal principles to be applied by the Courts. One's right to life, liberty, and property, to free speech and free press, to freedom of worship and assembly, and other Fundamental Rights may not be submitted to vote. They depend upon the outcome of no elections. There is a limit to your (legislature's) power: thus far and no further."

Dr. Mookherjee wound up by saying: "Today you are changing those Fundamental Rights." Yes: they have changed them: and four years' of "freedom" have converted us into mere hewers of wood and drawers of water.

Defenders of the Amending Bill were at pains to point out that in the United States also amendments to the constitution had been moved shortly after its formulation. But they did not pause to point out that there is a fundamental difference between the two amendments. The purpose of the amendments in the U.S. was *to broaden the base of democracy; to give positive affirmation to Fundamental Rights which found no place in the original draft.* Unlike the Indian constitution the American constitution of 1787 merely set out "to establish three great departments of Government, the legislative, the executive, and the judicial departments."

FREEDOM OF THE PRESS

As for the freedom of the press the American constitution specifically guarantees it. In France the French National Assembly, at its meeting of August 24, 1789, enshrined it in these famous words :

> "The free communication of thoughts and opinions is one of the most precious rights of mankind. Therefore, every citizen may express his views by words, writings, and printed matter, but he will be held responsible for any misuse of this liberty in the cases fixed by the law."

The freedom of the press is the keystone of the arch of political freedom, and if that is taken away the whole edifice collapses. But probably it is idle to expect modern Congressmen to respect freedom of speech and of writing: they have been brought up as mere automatons, the Mahatma having done the thinking for them in the past and the Pandit doing the same service for them now. What do they know of these precious freedoms? If they knew what they are, would they have voted for the Pandit's Bill *en masse* and, obviously, with so much gusto? It was reported that tremendous cheers broke out from them when the Bill was passed. It was only the valiant Mr. Kamath who had the courage to rebuke them for that tragically misplaced merriment. *It was a much greater shame for the journalist M.P.s, like Shri-s Deshbandhu Gupta and Shiva Rao, to have remained neutral at the time of voting.* The former had protested against it on the floor of the very Parliament a little earlier, and had protested against it in no lukewarm terms, but when it came to recording his vote he developed cold feet and abstained. Not that their recording their votes would have swung the voting in the opposite direction. But there is such a thing as (there not ?) as standing up to one's convictions without fear of the consequences: probably these journalist M.P.s have not heard about it.

RAJAJI'S HAND IN IT

It is a significant pointer to which way the political wind is blowing that this Amending Bill was sought to be introduced during the regime of Shri C. Rajagopalachari as Home Member. It is not, I think, an extravagant surmise that he is the real author of it, although the Prime Minister did most of the talking: the voice was Jacob's voice, it is true, but the hands, clearly, were the hands of Esau. I am prepared to stake my last bush-shirt on this theory of mine that the hands are of Esau (I mean of Rajaji) from the fact that one of the intimidating provisions of the Bill—now an Act—has to do with what has been called "our relations with foreign countries." Our liberty in criticising these foreign countries is sought to be curtailed ruthlessly. One has no need to be as brilliant as Rajaji has a reputation of being to guess what exactly he means by that "omnibus" term. *He means, gentle reader, only Pakistan,* of which he will go down to posterity as *the sole* architect—the father, the mother, and the wet nurse, too.

It was owing to him that the late Quaid-e-Azam was enabled to get his second wind, so to speak, when he was all but down and out. He (the Quaid) had received such a trouncing at the hands of his co-religionist, the Hon. Malik Khizar Hyat Khan Tiwana, the then Premier of the Punjab, that he immediately packed a carpet bag and removed himself to the Dal Lake in Kashmir to lick his wounds in private. Many, even of his tabernacle, had begun to lose faith in his ability to stage a come-back. I am not denying that he returned to Lahore soon after and started indulging in his old swagger, in his old swashbuckling; *but that had been rendered possible only through Rajaji's connivance.* Rajaji had emerged into the limelight again at Panchgani and suddenly propped up that recumbent figure with the notorious formula he devised in conjunction with the Mahatma. It was Rajaji who was instrumental in the resurrection of the Muslim League from the catastrophic tomb of the Punjab debacle.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the not less calamitous sepulchre of the Bengal muddle.

THE PRO-HINDU PRESS WILL BEAR THE BRUNT OF IT

When the history of our times comes to be written it will, I dare to suggest, be Rajaji, and not the Quaid-e-Azam, who will be unanimously acclaimed as the architect of Pakistan. It will be remarked that the Muslims were, comparatively, blameless in the matter, because even when, like Brer Rabbit, they were "lyin' low and sayin' nuffin'," Rajaji came bouncing and bounding to Panchgani and forced the hands of the Mahatma to present Pakistan to them on a silver platter.

It is this same Rajaji who has incorporated this provision about not offending the tender susceptibilities of foreign countries—*meaning, of course, as I have suggested, by "foreign countries" Pakistan and Pakistan only.* The corollary naturally follows that the pro-Hindu Press will come in for the roughest possible handling from the Government—the pro-Hindu Press as well as the Hindu Mahasabha and the R.S.S. *The Muslims, not the Hindus, are still the Congress's friends.* It is up to those Hindus that are not content to be merely "non-Muslims" and that are reluctant to see their identity swamped and submerged by an unprecedented wave of "secularism" to present a united front to this new menace to our very existence: for as Madison wrote to Jefferson :

> "Wherever there is an interest and power to do wrong, wrong will generally be done—and not less readily by a powerful and interested *party* than by a powerful and interested Prince."

———:O:———

NORWAY

A Cross-Sectional Glimpse of the Country

BY ADINATH SEN, M.A., B.SC. (Glas.), M.I.E. (India)

"We have a beautiful country. We covet no other people's land. We have no army, no navy. We live in peace." Thus declared a Norwegean merchant, a fellow passenger in the train from Oslo to Bergen a few years ago, when we were passing between the snow-covered mountains of Hardangerjokeln and Hallingskorpet on either side of Finse, the highest station on the line, which is considered as one of the world's wonder works of engineering, laid in the midst of the most dramatic and beautiful scenery in Europe.

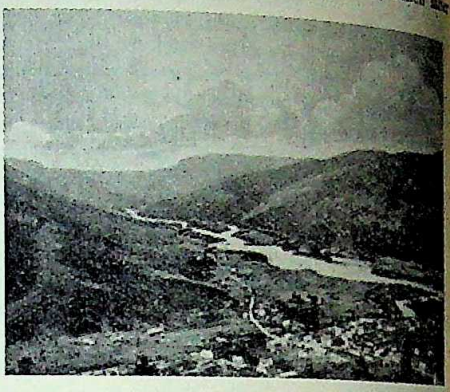
Oslo

We started from the East station of Oslo on the Oslo-Stockholm line. It made a wide curve round the city, following the crests of the heights, east and north of the city. The line north from Oslo to Trondheim through Lillehammer, on the lake Mjosa, the biggest in Norway, or through Elverum, which once gave shelter to the harassed king of Norway, started further east, from the Oslo-Stockholm line. Except the southern coast line from Oslo, and a few branch lines, these comprise all the railway in Norway.

Sea-wards, the whole panorama of the Oslo Fjord, sometimes scene of fierce fighting, was spread, dotted with the dark shapes of pine-clad islands and the white sails of yachts. Inland, the valley lands came into view right up to the station of Honefross with big waterfalls on lake Tyrifjord. The route then ran along the side of the great lake Kroderen through the station Gulsvik, the

Trondheim

gateway to the valleys beyond. On the far shore of the lake, were seen old farmsteads, set against dense forests, below high mountains. We pass Nesbyen station as the railway winds for nearly 70 miles, winds through the historic Hallingdal Valley of famed fiddlers, of stirring melodies which have some strange wild fairy spirit in them, and of the famous national dance, the Halling.



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The farms now became rare and the forests spread. From Gol, the well-known local centre of peasant culture, the country. Gradually the fir forests dropped below the line and the hardy birch trees appeared, which have

Geilo, at 2,600 feet altitude, is a ski-ing resort in winter and a popular summer centre, midway between Oslo and Bergen. From here starts the most remarkable stretch of the journey. We pass Ustaoset Ski-ing centre and Maugastal next. From a cleft between the mountains, through which the train passed, the snow of Hardangerjokeln gleaned on the south like a fantastic citadel with great boulders of ice on the Ustavatn lake, and the glaciers of Hallingskarvet in the north flickered like jewels in the clear mountain sun-shine. Tunnels and long screens in echelon, of wood, kept back the encroaching snow-drifts from blocking the line. Loneliness and

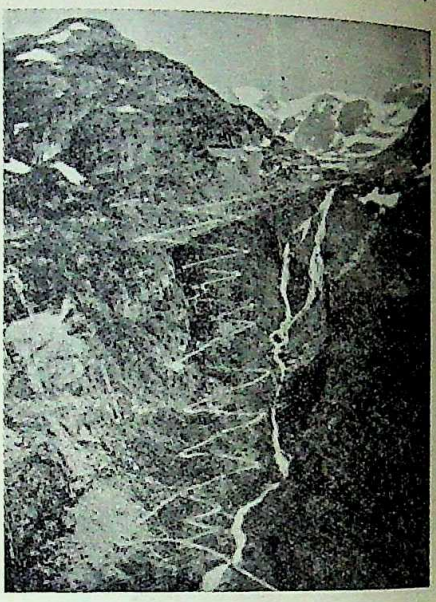
bleakness were almost overpowering in intensity, but there was a strange beauty in the scenery, all the same, while Finse 1000 feet over sea-level was being reached. This is a townlet with hotels and ski-ing cabins. There

Tunnels to keep out snow. Oslo-Bergen Railway



are also engineering plants equipped with rotary snow ploughs, reserve locomotives and other requisites for maintaining a difficult train service. There were no trees for 60 miles, the only vegetation being reindeer moss and tough grass round swampy expanses, here and there. For 30 miles the country was absolutely bare of plants of any kind. Horizons are enormous. One is so close beneath the sky. Cloud and snowy mountains meet, so

Snow-ploughs. Oslo-Bergen Railway

that one cannot sometimes quite say where the earth ends and the heavens begin.

Beyond the highest point, 4263 feet, mountain torrents run from the watershed towards east and west. Myrdal station was reached in the descent, where a magnificent view was obtained of the Flam Valley, the Flam winding like a canyon. Waterfalls crashed down the ragged mountain sides, and the road in the valley, winding like a thread in 21 spirals, led to the shores of Aurlands Fjord at the head of the Sogne Fjord, the biggest in the country, penetrating a long distance from the North Sea inland. On another head of the Sogne, lies Ardal, where a more zigzag road to Tyin astonishes the eye. We came next to the Voss station from which there is access by motor service to the Sogne Fjord, largely used by the

Flamstad Valley Waterfalls

Sor Fjord

tourists from the Voss station, further along, only about 200 feet from the sea-level. This place occupies a famous position in Norwegean peasant culture, as the junction point between the Sogne Fjord districts in the north and the Hardanger country in the south on the shores of the Fjord below the mountains, all of the same name. An Electric Railway runs to the south from Voss. Through Vaksdal station on Sor Fjord, Bergen was reached in 2 hours time, after running along the beautiful banks of the Fjords, the total journey of 306 miles taking just about 11 hours.

COCONUT—THE KALPABRIKSHA

Digitized by Arya Samaj Foundation Chennai and eGangotri

By MURARI PROSAD GUHA, M.A.

(Illustrations by the author)

News flashes across the country when a coconut is broken to launch a ship or to inaugurate something in an auspicious moment. In ceremonies a green coconut is placed on a full pitcher as an auspicious sign. But why is coconut given this honour? Beginning from the dawn of civilization to the middle ages, religion got the upperhand over politics and the seers of truth found it very convenient to impregnate what we should do through religious rites. So, we find

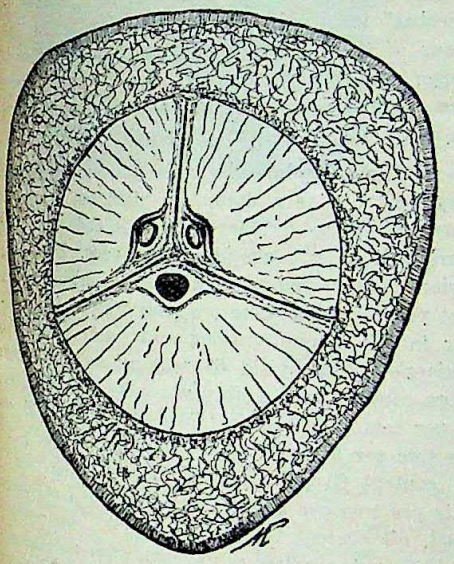

Fig. I. A dissected fruit from which the upper half of the fibrous mesocarp has been removed to expose the endocarp (nut). The shortest side of the triangular fruit is always on the reverse of the widest angle in the nut formed at the centre by the three carpels with the three eyes. And this widest segment contains the 'soft' or germinating eye hiding the only embryo (towards the base of the illustration)

that the coconut, one of the most important economic plants, has established its rightful place in every home in India from pre-historic times, our *Puranas* stating it on every occasion. Today coconut has got its own certifications, but lest we forget, we are still importers even from the little island of Ceylon of dry copra, and like many other crops are lagging behind other countries in production per acre.

Origin and Geographical Distribution

It is believed that the original home of the coconut was either the Indian archipelago or some of the Pacific islands in the southern Indian ocean. From this original home it spread to the tropical and sub-tropical regions either by the primitive seafarers or by the tide of the ocean currents from one shore to the other. The fibrous mesocarp of the fruit which helps floating, is water-proof and also protects the life of the plant for very long durations and as such explains the theory. The coastline habitat of the plant and its love of saline soil conditions with the dropping of the mature nuts to the sea even today is an addi-

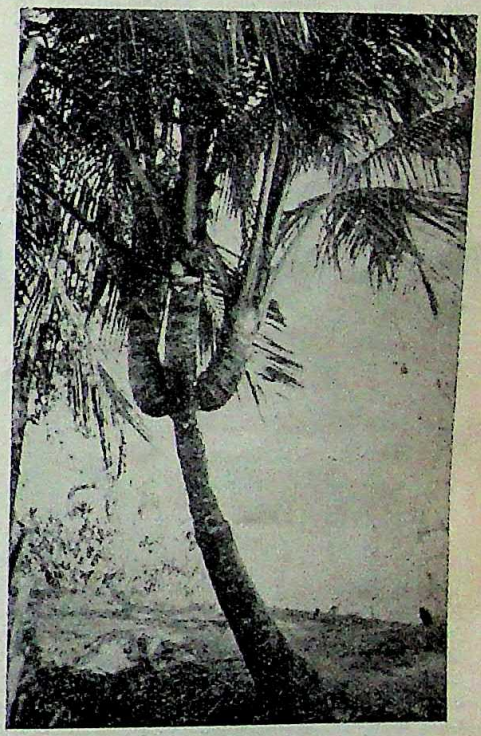

Fig. I-A. Photograph of a branched palm taken by the author at Sagar island. At an early stage due to attack of pinceros beetle growth was taken by secondary bud and the apical bud also revived giving it a *trshul*-like appearance

tional proof. It might have spread from India to Malaya, East Indies and the Philippines, earlier than the spread of Indian culture to these areas as well as to the coast of America and its tropical islands.

In India it distributed itself throughout the coastline and probably the Malabar coast is the original home with its maximum development of coconut cultivation in that land and the coconut is intimately associated with the daily life problem of the bulk of the population there. In West Bengal, it has spread maximum into the interior even in the extreme

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

North-West Bengal, more than 300 miles away from the coast.

Botanical and Common Names and Important Varieties

Cocos nucifera Linn. is the 'Indian nut' belonging to the family Palmaceae. The name cocos might have been derived from the Spanish *coco*, applied to a monkey's face,[4] a beautiful allusion which the three scars (one hiding the embryo) on the stony endocarp suggest. [Fig. I.]

The Hindusthani name 'Narial' is derived from the ancient Sanskrit name *narikela* mentioned in the *Puranas*. There are many other names original to the locality which helps to prove the primitiveness of the fruit tree here.

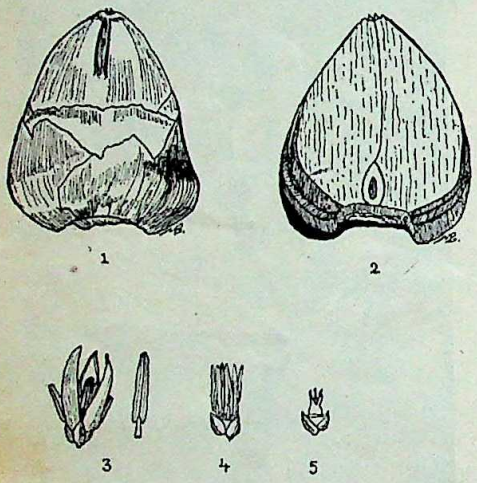

Fig. II. The flowers of coconut. (1) The mature female flower with 2 whorls of (3 each) perianth enclosing the united carpel with the beak shaped stigmas at the apex. (2) The female flower dissected through the ovary. (3) The male flower with two whorls of perianth leaves, one small, the other long enclosing the six stamens. A single stamen a little enlarged. (4) The inner whorl of perianth removed to show the position of the stamens. (5) Perianth and stamens of the male flower removed to show the undeveloped carnel

As with other crops a study of varieties of coconut has also been neglected in our country. In India we have mainly two varieties, one is the "Tall" variety found over-topping the buildings of the coastal or semi-coastal cities and towns and the other a "Dwarf" form, an early maturing variety which when starts fruiting still remains within the reach from the ground.

The tall variety also known as the "West Coast-variety" is most widely cultivated through the coconut-growing areas of India from very ancient times and may be indigenous to our country. It is one of the most economic multipurpose varieties from the point of view of its yield of nuts, copra, oil and one of good quality as well as the tapped juice (toddy) convertible to jaggery or sugar if not used as country wine. According to growers, sub-varieties exist from the point of view of size, shape, colour of fruit and thickness of the kernel. Under favourable conditions this variety may start fruiting in six to eight years which, however, may be deferred to ten to fifteen years when conditions are not favourable. The average yield of copra per nut is about 5 oz. and the oil content in the copra is about 72 per cent.[5]

The dwarf form also known as the "Andaman" or "Nicobar" variety is quite different from others. The colour of the nuts may range from green, yellow to orange and starts bearing within three to four years, even when the tree has not quite developed and one can pluck the nuts from the ground.

The dwarf palms give quite good yield and looks very beautiful as a decorative plant but due to its susceptibility to diseases and pests and to irregular bearing it is not considered economic. Usually the varieties are named after the place of origin and from that point of view there are some other varieties familiar in the coconut-growing areas, such as, (1) *'New Guinea'*—average yield 65 nuts per tree per annum; copra content 8oz.—quality not quite good, oil content 66 per cent, (2) *'Cochin China'*—average yield 86 nuts per tree per annum; copra content 8 oz.—quality fair, oil content 66 per cent, (3) *'Java'*—average yield 85 nuts per tree per annum; copra content 7 oz.—quality good, oil content 66 per cent, (4) *'Siam'*—average yield 50 nuts per tree per annum, copra content 8 oz.—quality good, oil content 74 per cent, (5) *'Laccadive Ordinary'*—average yield 124 nuts per annum; copra content 5 oz., oil content 72 per cent, (6) *'Laccadive Small'*—alternate bearing, average yield 150 nuts per tree per annum; copra content is only 2 oz., oil content 75 per cent.[6]

Description of the Plant and Flower

The tree with its uniform cylindrical trunk and the umbrella-like tuft of pinnate leaves gives one of the most beautiful and graceful appearances amongst the palms with the patent leaning habit, in case of some varieties. The stem marked by the scar of the fallen leaves sometimes takes peculiar shapes due to the truction of light by adjacent trees or buildings. Usually they attain a height of about 60 feet, some times more, the longest recorded being 117 feet in Ceylon,[14] and live a century. Sometimes, due to the destruction of the apical bud by beetle, secondary buds take up the growth and the result is an apparently branched palm (Fig. IA). Though the tree is [illegible] the root system is characteristically shallow and diverse [illegible] bulb-shaped bottom of about 4 feet

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

depth, which however, can spread latterally up to 20 feet. The roots are of uniform diameter, but the rootlets are thin and fibrous. The leaf scar adjacent to the root system can also develop roots if covered

Fig. III. The ideal medium-sized round-shaped seed nut of the Tall variety developing ideally. Germination started when the nut was attached with the palm

with earth and watered and this property comes to the aid when mature trees are transplanted or dug down deeper. A tree may have at a time 25-30 leaves with a length of 18-22 feet each.[1] The leaves slightly grooved and swollen at the base, are protected by strong net-like bracts and form an angle with the stem to give the appearance of an umbrella. The groove in the leaves helps the rain water to run down to the crown preventing its drying and also to the bulk of roots helping in its development. The inflorescence is a much branched monoecious spadix enclosed by a woody spathe, in the axil of each of the leaves, the exceptions being rare. The trimerous flowers borne in the branches are unisexual, the female flower being at the base and male at the apex of each branch.

Leyange[6] has observed that the tall variety palms, which remain productive for over 70 years, are protandrous and are generally cross-pollinated. But in the dwarf palms, the male and female phases overlap and self-pollination is the general rule. A saturated atmosphere seems to be injurious to the viability of the pollen grains but this viability can be prolonged artificially by creating an atmosphere with 50 per cent relative humidity.

The whorls of perianth leaves of the somewhat globose-shaped female flowers are persistent and develop along with the development of the fertilized ovaries. (Fig II).

Soil and Climate

The ideal soil for coconut is a rich alluvium or a deep friable loam with adequate soil moisture derived either from well-distributed rainfall, percolation water or proper irrigation with drainage facilities. Land with faulty drainage should be avoided. The sandy soil is also ideal in this respect but it must provide subsoil anchorage to the tall palm, which, as will be observed, is available almost throughout the coastline. But with drifting sandy soil it is a failure.

The coconut is a true tropical palm extending its domain within the actual tropics. It loves a climate with heavy but evenly distributed rainfall, high humidity and fairly even temperature (85 deg. to 95 deg. F mean temperature)[13] all the year round. Thus it will be found that coconut fares better in Ceylon and Malaya than in India. In Ceylon there is practically no month when the rainfall is below 0 foot 75 inches and in Malaya, the rainfall always exceeds 1 foot 25 inches in every month[12] whereas in India we have only 2 mon-

Fig. IV. The ideal seednut raised by the author in sand in an earthen pot, developing ideally (age 2 months)

soons. It is, therefore, natural that the average yield for gardens in India is below the average yield in Ceylon and Malaya. It has been found that the coconut thrives best in saline soil conditions close to the seacoast but this is not essential as will be found in Mysore and Bengal. In Bengal it flourishes even in Northern Bengal hundreds of miles away from the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

coast. The love of seacoast areas by this palm is directly related with climatological factors, because the coastline always have a high humidity and the temperature is never subject to great changes. Again although it grows best in the plains of the coast or the interiors, it grows equally the same 3,000 feet above sea-level in the Mysore Plateau.

Propagation

Propagation is always from seedlings raised from mature seednuts. The longevity of the coconut palm reminds us of the care taken by foresters in the laying

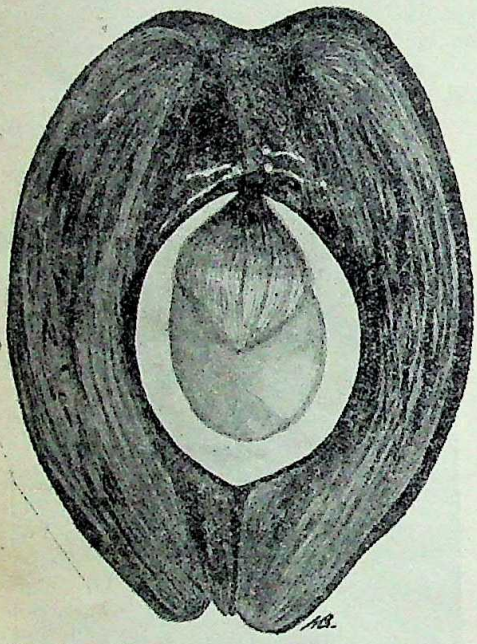

Fig. V. A dissected nut that dropped from the tree (X½). This nut after full maturity started germinating with the development of the spongy cotyledon (*jopra*) corroding the kernel a little from the top, while still attached with the tree. The roots developing through the fibrous mesocarp above the endocarp (stony) as also the first leaf just touching the point of attachment of the fruit

out of a forest with the best plantlings, that will give the choicest timber in years to come. Coconut plantations laid out for its fruit should similarly be of plantlings of the highest yielding, best quality and vigorous mother palms in its prime. As coconuts are usually cross-pollinated, to get the right type mother palms as above should be selected out of an entire plantation of the same variety. The mature seednuts, one year old, should be collected during winter and must be roped down from the top of the tree to avoid any injury. The medium-sized round-shaped nuts should be preferred and a few nuts at the base and apex of each bunch should be discarded. After harvest the seednuts should be stored indoors in a cool dry place on a 3-inch bed of sand for a month. (Fig. IV) In the meantime nursery beds should be prepared preferably in a sandy soil and where that is not available the local soil should be replaced by sand to a depth of 1½ feet as this will prevent the attack of white-ants and facilitate proper drainage. Where this is also a problem, seednuts may be planted in pots of 1 foot height and 1 foot diameter or wooden boxes of 1 foot cube may be filled with sand and utilized for this purpose. These methods are customary in industrial areas like Calcutta and suburbs.

The beds should be of convenient length, say 20 feet or 50 feet, but the breadth should be preferably 4½ feet to 5 feet as in the absence of rains the seedlings should have to be watered daily or on alternate days from the sides without disturbing any of them. And according to Dorasami,[3] the nuts should be placed in the bed of sands with their stalk ends up and six inch of the tip protruding above the surface, with a spacing of 1-1½ feet from nut to nut and row to row. To avoid the cost of watering, planting is preferred at the beginning of rains. Nuts without water should be discarded before planting. (Fig. IV) In three to four months most of the seeds germinate and they are allowed to grow for an year, and the seed-beds should never be manured as this masks the initial defect in vigour. At the end of one year when the main characters are visible, only the healthy and good looking seedlings should be selected as planting material.

Seedlings that germinate early and split their leaf soon should be preferred as they bear early. Just before planting, seedlings should be removed from beds without tearing the roots and should be packed well neatly for forwarding to distant places. Sometimes seedlings older than one year are planted but they are always removed from the seed-beds of the first year and planted wider till final planting. But this is costly and moreover the one-year seedlings establish themselves more quickly. The small-scale planters should always get their seedlings from reputed plantations.

Preparation and Planting

Lands already under cultivation need no special preparation. Otherwise two or three ploughing before the rains followed by planting of some legume to be ploughed in is ideal. The land should be free from all weeds and properly levelled and in case of slopes should be properly terraced with bunds to check erosion of soil with run-off of rain water. Arrangements for irrigation during the dry months should be made by laying out drains and intermediate reservoirs. Along with this arrangement for a boundary fence

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wicket gate is to be made to protect the saplings from grazing animals.

One year after this pits of three feet cube are dug in regular rows with specified intervening space of 30 ft. or as desired. Dried leaves are burned in the pits, which, it is believed, prevents white-ants. Also all nests of white-ants are to be dug out of the plantation at this time. Just before the rains one-year-old selected seedlings are to be planted in the pits.

The bottom of the pit is sometimes filled with loose earth or sand up to a foot to facilitate root growth of the root forming bole of the plant and to check white-ants. Sometimes *Neem* (Margosa) cake is also added to prevent white-ants. A handful or two of common salt and/or bonemeal is also added by some planters, in the soil of the pit surrounding the plantlings. The seedlings should be planted in right position firmly and the soil pressed like a cone. In case of high winds triangular supports are to be given to plants and a shade when the sun is very hot.

Maintenance of Soil Fertility

In our country there is a traditional neglect in the culture of permanent trees or rather long-living trees. Not only that we do not plant them in a planned way but we start our neglect as soon as the plant is established in the soil and is not eaten away by the Rhinoceros beetle. We never take care to know that the life of a plant is almost similar to the life of a human being growing to maturity. The coconut palm after gaining maturity in a few years after planting starts flowering which never stops till death. An inflorescence comes out every 4-6 weeks and one can find all the developing stages from the flower to the mature nut in the same plant. After flowering the fertilized nut comes to full maturity in 12 months. So, it is easy to guess that there is a continuous development and utilization of the available food from the soil which must be replaced to maintain the *status quo* of the soil. And this draws our attention to the scheme of manuring.

Sampson[13] observes that an individual palm growing on poor sandy-loam soil and producing 128 nuts per annum (not an unusual yield on the Malabar coast) removes from the soil 1.93 lbs. of nitrogen, 0.28 lbs. of phosphoric acid and 1.37 lbs. of potash. Pillai[12] has calculated that a crop of 2,000 nuts per acre removes from the soil of medium fertility about 18 lbs. of nitrogen, 5 lbs. of phosphoric acid and 38 lbs. of potash. Leaving aside others' findings, we find great disparity in the above figures.

Based on the observations of Sampson and taking 80 nuts as an average yield and 50 trees per acre as the usual method, the requirement for an acre will be 46.23 lbs. of nitrogen, 6.56 lbs. of phosphoric acid and 32.10 lbs. of potash. It should always be remembered, however, that if the well-being of the palm is also taken into consideration, a large proportion of N, P and K is to be added with the above in time of application to the field and the quantity of potash will have to be naturally increased giving due consideration to the huge fronds and the floral bunches. Also that 60 nuts is the average figure and this will be exceeded almost always with application of balanced manure. Again, the dosage of manures and fertilizers are obtained by personal experience and is varied in every locality as in our vast country we are subject to different soil and climatological factors and there can not be any hard and fast rule delimiting the

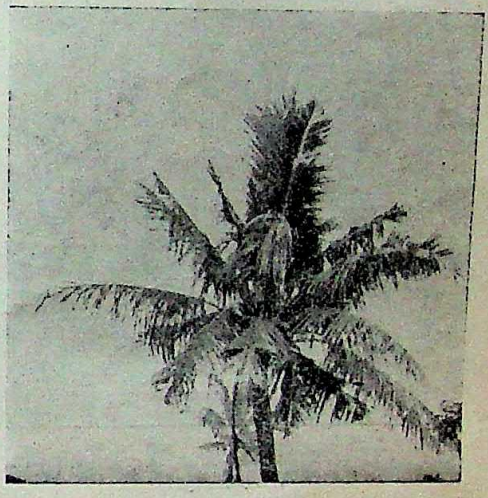

Fig. VI. A coconut palm affected with leaf disease. Bearing has almost stopped

application and the figures of intake are only a guide to this.

Manures are to be applied round the palm with a 4 feet to 5 feet radius after digging the earth a little and the costly ones to be applied close to the bole of roots. The following manure mixture adapted from John[6] is recommended :

		Per tree per annum. lbs.
	1. Cattle manure or compost or Groundnut or other oil cake ..	100
½ of these up to 5 years	or Ammonium Sulphate	15-20 3-4
	2. Muriate of Potash or potassium sulphate ..	2
½ of these up to bearing age	or Wood ash ..	30-40
	3. Superphosphate & Bonemeal or Bonemeal ..	1+1 2

Selection from this should be made according to the economics of the manure available at the locality

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as well as the physical aspect of the soil. But green manuring should be the fundamental principle of all manuring schemes and it has been found that sunn-hemp and cowpea, which comes to its age in 2 months, being sown in April-May is ideal as it can be ploughed in before the end of the rains in July so that it can help the good rotting of the green manure in the field. There are other green manure crops, such as (1) Cowgram, (2) Dhaincha and (3) Wild sunn-hemp that are also recommendable.

Fig. VII (a). An old coconut plantation in West Bengal

It has been found that cultivation increases the number of leaves per palm even when they are not manured, but manuring is necessary to replenish the loss due to heavy bearing, as in palms with many leaves the bearing is heavy always.

Food Value of the Kernel and Milk

The sweet water inside the green nut, known as 'milk' is a delicious and refreshing drink. During the summer months millions of nuts are sold in our Calcutta city alone leaving aside the suburban towns and all the wayside Railway stations within 50 miles radius from Calcutta where a thirsty passenger calls for a green coconut and gets it always with less than a lemonade's price (Fig. IX). The list of liquid diets prescribed by a doctor always contains green-nut-milk specially for patients having nasuea with fever and bowels troubles, as it has diuretic and laxative properties. It is a general practice in West Bengal to wash the pox-marked face just after recovery from pox with the milk as it is believed to make the marks less prominent.

The soft kernel inside the green nut is also delicious but does not keep and is eaten at once. The mature kernel or the 'meat' along with the 'milk' is the endosperm of the seed, the embryo being embedded in the hard endosperm, which is used either as copra for manufacture of oil or used for good preparations or delicacies and also taken along with other foods.

The total weight per cent of the husk, shell, kernel and milk are 57.28, 11.59, 18.54 and 12.59 respectively.[11]

The food value of the kernel taken from the *Health Bulletin* No. 23 is given below:

Moisture (per cent)	36.3
Protein (per cent)	4.5
Fat (ether extracted) (per cent)	41.6
Mineral matter (per cent)	1.0
Fibre (per cent)	3.6
Carbohydrate (per cent)	13.0
Calcium (Ca) (per cent)	00.01
Phosphorus (P) (per cent)	0.29
Iron (Fe) Mgs. (per cent)	1.7
Calorific value per 100 gms.	444
Carotene (International Vitamin A units per 100 gms.)	Trace
Vitamin B_1 (International units per 100 gms.)	15
Vitamin C (Mgs. per 100 gms.)	1
Calories per oz.	126

Carey[2] has isolated sucrose, fructose, and glucose from the milk and raffinose, sucrose, fructose, galactose and glucose from the copra meal.

The high amount of heat energy available per ounce of coconut kernel speaks of itself as a valuable food. And it has its rightful place in the dietery of every citizen of India.

Fruiting Time and Yield Per Acre

I have already told you that the dwarf variety starts flowering in 3-4 years and the tall one in 7 years. But usually the yield is poor at the beginning and becomes normal in half a decade. Usually an individual plant yields 60-70 nuts per annum while limit, however, is always exceeded with good management and cultivation. Usually about 50 plants per acre is planted with 30 ft. intervening space between the palms. And as such 3000-3500 nuts can easily be obtained from an acre. But in most cases this figure is far exceeded with better cultural practices and more close spacing. As every leaf bears an inflorescence in its axil, all the stages of fruit development will be found in the palm always, but a fertile female flower takes about a year to come to maturity. Periodicity in bearing is quite common in coconut. The best copra (and maximum oil) as well as coir is obtained when the nuts are harvested before they are dead ripe and the husk is still green, because at this stage (when 9-10 months old) (Fig. V) germination does not start and as such copra content

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

highest and likewise the fibre not being over-mature is of the best texture and colour. Harvesting is done usually twice in a year in Bengal but in the main coconut-growing areas 4-6 times throughout the year and June-July is the best harvesting time throughout India.

Patel[13] observed that with general manure an average yield of 33.9 lbs. of copra and 18.6 lbs. of oil can be obtained from 100 nuts, which however can be raised to 40 lbs. of copra and 22.6 lbs. of oil per 100 nuts with the application of N, P, K fertilizers, almost similar results being obtained by green manuring and application of lime.

In judging the yield per acre the total yield of copra per acre is really taken into consideration, in case of large plantations, instead of the number of nuts, as the thickness of the kernel of the nut is variable, and a thick nut may contain kernel double of the thin nut. Aiyer[1] observes that this variation may result in 1,000 nuts yielding copra from 9-13 mds., even 14 mds.

CONTROL OF DISEASES AND PESTS

A healthy plantation is a sign of the owner's care. As soon as any disease or pest is observed it should be stopped at once to prevent further spread. Because with the spread of disease and decay the whole economic equilibrium of the plantation is lost with the loss of production and of the bearing trees which cannot be replaced in a year or two.

The most important disease of coconut is 'Bud and Fruit Rot,' caused by *Phytophthora palmivora*. The disease starts with the withering of the young innermost visible leaves, which gradually become bright brown to light brown and finally bend and break down at the base. The infection spreads inwards resulting bad smell sometimes and ultimately kill the apical bud which stops all further growth and the plant dies. And when they attack the nuts, they either fall off immature or the kernel is rotten. Effective results have been obtained by spraying the crown with 1 per cent Bordeaux and it is better to use Bordeaux-soda mixture, as resin helps to stick on the smooth surface of the coconut leaf. Similar doses of 'Perenox' may be used which is more handy. As the disease usually spreads during monsoon like most of the fungus diseases, two sprays may be given one before the outbreak and another before the close of the monsoon.

The other important disease is 'Leaf Rot' caused by more than one fungi (Fig. VI) *Helminthosporium halodes, Collectrotrichum pauciseturn* and *Gliocladium roseum,* the first one being most virulent. This disease does not kill the palm but much of the leaf surface is lost due to death of the leaflets by gradual blackening and shrivelling of them and ultimate loss in yield. The same treatment as above is recommended.

Stem bleeding caused by *Ceratostomella paradoxa* shows brown fluids oozing out of longitudinal cracks of the stem. The tissue inside is rotted and the plant is weakened with loss in production. The diseased portion should be chiselled out and Bordeaux paste applied on it. Some people use coal tar.

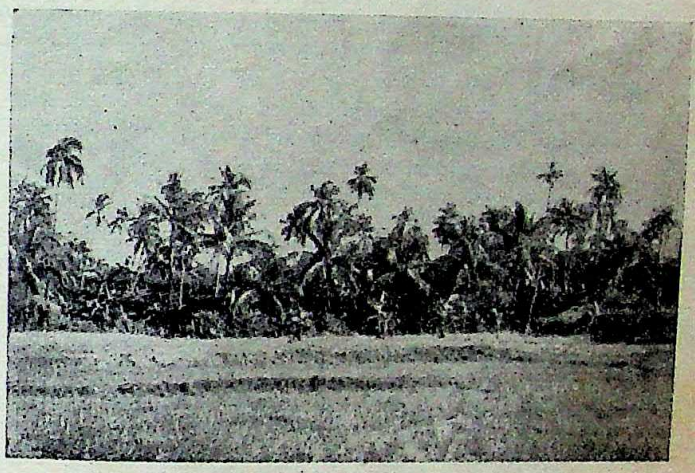

Fig. VII (a). The coconut grove

There are other diseases of minor importance like leaf spot caused by *Pestalozzia palmarum*. Root rot caused by the bracket fungi *Ganoderma lucidum* and root disease caused by *Bortryodiplodia theobromae, Rhizoctonia bataticola* and *Rhizoctonia solani*.

Last but not of least importance is the highly destructive 'unknown disease' in the West, which brought in bold relief the activities of the plant pathologists there in the present decade.

The disease starts with nut fall, soon followed by the death of the heart and the whole crown and becomes epidemic over considerable areas where coconuts are grown closely. In a young non-bearing palm the disease starts with the drying of the still folded heart leaf or young inflorescence within a closed spadix due to the death of the young tissue at the base of it near the growing point and subsequent rottage by secondary saprophytic organisms. The disease was first reported by Leach[7] from Jamaica in 1946 which was confused by Martyn[9] with the mechanical injury caused to coconuts in the form of girdles round the nut due to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

variable supply of water. Innes[5] trying to connect it with deficiency of Manganese proved that it has no relation with the disease. Martyn's[10] recent observations lead us to the belief of a virus as the causal organism which is unlikely carried by air-borne vector, but by soil-borne organisms as will be evidenced in the rapid transmission of the disease in close-packed plantations of certain soil types. It may be noted that the symptoms are similar at the start to 'Bud Rot,' etc. Is it that in India also the virus is prevalent and the 'Bud Rot' is only the secondary stage of infection by saprophytic organisms?

Of all the pests of coconut, Rhinoceros beetle (Oryctes rhinoceros) is the most destructive and is known to every coconut-grower throughout the coconut world. It is a strongly built powerful beetle with a strong blunt recurved horn on its head like a rhinoceros, which gives it the name. Chewed fibrous materials either at the bore holes or at the base of the palms are the first signs of its attack. It attacks the crown and tender parts of the palm either destroying the apical bud and thus killing the palm or tunnel through making the inflorescence missing and twisting and disfiguring the crown. The beetle breeds freely in dung heap or decaying organic matter throughout the year.

As soon as the attack is detected the beetles should be destroyed by means of a very sharp pointed spike like the big ones used by the elephant tamers. The beetle will be pinned to death by the point and brought out by the curved iron. Close watch should be maintained to destroy the attacks and strict sanitary conditions maintained to prevent breeding.

The largest weevil known as the 'Red Palm weevil' (*Rhynchophorus ferrugineus*) is the other important pest of coconut and most of the damage is caused by the larva which feeds on the soft tissues.

The attack of the weevil and the beetle goes hand in hand, the beetle bores into the palm and the weevil lays its eggs inside the bores and the larva starts eating away the soft parts and kills the palm. And even if you kill the beetle, the destruction goes on. So, along with the measures suggested for beetle one should always seal the bores made by the beetle with sand. The crown of the palm should also be kept clean always from bird's nests, dead spathe, etc., and any damage to the palm should always be avoided through which the weevils can get access.

The black-headed caterpillar (*Nephantis serinopa*) eats away the green matter of the leaf and builds its nests under the leaf, thus destroying the leaf. It causes considerable loss to production due to large loss of leaf area. Predators help in the control of this pest.

White-ant with its large domain of destruction has taken also coconut as one of its subjects. Local application of D.D.T. or Gammexane and destruction of their nests wherever found keeps it in check.

Rodents, squirrels and bats destroy young nuts which can be prevented through watchful eyes and by keeping the crowns clean and also by girdling the palm with an arm's length of tin sheet above human height.

Plea for Plantations—Importance as a Fruit

From the usage point of view it is an ideal plant for cultivation and where suitable land permits for starting up a plantation. Right from the roots to the leaves nothing is wasted and the kernel and the sweet milk received from the same fruit is an ideal food and drink which man can expect from nature. The use of every bit of the coconut plant even when it does reminds us of its importance and we should grow it with care instead of haphazard planting of one nut here and another nut there. More so, because we are still in the stages of under-production and with our 1.5 million acres, out of the estimated world acreage of 8 million acres, India ranks third with a production of 3,000 million nuts annually. Philippines with 2 million acres produces 3,200 million nuts and Netherland East Indies with 1.5 million produces 3,200 million nuts annually. Ceylon with 1.1 million acres produces 1,800 million nuts annually and from this little island and other countries we are annually importing on an average 38,288 tons of copra worth Rs. 1,20,00,000 to make up our deficit.[6] And this fact alone can whip us back to our senses for planting coconut in a planned way in the form of plantations. We cannot ignore the other more important facts. During the last devastating war thousands of coconut plants have been either cut down or have died an unnatural death due to construction of bases for land and air war and bursting of bomb shells, the operation of war theatre being in the main coconut-growing areas of the East Indies and Philippines. We shall have to make good this loss in production and though we cannot produce nuts with a magician's wand in a year but still we must plant the trees first and then wait for the fruit. In India the bulk of the acreage lies in the south-eastern coastline. Travancore and Cochin Union has an area of 6,35,015 acres followed by Madras 6,05,874 and Mysore 1,69,191 acres; Orissa 21,694 acres and West Bengal 16,448 acres with much less acreage in other coastal districts.[6] (Figs. VII & VIII).

The Layout of a Plantation

There is a tendency amongst small growers for a mixed plantation, but they are always detrimental to the coconuts, that live on their spreading green leaves which become covered by the other competing trees with loss in production. The plantation should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be absolutely pure, only so long as the palms do not sufficiently cover the entire surface of the soil, secondary crops may be raised, preferably some legume. But along with intercropping the soil should always be additionally fertilized for the secondary crop. It has been found that the square method of cultivation is better workable than the triangular method, though the latter can afford more plants within the same area. But planting of too many plants never bring any good, not only that seedlings should be planted in such a way that when old the leaves of adjacent plants should never overlap each other. The intervening space should never be less than 24 ft. and preferably be 30 ft., when it is meant for copra or nut. But when it is meant for the milk of the green nuts, as is the case in most of the industrial areas and places round about Calcutta, they can be planted more close and is usually planted round the homestead. In most cases they harvest the green nuts leaving only a few nuts for ripening and thus making a double profit. Even the smallest planter may dig a ditch round the plantation, which will act as a reservoir of irrigation water as well as protective barrier. Let us draw up a present-day schedule for an acre of plantation with 50 trees:

(1) Price of 50 seedlings at -|8|- each ..	Rs. 25|-
(2) Cost of 5 labour for making 50 pits and planting 50 seedlings at Rs. 2|- each ..	„ 10|-
(3) Cost of manure mixture for 50 seedlings (calculated on the quantity of individual requirement of the manures and their price) at -|8|- for each ..	„ 25|-
(4) Cost of watering 50 plants during summer months at Rs. 15 per month for 5 months ..	„ 75|-
Total	Rs. 135|-

The cost of ploughing, etc., will go with the cost of cultivation of the secondary crop which will fetch some money till the palms come to the bearing age. And during this time with the profit from the secondary crop, irrigation drains, fencing, etc., should be done. It should be borne in mind that a long-range plantation is always a losing concern before it comes to age.

Marketing

I have already mentioned to what extent we are deficient in copra and are to import it mainly from Ceylon and other foreign countries. Similarly we are importers of large amounts of oil with a little export. But the balance of trade is maintained by the export of coir, a bye-product of the copra industry. It was started a century back and it is estimated that in 1946-47, 516,215 cwt. of mats and matting and about 288,000 cwt. of coir yarn were exported. This export mostly to the hard currency areas brings about 1.75 crores annually. The most important feature in the marketing of coconut is that the fruit is not easily perishable like others and can be preserved for a long time only through simple natural curing methods. The estimated import and export figures to and from West-Bengal during 1949-50 is detailed below:

Item	Source of Import and Quantity	Value	Export destination and quantity	Value
Copra	Andamans .. 25,000 mds.	Rs. 10,00,000.		
	South India —Cochin, Malabar .. 5,000 tons	Rs. 30,00,000 at Rs. 600 per ton.	Eastern Pakistan and small quantity in Assam — 1,500 tons.	Rs. 9,00,000 at Rs. 600 per ton.
Coir-Strings	S. India—Cochin Malabar, Alleppay .. 60,000 tons	Rs. 4,80,00,000 at Rs. 800 per ton.	Assam, Burma, East Pakistan, & Upper India— 45,000 tons.	Rs. 3,60,00,000 at Rs. 800 per ton.
Matings				
Bakka Nut	South India .. 1,000 tons	Rs. 4,00,000 at Rs. 400 per ton.	—	—
Coconut (dry)	South India .. 50,00,000 pieces	Rs. 5,00,000 at Rs. 10 per 100 pieces.	U.P., East Pakistan— 12,00,000 pieces.	Rs. 1,20,000 at Rs. 10 per 100 pieces.
	Port Blair .. 5,00,000 pieces	Rs. 9,90,000 at Rs. 18 per 100.	C. P. and other parts of India— 25,00,000 pieces.	Rs. 4,50,000 at Rs. 18 per 100 pieces.
	East Pakistan .. 50,00,000 pieces			
	55,00,000 pieces			
Desiccated coconut	Ceylon .. 20,000 mds.	Rs. 1,00,00,000 at Rs. 50 per md.	—	—
Coconut Oil	Sea-borne (St. Settlement, C. W. Australia)	40,59,140 galls. Rs. 2,37,85,055		
	Coastal routes (Madras, Travancore)		1,739 gallons.	Rs. 15,850|-
	Rail and river.	8,74,723 gallons Rs. 67,42,704	69,664 gallons.	Not known.
		2,02,664 gallons. Not known.		
			71,403 gallons.	
		51,36,527 gallons.

Economic Aspect

Coconut is the only fruit tree which is cultivated for food, for the oil and for the fibre and it can easily compete with any other crop on these three individual merits.

The mature nuts are either used for food preparations or are dried and made into copra. For copra making the fully matured nuts either stored for a month or two are at first husked by hand with the help of a sharp fixed horizontal iron rod. One man alone can husk about 1000 nuts daily and expert hands can do even 2000 nuts in a day. The shell is broken and kept upside down for some time to let the water drop completely, then they are kept upturned for some days when the copra shrinks away from the shell and levered out, if necessary with a thin wooden piece. Then the copras are again dried for a few days more to remove further moisture and in a good sunny week the copra is ready. Artificial drying in kilns is good for the monsoon, when sun-drying should never be undertaken, but care should be taken to see that the copra does not become sooty and give smell of smoke.

The copra thus made ready should be properly stored if not sold to oil millers. The oil is extracted either by country method or by modern milling machineries. But expellers give the maximum extraction of oil. The oil cake or *poonac* is used for feeding livestock but is also taken as food by the poorer people with jaggery. For bakeries or others dessi-

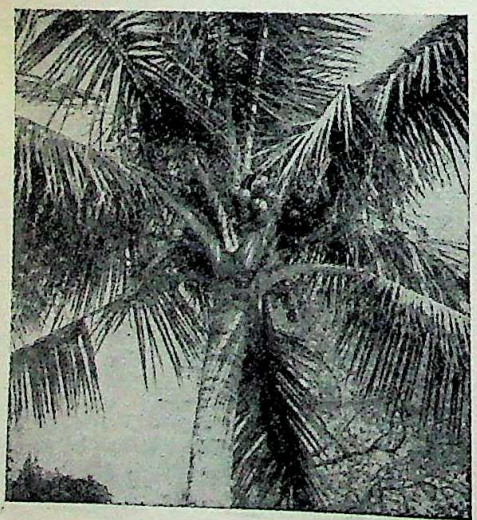

Fig. VIII. Close-up of a full-bearing palm

cated coconut is prepared from good quality nuts or copra, which gives the extracted milk, a nourishing juice as bye-product. The oil is used for cooking, as hair oil and for the manufacture of pomade, candles, 'marine soap' and glycerine. Today the mass production of vegetable fats or margarine is based on this oil.

The spongy cotyledon of the germinating coconut known as apple (*Fopra*) and the apical bud of the growing tree are delicious.

The only prominent fibre obtained from any fruit is the fibre of the coconut husk called 'coir,' mainly used as cordage for all kinds of marine and riverine

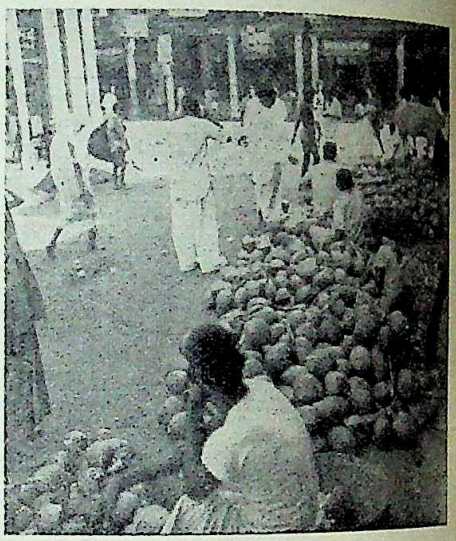

Fig. IX. Are you thirsty? Sale of green coconut at College Street Market in Calcutta

crafts, as it does not decay even in saline water, compared with jute, etc. The coir yarn is used for the manufacture of ropes, mats, door-mats, matresses and for upholstery work in railway carriage, etc. The husk retted in brakish water for about 8-12 months with suitable enclosures are of best quality, although it can be done in fresh water also.

After retting they are beaten with heavy wooden mallets and the fibres are separated from the husk. Best quality fibres are obtained from mature but not over-ripe nuts. The disintegrated pith is usually wasted although it forms the bulk of the husk. In these days of air conditioning with shortage of raw materials the value of the pith compressed as insulation boards may be explored by refrigeration engineers.

The unopened inflorescence is tapped for the juice which can be either 'Nira' or the fermented 'toddy'. It has been observed that in case of poor bearing trees effects of tapping appears to improve the yield, which lasts up to four years. From the juice vinegar and alcohol or jaggery and sugar may be made. The fronds and fruit stalks as well as the husk may be used as fuel and the ash contains a high percentage of potash and can be used as manure. The fronds after

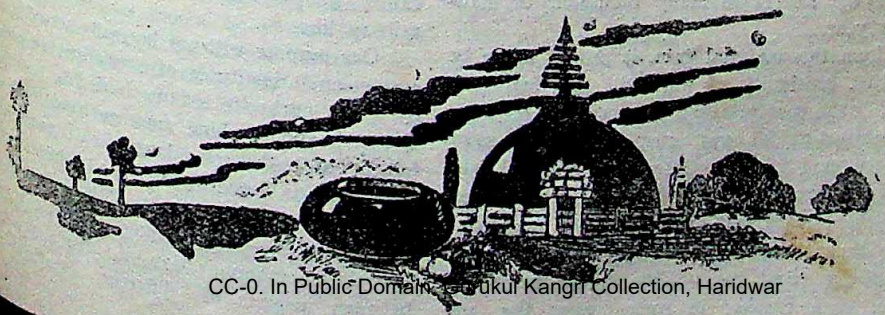
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trimming and beating can be used as white washing brush. The tender shoots can be made into pickle. The spathe is used as a shelf by the poor. But the midrib of the leaflet helps the cleaning of indoors and outdoors as brooms and its use is universally known. The leaflets are used for making fans, mats as well as thatching of poor men's homes.

The ploughman's hubble-bubble is always made with the coconut shell and today with modern ideas it is used in various other ways as ash-tray, cup and saucer, button, buckles, lamp-shade and box. It can be used as a laddle. The shell charcoal is a good absorbent and is used in making gas masks. The roots are of value as medicine and dye-stuff.

Even in death the palm is of value to us. The trunk is excellent as pillars or beams and rafters.



The long list of usefulness of coconut reminds us of the belief that the great sage Biswamitra in trying to create his new world with new things, first created coconut which is a unique production with its universal use of all its parts. And probably this is the *Kalpa-briksha* of the *Puranas*, the tree that fulfills all human wishes.

Conclusion

All along I have tried to impress my readers that this palm with its varied use and long life is economically inter-related with our every-day life. Such a plant should obtain special care from us in the multiplication of their progeny and in this matter the place of the Indian Central Coconut Committee is unique. We know that nothing good can be obtained when the seed is bad and for this every State established and is establishing seed multiplication farms for production of quality seeds of cereals and other crops. Unfortunately coconut did not obtain the attention it deserved. Today we find only a few centres opened by States for this. Private enterprise in these matters ends in failure as it entails heavy expenditure and may be a losing concern though with ultimate gain to the country. With this idea of eliminating bad palms by replacing them with good and extension of the cultivation of coconut in the coconut-growing tracts of India, we must establish coconut multiplication farms or rather nurseries throughout the coconut-growing regions of the country with at least one unit in each producing State. Mother palms are to be selected from within the State after extensive observation tours and the selected nuts from them will be the nucleus of the nursery. The nursery may be opened with a promise to supply at least 1000 seedlings and more than this should have to be planted for rejection of the inferior ones. And this start with a thousand nuts will take us to days when we can supply thousands of good quality seedlings to our countrymen in every State for extension of its production.

AN OLD MAN'S LAST HOPE

By Dr. JADUNATH SARKAR, Hony. D.Litt.

The supreme problem of Free India is how to be intellectually independent of Europe. On the right solution of this question depends her prosperity, and even her very existence as a nation. Europe is advancing every month, nay every day, in arts and arms, in industry and technique, in range of thought and the conquest of nature. India, as even the blind can see, has been standing still, glorying in the "wisdom of our ancestors," or at best borrowing thoughts and material products from Europe at second hand. Hence, even when we seem to be making progress at all, we are only panting far behind Europe like the coolies carrying the baggage of a civilised army and straggling in the rear.

Continual progression is the rule of Europe. Her civilisation is never stationary, she is constantly moving from more to more, from new to newer things. This is the result of the labour of an army of her best intellects, carrying on to higher and higher stages the gains of their predecessors, by working without cessation, without a break. In Europe, "the tail of one generation is where the head of its predecessor had been." This is the root principle of every living civilisation.

Hence, there must be created and vigorously worked a fountain-head of original research on the Indian soil, if Free India is to justify her name. This brings us to the next step. India today is so backward, so poor, that she cannot afford to waste any portion of her existing brain power or material resources; she must get the utmost out of every rupee she spends and every man she employs. And that can be done only by creating centres for this high type of work in those spots where the climatic conditions favour the highest brain work throughout the year without any seasonal stoppage or slackening, and the air and water exclude those periodical diseases which elsewhere cause the loss of so many thousands of man-hours every year.

Apart from this material gain, it should never be forgotten that continuity of work till the final fruit is produced is the root principle of success in research. If the investigation is once suspended for some months by summer heat or winter's cold, it will take many weeks before the returned research-worker can pick up all the threads that he had dropped and make an advance from the point reached by him before his enforced holiday. And the quality of the work also suffers from such breaks; in some cases the completed result arrived at before the break has to be scrapped altogether, and that particular piece of investigation has to be started from the beginning once more. Such losses must be avoided by wise planning beforehand.

This brings us to the third point: where in a tropical country can we find spots with such a temperate climate as to allow vigorous and continuous brain work throughout the year? Our noted capitals have their multitude of modern civilised conveniences and scientific apparatus besides expert specialists otherwise employed who are available for consultation, but the enervating heat of Calcutta, Madras and Bombay, the sunstroke atmosphere of Delhi, Lucknow and Allahabad on the one hand, and the freezing cold of Darjeeling, Simla and Naini Tal (in winter) on the other hand, make *continuous* work there in twelve months in the year impossible; they can serve us for eight months at the utmost. These *high* hill stations are also barred out by another very relevant consideration; they cost in dress, shoes and food twice or thrice as much as the same style of living in the plains, and their greater distance from the centres of food production naturally enhances the cost of living there.

We are thus left with moderate heights of two thousand feet or more above sea-level and subject to strong cooling winds, such as Shillong and Dehra Dun in the north, Bangalore in Mysore, and the Bombay hills from Lonavla to Talegaon—these last two being only 36 and 20 miles from Poona, on the same G.I.P. line, and the former already provided with good educational facilities of the medium grade and the latter (Talegaon) with an admirable hospital and convalescent home. A research-and-teaching college established here will not have to bear at the start the crippling expenses of what may be metaphorically called jungle-clearing and construction of a new railway line.

Our purpose will not be really served if we must create small institutes of specialised research manned by a few anchorite savants buried in their laboratories. Research and teaching must go hand in hand for the benefit of both; they languish if mutually estranged. And there is, besides, the sound educational principle aptly expressed by the term "the inter-fertilisation of the faculties"—(*i.e.*, different subjects or branches). The daily communication—it may even be close—between masters of different branches not only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sharpens and stimulates the brain of each but also creates an atmosphere most fruitful of the advancement of learning. The hermit in his cell is denied this advantage. Therefore a degree college (with not more than 400 students) should be opened there at the same time and under the same administration. This is the most successful device for bringing to the surface and enlisting for the work in the next generation the most promising pupils.

As for the teaching staff, let not the word research frighten the Finance Minister. The highest professors employed by the Calcutta University, such as Drs. Radhakrishnan, C. V. Raman, and D. R. Bhandarkar, cost about 2,000 rupees each per month (taking into account the pay, the housing concession, employer's contribution to the provident fund, and provision for furlough on full pay and half pay). It is not proposed to take the top-men of the old well-endowed Universities and dump them on my projected hill college. But I feel that a salary of Rs. 600 a month (with residence provided) will attract very able men. Many I am sure will prefer this chance of uninterrupted research work and the full enjoyment of health on Rs. 600 to a cosy chair in Calcutta or Madras on Rs. 1,000. Besides, these hill-college teachers will be kept up to the mark by the periodical society of "visiting professors" and retired educationists, who will demand no pay but only board and lodging and the opportunity of making themselves useful to the next generation, so as to keep India's torch of light burning. Provision for such visiting professors is an integral part of my scheme. (Later on Government inspectors and technical advisers will come for short periods). For them a guest-house should be made ready at the outset. And also a clean hotel supplying decent but cheap and standardised meals. I still remember how exhilarated in spirit, how elevated in mind I felt as a young freshman when attending the lectures of some known authority on a subject, a professor whose opinion is quoted in standard works as decisive, one who has himself advanced the bounds of human knowledge in a particular field. Contact with such first-rate men vivifies the young disciple, like an electric current making the dead frog dance in the physics laboratory. But it does not mean that such pre-eminent scholars should be present at our proposed college, lecturing there throughout the year. The purpose will be well served if they pay short periodical visits and electrify the students. They will also do a still more necessary work by vivifying the permanent *teachers* of the place themselevs. After all first-rate men are, in their very nature, not numerous enough.

Before embarking on the scheme, its financial implications must be understood. I am (with all the diffidence of a book-worm) giving below a rough estimate based on the present prices; (the index number today being 446 against 100 in August, 1939). The scheme will be worked in parts, as it grows, from year to year and not in full strength at the very start. But two things must be attended to at the very beginning: (1) land acquisition to prevent private building which may be a bar to future extension, and (2) collection of the indispensable core of a learned library, because ever since the Blitz of London destroyed 20 million copies of printed works (in England alone), many learned books of primary importance have become as rare as the phoenix. But I am optimistic enough to hope for gifts of books from the enlightened rich as soon as our work begins to justify our existence.

All the staff and preferably all the students (maximum 400) should be residential. Hence the heavy building construction necessary at the outset. But why should we not economise in other directions? Why ape Oxford or Cambridge by insisting on a vast meeting hall for *all* the students? I have heard British Oxonians in India sadly complaining that the Presidency College of Calcutta has no Hall for bringing together *all* its thousand students. India has been favoured by nature like ancient Greece; we can hold our College gatherings in the open air (except during two months in the year). Let us sternly cut out ornaments till after *all* the essentials have been provided.

And the first essentials are hostels where the students will not be packed like sardines in a tin, residences for the staff close at hand, and a really good library (with laboratory added in the case of science). For the convenience of younger teachers, there will be one or two chummeries or "bachelors' barracks"—but not in the style of our *dharmsalas*; each one must have a room of his own however small.

Other requisites are a common mess and playgrounds or gardens (so designed as to provide for future extensions). The future is to be assured and the work once started saved from curtailment or debasement by future financial stringency. This can be done only by accepting and steadily pursuing the policy of building up an Endowment Fund of fifty lakhs at its maximum. If the State makes over two lakhs a year for ten years to the Trust managing the Institute, and all public donations are credited to the Corpus of the endowment, the above is not an impossible figure. Judging from some of the noblest non-official institutions whose inner working I have seen, the work of such a hill college, if honestly done, will be its best advertisement and attract large donations. As Swami Vivekananda said to a pessimistic friend at the initial stage of his India-wide philanthropic

Total		,,	1,50,000

or an *endowment* of forty lakhs.

Fee income from 400 students (less ten per cent free), at Rs. 12 per month—Rs. 51,840 per annum, or *half a lakh*. Physical instructor, doctor, etc., to be included.

Capital expenditure at the start (in two years)

Land acquisition, levelling, etc.	1 lakh
Buildings	6 lakhs
Furniture and equipment	1 lakh
Water (and/or? electricity)	1 ,,
Library books (and/or laboratory)	1 ,,
Total	10 lakhs

P.S.—Will the title of my prayer be at last changed from *Hope* to *Dream*?

———:O:———

REMINISCENCES OF PROF. CARLO FORMICHI

BY MAHAMAHOPADHYAYA VIDHUSHEKHARA BHATTACHARYA

IT was with great pleasure that I read the short notice on the late Prof. Carlo Formichi published in the April issue of *The Modern Review*. It recalled vividly to my mind many incidents associated with him that happened during the time he was a Visiting Professor in the Visva-bharati and I was in charge of Vidyabhavana. The last letter I had from him would be of special interest to the present generation in view of the strong anti-Fascist sentiments he expressed therein in spite of his being an Italian who held high official rank in the academic world of his country. His letter runs thus:

'Rivoli, 25.IX, 1926.

My dear Friend,

Your kind letter has reached me here, where I shall stay a couple of days more before I go back to Rome.

Thank you very much for the sincere sympathy you show me and which I appreciate highly.

I am just like a man that has seen before his eyes a whole city crumble to dust on account of an earthquake. I am seeing many beautiful things pitifully destroyed and I cannot help crying over the ruins.

I do not know yet if the work of reconstruction will be possible. I shall do my best to help it, but on a quite new basis.

I can no longer trust persons in whom I had placed the whole of my love and confidence. I shall ever love you and some other friends in Santiniketan but they are not those who have done the mischief and who have become unworthy of my trust.

Tell Tucci,* please, that I am not writing to him this week for lack of news.

If not in this life I certainly shall meet you in some future existence and you will find a friend in me at once. Be sure of it.

Yours for ever affectionately
Carlo Formichi"

I may also in this connection narrate a few details I obtained from reliable sources regarding the trend of affairs during the Fascist regime. When Gurudev went to Italy, the Italian Government took special care to prevent any person from having access to him, who might give Gurudev a glimpse of Italian affairs different from Governmental propaganda. But somehow Gurudev did come in contact with other views which so displeased him that he publicly denounced the Fascist.

The Italian wife of an American Professor then living in Santiniketan, told me at that time that oppression as we were under British rule, we were yet much better off regarding freedom of opinion, thought, etc., than the people under the Duce's dictatorship.

A leading Indian Scholar who visited Rome at this time told me after his return, in reply to his query, the taxi-driver while passing Mussolini's Office uttered the Dictator's name in a very low and cautious whisper and explained later that he did so in order not to rouse suspicion in the mind of any passerby that he had any sinister motive in showing the Duce's office to a foreigner.

One incident may be added here, when for the first time Prof. Formichi met the class he had to teach, it fell to me to introduce him to his audience. After the introduction he dealt with his subject for a few minutes and then told me, "I hope you will now believe that I can teach." The remark was received with loud laughter from all present there.

* i.e., Prof. Giuseppe Tucci, the noted Italian Sanskritist who was also in Santiniketan as a Visiting Professor.—V.B.

INDIA'S NATIONAL INCOME

By Dr. R. M. AGARWAL, M.A., Ph.D.

The calculation of per capita national income is not an end in itself but simply a means to an end. And its importance in planning future economic policies cannot be over-emphasized. Every sort of economic planning, agricultural or industrial, commercial or scientific, capitalistic or socialistic, must necessarily aim at increasing the per capita national income because other things remaining the same, particularly prices, it indicates rising standards of living of the people, material well-being and economic progress. It also serves as a measuring rod for comparing the general economic condition of the people in different countries or in the same country at different times. And changes in the various components of national income reflect upon the changing patterns of economic set-up.

But despite its playing such a vital role in the day-to-day economic life of the people and the country, no systematic or scientific attempt, official or non-official, was ever made to take stock of India's national income and compile the per capita earning. Some individual efforts were no doubt made, at their own initiative, by Dr. Dadabhai Naoroji, Messrs. Baring and Babour, Digby, Atkinson, Sir B. N. Sharma, Findlay Shirras, Shah and Khambata, Lord Curzon, the Simon Commission, V. K. R. V. Rao and B. Natarajan at various times from 1871 onwards and in the absence of any other useful data their findings did throw some light over this important issue, but they could by no means be taken as reliable and dependable because their difficulties were innumerable. This negligence on the part of our Government was more so deplorable in view of the fact that of all the countries of the world, ours was the only one which made the largest number of plans and programmes, what if they did not cross the paper stage, during the post-war years. Fortunately it recently realized the necessity of organizing such investigations and appointed for the first time on the 4th August, 1949, a National Income Committee with Prof. P. C. Mahalanobis as Chairman and Prof. D. R. Gadgil and Dr. V. K. R. V. Rao as members to prepare the report on the national income and related estimates, to suggest measures for improving the quality of available data and for the collection of further essential statistics and to recommend ways and means of promoting research in the field of national income. The Committee was also to guide the national income unit of the Government of India in compilation of authoritative estimates of the national income. The Government of India also made available to the Committee the advice of three destinguished foreign experts on national income, namely, Prof. Simon Kuzuets, Mr. J. R. N. Stone and Dr. J. B. D. Derksen who visited India during the cold weather of 1950-51. The committee submitted its first report only recently which was placed before the Parliament by our Finance Minister, Sri C. D. Desmukh on the 5th May, 1951. The Committee proposes to follow up its first report with a final one which is expected to be submitted towards the end of 1951 or early in 1952. The final report would cover both 1948-49 and 1949-50.

According to the first report of the Committee, the sum of the net output of all sectors of economy gives the net domestic product at "factor cost"—Rs. 8,730 crores (Government enterprises Rs. 300 crores, Government administration Rs. 460 crores, and private sector Rs. 7,970 crores). The net national product at market prices, factor cost plus indirect taxes, is estimated at Rs. 9,170 crores. Adjusting these figures with the estimated net earned income from abroad the figure for the net national income during 1948-49 has been arrived at Rs. 8,710 crores or Rs. 255 per head on the basis of an estimated Indian population of 341.04 millions during that year. But while discussing the above estimate at a Press Conference recently, Dr. V. K. R. V. Rao, one of the three members of the National Income Committee told that India was not richer in 1948-49 than in 1931-32 in real terms. His estimate of per capita income in 1931-32 was Rs. 65 which, he added, would come to about Rs. 260 when adjusted to the increased prices and the inflated values of other contributory factors in 1948-49. This indicated that the person was poorer by nearly Rs. 5 in 1948-49 than in 1931-32. Dr. Rao added, "I would certainly state that the per capita real income has not gone up." This is also shown partly by the fact that nearly 53 per cent of the material income was being spent over food alone.

The Committee has however estimated the national over-all average of the net output per engaged person at Rs. 660. Breaking the figure occupation-wise, the net output per engaged person was highest in mining and factory establishment, that is Rs. 1,700, followed by commerce, transport and com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

munications Rs. 1,600, Government services Rs. 1,300, small enterprises Rs. 600, professions Rs. 600, agriculture and animal husbandry Rs. 500 and domestic services Rs. 400. Thus the comparatively more paying and productive character of mining and manufacturing enterprises as against either agriculture or services is too obvious even though agriculture, animal husbandry and auxiliary activities contributed 48 per cent and commerce, transport and communications 19.5 per cent of the national income. Again contribution by small enterprises, which is 83.6 per cent is about five times as great as that of large enterprises (16.4 per cent). It is also seen that small enterprises account for more than 61 per cent of the net domestic product.

Moreover, the total working force of the country has been placed at 132.74 millions of which 90.50 millions or 68.2 per cent were engaged in exploitation of animal and vegetation, 18.02 millions or 13.6 per cent in industry, 8.30 millions or 6.2 per cent in trade, 5.04 millions or 3.8 per cent in professions or liberal arts, 4.19 millions or 3.2 per cent in domestic services, 2.45 millions or 1.8 per cent in transport, 1.91 millions or 1.4 per cent in public force, 1.70 millions or 1.3 per cent in public administration and 0.63 millions or 0.5 per cent in exploitation of minerals. Hence, the unbalanced nature of our national economy which is predominantly agricultural offers very little scope for future developments, if left undisturbed and allowed to take its own course.

Also 97 per cent of the Government revenue that is, Rs. 690 crores out of a total revenue of Rs. 710 crores was spent over administration. Out of Rs. 710 crores, direct taxes accounted for Rs. 198 crores (Corporation tax Rs. 65 crores and other Income taxes Rs. 133 crores), indirect taxes Rs. 416 crores (Customs Rs. 139 crores, Excise Rs. 107 crores, Stamps Rs. 20 crores, Land Revenue Rs. 42 crores, and other indirect taxes and duties Rs. 108 crores) and fees and miscellaneous receipts Rs. 70 crores (Civil Administration Rs. 38 crores and Miscellaneous Rs. 30 crores) thus making a total tax revenue of Rs. 684 crores. Another Rs. 50 crores was obtained by transfer of operating surplus from current account of commercial enterprises (Railways Rs. 25 crores and others Rs. 25 crores) and income from property accounted for Rs. 22 crores (Interest Rs. 10 crores and others Rs. 12 crores). The expenditure of Rs. 690 crores, on the other hand, comprised Civil Administration Rs. 326 crores. Defence Rs. 279 crores, Miscellaneous Rs. 25 crores, Subsidies Rs. 34 crores, Transfer payment to individuals Rs. 26 crores. Of the expenditure on Civil Administration the cost of collection of taxes alone accounted for Rs. 26 crores while General Administration including expenditure on Police, Public Health, Education, etc., accounted for Rs. 242 crores. Out of Rs. 279 crores spent on Defence, the pay and allowances of the armed forces alone has been estimated at Rs. 117 crores. The surplus of Rs. 20 crores on current account does not represent the budgetary position of the public authorities, but only the excess of income drafted by them and not spent during the year.

The capital account of the public authorities for the same year reveals a sum of Rs. 49 crores and an expenditure of Rs. 208 crores (Capital Expenditure on commercial enterprises Rs. 120 crores, Maintenance and capital outlay of Administrative departments Rs. 81 crores, and Net purchase of assets Rs. 7 crores). The deficit was met by a net borrowing of Rs. 159 crores.

Taking the current and capital accounts and also the current account of the public commercial enterprises together, a sum of Rs. 1,214 crores was paid out of the public sector during the year. Of this, Rs. 630 crores represented wages and salaries, Rs. 28 crores interest, Rs. 360 crores purchase of commodities and services, Rs. 29 crores maintenance, Rs. 60 crores transfer payments and Rs. 7 crores purchase of assets.

Thus, it is obvious that the above details of India's national income and expenditure demarcate the following four characteristics of our national economy:

1. Deteriorating economic condition of the people in spite of rise in their money incomes on account of general inflationary condition in the country and rising cost of living;
2. unbalanced character of our national economy which is predominantly agricultural and which is no more paying on account of too many people working over it;
3. predominance of small-scale over large-scale enterprises; and
4. very little expenditure of public revenue over development programmes as compared with those over administration.

This is anything but in the interest of the country and our administrators must necessarily devise policies to change this natural course of our national economy. If we want to be as powerful and rich as the other countries of the West, we cannot lay too much emphasis over our agriculture and must essentially devote greater and greater attention towards large-scale industrial developments. But this cannot take place without an active and all-out help from the Government. But for this, no country in the world would have been able to increase its per capita national income, not even U.S.A., Canada, U.K., Germany or Japan.

INACCURACIES IN OFFICIAL STATISTICS IN WEST BENGAL

By JATINDRA MOHAN DATTA, M.SC., B.L., F.S.S. (Lond.)

A fresh ration cut has been imposed from the 2nd July, 1951. The Food Minister, Sri Prafulla Chandra Sen, in a recent broadcast tried to justify the policy he is following by quoting certain official statistics. We pity him; he is more a victim of the inaccuracy of official statistics than a sinner for inaugurating a bad policy. We do by no means exonerate him or the Central Government for their policy. But we realise how badly they are being served with official statistics.

In 1934, we pointed out in the pages of the *Sankhya*, the journal of the Indian Statistical Institute, how inaccurate the official statistics sometimes are. In one single year, there were *ten* Chairmen for the Panihati Municipality!

Since then we hoped there would be an improvement in the official statistics; if not in their collection at least in its presentation. We based our hope on the formation of the Provincial Statistical Bureau in West Bengal. But our hopes have been belied.

The Provincial Statistical Bureau publishes a Statistical Abstract for West Bengal. It published one for 1947 sometime ago. It has recently published another for 1948. But there are serious errors in it, both of compilation and presentation. We hope the authorities responsible for the publication of the *Statistical Abstract* would take greater care in future. We would request them to go through the pages of such books, as the *Canadian Year-Books, Australian Year-Books*, etc., to see for themselves how the official statistics are coudensed and presented in the British Dominions; and also to go through such books as *Pocket Compendium of Australian Statistics* (pp. 208), price 1 sh.

The attention of the authorities has been drawn to the inaccuracies and insufficiency of the official statistics ever since 1934. (See *Sankhya*, Vol. I, pp. 435-39 and Vol. 6, pp. 231-35). Some serious mistakes in the Bengal Census Report of 1931 (*Sankhya*, Vol. 3, pp. 163-170 and Vol. 6, pp. 327-328), were pointed out by the present writer.

Statistical Abstract, West Bengal, 1948 has been published. This is the second issue of the series. But there are certain errors persisting in it still.

(1) At page 6, in table 1.1 it is stated that the number of sub-divisions in the District of 24-Parganas is 6. But at page 22, table 1.9, five sub-divisions have been shown. The Bongong sub-division has been omitted; the area under it has been amalgamated with the Barasat sub-division.

(2) The population of West Bengal has been given as 21,196,453 in tables 1.2; 1.3; 1.4; 1.5; 1.6. The population of West Bengal (after partition) has been given as 21,211,427 in the Statistical Handbook No. 1 presented to the members of the Constituent Assembly. It is a saleable publication. The figures 21,211,427 have been repeated at pages 3 and 4 of the *Statistical Handbook*.

The error in the figure given by the Provincial Statistical Bureau has arisen in this way. In table 1.9 the figures for each thana has been given; but no figure has been given for that portion of the Daulatpur Police Station which has been allotted to West Bengal under the Radcliffe Award. This exclusion has led to the above error.

(3) At page 274, table 26.3 is headed thus:

> "Particulars relating to New Life Insurance Business of Indian Insurers effected during 1947 and total Life Insurance Business in force at the end of the year in West Bengal."

The heading is misleading. All that has been shown in the table is the business of certain companies registered in Calcutta. The Oriental Life Insurance Company's business here in West Bengal is not included; while the entire business of Hindusthan Life Insurance Company is included, much of which is outside West Bengal.

(4) In table 41.4 at page 383, the number of cinema houses and the monthly average number of spectators are given.

District	*Number of cinema houses (in Dec., 1948)*	*No. of spectators (monthly average)**
Burdwan	11	109,841
Birbhum	5	37,332
Bankura	4	65,756
Midnapore	13	201,344
Howrah	15	221,079
Hooghly	20	232,951
24-Parganas	16	194,405
Calcutta	72	Not available
Nadia	4	46,777
Murshidabad	2	21,389
West Dinajpur	3	18,152
Malda	2	36,851
Jalpaiguri	1	10,325
Darjeeling	4	52,615
Total West Bengal	172	(a) 96,832

(a) Excluding Calcutta.

Figures for Calcutta have been omitted. No explanation has been given why the number of

* Average of twelve months (Jan. to Dec. 1948).

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

spectators at Calcutta cannot be given. No attempt has been made to form an estimate of the number of spectators at Calcutta from the amusement tax collected though of the total Rs. 4,21,000 amusement tax collected in 1948, Rs. 3,41,000 came from Calcutta alone. Further in calculating the provincial average of spectators a simple average of the district averages instead of a pooled average for the province has been used. In some copies there is a corrigenda, giving the correct figure, in some other copies there is no corrigenda.

(5) In table 41.2 at page 382, the particulars about street accidents in Calcutta are given.

The figures for 1945, 1946 and 1947 are given; while the figures for 1948 are given month by month, but no totals for 1948 have been given. For ready reference and easy comparison such total should have been given.

But there seems to be error in the figures themselves. For example, the number of persons killed in 1946 and 1947 are given as 324 and 184. But in the *Monthly Statistical Digest, West Bengal,* published by the same Provincial Statistical Bureau for September, 1950, we find at page 101, that the monthly average of persons killed in Calcutta in 1946 and 1947 are 19 and 15 only while they are 27 and 15 respectively if the previous annual figures are reduced to monthly figures.

324 divided by 12 for 1946, comes to 27 and not 19.

184 divided by 12 for 1947, comes to 15.

Let us assume that this is a printing mistake. The total number of vehicles involved in such street accidents in 1946 and 1947 are given as:

	Number of vehicles involved			
	Civilian	Military (British)	Military (U.S.A.)	Total
1946	5,696	2,061	1,112	8,869
1947	9,105	601	28	9,734

The monthly average of vehicles involved in accidents would work out to 739 for 1946 and 811 for 1947. But in the *Monthly Abstract* referred to above the figures given are 1,131 and 1,276.

(6) At page 372, table 37.1 capacity of jails in West Bengal has been given. But no mention has been made of the Hazaribagh Reformatory, where West Bengal has a right to send convicts, perhaps because it is in Bihar. As it is a statistical abstract such information should be given. When about two years ago the Judicial Minister of West Bengal, visited the Hazaribagh Reformatory, he found that 87 convicts out of a total of 200 has been sent by West Bengal. (cf. the *Prabasi,* Baisakh, 1357 B.S.)

(7). At page 177, table 14.12 gives the number of newspapers, periodicals and books published in Bengal.

In column 3, the number of newspapers, periodicals published has been given. The *Statesman,* the *Amrita Bazar Patrika* and the *Hindusthan Standard* are counted as one each, the twelve issues of *The Modern Review* are taken as twelve. This is not reasonable.

(8) The area of Calcutta has been shown differently at different places.

At page 22, table 1.2 the area has been given as:

Calcutta excluding Fort William, canals and port	18,121 acres
Calcutta	26,714 "

At page 29, table 1.11 the area has been given as:

Municipal area	31.70 sq. miles
Fort William and Maidan	2.00 "
Total Calcutta	33.70 sq. miles

But the areas of the 32 different wards of Calcutta as given in table 1.2 total up 18,121 sq. miles or 28.3 sq.miles.

(9) Coming now to table 34.1 at page 352 showing the number and constitution of Municipalities, District Boards and Union Boards in West Bengal we have several comments to make.

(*a*) While the figures for Municipalities and District Boards are for the year 1946-47, those for Union Boards are corrected up to July 1948. The report is signed in January 1949. Why the figures for the Municipalities and District Boards cannot be brought up to the end of 1947-48 at least we fail to see.

(*b*) The figures for Nadia District Board are said to be not available. In pre-partition Nadia, the figures were certainly available.

As a result of the partition of Bengal, the districts of Nadia, West Dinajpur, Malda and Jalpaiguri were also partitioned. To provide for this West Bengal District Boards Ordinance XI of 1947 was promulgated, and the West Bengal District Boards Act III of 1947 was passed on the 30th December, 1947. The figures for the reconstituted District Boards could have been and should have been given.

(*c*) If the figures are for the year 1946-47, how then the constitution of the District Board of West Dinajpur, which was not formed till August 1947, could be given. Surely it relates to post-partition position.

(*d*) The number of municipalities is wrong. There were 10 municipalities in Hooghly, and not 11.

(*e*) A note should have been added as to the number and constitution of Cantonment Boards in West Bengal.

(10) At page 344, in table 32.9 classified List of Assessees assessed to Agricultural Income Tax in Bengal, 1945-46 has been given. In the *Statistical Abstract* for 1947 no such table was shown. We fail to understand why the later figures for United Bengal the year 1946-47 could not be given. After the partition of Bengal, the agricultural income-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

structure of West Bengal has undergone a radical change; and these later figures should have been given. The following abstract of statistics for the several years show that the statistics for 1945-46 standing by themselves are misleading as to the distribution of incomes.

	No. of cases dealt with	Total gross income	Amount of tax collected
		Rs.	Rs.
United Bengal—			
1945-46	4,331	8,18,31,920	90,91,232
1946-47	3,202	4,27,55,090	39,75,954
West Bengal—			
1947-48	2,302	4,34,96,312	38,12,579
1948-49	3,154	4,24,63,815	43,51,416
1949-50	4,249	6,59,75,512	65,11,400

If the detailed figures are available to non-officials, why the same cannot be collected and published in the *Statistical Abstract* we fail to understand.

(11) At page 345, in Table 32.10, Commercial tax collected in Bengal, 1941-42 to 1947-48 has been given.

The Sales-tax, for example, has increased from Rs. 15,61,592 in 1941-42 to Rs. 3,60,45,539 in 1946-47. To what this phenomenal increase is due? It would require sometime to get the Department concerned in assessing and collecting the tax in full working order. Therefore, there is some time-lag. Any normal increase would be due to commercial activity. But there have been several changes in the rate of tax since it was first imposed.

The Bengal Finance (Sales Tax) Act, 1941 came into force on the 1st of July, 1941. The official financial year begins on the 1st of April every year. So the first year's collection represent only 9 months working of the Act, apart from the time-lag to get the working of the Department in full swing.

At first the rate of tax was one quarter-anna in the rupee. By Bengal Act I of 1944 the rate was increased to one half of anna in the rupee. By Bengal Act VIII of 1945, the rate was increased to three-quarters of an anna. It was then reduced to one-half of an anna in 1946; and again increased to three-quarters of an anna by West Bengal Act X of 1948. Further there have been changes in the Schedule of tax-free goods from time to time. A note drawing attention to these several facts should have been added to make the Table more useful to the reader.

Our observations cover the other taxes also.

(12) In the section headed Medical, beginning at page 160 and ending at page 163, we find in Table 14.4 the distribution of Registered Doctors according to qualification and sex in Bengal for the years 1946 and 1947; and in Table 13.5, the number of registered Nurses, Midwives and Health Visitors in Bengal from 1939-1948.

We have several comments to make on this section.

(*a*) To make the above two tables comparable the figures for the earlier years as well as for 1948 should have been given in Table 13.4.

(*b*) Nowhere we find the number of Dentists registered under the Bengal Dentists Act, 1939. Neither one finds mention of the number of Ayurvedic practitioners, registered under the State Faculty of Ayurveda, nor of the Homeopath doctors similarly registered. This is in our opinion a serious lacunae.

(13) At page 35, in Table 1.15, area and population of Provinces of Indian Union with density per square mile are given.

The area and population of Assam, West Bengal and East Punjab have been shown thus:

	Area	Population
Assam	50,321	73,92,618
West Bengal	28,215	211,96,453
East Punjab	31,028	126,91,430

It is said that these figures are estimated figures, estimated presumably by the Provincial Statistical Bureau.

In the Statistical Handbook No. 1 prepared for the use of the Members of the Constituent Assembly, the respective areas and populations have been shown thus :

	Area	Population
Assam	50,296	74,47,531
West Bengal	27,748	212,11,427
East Punjab	37,058	126,17,175

The second edition of this Handbook was published as early as 1947. Why no use has been made of this authoritative publication, and a fresh estimate, apparently erroneous, has been made, we do not know.

The discrepancies between the two sets of figures are given in the table below. Taking those given in the Handbook No. 1 as the bases, we find the differences to be:

	Area	Population
Assam	+ 25	— 78,913
West Bengal	+ 467	— 14,974
East Punjab	—6,030	+ 74,255

(*b*) Why the population and area of the Native States acceding to India, at least its totals, have not been given to make the Table really useful, we do not know. We complain of its absence.

(14) At page 234, in Table 19.5, a list of towns and villages in West Bengal served with electricity in 1946 is given.

The list is positively misleading. How misleading we shall show by a few examples. The Panihati Municipality consists of seven Wards, of which Agar-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized By Arya Samaj Foundation Chennai and eGangotri

para, Panihati, Bhowanipore, and Sukhchar are on the river Hooghly (Bhagirathi). They are served with electricity. While Agarpara and Panihati have been mentioned as items No. 1 and 47, no mention has been made of either Bhowanipore or Sukhchar.

Similarly the Kamarhati Municipality consists of four Wards, *viz.*, Kamarhati, Areadaha, Dakshineswar, all on the river Hooghly and of Belghurria. Mention has been made of Areadaha (item No. 2), Belghurria (item No. 12) and of Kamarhati (item No.33); but Dakshineswar has been omitted.

Calcutta and Fort William have been shown as two different places (items No. 17 and No. 21).

Radhanagar (item No. 48) in the district of Burdwan is supplied with electricity from Dishergarh; but no mention has been made of Dishergarh itself as a place supplied with electricity, although it is within West Bengal.

A better plan would have been to give the names of Towns or Municipalities or of the main villages; as also the area of supply and if possible the population, enumerated or estimated, of such area where the supply is available.

We are making these observations to show how haphazardly the statistics have been compiled and presented.

(15) At page 228, in Table 18.1 the production and the number of workers and the Coal Industry have been given. It has been stated that the number of workers for 1946 and 1947 are "not available." The book has been published in 1950, and bears the signature of the Director in 1949. In the *Indian Labour Year-Book, 1947-48*, page 8, the total number of workers in the Mines of West Bengal for the years 1946 and 1947 are given as:

1946—80,373 and 1947—89,682.

The source or sources from which the authors of the *Indian Labour Year-Book*, a Central Government publication, have got the figures are presumably available to the officers of the Government of West Bengal. It appears they have not exerted themselves in the matter.

THE GOSPEL OF KRISHNA

By SUDHIR CHANDRA MAJUMDAR

I

1. The book of Krishna, the son of Basudev, the son of Jadu.

2. Jadu begat Madhu and Madhu begat Sattwata and Sattwata begat Vrishni and his brethren.

3. And in the generation of Vrishni was born Basudev, the husband of Devaki of whom was born Krishna who is called Basudev.

4. Now the birth of Krishna was on this wise: Devaki the king Kangsa's sister was espoused to Basudev.

5. Now it came to pass that as one day Kangsa went out to the street on his chariot, behold, there came a voice from heaven, the eighth child of Devaki, thy sister would kill thee.

6. When Kangsa heard these things, he was very wroth and threw his sister and his sister's husband into the prison and slew one after another, their seven children.

7. Now when Krishna was born in the prison, behold, the spirit of the Lord appeareth before Basudev at night saying, Arise and take the young child to Brindabon, for Kangsa will seek the young child to destroy him.

8. When he arose, he took the young child by night and departed into Brindabon and kept him at the house of Nanda, the king of cowherds.

II

1. Now Krishna grew up to be a fine lad and brought gladness into the hearts of Nanda and his wife.

2. He went forth to the fields to tend cattle by the Jamuna with other cowherd boys and piped and danced merrily in the shade of the Kadamba tree.

3. And the maidens of Braja knew that this was the God which is come to teach love and piety. So they met him in the wilderness and worshipped him.

4. And they said unto him, Draw us, we will run after thee, for thy love is sweeter than wine, so the upright love thee.

5. And he said unto them, Ye daughters of Braja why do ye leave your husbands and brothers and run after me, behold, I am black and a mere cowherd boy.

6. And they answered and said, Thou art black but comely, yea, fairer than the primrose.

7. Behold we have left our husbands and our kindreds and followed thee, for whither thou goest we will go.

8. When Krishna heard these things, he saw that love was real and pure and so he favoured them.

III

1. Now when Kangsa heard that Krishna was living he was very wroth and he sent demons to kill him.

2. Then Krishna's wrath was kindled and he went forth to Mathura and smote him and lo he was dead.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

3. Then Krishna gave the people good laws and ruled them wisely.

4. Now king Jarasandha of Magadh, the brother of Kansa's wives, came with a large army to conquer Mathura.

5. And his men were numerous even as the sands of the sea and his wealth was great, yea greater than Kuvera's.

6. Then Krishna said, Behold ye sons of Jadu, we are few and poor, so shall we leave the city to Jarasandha and move westward.

7. So they went forth to the west even up to the sea and built the city of Dwaraka and dwelt there.

8. There the children of Jadu—the Bhojites, the Andhakites and the Kukurites lived peacefully under him.

IV

1. Now it came to pass that a mighty battle was fought between Pandavas and their uncle's sons, Kauravas.

2. This was done that it might be fulfilled which was said of old, Brother shall rise against brother and bloody battles shall be fought.

3. And all the kings of Ind assembled in the wilderness of Kurukshetra, yea from the Himalayas to Comorin.

4. Now when Krishna came to help Pandavas, he saw Arjun, very much cast down. And he said unto him, Why art thou cast down? Fight and have thy right.

5. If ye fight not, your enemies will think you like the publicans that are weak in heart. Are ye not much better than they?

6. Verily I say unto you, the soul dieth not, but passeth into another body, even as a man weareth a new cloak.

7. Ye have heard that it was said by the sages of old that Thou shalt perform sacrifices and go to heaven; verily I say they have their reward.

8. But desire not the reward and do not sound a trumpet before thee as the hypocrites do.

V

1. Ye have heard that Thou shalt renounce all works, but I say unto you whosoever renounceth the worldly tasks but lusteth after them is a hypocrite.

2. So be thou ever working for it has been said that even Thou shalt not eat except by the sweat of thy brow. But whatever thou eatest or whatever thou doest do to the glory of God.

3. Whosoever offereth any gift to me—water, flowers, fruits or leaves with a sincere heart, that gift shall I take; for hath he not humbled himself for which the kingdom of heaven is?

4. I am the Light of the world, the Supreme Soul, yea, the holder of the universe, but people know me as Basudeva Krishna.

5. Despise all good and bad and seek my shelter and thou shalt not sin before God. *Selah.*

6. Then Arjun arose for battle and long was the fight and terrible was the bloodshed, yea, the land was red with blood.

7. Rivers of blood flowed and mountains of corpses were heaped and the land of Ind was desolate.

8. And the Lord smote the Kauravas by the scores of hundreds and thousands and they were all dead for they sinned against God.

VI

1. When Krishna saw his work was done, the empire of righteousness founded, he departed into Dwaraka.

2. Now it came to pass that the sons of Jadu sinned in the eye of the Lord and God cursed the city and it was doomed.

3. They quarrelled with one another and fought with one another and they were destroyed for their wickedness.

4. Then Krishna seated himself on the branch of a tree when a fowler shot an arrow at him and he yielded up the ghost.

5. Then a thick darkness covered the earth, the earth quaked, the hills rent and behold the land of Dwaraka was under the sea.

6. And all the devas and the departed saints appeared and sang welcome to hail their Lord to heaven.

7. Now when the unbelievers saw these things, they feared greatly saying, Truly this was the Incarnation of God.

8. And the spirit of Krishna said unto all, Lo, I am with you alway, even unto the end of the world. *Amen.*

———:O:———

VINOBAJI IN TELANGANA

By SURESH RAMABHAI

The history of the human race may be described as the story of a long and continuous struggle between the 'haves' and the 'have-nots,' the former trying to have more at the cost of the latter, and the latter trying to rise to the status of the former. The political, economic, religious, social and even cultural revolutions may be regarded as the manifold shades of this great struggle in which greater stress was laid at a time on one particular aspect of it against the other. It is the task of the reformer or revolutionary to bridge the vast gulf separating the haves from the have-nots, or, in other words, to break down the oppressive variety of walls acting as a barrier between one man and another, one class and an other, one community or country and another.

To a greater or smaller extent our country also as much suffers from this malady as any other. And inside the country the most conspicuous victim of this havoc is the State of Hyderabad whose capital city with its dazzling wealth and luxurious display offers a gruesome contrast to the squalor and poverty of the inhabitations

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stretching on from about five miles off from the city. Again, nowhere in Hyderabad has this gulf between the haves and the have-nots assumed so devastating proportions as in Telangana. It is the name given to the area comprising the districts of Mahbubnagar, Nizamabad, Karimnagar, Nalgonda and Warangal, in the south-east, east and north-east of the State, where Telugu is the language of the masses. The centuries-old feudal administration of the State has only countenanced to the growing of this gulf still wider. The general people in Telangana are perhaps poorer and far more afflicted than their brethren in any other part of the country. But, until a few years ago, no attempts were made to alleviate their misery or meet their genuine grievances. Unfortunately, however, the youths, abiding by Communism, who rallied together in this mission of service believed in the maxim of 'All is fair in love and war.' They began to develop Telangana into an impregnable base from which they thought they could succeed in establishing other pockets and thus conquering the whole country in no distant future.

During the British regime neither the condition in Telangana was very serious nor did the then Government of India take any interest in the matter. But with the British withdrawal from India the situation took a grave turn. And when both the State Government and the Republican Government at New Delhi were badly preoccupied in the 'Police Action,' the Communists took hold of this sleeping-hour opportunity to propagate their mission and set in such horrors in most of Telangana as to make the 'haves' flee away with their lives and even the official administration seemed to come to a stand-still. By the time both the State and Central governments felt ready to tackle the area the problem had already taken the form of a big menace pervading all round and the Communist-infected Telangana was famous the world over. But all governments have a strange sense of prestige and a stranger sense of recovering it, if lost. So curiously impelled, both the Governments, amassing all possible stuff in the form of man or material sprang upon Telangana with a leonine violence and asked, at the point of pistol, its people to give correct clues of the communists or hand them over to them (the Police). Frightened by this monstrosity, the poor inhabitants, in some measure, began to give the whereabouts of some of them whom they knew. This enraged the communists bitterly. And they came at night to inflict every pain and torture on those who, according to their true or false information, had submitted to the wishes of the Government. Thus ravaged by the Police forces in the day and by the communists in the night, the hundreds and thousands of men and women and children in Telangana are groaning under a terror which has no parallel in the country. Naturally many innocent people who had nothing to do with either the Police or the communists also came under fire. It is like the grinding down of the proverbial ant together with the grain between the two stones. And truth it is that the innocent ones far outnumber those who are really hands in glove with the Police or the communists. Virtually, therefore, a reign of terror stalks the entire Telangana and the woe-stricken millions know no end of their miserable plight which beggars description.

Towards these people, it was on the auspicious day of Ramnavami, the 15th of April 1951, that Acharya Vinobaji Bhave, or Vinobaji as he is lovingly called, set his face when he started from Hyderabad on a walking tour of Telangana. To quote his own words :

> "I wanted to tour the Telangana as a soldier of Shanti Sena in order to propagate the message of peace. For many days, I could not put into practice this wish of mine for many reasons. But, however, after obtaining the blessings of the Lord Rama, I have undertaken this tour", as he said in the course of a speech (May 10th) delivered to the Communist detenus whom he met in the District Jail of Nalgonda (Vide unofficial Note No. 364, issued by the Director of Information and Public Relations, Hyderabad).

What is the problem of Telangana? As Vinobaji said in his speech in the village of Mirialguda (May 15th) :

> "Some people here possess thousands of acres of land while some cannot call even one acre as their own." (No. 353)

The seriousness of the situation can be gauged by what he said at Balapalle (May 31st) :

> "The population of this village is 3,000 and its cultivable area is 3,000 acres. But only 90 families own the entire lands, while 600 families are landless. Nor is there any cottage industry in the village. The weavers of the village get yarn sufficient to keep them engaged for eight or ten days only in a month. Equitable distribution of lands should be co-ordinated with the development of cottage industries. Villagers should not grow cash crops. They should grow food crops and enough cotton to enable them to make their village self-sufficient in the matter of clothing. *The trouble in Telangana is due to indiscriminate growing of cash crops, like groundnut and tobacco.*" (Vide No. 330)

By the way, it shows that thoughtless encouragement given by the authorities in India to the random growth of cash crops like cane, groundnut and tobacco, is responsible for much of our food shortage, as Vinobaji also mentioned in very clear terms in his note on the letter from Sri R. K. Patil, member of the National Planning Commission. (Vide *Harijan*, dated 23rd December, 1950 and 3rd March, 1951). How deeply Vinobaji feels about this can be gathered from his speech at Medepalli (May 26th) :

> "Forty years ago, as a student I used to read and think about the conditions of my country and feel sorry for my slave country and its miserable conditions. To-day, after forty years, there is no change in those conditions; on the contrary, they have worsened." (No. 374)

In keeping with the time-old tradition of India, Vinobaji wants to meet this baffling situation by performing a *Yagna* :

> "In olden days, when disturbed conditions prevailed in the country, our ancestors used to perform *yagnas*. I also wanted to perform a *yagna*, so I have started experimenting this *Bhudana Yagna*. I have asked many persons to donate lands. Everyone should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take part in this *yagna* which is in the interest of the upliftment of the people. Just as we give our share to the *yagnas*, so also we should donate lands. People were doubtful whether anyone would donate lands to the landless poor in the Kaliyug but when there is a person to ask, people are giving and up till now (speech at Tanikella on May 30th) I have got 3,500 acres of land." (No. 386)

From the foregoing it is manifest that the mal-distribution of wealth and property has brought about all the trouble in Telangana. Nothing else has so much contributed to the communist menace as this. As Vinobaji said at Suryapet on May 23rd :

> "The rich people are responsible for the creation of the communists. The rich in fact are the fathers of the communists." (No. 373)

Receiving donations of land from every one and distributing the same among the poor is the only way to root out this trouble. No amount of Police and military forces will do the job. As Vinobaji made it clear in a speech :

> "In summer you will not find grass but no sooner the rainy season starts, grass begins to grow as there are seeds of grass in the earth. So also the Police can curb the Communist menace for a while, but it cannot root it out permanently. So we must root out this menace by adopting the right path." (No. 386). Or again, "The police will not be very helpful in fighting the Communist menace. The only way to root it out is to remove the unequal distribution of land by peaceful way." (No. 379)

Vinobaji wants that effective legislations must be passed so that this anomaly may become a thing of the past. Speaking at Naikengudam (May 23rd) he said :

> "The task begun by me should be continued. Sri U. Kesava Rao, the President, Nalgonda District Congress Committee, will continue this task. According to my estimate, about fourteen to fifteen lakhs of people live in the District of Nalgonda and if fourteen to fifteen thousands acres of land are donated, then fourteen to fifteen thousand individuals will get their livelihood. This act of distribution of lands will remove the state of restlessness and establish peace. Government should give Taccavi loans and other facilities to individuals who will be acquiring these donated lands. Besides this, the Government should pass an Act limiting the extent of land and the number of acreage that a man should possess and then it should make a provision by the same Act to ballot the rest of the land to the poor. If these things come into existence the communist menace will disappear." (No. 373).

Further, the 'haves' must donate this land regarding it as their duty. Vinobaji made it clear in a speech (May 26th) at Kodmur :

> "The donations that are now being given are not obligations. According to Shastras, the act of donation means the act of sharing with others whatever we have. This clearly means that no individual obliges the other individual by giving donations." (No. 379).

It may be argued whether donation of money will not serve the same purpose. No, certainly not. Vinobaji is very firm on this point. He unequivocally declared at Kodmur (*ibid*) :

> "I do not accept money by way of donation. As a matter of fact money has destroyed India. The values of commodities do not fluctuate; on the contrary, the price of money fluctuates. The value of foodgrains is stationary. I want to redeem the people from the clutches of money which is merely medium and which generates a feeling of pride in the man who donates it. But in the donation of lands the right of the poor is inherent and, therefore, I accept donation of lands. . . . If everyone embraces the poor with love I am sure that the Communist menace will vanish."

In passing it may be remarked that Vinobaji accepts only Shrama-Dan (donation in the form of labour done). He has been working on this principle for more than a year past and with a band of devoted workers has achieved remarkable results in the direction of self-sufficiency by self-labour, in his Paramdham Ashram at Paunar, about five miles away from the famous town of Wardha.

As regards the Communist menace in Telangana, its genesis has been given above in Vinobaji's own words. He bears no malice or ill-will towards the believers in the Communist doctrine. Speaking (May 23rd) at Chandupatta, he said :

> "I have heard that a sort of awakening does exist in this village, as the communists have put in some work here. I consider the communists as my brothers. I have got some friends among the communists and it is not a crime to be a Communist. To be a Communist is to serve the poor." (No. 373)

But Vinobaji has no doubt about it that the ways of Communists are not suited to the country. In the course of the same speech he observed :

> "But, however, the Communists have indulged in violence and murderous acts. This is absolutely wrong and, therefore, all their services go over-board. Sri D. Venkateshwara Rao, a prominent Communist, who belongs to this village is a good man. If he could see me, I would have been able to convince him that he had adopted a wrong path. I have met some Communists in the jails of Hyderabad and Nalgonda and I held talks with them. It is my earnest wish to convince the people by making them understand that the way of peace is the real way to serve the masses." At another place he stated, "I want to make it clear to the Communists that it is not necessary for them to murder the rich, for the era of Democracy has ushered in. As a matter of fact the rich can be killed without pistol; for every adult has now acquired the right to vote. The future Raj will be the Raj of the common man. I request the Communists to come out openly and work. If they do that I will give my co-operation. If the Communists abandon their path of violence, all good and moral people will co-operate with them. Mahatma Gandhi also used to say: 'I am a Communist but I will not accept the suicidal path of violence'." (No. 374)

Nay, Vinobaji goes even further. In appeal to the Communists, he said at Wyra :

> "I request them to abandon violence and if they do so, I will accompany them to every nook and corner of India in order to propagate Communism."

What else could a believer in Communism aspire for ?

Vinobaji's method is that of love. As he observed (May 26th) at Kodmur :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Naval Vidyan Chennai and eGangotri

"The change that you villagers are perceiving in the entire environment is due to the blessings of God. If everyone believes in God it is definite that He will show the way. God is present in everyone's heart. If we appeal to Him, much work can be done. I will accept lands which are donated willingly. I have not come here with sten gun or with any power which is vested in me by Government. The Communists are doing their work and the Government is also doing its work in its own way. I am also doing some work here in my own way which is essentially based on love."

One need not be sceptical about the efficacy of this method which Mahatma Gandhi taught us by his life as also by his death. Hatred and violence do not help us at all in the long run. Attacks by the Police in the day and counter-attacks by the Communists at night will lead either of them nowhere and, of course, the people will continue to suffer in the extreme. To quote from Vinobaji's speech (June 5th) at Gavicharla :

"Violent manifestations of Communist activities may disappear in Telangana for some time, due to police vigilance and the split among the Communist workers, but Communism as such may continue as a problem with us until we solve the problem of poverty through redistribution of lands and the abolition of the drink habit."

He believes in the innate goodness of man and the conversion of his heart by persuasion. When he met the Communists in the Warangal Jail they asked him whether he could solve the problem by reinstalling the rich in their villages. To this Vinobaji replied :

"I believe that hearts do change. The act of donation will lead to a duel between the good and the evil inherent in man and improve their outlook. The fusion of Indian metaphysics and Western sciences will necessarily be sweet. Non-violence alone is the remedy of all evils." (*Ibid*)

But to work this method is a very hard task indeed. A solid work of this nature could be undertaken only by the Sarvodaya Samaj. To quote again from his Gavicharla speech :

"The Congress cannot serve the people because the principle of service has become a joke for the Congress. The Socialists are a better lot but they are after power. In these circumstances, the Sarvodaya Samaj alone can deliver the goods."

During this tour Vinobaji did not lay stress only upon the distribution of land. He made a plea for self-help and village industries also. As he said in a speech (May 10th) at Nalgonda :

"There is a limit to the extent of the availability of land. Besides, the population is also growing day by day. We must, therefore, increase the number of wells by digging new ones."

(It may be added that Vinobaji has actually dug a well at Paunar, no labour from outside the Ashram being availed of). He went on to say :

"We must construct canals also. The digging of new wells and constructing of new canals will usher in a new era wherein a man will be contented with twenty acres of wet land, whereas now he is not contented even with a hundred acres of land."

He continued :

"Without cottage industries, mere possession of land by a *kisan* will not solve his problem. If the *kisans* take to producing finished goods from the raw material obtaining in the villages, then only they will save themselves." (No. 364)

He also asked the rich to open Nai Talim schools in the villages so that no children need be sent to the cities.

Vinobaji concluded his tour on June 6th when he reached Mancherial, a little town on the bank of the Godavari. During this historic tour of 51 days Vinobaji encamped at 51 villages. It may be added that it was in the early hours of the morning on the 8th of March, 1951, that Vinobaji left his Ashram on foot for Shivarampalli, five miles from the city of Hyderabad, where he reached after covering some 300 miles on 7th April and for four consecutive days from April 8th to 11th, the Sarvodaya Samaj met there for its annual session. In his Telangana tour Vinobaji passed through some 200 villages and received about 9,000 acres of land for distribution among the landless, for which purpose he has formed a committee of three persons. Vinobaji settled about 500 village disputes, almost ten every day, during this pilgrimage of peace, and addressed some two lakhs of people.

A word about his daily routine. Vinobaji got up early in the morning before four o'clock and after the nature calls and the morning prayer he started on his tour by five. Walking for ten or twelve miles until nine he would come to a village, have his bath, frugal meal (consisting of some milk, curd, bananas, and gur) and rest. For two hours from two in the afternoon he went through his correspondence. Interviews began at four and the evening prayer at five, which closed with a speech by Vinobaji. Again, he gave time to the visitors after the prayer and by nine o'clock he went to bed.

The tour has now come to a close. Vinobaji is completing the return journey on foot which will take another fortnight. All the while in Telangana his endeavours have been to "bring about," as he said in a mass meeting at Warangal on June 5th, "a silent ideological revolution in our social outlook by asking the rich to donate lands to the poor."

This is a very heartening, refreshing news the like of which the country has not heard ever since Gandhiji passed away. At this critical hour the people all over the country look forward to Vinobaji to help show them the path lit by the Sarvodaya light and save them from the impending ruin.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

CONVERSATIONS OF GANDHIJI: *By Chandrashanker Shukla. Vora and Co., Publishers Ltd., Bombay. 1949. Pp. viii + 134. Price Rs. 3.*

Shri Shukla, who was the Assistant Editor of the *Harijan* for several years, acted as Gandhiji's Secretary during 1933-34. This was the period when the Civil Disobedience Movement was restricted to Gandhiji alone, and when Gandhiji toured over India in order to combat the vile custom of untouchability.

There were numerous interviews in those days of which reports were duly prepared and subsequently corrected by Gandhiji himself. Shri Shukla has now presented them in the small book under review. He has put students of Congress history under a deep debt of gratitude by throwing an unexpected light on how Gandhiji used to work out his programmes through the national organization.

A DAY BOOK OF THOUGHTS FROM MAHATMA GANDHI: *Edited by K. T. Narasimha Char. Macmillan and Co., Limited. 1951. Pp. xxiv + 200 and eight plates. Price paper cover Rs. 2-4, cloth boards Rs. 4-8.*

The editor has brought together excerpts from Gandhiji's writings and arranged them in groups date by date. They are meant to be read, perhaps one group on each day of the year. He has therefore tried to present only such thoughts as has seemed to him to be of abiding interest.

At the end of each quotation we find the name of the book or journal from which it was taken, but no exact references are given. These look unnecessary. It would have been much better if the references had all been given in one place in the appendix. The plates which have been presented also seem to be unnecessary. One portrait of Gandhiji is all right; but why bring in others like the President of the Indian Republic or members of the Cabinet of the Indian political chess-board seem incongruous besides a recital of Gandhiji's thoughts which have a permanent value for all times. The printing and get-up of the book do great credit to the publishers.

NIRMAL KUMAR BOSE

THE CULTURAL HISTORY OF THE HINDUS: *By Chandra Chakraberty. Published by Vijaya Krishna Brothers, Calcutta. Pp. 376. Price not mentioned.*

The author's aim is "to assess and evaluate our ancient civilisation and culture ranging from 2700 B.C. (Mohenjo Daro period) to 648 A.D. (Harshavardhana's time)," and in particular "to show dispassionately how India's culture is indebted to others and how her natural genius has expressed itself." We can form an idea of the range and variety of topics dealt with by the author from his sectional headings, *viz.*, Arts, Philosophy, Morals, Law, Domestic Rites, Medicine, Astronomy, Religious Festivals, the Epics and the Puranas, the Economic Life, Indo-Iranian Contacts, Indo-Chinese Relations, Sex Life, and the Cultivated Plants. No one who reads these pages will grudge the author high praise for his enormous industry in tackling a vast mass of material bearing on his work. But his comparisons of ancient Indian and related civilisations have often to be accepted with a good deal of caution. His etymological derivations especially are not unoften fanciful, if not fantastic. With this qualifications, the book may be safely recommended as a useful reference work on the various aspects of ancient Indian culture and civilisation.

U. N. GHOSHAL

MAHABHARATA (Santiparvan): *Fascicules 18 and 19. Edited by Prof. S. K. Belvalkar. Published by the Bhandarkar Oriental Research Institute, Poona, 1946-47. Pp. vii + 683.*

In these two fascicules the General Editor completes his textual analysis of the famous *Raja-dharma* section which he began printing on the 15th August, 1948, the first anniversary of Indian Independence. We are glad to hope with him, that with the building up of their printing press in the Institute's own premises in Poona, the whole work of publishing the critical edition of the Mahabharata will be completed 'long before the Institute celebrates the completion, in 1968, of 50 years of its unflagging work in the cause of oriental research.'

The *Apaddharma* and the *Mokshodharma* sections will be issued in two separate volumes with special Editorial notes on each of them and the entire Santiparvan (in 4 vols.) will be published with critical notes and general Introduction summing up the results. (As it was done by Dr. Sukthankar in the case of the *Adiparvan*). The Editor confesses that 'old and independent MSS. are very rare'; and so it is difficult to preserve uniformity of textual tradition in regard to the different versions of the Santiparvan which was nicknamed the "Pseudo-epic," of which several versions were textually altered or conflated! So we are doubly grateful to Prof. Belvalkar for having given us a rational order of text reconstruction, even when we know that the Upa-parvans have 'often suffered much wayward handling in the course of transmission.' The bulk of the Mahabharata text came to be fixed in the Gupta period (C. 500 A.D.) after say a thousand years of transmission from the age of Panini (C. 500 B.C.). Then the diverse MSS. traditions developed for another one thousand years. No wonder then that the Great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Epic shows today a bewildering variation of readings—both in the composition of the Parvans and of the Upa-parvans.

In the MSS. of the *Rajadharma* presented by Prof. Belvalkar we notice that they mostly come from the 17-18 centuries. But a very rare Maithili version of the entire Santiparvan—dated 1516 A.D.—has been traced in the Nepal Durbar Library (No. 738) which has previously furnished unexpectedly new materials to the Bhandarkar Institute. The Editor has used, among others, a rare Bengali MS. (dated 1687) now in the National Library, Paris, which contains the Rajadharma, the Apaddharma and the Mokshadharma sections. These sub-parvans are self-contained units appealing to distinct classes of readers; and therefore critical notes will be published separately for each separate section. Purely exegetical notes apart, the learned editor has given references to the *Sutra, Smriti* and *Puranic* literature throwing new light on the Rajadharma text which can and should be studied with special reference to the Arthasastra, Manu and allied group of Sanskrit literature on the political, economic and administrative sciences of ancient India. This is a much neglected branch of Hindu sciences partly illumined by the *Arthasastra* of Kautilya; and now Prof. Belvalkar has furnished the first critically edited text of the *Raja-dharma* for which future researchers will be ever grateful to him. The Bhandarkar Institute is doing its arduous task for the whole nation and Free India should come forward to help the Editor and his learned colleagues to complete their "Mahabharata-yajna," if possible, by 1958 marking the centenary of India's first fight for Independence.

KALIDAS NAG

POONA RESIDENCY CORRESPONDENCE SERIES. (Government Book Depot, Bombay):

Vol. X: *The Treaty of Bassein and the Anglo-Maratha War in the Deccan, 1802-1804. Edited by Raghuvir Sinh. Price Rs. 15.*

Vol. XII: *Poona Affairs, Elphinstone's Embassy, 1811-1815. Edited by G. S. Sardesai. Price Rs. 15.*

Vol. XIV: *Daulat Rao Sindhia and North Indian Affairs, 1810-1818. Edited by Jadunath Sarkar. Price Rs. 15.*

These volumes bring to conclusion the famous series of English Records of Maratha History, undertaken by the Bombay Government, with the help of the most eminent historians available in India.

These contemporary reports, most of them unpublished till now, are the basic materials on which the true history of the Deccan and also of North India west of Oudh, during the first eighteen years of the 19th century will have to be constructed by the future historian. Their value can never be overestimated. The arrangement, summary of contents, and indexing of the volumes of this series are very helpful to the student. The records light up a rather obscure period of Indian history. Going through these papers, one realises that we had so long been content with the husk only; here is the kernel.

Vol. X gives the full and correct text of five important treaties not easily available elsewhere, and fully details the Duke of Wellington's diplomatic palavers with Vittal Mahadev whom he declared to be "a cleverer man than Talleyrand"! Vol. XII shows how Fate drove the last Peshwa Baji Rao II relentlessly on to the murder of Gangadhar Shastri and ensured his downfall. Vol. XIV has been called by its editor as "The Agony of Rajputana and Malwa". It gives the fullest information in print about the Pindharis, Amir Khan, Jaswant Rao Holkar, and the Rajput States in their worst plight. Tod's reports on the Pindharis, though very long, have been here printed in full. This volume is invaluable.

BRAJENDRA NATH BANERJEE

THE AGRARIAN PROBLEMS OF MADRAS PROVINCE: *By V. V. Sayana, M.A., Ph.D. Published by the Business Week Press, 173 Lloyd Road, Madras 14.*

The prosperity of agriculture is not only essential to the success and prosperity of all economic activities in other sources of life as industry, trade and commerce, but to an agricultural country like India it is also to a large extent the economic basis of social progress and political stability. Agrarian problems and policies have attracted special attention of the Governments and the peoples since the Great Depression. But since after the second World War, agrarian problems have assumed much greater importance than ever before and in India, it has occupied the first place from the point of urgency. But unfortunately for us, a continuous and well-planned research activity to carry on systematic and scientific studies of the factual situation in our provinces which is so very essential for the preparation of a rational plan of reconstruction, is extremely lacking. In this book, Dr. Sayana has given us a very rich study on the agrarian situation of Madras which meets the standard of the Research Worker as well as the needs of the enlightened public. The work is the result of a study of published material and accessible records, official and non-official, available on the subject supported by direct field investigations of villages selected on a multipurpose random sampling basis. The book is a very valuable addition to our present meagre stock of knowledge of the agricultural situation in India. We wish there were more Research workers to undertake similar studies in other provinces.

D. BURMAN

THE PERMANENT SETTLEMENT IN BENGAL AND ITS RESULTS: *By S. Gopal. Allen and Unwin Ltd., London. Pp. 52. Price 4s. 6d.*

Many books have been written on the Permanent Settlement of the Land Revenue in Bengal and its good and bad effects on the people of the Province. Mr. Gopal hails from the Madras Province and is comparatively 'an outsider.' He gives a scholarly account of the establishment of permanent settlement in Bengal, and the way in which it has worked. The writer's being an outsider, while it has added value to the study generally, has sometimes landed him in errors. The book, which secured the Curzon Memorial Prize at Oxford, is of particular value now when the State is contemplating abolition of zamindaries.

HOW TO FIND OUT ABOUT THE UNITED NATIONS. *Pp. 48.*

UNESCO PUBLICATIONS: *Pp. 84.*

The United Nations Organisation with all its faults is still the only World Organisation where the world problems are discussed from the international angle of vision. Its various activities are little reported in the daily press; and the intelligent querist finds it difficult to pursue its various activities and to know authoritatively about it. These two pamphlets will be of great use to students of international politics and intelligent readers.

THE QUEST OF LEADERSHIP: *By Donald Portway. Thacker & Co. Ltd., Bombay. 1945. Price Rs. 4-14.*

The author is a man of varied experience. He is an Engineer, President and Senior Tutor of St. Catharine's College, Cambridge, served in the Army for a long time and had been a member of the Army Selection Directorates of Britain and India. He stayed in India for a year and came into close contact with Armymen. Having keen interest in men and their affairs he made his own observations about many aspects of Indian life and has expressed his views in clear and unambiguous language.

Leaders are necessary in every field of human activity. War, politics, business, industry and peace too depend a good deal on the leader and leading man that each has in its own sphere. Leaders in different fields need not have the same psychological qualities. Leadership depends as much on the personal traits of the leaders as on the environmental circumstances. Modern psychology has been paying very great attention to this question of leadership traits and has already contributed materials of considerable significance. The author has presented in this little volume much of this material in plain non-technical language. Laymen as also students of psychology will certainly be benefited by going through this book.

Training and sound education are necessary for all would-be leaders, even for those who are 'born' leaders. This is a point which has been rightly emphasised by the author who has in this connexion drawn pointed attention to the faultly educational system that prevails in India. Real civilian leadership cannot be expected in a country where passing the University examination by fair means or foul is accepted as the ideal of education. The author has made some very pertinent though unsavoury remarks about our methods and ideals of education.

"It is regrettably true that it is impossible to imagine the emergence of dynamic leaders from India's high schools and India's Universities in their present sitting" (p. 101), writes the author and he feels that it is in her military training centre that India is training her future leaders because there "moral and physical well-being is practised instead of mere book-learning."

After all criticisms are not new and have been repeated many times by our own countrymen. So it is not difficult to agree with him. India has travelled a long distance since 1945 when the book was published. Let us hope that she will ere long be able herself to find out the types of leaders that she needs and to devise adequate methods for their training and education.

S. C. MITRA

ROBERT KNOX IN THE KANDYAN KINGDOM (Illustrated): *Selected and edited by Prof. E. F. C. Ludowyk of the University of Ceylon. Published by the Oxford University Press, London. Price Rs. 6.*

The book under review is an abridgment of *An Historical Relation of Ceylon* by Robert Knox, a work which "delighted and edified his (the author's) age."

Son of an English ship-captain, Robert Knox along with his father and several others was detained in 1660 under orders of the king of Ceylon. The elder Knox died shortly afterwards. The younger however survived and managed to give the slip to his captors in 1680.

The present volume describes Knox's life and experience during his captivity and gives an account at the same time of the people, their manners and customs, their laws and language and also the climate, the flora and fauna and the administration of contemporary Ceylon. Editorial notes at places add to the value of the book. The reading public in general and students of history in particular will find the book useful, informative and interesting.

The printing and get-up of the book are excellent. But with a reading matter of 175 pages of text and 45 pages of introduction it should have been more moderately priced.

SUDHANSU BIMAL MOOKERJEE

REPORT OF THE BOTANICAL SURVEY OF INDIA (for 1944-45, and 1945-46): *Calcutta. 1948.*

Due to war emergency floristic study in the field was kept in abeyance but later on 3,000,000 herbarium sheets were rearranged in the herbarium. Re-identification of all the herbarium sheets of *Grewia* in the light of Burrett's recent and excellent monograph of the family *Tiliaceae*, published in a German journal and not being easily available during the war, was done. This has resulted in adding three new species and several new combinations. Sir David Prain's *Bengal Plants*, Vols. I and II, are out of print. Students as well as plant-lovers suffer very much for their want as they are not always available for consultation. Persons interested in Botany and the Botanical Society of Bengal incessantly demanded at least their reprint pending the long-sought-for publication, *New Flora of Bengal* by the Botanical Survey of India. But the regrettable fact is that neither the Survey has yet published the said book nor does it deem necessary for reprinting Prain's *Bengal Plants*. When will the new book, *New Flora of Bengal*, be completed and published? Would it not be possible for the Government of India to reprint the *Bengal Plants* for the sake of convenience and research as a stop-gap arrangement? Surely this method of procrastination in researches is very much undesirable and the learned public should make their protests more thorough and stronger. It is also regrettable that only 89 new specimens were incorporated in the Royal Botanic Gardens' Herbarium in 1944-45. We should record our deep sorrow at the sad death of Lt.-Col. A. T. Gage who contributed much to Indian Botany by his researches and was also concerned with the opening up of the cinchona plantations in Burma and the scheme for the import of the Java Quinine bark. Randhawa discovered a new variety of an alga *Botrydium granulatum* (1) Grev. (var. *polyrhiza* nov. var.) and S. N. Banerjee established a new species of fungus (*Mitrula Agharkarii Banerjee*) but both of them violated international rules of botanical nomenclature in not including Latin diagnoses and thus losing their new status. A new fossil Gymnosperm (*Dadoxylon resinosum* Shukla) from Chhindwara district (C.P.) was described by Shukla. Prof. Sahni and Surange published a note on *Cyclanthodendron*, a new silicified member of the *Cyclanthaceae* from the tertiary of the Deccan. The discovery of this fossil provides an interesting link between the early tertiary flora of Deccan and the modern flora of South America. A new genus of *Rubaceae* and other new specimens were also discovered. Thanks to Prof. E. D. Merrill, Director, Arnold Arboretum, Harvard University, U. S. A., a cinematographic and botanical expedition to the snowy wilds of Northern Sikkim was undertaken. A huge collection of living specimens for cultivation in the Lloyd Botanic Gardens, Darjeeling and seeds of thousands of dry Himalayan plants for the herbarium was made later on.

In the Industrial Section, Indian Museum, the work also suffered but the department supplied some

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sary information relating to Pharmacopoeial drugs, insecticides, rubber-yielding plants, plants used in perfumery trade, etc., to the Government departments, the commercial public, the students, etc. Besides, the Department has discovered *Lobelia nicotianaefolia* Heyne, an Indian plant, which contains the alkaloid 3 times richer in active principles than the European species. In case of *Ipecac*, this section found that the crop should be harvested at the end of the 3rd year to get the maximum alkaloid. It is also recorded from several Indian species of *Aconitum* that the different species contain different proportions of alkaloid content. The most valuable report of Prof. A.V.Hill, F.R.S. on the "Scientific Research in India" has been published. He rightly says with regard to this survey thus: "The great natural resources of India are still inadequately known. Consequently the Geological Survey must be expanded, the Botanical survey restored and the Zoological survey extended." Will the National Government of India kindly look into this report carefully and try to tap the floristic wealth of the country by extending researches in all important branches of Botany? Surely the money spent will not be wasted.

R. M. DATTA

BENGALI

KAUTILIYA ARTHASASTRA (Part II): *Bengali translation by Dr. Radhagovinda Basak. Published by General Printers and Publishers Ltd., Calcutta 1950. Pp. 588.*

The present work happily brings to a conclusion an outstanding work of recent Bengali literature. This is the first complete Bengali translation of that masterpiece of the Ancient Indian Art of Government, the *Arthasastra* of Kautilya. In his short Preface, the author modestly craves the indulgence of his readers for probable deficiencies in his translation, but a perusal of his work has convinced us that it worthily maintains the high standard of the preceding part. It is, as we observed in the course of our review of the first part (*The Modern Review*, January 1951), a marvel of lucidity combined with scholarly accuracy of a high order. We are glad to find that in accordance with a suggestion made by us last time, the author has added in an Appendix a list of rare words (with their explanations) in the whole work. One could have wished that the list had been fuller by the inclusion of such items as *bali*, *udakabhaga*, and *vaidharana*, and more exact in rendering the meanings of words like *sita*, *samgha* and *hiranya*. But these are minor blemishes in a fine work on the completion of which the author deserves our warmest congratulations. We have no doubt that it will receive a most cordial welcome from all lovers of our ancient culture.

U. N. GHOSAL

HINDI

MARATHI SAHITYA KA ITIHASA: *By Narayan Vaidev Godbole, M.A. Publishers: Gayaprasad and Sons, Agra, U.P. Price Rs. 3.*

India is a land of many languages which have developed rich and interesting literatures during the last one thousand years or so. These literatures in their early stages drew their inspiration principally from Sanskrit and latterly from English since this country came into contact with England about two hundred years back. Hence generally they followed similar lines of development, though of course there were occasional and none the less interesting variations. Besides containing much valuable information for the student of literature and history they attract the attention of the general reader to the amazing unity of culture underlying the apparent diversities in different parts of this vast land. Their contents therefore require to be popularised throughout the length and breadth of the country. It is, however, a matter of regret that even accounts of these literatures are little-known outside the places of their origin. Under these circumstances Messrs. Gayaprasad and Sons deserve to be congratulated for making accessible to the Hindi-reading public short popular accounts of two important literatures of India, *viz.*, Urdu and Marathi. We hope the enterprising publishers will not stop with what they have done but will complete the series with accounts of all the important literatures. We wish them every success and god-speed in their undertaking.

The work under review has a special value in that it has been compiled by a scholar who is himself a Marathi possessing intimate knowledge of the subject. We would be eagerly waiting for similar publications in other languages too.

CHINTAHARAN CHAKRAVARTI

GUJARATI

KALAKARNI SANSKAR YATRA: *By Ravishankar Raval. Kumar Karyyalay Ltd., Ahmedabad. Pp. 340. Price Rs. 4-12.*

Ravishankar Raval, the distinguished artist of Gujarat, undertook a pilgrimage—an artist's pilgrimage to Japan, North India and Kulu, an account of which forms the content of the volume under notice. The descriptions are colourful, and they are accompanied or set off by sketches and photographs which give a fillip to the reader's imagination. The sections treating of the artist's visit to Japan, North India and Kulu are kept separate, and the atmosphere in each is distinct. Ravalji has enough of the spirit of reverence dwelling in him to make his account of the men and manners that he met something more than a mere human document. Mori San of Kisto and the various organisations of teaching, encouraging and conserving art products received his attention; Nandalal Babu and Sri Abanindranath Tagore had naturally an attraction for him, and he was closely observing what Sri O. C. Ganguli, Jamini Roy and Ramendra Chakravarti were doing in matters of art, while his enthusiasm for the Roerichs and for Prof. and Mrs. Cousins has been very well expressed.

A goodly portion of the second section is devoted to Bolepur and Calcutta, roughly speaking, more than one-fourth of the book.

How the World War II has changed some of the valuations of the artist! It is interesting to find that while Ravalji was full of admiration for Jamini Roy and his bold stand for the living village art, he was doubtful if Jamini Babu would get his due appreciation in his own life-time in spite of his 'immortal' courage and insight and sacrifice. Happily, this wished-for denouement is now an accomplished fact.

The book retains its interest from start to finish; it is not a travel diary, but an understanding appreciation of art in the countries visited—such as may open the eyes of the reader to the realities round about him.

Miracle Man with Unrivalled Power

Everybody in this country is aware of the fact that India's unrivalled and greatest palmist, Tantric, Yogi vastly learned in the Astrology and Astronomy of the East and the West, gifted with supernatural power of predictions, permanent President of the Internationally famed Baranashi Pandit Mahasabha of Benares and All-India Astrological and Astronomical Society of Calcutta.

RAJ-JYOTISHI

Jyotishsamrat Pandit Sri Ramesh Chandra Bhattacharyya, Jyotisharnab, Samudrikratna, Jyotish-shiromani, Raj Jyotishi, M.R.A.S. (Lond.), has won unique fame not only in India but throughout the world (*e.g.*, in England, America, Africa, China, Japan, Malaya, Singapore etc.) and many notable persons from every nook and corner of the world have sent unsolicited testimonials acknowledging his mighty and supernatural powers.

This powerfully gifted great man can tell at a glance all about one's past, present and future, and with the help of Yogic and Tantric powers can heal diseases which are the despair of Doctors and Kavirajas, can help people to win difficult law-suits, and ensure safety from dangers, prevent childlessness and free people of family unhappiness. His three important predictions (prediction about the British victory on the very day—2nd September, 1939—of the declaration of last World War, prediction of the achievement of independence by the Interim Govt. with Pandit Jawaharlal as the Premier made on the 3rd Sept., 1946, and prediction regarding the future of India and Pakistan which had been sent to the Prime Minister of India on the 11th August, 1947 and subsequently published in various Newspapers) have proved correct to the detail, amazed people the world over and have won for him unstinted praise and gratitude from all quarters including His Majesty George the Sixth, the Governor of Bengal and eminent leaders of India. He is the only astrologer in India who was honoured with the title of "Jyotish-Siromani" in 1938 and "Jyotishsamrat"—Emperor among astrologers and astronomers—in 1947 by the Bharatiya Pandit Mahamandal of Calcutta and Baranashi Pandit Mahasabha of Benares. —a signal honour that has not been endowed on any astrologer in India so far.

Panditji is now the Consulting Astrologer to the Eighteen Ruling Princes in India.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji." **Her Highness The Dowager 6th Maharani Saheba of Tripura State says** :—"He is no doubt a great personage with miraculous power." **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt., says** :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son." **The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt., says** :—On seeing my son, his prophecy about my future is true to words." **The Honourable Chief Justice Mr. B. K. Ray of Orissa High Court says** :—"He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot, says** :—"The wonderful power of calculation and Tantrik activities have struck me with greatest astonishment." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court, says** :—"Panditji has bestowed the life of my almost dead son." **Mr. J. A. Lawrence, Osaka, Japan, writes** :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andre Tempe, 2723, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Etia, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects from your Kavachas on several occasions", etc., etc. and many others.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. **Price Rs. 7-10.** Special for speedy action **Rs. 29-11.** Super powerful with extraordinary effects **Rs. 129-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special for speedy action **Rs. 34-2.** Super powerful **Rs. 184-4.** **(The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).** Super powerful **Rs. 38-9.**

SARASWATI KAVACHA.—For success in examination and sharp memory. **Rs. 9-9,** Special **Rs. 11-8.**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.** Super powerful **Rs. 387-14.**

INDIAN PERIODICALS

Naming the Country

V. S. Agrawala observes in *The Aryan Path*:

It is of interest and value to know the history and traditions of the different names of our country. There are two distinct traditions behind these names, one of them foreign and the other indigenous. All the foreign traditions are rooted in the ancient word *Sindhu*, as exemplified in *Sindhu* (Sanskrit), *Hindu* (Persian), *Indus* (Greek), *In-tu* (Chinese).

In the *Rig-veda*, the earliest Indian document, at least 3,500 years old, *Sindhu* is the word for a river, but more specifically for that particular river which encircles the country to a very considerable length on its north-west. Besides being a river-name, Sindhu was also the name given to the region lying to the east of the river and coinciding with the extensive tract of land now known as the Sind-Sagar Doab. The name Sind as applied to the present province is not sanctioned by antiquity when Sind was called Sauvira, from which the Biblical Ophir was derived.

The confusion of names begins from the time of the Arab invasion of Sind. But Sindhu was a famous geographical designation by at least 1000 B.C.; by it North-west India was known to her neighbours.

The modern word "Hindu" dominating the word "Hindustan," "Land of the Hindus", is directly descended from the ancient name Sindhu.

It is a common mistake to think that the derivation has anything to do with the Muslims. There is evidence in the inscriptions of Darius I, the great Achaemenian Emperor of Iran in the last quarter of the 6th century B.C. that the word "Hindu" was known to the Iranians at that time. In the Charter of the Palace Foundation from Susa, there is mention of Indian ivory being imported for the royal palace from Hindu or India. The Greeks, coming here under Alexander in the 4th century B.C., followed the same tradition and, by omitting the aspirate sound called the river "Indus" and the country "India." The Chinese followed the Greeks and named it In-tu.

At the beginning of the 3rd century B.C. the Sassanians were masters of the Persian Empire and their language was Pahlavi, from which modern Persian is derived. In Pahlavi also the country was known as Hindu and from there the word passed into Arabic and into the modern Persian of the time of Firdausi and Alberuni. The Muslims naturally applied, when they came here, the name "Hind" to this country, following an old tradition. The European nations borrowed the name "India" from their classical predecessors.

Now to the indigenous tradition of the country's name, which is threefold. In the Buddhist literature it was called *Jambudvipa*, but this name did not obtain lasting usage. The second name was given by the Puranas; *Kumaridvipa*, which reflects the colonization of the whole country from the Himalayas to Kumari, *i.e.*, Cape Comorin, and also its unification under a single geographical system. But this name also did not find much favour and was perhaps ousted early by the much more poetic, facile and widely accepted designation *Bharata-varsha, i.e.*, Bharata, the land served by a single system of rainfall or monsoon winds (*varsha*).

Bharata as the name of the country is derived from the basic word *Bharata*, the former having a long and the latter a short initial syllable. Now it is one of the most interesting facts of ancient Sanskrit literature, though one little known, that there are three independent etymologies for Bharata as the name of the country. These three derivations are based upon the conception of (1) the state, (2) the people, and (3) their culture.

According to the first etymology the country was called Bharata because it was brought under a unified political system by King Bharata, son of Dushyanta and Sakuntala of classic fame. Bharata is a great name in the list of old *chakravartins* recorded in the Puranas. A *chakravarti* ruler was one who had established his authority over a *chakra, i.e.*, a realm brought under a single sovereignty. Bharata was such a sovereign ruler and the country unified under him derived its name from him. In the *Mahabharata* it is explicity stated that the conquering chariot wheels of Bharata measured the earth up to the encircling oceans, together with its deep forests and high mountains.

By the time Vyasa composed his great epic, the name Bharata had become established as the designation of the whole country.

The second etymology of Bharata is derived from the name of the people. According to Vedic tradition the Bharatas were a very old Aryan tribe or, rather, the leading and most important *Jana* which, after crossing the Beas finally settled in the region of Kurukshetra, including the area around Delhi. This Bharata tribe became very powerful and widely distributed and its descendants found themselves the undisputed masters of Northern India. With the expansion of the Bharata tribe, the name *Bharati Praja, i.e.*, the people descended from that tribe, became a wider appellation and in course of time was applied to all the people settled in this land. There is evidence in the epic that the name had been generally so accepted, at least before the *Mahabharata* took its final form.

The third etymology of the name Bharata goes back to old Vedic literature. The authority of the latter on this particular point is repeated with notable emphasis by Vyasa in the *Mahabharata*. In the *Satapatha Brahmana* Bharata is the name of fire, which was so called because it was the mainstay of the whole community (*sarva-praja*). Culture was symbolized as *Agni Bharata*. Like a fountain it over-flowed into myriad streams, moving along the courses of rivers and valleys. It created on its march new fire-altars, *i.e.*, centres of civilization, until at last the Pilgrims' Progress covered the entire expanse of the country.—*Mahabharata, Vana parva*, 212.20.

This sublime conception of the unity of the country being brought about through the torch of culture aglow throughout the land, is of a beauty and sublimity unique in the whole range of Sanskrit literature. It would be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hard to find another passage which, besides being as true to its ancient pattern is of greater significance to our modern life. In fact, the cultural unity thus envisaged at the very outset of Indian thought, became the lasting charter of that intellectual and religious synthesis which has distinguished the history of this nation. Gradually the stream of culture began to pour itself into the life-cup of the differing peoples settled on the land, and when the vase was full it over-flowed, saturating the country and welding the many elements into one harmonious whole.

Bharata Agni, as the great symbol of light implanted in the hearts of men, dominated this vast cultural drama and finally gave its own name to the country. This was the basis of the name Bharata, a name applied to the country of all those who accepted that cultural synthesis as the culmination of their own past history. Thus there are three mutually amicable derivations underlying the name Bharata, all rooted in common literary and religious traditions and accepted in one or another version by millions of people for more than 30 centuries. The name Bharat is verily sanctified by antiquity and has been glorified by the ancient seers and poets of this country.

Andre Gide's Place in Our Memories

Jacques Madaule writes in *Careers and Courses*:

When a great writer dies, it seems to us as though, having left the earth on which we all tread, he had gone to fill forever that niche in the Pantheon of Literature where posterity will always be able to find him. I know that for an Andre Gide the prospect of such stillness is rather cruel. And furthermore, his place has not yet been clearly decided. It will take an outline and precision only with the lapse of time and the passing of the generations. Only the greatest remain alive and continue to change their places in the eyes of the succeeding generations. That is in itself the mark of their greatness.

Is Gide, the elusive, easier for us to seize and to define now that his heart is still and he rests in the damp clay of Cuverville? We must, I think, resist the temptation to accept such a belief. He himself has enjoined us, at least in his latest writings, to trace a final view of him, a conception made up of the negation of what his fervour had long made him envisage. But why should we consider the old man worthier of acceptance than the young man or the man in the prime of Life? If we keep only to the constants, we shall, it seems to me, find two: one is a certain perfection of style; the other is the faithful and passionate pursuit of a sort of perfection of life.

But a writer does not survive merely by reason of his style, and there perhaps lies Gide's secret weakness and at the same time the secret of his greatness. That he has contributed something to French prose, no one will in good faith, venture to deny. Of course, the lesson of symbolism was not lost upon him, and to the very end rhythms are to be found in his language that recall the end of the last century. But he never fell into the exaggerations and mannerisms of that period and quite early can be traced in his works, forms that reveal him as a true heir to eternal classicism, that is, a balanced alternation between equilibrium and movement. He reveals in particular a strict economy in his effects, an extreme restraint in his very brilliance to render his essentially inward intensity. It is for this quality, it must be admitted, that Frenchmen will never wish to deny Andre Gide; because of this quality, he will live as long as the French language which he played, as on a piano, to perfection. We find this perfection also in the composition of his "tales" such as *La Immoraliste* or *La Porte etroite* or *Le Retour de l'Enfant Prodigue*. Undoubtedly he was less happy with the novel proper, and if he took more trouble with *Les Fauk-monnayeurs* than with any other of his books, it is nevertheless not the most successful.

But Gide was above all a moralist. This was probably due to his Protestant upbringing from which he found it so difficult to free himself. Yet here too he belongs to a very French line that can be traced, through Port-Royal back to Montaigne. It is of little moment whether Gide sojourned long or not at Port-Royal. He belonged to that race that is at the same time fervent and somewhat austere, that cannot enjoy its pleasures without a certain asceticism. This statement may, at first view, appear extraordinary, since it seems that Gide's purpose was to throw all trammels away to attain the perfect sincerity of naked desire. But he never lost sight of the necessity for the heroic and he knew how to portray it in unforgetable pages, like those, for instasce, that he devoted to Saint-Exupery.

Above all, Gide had a horror of hypocrisy and conformity, the one implying the other, and that made him exalt in all things the virtue of sincerity, even when his own appeared at times to be tinged with affectation and pretentiousness.

It is the flexibility and freedom of this movement that account for Gide's influence over youth. He has been accused of corrupting youth, but it must be recalled that the same accusation had been levelled at Socrates. I do not deny that Gide's example may have been dangerous. The example of the great is always dangerous for the mediocre. But it is rather the mediocre who condemn themselves and not the examples by which they claim to have been inspired. I do not think Gide loved evil for evil's sake, even if at times he affected such a pose. He was too much of a humanitarian to be really wicked. All he had was a horror of smug virtue and if he happened, in a now famous book, to have sung the praises of vice, it was to prove that this particular vice was in actual fact no vice. The demonstration of this can be appreciated in various ways; it nevertheless remains true to say that vice and perversion were not enjoined for their own sakes.

For a long time also Gide revealed a horror of dogmatism; and then we saw him with difficulty give himself up to the narfowest and most rigid of dogmatisms, namely that of reason. He gives up Montaigne's heritage to accept Voltaire's. The reason is that he was not able to face the challenge of remaining absolutely free to the end and collected, like the [illegible] sclerosis of old age, he was

unable to see that, dogmatism for dogmatism, that of reason is the straitest and narrowest. But, I repeat, there is no need to attach more importance to his latest works than to his earliest, and I do not think that *Feuillets d' automne* will ever supersede *Les Nourritures terrestres.*

Today, we must let those who were his friends weep, and those who were his enemies wrap themselves in peevish silence and reproach Gide for not having fulfilled their hopes, as though a great writer did not first and foremost belong to himself. Man belongs to God and His judgement is kept from us. The author is left to us and we should be singularly ungrateful if, standing on the edge of his newly sealed tomb, we did not acknowledge the great debt we all owe him. In a way, he gave his life up to us, for most of his writings were of an autobiographical character. He knew that he risked the severest criticism and he suffered from it more than can be expressed as is proved, for example, by the sorrow he experienced in the face of the book by his friend Charles Du Bos, who had only spoken of him with utter sincerity.

But over and above all this, there remains the fact that Gide introduced into the French world of letters with a wisdom and restraint that do not preclude audacity, certain foreign values that enriched French letters prodigiously. Even if his book on Dostoievsky has since been superseded, there remains the fact that it was Gide who helped Frenchmen to understand the great Russian novelist, and certain aspects of Nietzsche would not be so familiar to them if, the latter had not provided Gide with some of the themes of *L'Immoraliste*. He even drove self-abnegation so far on several occasions as to force himself to do translations, and some of his most admirable works are actually these translations.

Singularly enough, at the end of a long life, Gide has only just entered the portals of Death and yet he does not seem to me to belong particularly to our times. I can see him continuing the line of Montaigne and Voltaire, enriching a tradition of prose and morals, dating several hundreds of years back. In time he will be classed altogether with his great forbears, one of whom at least lived, as did Gide, through one of the most terrible crises of this country without its ever turning him from the enquiry which he had set himself into Man's nature and his own. It is the asceticism rather than the hedonism of his work that will strike the reader and this work, led, through a thousand by-ways, has yet never changed its course. Perhaps Gide's final lesson is acceptance. It is said that he accepted death as he had accepted life. If you ponder on it, you will see that acceptance implies no less constraint than rejection. But was it necessary in order to accept oneself, to end up by denying God?

The Resurrection of Somnath

K. Mukherjee writes in *The Indian Review*:

Somnath has always remained and will yet remain one of the most important land-marks in India's history. The resurrection of Somnath is like the resurrection of India—showing that through all the vicissitudes in the field of politics, and despite the degradation of foreign domination continuing through several centuries, the heart of India has remained unconquered and unconquerable,—deeply and fundamentally religious with a spirit of toleration that will ever remain an ideal for all other countries, unruffled and serene like Mt. Everest towering over all the thousands of peaks in the Himalayan range.

SOMNATH THROUGH THE AGES

Somnath city with its seven temples has been like Delhi, the capital of seven kingdoms since the days of the Mahabharat.

Somnath, the Lord of the Moon, takes us even to prehistoric and legendary times. The legend says, that Daksha Prajapati (the creator) married all his twenty-seven daugthers to Som, the Moon God who loved best Rohini, the loveliest. This gave rise to jealousy in the minds of the other sisters who implored their father to take Som to task. The father in a rage punished Som who began to wane. All his penances were of no avail. The gods in a body persuaded Daksha to take pity on him. He agreed on condition that Som from that time loved all his wives equally well, and worshipped Siva after a purifying bath at Prabhasa. Som had to agree and according to his father-in-law's wishes he waxed every day for half the month to wane every day for the next half. It is believed that he bathes in the sea off the coast of Prabhasa every other day of the new moon to gain fresh beauty and lustre. Since then Prabhasa has remained a sacred spot; and Siva there has been known as Somnath or the Lord of the Moon.

Prabhasa, where Lord Krishna also built a temple of silver and cast off his mortal coil only two furlongs away from the temple of Somnath, has thus remained a place of pilgrimage even from before the time of the Buddha. But the first temple of the deity was built probably at the beginning of the Christian era. It sank into comparative oblivion during the days of the Guptas (320-500 A.D.) who were Vaishnavas: though the Gharshada and Vakatok kings of the west were Shaivites. Prabhasa, however, became a very prominent international port and remained so during the prime of Ballabi, the capital of Saurashtra. Its fall came with the fall of the capital which about 755 A.D. was ruined by the Arab hordes of the Governor of Sind.

Somnath rose again like the Phoenix from its ashes, when Nagabhatta II drove back the Arab hordes and visited the shrine. It was when the Third Temple of red stone was built—one of the largest of its kind in all India. Somnath now enjoyed the greatest glory from 880 to 950 A.D. kings and peasants—the rich and the poor —all flocked to pay homage to the deity from all over India; and showered presents which gave the temple its fabulous wealth.

But misfortune came a little later for the tale of its riches reached the ears of that soldier of fortune Sultan Mahmud of Ghazni. In 1024 or 1025 A.D. he directed his last expedition against the temple of Somnath, with a big and well-equipped army for he had heard that it was well-fortified. The King of Guzerat with the neighbouring chiefs came forward to defend the shrine and kept back the invader for eight days. On the last day, in a most bloody battle, 50,000 of the defenders sacrificed their lives in a vain attempt to save the shrine. The Sultan entered the fort and then the temple and when about to get into the 'sanctum sanctorum,' was implored

Digitized by Arya Samaj Foundation Chennai and eGangotri

by the priests to save the image: but the image-breaker broke it with his own hands and burnt the temple whose burnt-up pillars can be seen to this day. Mahmud left the place within a month as he feared to face the great army with which Raja Param Deb was marching towards Somnath. The treasures which he secured at the place 'were incalculable and are said to have exceeded all his former captures.'

But after the retreat of Mahmud, the Star of Somnath was again in the ascendant. A succession of strong and enlightened Kings raised Guzerat to the front rank among Indian States: and the temple and the town were both rebuilt and entered into an era of great prosperity. The great emperor Kumarapala built a new temple on its ruins—larger than any on record,—with a court room, a reservoir, a pavilion in front of the deity, and a seat in the shape of a leaping frog for the deity itself. This was the fifth temple of Somnath which stood safe for at least one hundred years. With the decline of the fortunes of Guzerat, at the end of the 13th century—the temple was again attacked, this time by Alauddin Khiliji who defeated its gallant Rajput defenders, and broke the idol.

Better days came for Somnath only after Akbar came to the throne: and thence-forward the shrine remained untouched and undefiled for about two hundred years. Then came another iconoclast Aurangzeb who ordered the total annihilation of the temple so that it might for ever afterwards be beyond repair. The sudden and gradual rise of the Mahratta power, however, stood in the way of the fulfilment of his wishes and his Generals could not demolish the temple.

The Nawabs of Junagadh during British rule held sway over Prabhasa Pattan: but they could not put out the spiritual fervour that attracted pilgrims to Somnath. Now again after the end of British rule, the temple of Somnath is being rebuilt—its rebuilding coinciding with the rebuilding of the nation. In September 1947, the shrine was visited by the late Sardar Vallabhbhai Patel who announced before a huge assembly that the Government of India had decided to take up the reconstruction of the temple.

Since the time of Aurangzeb the temple ceased to contain the deity; in 1706 for a while it was used as a mosque even. Maharani Ahalya Bai of Indore tried to bring back the deity to the desecrated temple but her architects held that it was beyond repair: so, she built a new one near the Sixth Temple. The new temple —the Seventh properly speaking—is conjuring itself up again on the very site—and Somnath is about to emerge on a greater and more glorious chapter. The deity—one of the twelve Jyotirlingas—has been placed in the same spot where it was consecrated more than 2000 years ago.

Sri Chaitanya and Somnath

Lord Chaitanya (1485-1532) when he visited the ruin of the temple more than four hundred years ago (c. 1512), cried his heart out: and in paying his homage to the deity, prayed that Lord Somnath might re-arise in all his glory for the good of his devotees. He also said :

"Come, O Lord Somnath, come thou into my heart,
And allow me to see there thy divine image."

His wishes are now being fulfilled, thanks to the endeavours of the late Sardar Patel.

President Rajendra Prasad, while installing the 'Jyotirlingam' in the new shrine on May 11, was greeted by a hundred and one salutes of gun-fire. Addressing the mammoth gathering from all parts of India, he said, "In the days of yore the temple of Somnath was the centre of the faith and wealth of this country. The fame of its unparalleled glory and wealth had spread to distant regions and countries. Unfortunately during several centuries it had to suffer calamity after calamity. Again and again it was desecrated and demolished. But while the external symbols of a national faith may be destroyed, nothing can destroy the very foundations of that faith."

"It was for this reason that inspite of having had to face numerous calamities there always remained in the hearts of the Indian people an undying faith and respect for this temple of Lord Somnath; and it ever was their dream to build this temple again soon after its destruction, and they went on doing so time after time."

Then, as the head of our secular state, he very pertinently observed, "On this sacred and historic occasion it is desirable for all of us to realise the great secret to spiritual faith which is that to have a glimpse of God

of Truth it is not necessary for all men to follow one and one path alone."

"This great truth had been perceived by our ancient seers and they had proclaimed it to mankind. They had consistently declared that though He is one, yet the wise describe Him in many ways and by many names. Similarly the Mahabharat says that all paths lead to God just as all rivers flow to the ocean. Unfortunately this great truth was not properly grasped by different people and in different ages, and so very destructive and terrible wars were waged between different countries and different peoples."

THE FUTURE OF SOMNATH

The future of the temple of Somnath is very glorious —far more so than its historic past—for near it is being built the splendid Dehotsarga monument to commemorate the holy spot where Lord Krishna gave up his body, and also because, according to the wishes and plans of Sri K. M. Munshi, author of the novel *Jay Somnath*, it is going to have a Sanskrit University attached to it—in the midst of thousands of trees that are being planted there to give it the appearance of Sri Krishna's Nandanvan, because a temple is not worth the name which is not also a seat of learning.

The Ideal of Social Reconstruction

Prabuddha Bharata observes editorially :

Vedanta stands, above all, for universality, synthesis, and harmony. It is a most practical philosophy of infinite hope, strength, and life-affirmation. Vedanta, while recognizing inevitable differences between man and man on the relative plane proclaims the supreme equality and fraternity of all beings on a spiritual and divine (*paramartha*) basis. But this divinity has to be manifested sooner or later. And it is best that social leaders emphasize this great Vedantic ideal of not only spiritual liberty, equality, and fraternity but also inherent divinity and sacredness of human personality. This lesson of universal brotherhood, of loving one's neighbour as oneself, has been inculcated by all religions. The Vedanta lays down the surest path for the social, moral, and spiritual progress of man and enjoins the performance of duties by which he gradually transcends his lower self and lives a higher and purer life and advances onward till his self merges in the universal Self. The duties which Vedanta enjoins have reference to the relation in which man stands to himself, to his kith and kin, to his community, to his country, to the whole of mankind, nay, to the whole universe as part of one infinite existence. True salvation, or to use a more appropriate expression, *moksha* (liberation from ignorance and bondage), consists in the complete realization of this identity, this spiritual world view.

A doubt is often expressed, saying, 'Does not this spiritual (ergo non-material and otherworldly) outlook on life clog secular activity and thwart ambition and progress, thus disturbing practical relations between man and man in the ordinary workaday world?' This is a question which has been discussed and answered times without number since the dawn of life on earth. The Upanishads and the *Gita* have solved this momentous problem. The Tantras and the Puranas also have thrown considerable light on the subject, sufficient to disabuse the doubting mind of all such misconceptions and misgivings regarding the supremacy of the spiritual ideal over all other ideals in life. Vedanta is far from being an abstraction merely meant for philosophical discourses and intellectual interpretation. It is intensely practical and can be most effectively carried out in everyday life, producing lasting harmony and satisfaction and giving the highest benefit to all—to the person who is bold enough to practice it as well as to others around him. Man understands the true significance of spiritual ideals only when he puts them into practical application in individual and collective life. Practical demonstration is the only condition for the establishment of a society on the basis of spiritual ideals.

The most outstanding feature of Indian civilization is its insistence on Dharma as the foundation of the social order. The principles that regulate and guide man's functions in daily life and in his social relations are constituted by what is called Dharma—a word of protean significance. As Dr. S. Radhakrishnan observes:

"The basic principle of Dharma is the realization of the dignity of the human spirit which is the dwelling-place of the Supreme. . . . It is truth's embodiment in life, and the power to refashion our nature. . . . The principle of Dharma rouses us to a recognition of spiritual realities not by abstention from the world but by bringing to its life, its business (*artha*) and its pleasures (*kama*), the controlling power of spiritual faith."—*Religion and Society*.

The ideal of social reconstruction should remind the builders of society, through its various aspects, that the ultimate Truth in man has to express itself in spiritual illumination and in extension of his syspathy across all barriers of caste and colour. And Vedanta can and does provide mankind with such an ideal which while it does not deprive man of the advantages of wholesome economic, social, and cultural institutions, enables him gradually to transcend his material limitations and realize his spiritual unity with the ultimate Reality in and through the brotherhood of man.

DIABETES
CURED
IN SEVEN DAYS

No matter how severe or long standing, Diabetes can be completely cured by VENUS CHARM, the latest scientific Discovery. Some of the main symptoms of this disease are Abnormal thirst and hunger, excess sugar in urine and itching, etc. In its serious form, it causes Carbuncles, Boils, Cataract and other complications. Thousands have escaped from the gallows of death by using "VENUS CHARM". The very next day it eradicates sugar and normalises specific gravity. Within two or three days you will feel more than half cured. No dietary restrictions. Ask for Free literature. Price per phial of 50 tablets Rs. 6-12-0. Postage free. Available from

FOREIGN PERIODICALS

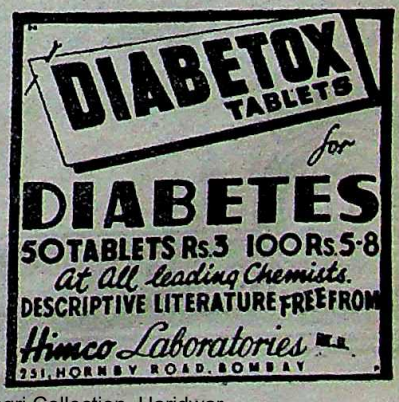
Early Travellers in India

"Wanderlust" writes in the *Bulletin of Italian Cultural Information* as follows :

Strange lands have always held a singular fascination for the human mind. Most popular of all channels through which it has sought to reach an understanding of the unfamiliar and unknown is travel. Books come only second best. In many this thirst for travel developed into a "wander-lust" so intense that they braved the privations and perils which all too often, in early times, characterised travel in the remote regions of the earth. Travel has become comparatively safe and easy only in our own time. Rather than act as a deterrent, they added zest to travel and made of it an adventure which a few found irresistible.

Few lands have lured travellers more than India. Throughout history men have been drawn to her from both the East (the Far East) and the West. The records these early travellers have left of their observations contribute many colourful pieces to the mosaic of her history. To the travel-minded they hold an interest which has not staled with the passage of time.

From the West, perhaps, the earliest visitor to India was John of Monte Corvino, a Franciscan friar, who in 1200 travelled in a frail bark to the beautiful coasts of Malabar and Coromandel, of which Sarojini Naidu has sung. South India struck him as a land of great cities and wretched houses, few hills, beautiful rivers, many springs, where cattle were sacred and idolatry rampant. In that region of perennial summer, sowing, reaping and fruit-gathering were seen in all seasons. John speaks particularly of the aromatic spices, of trees which yielded honey, sugar and a liquor like wine and the wonderful "Indian nuts" as big as melons and as green as gourds growing on trees like date-palms. The people were olive-skinned, with well-formed but hairy bodies, scrupulously clean, feeding on milk and rice, eating no meat and drinking no wine.



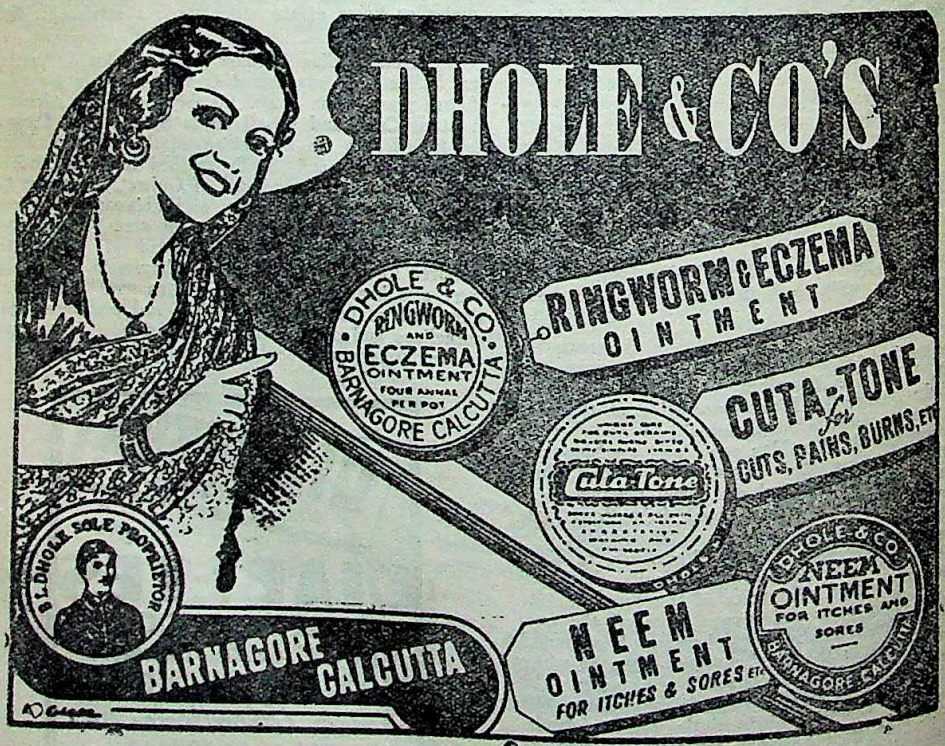
Odoric of Pordenone was another Franciscan missionary who touched the Western coast of India on his way to China in 1316. He describes at length the Fire-worship of the Parsis, the Hindu veneration of the cow, trees and serpents, the 'monstrous' idols by which their gods were represented, of golden roofs and marble pavements of their temples, their burning of widows, their pilgrimages, religious 'starvation' and cruel penances.

Jordanus, a French Dominican monk from Rome, was probably the first to come to India on a proselytising mission. He settled down at Kulam in Travancore in 1328. He has left a remarkable treatise on the fruits, the 'flora' and the 'fauna' of India. He talks of the cocoanut, the jack-fruit, the sugar cane and ginger root; of the one-horned Indian rhinoceros, the docile beast of burden and transport, the elephant; the big bandicoot rats, the white ants which destroy timber, the large 'mason' wasps; the gold kites, the white russet fishing-eagles, the many, the wonderful and the beautiful birds of the Indian islands. Of the people themselves Jordanus contrasts the civilised Hindus and Moslems with the savage forest tribes of the interior and of the mountains, living in [illegible] clothing and 'of brutish aspect'. Though the size of India is great and its population enormous, he observes, the Indian people were but children in the art of war or even seamanship. But the land was fairer than any other, its food more savoury, its people more honest and much more moral than the Christians of Europe.

Jordanus was followed by Bishop Giovanni dei Marignolli of Florence who settled down in Kulam for 16 months. His departure from India in 1350 was followed by a lull for three centuries during which few travellers ventured to come to India, as the country was almost continuously convulsed with fierce Meslem invasion from the north, of intolerant and fanatical Turks, Afghans and Mongols. The only part of the land which was comparatively accessible to Europeans was the Southern region under the sway of the Hindu rajas.

The next record of travel in India is the annals of Nicolo dei Conti, a Venetian merchant, who first touched at Cambay which he describes as a flourishing port from where he subsequently reached the kingdom of Vijaynagar. His description of the Ganges Delta, the charming villas and gardens, and plantations of delicious bananas, is lively and touched with romance by an occasional 'traveller's tale', as when he speaks of reeds or riverside bamboos 'so lofty and of such enormous girth that one section between the nodes or knots of the stem made a serviceable fishing boat'.

An outstanding traveller was Ludovico di Varthema, an Italian, who succumbed to wanderlust in his twenty-fourth year. From Venice his ship touched at Alexandria, next at Cairo and passed on to Syria. From Damascus he travelled to the holy cities of Mecca and Medina, touched Aden and finally reached India in 1505. He voyaged round the Peninsula of Gujerat, halting at Cambay. He describes the Jains of Kathiawar who when in going through their repositories of grain, found weevils or any other kind of beetle, instead of killing them removed them to the domed insect-houses in which places were also kept ants who were fed on meat! Cambay he described as famed for its spices and perfumes, agates, cornelians and onyxes, and even diamonds! His account of the Muhammadan Sultan of the region is realistic and



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

vivid, but is occasionally touched with incredulity, as when he describes him as 'having been habituated to consume poison or poisonous drugs from childhood in the hope that he might thus never lose his life by treacherous attendants or enemies who might seek to put poison into his food !' Varthema also speaks at great length of the life of a Hindu Chieftain who whenever he travelled, was accompanied 'by his wife and children, four or five riding horses, tame monkeys, parrots, civet cats, chitas and falcons.' Passing through the Colaba District on to Goa and Bijapur, Varthema describes the magnificant palace of Adil Shah at the latter place. At the ports along the Coast of Kanara, Varthema is specially struck by the abundance of domestic buffaloes, oxen, sheep and goats, the absence of horses, mules and asses; the quantities of rice eaten by people; the numbers of peacocks, parrots, wild boars, deer, wolves and even lions, of roses and other flowers and fruits. Kannanore (Cannanore) he describes as a port which kept up a great trade with the Persian Gulf, had lots of Arabs in the city and grew cucumbers and melons, cocoanuts, rice, pepper, ginger, cardamoms, and other spices, besides the mango fruit. As beasts of burden and draught elephants were used.

Varthema's next halt was at Vijaynagar, the capital of the ancient Hindu Kingdom of Karkatak, which 'occupied a most beautiful site on the side of a mountain and had a triple circle of walls.' It contained immense parks for hunting and fowling, and appeared to him a second paradise with the best air, great fertility, wealth of merchandise and abundance of all possible delicacies. Varthema describes the great army of Vijaynagar which had among other things four hundred elephants. Kalicut (Calicut) is described as a very noble city, 'the converging port of Portuguese and European trade fleets.' Calicut was then ruled by the Zamorin family. Varthema gives an extensive and intimate account of the six classes of the city's inhabitants, their customs of dress, diet and vocation; of their harvest festival and devil dances; of the magnificent palace and regal temple, of the ships built out of native wood from the forests, which grew as many as a hundred and twenty different varieties of fine timber. Varthema greatly admired the orderliness of the people and the strict manner in which justice was dispensed. Nearly all the travellers who visited this part of India between the 13th and the 16th centuries, agree on the honesty and sense of justice of non-Muhammadan natives. Varthema's sojourn in India coincided with a period of intense commercial and military activity, from Vasco da Gama's arrival at Calicut in May 1498 to the establishment of Albuquerque as the first Portuguese Viceroy over Portuguese trading stations on the Malabar Coast.

The next remarkable account comes from Barbosa, Magellan's cousin, whose descriptions of the people—the Brahmans and the Banyans (Banias), the potters and the workers of clay, the workmen, the weavers, the agricultural labourers, the mariners and fishermen, the makers of hats and shields, the astrologers, fortune-tellers and weather prophets, the quarrymen, carpenters, blacksmiths and silversmiths, the salt-makers and rice-growers, the hunters, the practisers of low witchcraft and finally the miserable, naked, negroid bush tribes living on roots and wild fruits and such beasts and birds as they could kill in the woods, the merchant communities of Bengal and Eastern India, Calicut, Cambay or Gujerat, the Parsis, the Arabs and the Moplas—are singularly instructive and full of sociological interest.—'Come to India' Special Supplement, *United Asia*, 1950.

"Fourscore and Seven Years Ago"

America Honors 87th Anniversary of Abraham Lincoln's Gettysburg Address

Fourscore and seven years ago, on November 19, 1863, Abraham Lincoln, the sixteenth President of the United States, began his famous speech at the dedication of the National Cemetery on the battlefield of Gettysburg with the words:

"Fourscore and seven years ago our fathers brought forth on this continent, a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

Today, Lincoln's Gettysburg address represents a mid-point between the founding of the American republic and the present. The young republic, which had emerged from the cocoon of its colonial status with the American war of independence, grew in that first fourscore and seven years into a nation. As Lincoln spoke, his nation was torn and twisted in that most bitter of struggles, a civil war. Then, as in the years of the war of independence, there were those who could not see beyond the perils and strife of the present into the growth, development and prosperity that was to come, unparalleled in degree and extent.

In the second fourscore and seven years, which began with Lincoln's Gettysburg speech and extend up to the present, the American republic has grown in power and prosperity beyond even the wildest anticipations of the brightest prophets of that mid-term year. Yet, as in 1863, the American republic today faces a conflict and a struggle, a struggle in which the principle that "government of the people, by the people, for the people shall not perish from the earth" is again at stake.

For the people of the United States, the life of Abraham Lincoln, storekeeper, soldier, lawyer, orator and President, has symbolized the right and the opportunity of the humblest citizen of a democracy to follow a path from a frontier settlement to the highest position in the land. Born in a log cabin in a cleared patch in the forests of the frontier state of Kentucky, Abraham Lincoln began life as a poor, as unheralded and as devoid of immediate opportunity as any child born today in the humbler villages of India. Yet, within the years of his life, he came to occupy the presidential mansion in his country's capital and, in the years since, to occupy an almost unparalleled position in the hearts of the American people and the pages of American history.

The life of Abraham Lincoln exemplifies the opportunities open to the citizens of a free country, a country in which the right of every citizen to life, liberty and the pursuit of happiness is both recognized and championed. That right and that opportunity, however, did not come to Abraham Lincoln as a gift of fortune. They came as a direct result of both the struggle for freedom and the continuing struggle to make freedom real, a struggle which continued through the fourscore and seven years of American history before Lincoln's Gettysburg speech, and has continued through the fourscore and seven years that have passed since that day.

The United States of that mid-term year in its history and the United States of 1950 are as different as the rude character of Lincoln's youth and the urban New York of today. Yet, the continuing necessity of the struggle for the rights of freedom, as presented by Lincoln in his immortal speech in 1863, remains dominant today in the hearts of the American people. Today, as then, this struggle remains. Freedom, if it is not to die, must be reborn again in the hearts of a people who would be free, a truth that led Lincoln, in this same Gettysburg speech, to resolve that his nation "under God, shall have a new birth of freedom." For Lincoln in 1863, as for the American people today, the rights of the individual, and the opportunity that can make those rights effective, are worth defending. The American foreign policy in 1950 no less than the domestic policy of Lincoln's day, is "dedicated to the proposition that all men are created equal" and that "government of the people, by the people, for the people shall not perish from the earth."

Within those simple phrases has been caught much of the American philosophy of political existence. By government *of* the people, the American people mean a government that derives its authority, its right to continued existence and its support from within the people themselves, not from any small selected group or by imposition from any individual or self-designated band. By government *by* the people, the American people mean a government in which the people play the roles and fill the seats of the mighty, a government that is "of" not "over" the people, that is a part of, not a lid on, the people. By government *for* the people, the American people mean a government that works for the people, not the reverse; they mean a government that derives its right to continued existence from the will of the people, not a people who derive their right to continued existence from the will of the government.

The American people believe today, as did Abraham Lincoln, that men are created equal, not with the equality of the slave labor camp, but with the equality that can bring a poor child of the frontier to the presidency of a great land. They know that this equality is an ideal. They make no pretense that it is a full reality, for themselves or for any other nation. With all humility, the American people of today can say with Abraham Lincoln, "It is for us, the living, ... to be dedicated to the great task remaining before us."

In this year of alarm and crisis, the people of America

Natyacharya SISIR KUMAR BHADURI says :

"I have found 'Swarobin' useful before performance on the Stage, particularly when the voice is uncertain."

and the other freedom-loving nations of the world can take a measure of strength from a look back through fourscore years and seven to that day in 1863 when a President of the United States, caught in a struggle as bitter and as brutal as any ever fought, seeing son fighting against father and brother against brother, facing a future as cloudy and uncertain as any the world faces today, could, with calm determination and certain equanimity, restate in these words the basic American belief in the rights of man, the eternity of freedom and the certainty of a brighter future:

"Fourscore and seven years ago our fathers brought forth on this continent, a new nation, conceived in liberty and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field, as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

"But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth."—*U.S.I.S.* November, 18, 1950.

The Principle of Indeterminacy

Under the heading, "Aspects of Modern Science," writes Ira M. Freeman in *Unesco Courier*:

All naturl science is based on observation. Whether our knowledge of any segment of the external world remains at the level of a mere cataloguing of facts, or soars to the heights of Relativity or of Quantum Theory, observation of Nature as she really is constitutes the foundation of science, and all else is secondary.

There is one aspect of the business of making observations that is usually taken for granted, and that is the faith (for this is all it amounts to) that any observation made here and now may be expected again on any other occasion when the same conditions prevail. This proposition is sometimes called "*The Uniformity of Nature*" or the "*Constancy of the Universe.*" But whether mere faith or something else, it works. It is science's answer to the ancient beliefs in capricious demons and deities.

Despite the bewildering differences between one science and another, all of them advance largely by the same general tactics: observations are made, quantities are measured (where possible), results are correlated, theories are set up and general conclusions are drawn in the form of natural laws. The great scientific conquests of Galileo and Newton, of Darwin and Pasteur, were made according to this kind of campaign plan.

A Miscellaneous Approach

What we call classical physics attained a high state of perfection toward the end of the last century. Evolving largely from ordinary mechanics, it went forward on the assumption that all the events taking place in space and time have the objective character that we associate with common mechanical phenomena such as the falling of a stone or the swinging of a pendulum.

Early in the nineteenth century the great French mathematician and physicist Laplace made the much-quoted statement that an omniscient mind, knowing the momentary location and speed of every atom in the universe, could deduce the entire course of events in the cosmos, both past and future. The universe was thus viewed as a machine, with all the parts rigorously interlocked. Every event was held to be strictly determined by the preceding one; every effect was ascribed to a definite cause.

Later, this mechanistic approach began to be challenged when scientists learned to break up the physical world into its basic constituents. The ubiquitous quantum aspect of nature (*see "What is the Quantum Theory" in the Courier for November, 1950*) began to assert itself once more, and in several places.

In 1927, a brilliant young theoretical physicist, Werner Heisenberg, was able to state a highly significant generalization relative to the observation and measurement of elementary processes. It is called the Principle of Indeterminacy. In one way of phrasing it, the rule asserts that the more closely we determine the location of a particle, the less accurately are we able to specify its motion, and *vice versa*. Heisenberg contends that the underlying cause of this puzzling situation is the fact that every process of measurement or observation actually *interferes* with what is being measured or observed.

The Evasive Electron

For example, if we should wish to "see" directly a single electron, it turns out that it would be necessary to use light of very short wavelength for the purpose. But light of this kind is highly energetic, and if thrown at an electron would knock it completely out of its original position, thus defeating what we are trying to accomplish!

In the same way, there is a fundamental inexactness, an uncontrollable or indefinable element, inherent in *all* measurements relating to elementary processes. Of course,

in dealing with ordinary large-scale objects, the interaction between object and observer becomes vanishingly small, and things seem to behave in their accustomed way, but on the sub-atomic scale, the obvious connection between cause and effect is no longer in evidence.

After all, nature does seem to be governed by order and regularity, and so if strict causality is not valid in the submicroscopic realm, what takes its place? The answer is that what we observe in coarse-grained experience is a statistical orderliness—the average behaviour of a multitude of individual entities—and such an average is accurately predictable. It is predictable in the same way that the death rate in a given population group may be computed in advance by a life-insurance company, although there is no way of forecasting when a given individual is going to die.

Chance rules the activity of the individual sub-atomic particles of physics, but their *"cultural"* or *"crowd"* behaviour, as mirrored by the large-scale world of ordinary experience, turns out to be completely in accord with expectation. The recognition of this fact has been of vast importance to the development of modern science, and has had profound and far-reaching effects on philosophical thinking as well.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will push you to the forefront and will help you, as no other thing can, to reach the goal of your desires and secure success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you to—

Increase Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Avoid all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Useful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationalist and Be Popular in Good Society;
Acquire Culture, Power, and Influence;
Make More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage-Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had on his mailing list many of the best known men in the public eye. His Mail Courses are his life work. They are for every man and woman who would use the English language for all one is worth in business and social life. We shall be pleased to explain, any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas for postage. Will you do it TO-DAY?

MESSRS. BOOKS OF THE WORLD, PUBLISHERS & BOOK-SELLERS, 31, Grosvenor House, CALCUTTA

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind."
—*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know."
—*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

TO BE HAD OF:—

WONDERFUL POWERS OF AN OCCULTIST

Have your Past, Present and Future wonderfully revealed by Prof. M. J. Narsian, B. A., the Famous Astrologer and Occultist. His system of calculation is based upon YOGA-SADHANA (Meditation) and upon Ancient & Modern Science of Prediction. His book *Your Future Thru Astrology* has been eulogised in the Press. Prof. Narsian possesses wonderful OCCULT POWERS, and "Hypnotic Chart" is appropriately designated "The Mascot of Success". Numerous eminent persons have certified his wonderful predictive faculties.

DETAILS OF CHARGES:

Accurate Description of your Life Past, Present & Future up to 1952	Rs. 5-4
Detailed Annual Life Reading for next twelve months	Rs. 5-4
Three Questions Answered	Rs. 5-4
Hypnotic Chart (size 19"×25")	Rs. 10-8
Hiro-Mantric-Talisman surcharged with Psychic Spiritual Powers	Rs. 10-8
Extensive Astrological Life Reading (Western Astrology)	Rs. 25

DATA REQUIRED:

Birth date, time and place of birth. If your birth date is not known, please mention approximate age, date and exact time of writing.

A copy of your HOROSCOPE drawn according to Western Astrology will be sent with leaflets on "The Third World War" and "Future of First Indian Republic" without extra charge.

Payment may be made by M.O. or Postal Order.

ADDRESS:—**PROF. M. J. NARSIAN, B.A.**
OCCULT ASTROLOGICAL FOUNDATION, Post Box No.: 25. POONA (India)

The International Journal of Sexology

Containing scientific and educative papers contributed by authorities in all countries of the world and of equal interest to doctors, lawyers, educationists, sociologists and others.

A recent verdict on the Journal,

"Of the sexological periodicals new appearing, it would perhaps not be invidious to give pride of place to **The International Journal of Sexology**, because in a world that is becoming more and more nationalistic it makes a brave appeal to a wide internationalism. Editors in twenty countries under the Managing Direction of Dr. A. P. Pillay in Bombay form an imposing team. ... The journal provides a genuinely literal platform for facts and discussion, and gives due regard to the problems of the Eastern as well as the Western world..." (Alec Craig in *Plan*, London, January '51).

tea

the way you drink it

You drink it leisurely in bed, still half-dreaming, and you are a king or a god with the day ahead of you, bright and rich with promise.

You drink it over your morning paper, almost unthinkingly, but deep down you know that this is a good, satisfying beginning to another day.

You drink it hurriedly at breakfast before rushing off to work and it punches power into you: you are armed, you are ready to begin.

You drink it at work and fatigue drops off like a cloak.

You drink it when you come home and the evening takes on a glitter and a sparkle.

You drink it alone or with friends. It is always satisfying, always cheering, always refreshing.

A WONDERFUL SCIENTIFIC INVENTION
"PILEGORIN" (Regd.)

Long-felt demand for an effective remedy for piles is now fulfilled. Piles are no longer incurable. There is no need of operation or external application of ointments and pastes of any kind on piles. Piles of any type can be cured completely within six days by taking 'Pilegorin' orally. It acts on the circulatory system of the parts affected as well as on the liver and thus produces tonic effect.

Price Rs. 3-12-0 Postage and Packing extra.

Available from—

Vinekernel Pharmacal Co (MW)

CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has elaborately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

—*Amrita Bazar Patrika.*

THE MODERN REVIEW

AUGUST 1951

VOL. LXXXX, No. 2 WHOLE No. 536

NOTES

Prospects for the Coming Election

The elections for the Parliament and the State Legislatures are coming near. The contest will be as between the Congress and a whole host of opposition groups, of which there are no less than fourteen odd in West Bengal alone. There is schism within the Congress, both open and furtive. There are elements within the main body of the Congress itself, that are getting restive due to their confidence in leadership being increasingly lowered.

Apart from the splinter groups, which up till now have not been able to form effective opposition coalitions, there are the Hindu Mahasabha, the Socialist Party and the Krishak-Mazdoor-Praja Party led by Acharya Kripalani. The so-called Progressive Group and the Leftist parties are even now negotiating with all and sundry to form election combines in order to conduct an effective campaign against the Congress. They have had some petty successes in District and Local Board elections, mainly due to the action of recalcitrant local elements that are dissatisfied with the arbitrary and high-handed methods of the Congress.

The Socialist Party has issued an election manifesto, the substance of which is printed elsewhere in the editorials of this issue. Acharya Kripalani is touring the country on behalf of his party and the K.M.P. party has also issued a manifesto. Acharya Kripalani's speeches have been mainly directed against the Congress, in and out of office.

Dr. Shyamaprasad Mookerji's campaign is also directed against the Congress. His main plank is the question of appeasement of Pakistan. Hindu Mahasabha leaders are not much in evidence. The Communist party has come out in the open and is carrying out its propaganda throughout the country through a highly-skilled dissemination of news, views, propaganda articles and cartoons by the channel of its personnel that has infiltrated into almost every newspaper in India. The Party Politburo does not seem to have received any definite instructions as yet from Moscow.

The rest of the contestants, whom we have termed 'splinter groups,' have only localized influence and significance. In some provinces, like the State of West Bengal, they have as yet only considerable nuisance value, and where their influence is manifest, there will be a very considerable chance of violence and disruptive activities during the elections. None of these parties have any All-India significance, but if the proposed coalitions materialise then there is some likelihood of their affecting the Parliamentary elections to some appreciable extent.

All these parties, the major groups and the splinters are actively canvassing the support of disaffected Congressmen, the Have-nots or Have-littles within the party in power, as also the few genuine Congressmen who have stood aloof, with distressed minds, as silent spectators of the acts of perfidy against the nation being perpetrated by the dishonest ones in the Congress. Indeed the main strength of disruption lies in the corruption and malfeasance that is rife within the Congress, the administration as well as the body-politic. Honest men there are galore, inside the Congress, but they are powerless and are chewing the bitter curds of frustration in silent despair.

The Congress has issued an Election Manifesto, and the Congress Government has had a Five-Year Plan prepared in draft, a few copies of which have been circulated with discretion, so that there might be as little considered criticism and as much of empty fanfare as possible. And the A.I.C.C. has capped the Congress Manifesto with a bombastic proclamation, which in substance means that the A.I.C.C. is willing to accept and nominate for election "good men" from outside the Congress, provided the said "good men" are such congenital morons as to be willing to sell their very souls to that assemblage of pernicious and dumb nonentities who sit tog

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

A.I.C.C. with the notorieties that have reduced the once noble edifice of the Congress to a veritable Augean Stable! We shall consider all the manifestos in due course. But before that let us confess to a mind charged with dismal forebodings. Unless a miracle happens, we do not see how chaos can be averted in the elections and its aftermath.

The makers of the Constitution and the members of the Constituent Assembly have made an appalling mess of their jobs, and the High Courts—or at least some prominent judges—have completed the disaster. Today the Four Freedoms—indeed a hundred times four—are for those criminals who wage war against the nation and the social structure. Honest men are at the mercy of the corrupt ones who have filled the administration with their minions. The case of the Satyagrahis of Manbhum in Bihar is so shameful as to force us to hold down our heads. We know Pandit Nehru or Babu Rajendraprasad have no time to cogitate on the prostitution of justice in corrupt governments, but what has happened to President Purushottamdas Tandon's principles? In the Manifesto itself, the issue of linguistic readjustment between Bihar and West Bengal has been evaded in a fashion that is not only cowardly but flagrantly dishonest as well.

The crying need in the Congress, both Official and National, is a purge of corruption. Corruption has permeated into the very vitals of it, right from the top to the bottom. Ministries, administrative services, the Working Committee, the A.I.C.C. all need to be rid of those vile elements. *The Public Services Commissions have been reduced to fraudulent farces, nepotism and favouritism is rife everywhere.* So until such time as we see a determined move on the parts of the Congress Governments and the Congress body-politic, we shall take the Congress Manifesto in the same light as a prospectus of a shady company promoter. If the ricketty Congress of Nehru, Tandon and their satellites and sycophants is to be re-constructed, then let them implement their declarations of faith into actual deeds. We are unable to gather any inspiration from the Manifesto as it stands, but we have substantially reproduced it *infra*, for record and for the judgment of our readers, whom we request to judge for themselves as to whether any of the noble sentiments, pious wishes and plans for the coming of the millenium contained therein, are ever likely to materialize unless the entire structure of the Congress, political and administrative, be deloused, disinfected and rebuilt from the very foundations.

The Manifesto of the Praja Party, at the very first sight, betrays a bewildering lack of consistency and weakness in its treatment of the most vital pro-[illegible]e day. Two of the most burning problems, *viz.*, nationalisation of industries and abolition of zemindary have been practically evaded. Both these points show confused thinking. The third point of vital importance, *viz.*, the formation of linguistic provinces have been completely ignored. An air of Marxism has been injected in the manifesto, but a Marxist stand on the burning problems of industries and land has been avoided. Undue disparity between the lowest and highest income groups is admitted, but the framers of the manifesto have remained content only with a barren appeal to the good wishes of the people, knowing fully well that wishes of the people, unaided by State power, means little. In their urge to support democracy, they have laid emphasis on small units and greater decentralisation, but have totally ignored the defects of this step as revealed in the working of the Panchayat system in the U.P. Desire to strike a balance between a strong Centre and a thorough decentralisation has been expressed, but the golden mean has been left undiscovered. Decentralisation of industries has also been emphatically spoken of, but the exact structure that will bring about a synthesis of both big and small industries is missed. Too much trust has been laid on co-operation with Pakistan, about the fruitfulness of which most people have much doubt. Foreign policy of the present Government has been supported. Nationalization of major industries has been opposed by singularly muddle-headed arguments. The real objective, seems to be to give sop to the rapacious Labour-Caucus that is a part of the Party. Heaven help the Nation if they come into power!

The Socialist Party Manifesto is more bold and definite, but inexperience, woeful disregard for realities, fanaticism and finally frustration is writ large all over it. The Land policy aims at vcitimisation of all middle-class tenant farmers as well as large land-holders—for unless there is victimisation of the bourgeoisie how can Marxian fanaticism be satiated? We for ourselves, neither possess land nor do we hold any brief for landlords but we consider forcible acquisition of anyone's property without compensation to be against all civilized moral codes. The other projects regarding land, industry, etc., seem to be permeated with an atmosphere of unreality.

Caution is the watchword of the much vaunted Five-Year Plan. Perhaps that is born out of the hard realities of the last four years' experiences. There is no bold display of imagination, neither is there any evidence that the Planning Commission has ventured beyond the secretarial dossiers of the development departments of the Central Government. We had only a cursory glance through the draft plan—for obvious reasons—but it seems to be a rather expensive plan for going bankrupt slowly in five years.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Plan has been presented by the Commission as a Draft Outline. "Planning in a democratic State," says the Commission, "is a social process in which, in some part, every citizen should have the opportunity to participate. To set the pattern of future development is a task of such magntiude and significance that it should embody the best thought of the country and reflect as fully as possible the impact of public opinion and the needs of the community." The Draft is "intended to be a document for the widest possible discussion" *and therefore its circulation has been restricted as far as possible!*

The distribution of expenditure in the first part of the Five-Year Plan, which has been worked out in detail, is shown by broad categories:

First Part of the National Plan, 1951-52 to 1955-56

ESTIMATE OF INTERNAL RESOURCES FOR THE PLAN

(Rupees crores)

CENTRE	
1. Surplus on Revenue Account ..	130
2. Resources normally set apart in the Revenue Account for development expenditure under civil aviation, broadcasting, education, etc., for grants to States for GMF and development, for rehabilitation of displaced persons, etc.	118
3. Resources available from Capital Account for development:	
(*a*) public loans	35
(*b*) small savings and unfunded debt	250
(*c*) others	78
4. Resources available for railway development	30
5. Total Resources available to the Centre	641
6. Assistance to States assumed in the preparation of their Plans	211
7. Resources available for the development expenditure of the Centre	430
STATES	
8. Surplus on Revenue Account ..	81
9. Resources normally set apart in the Revenue Account for schemes of expansion under social services, agriculture, irrigation, electricity, roads, etc.	275
10. Resources available from Capital Account for development:	
(*a*) public loans	79
(*b*) others	45
11. Assistance from the Centre assumed in the preparation of the Plans of States ..	211
12. Resources available for the development expenditure of the States	691

The surplus of Rs. 81 crores on revenue account in the States over five years is to be secured by raising additional resources of the order of Rs. 213 crores. There will still be a gap of Rs. 372 crores over five years in the first part of the plan.

The Congress Manifesto

The following is the substance of the draft election manifesto :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The achievement of independence and the establishment of the Indian Republic concluded one phase of the Indian people's struggle for emancipation.

It was the high privilege of the Congress to serve the cause of the country and of the masses of our people and lead them to success. The Father of the Nation told us to value the moral and ethical basis of national life and made this the condition of political action. He emphasised that means were as important as ends and the means we adopt ultimately shape the end which follow.

Even during our struggle for independence, its content was not merely political freedom, but also the freedom of the masses from exploitation and want. The provision of basic material needs of food, clothing and shelter as the first essential, to be followed by the provision for cultural growth.

The last Great War put an end in many ways to the old world that we knew and posed entirely new problems; the partition of India left a bitter legacy behind. Our civil and military services had to be organised afresh and the very large foreign element in them replaced by Indians. India's relations with her neighbour country, Pakistan, have, in spite of our best efforts, continued to be abnormal and have raised and are still raising difficult problems.

Because of the multitude and complexity of the problems, the country has had to face since the achievement of independence, our economic progress has not been satisfactory. Millions in the country still lack sufficiency of food, clothing and shelter. The objectives of the Congress, which have been embodied in the Constitution of India, still remain, in a large measure, unrealised. The time has come for our struggle for emancipation to enter into its second phase of realising those objectives, without which political freedom can have little meaning for most of us. Economic progress must, therefore, be given first priority, subject only to the maintenance of the freedom and integrity of the country.

The key to the character of the future economic and social organisation of the country and its motive power is provided in the Congress constitution, which has as its objective the establishment in India, by peaceful and legitimate means, of a co-operative commonwealth based on equality of opportunity and of political, economic and social rights, and aiming at world peace and fellowship.

Thus the objective as well as the method is one of co-operation and the avoidance, as far as possible, of competition and conflict. This conception of social organisation inevitably leads to the secular State in which every individual has equal rights and opportunities, and the removal of barriers which may divide the people into opposing groups on the basis of religion, caste, class or region.

The application of this principle in the national sphere would lead to social progress and peace and would strengthen the nation. Its extension to the international sphere leads to an independent foreign policy basing itself on the promotion of world peace.

The progress of the country with limited resources, such as India is at present depends on the most effective utilisation of such resources for the various aspects of national life and activity. The Congress welcomes, therefore, the functioning of the Planning Commission and considers that the method of planned development is essential for progress and must be continued.

But such planning, in order to be effective, must have full support and co-operation from the public. Planning must include and might not be held up by some backward sector.

In India today, stress must inevitably be laid on the progress of the rural areas and the people, who live there.

The first and vital step has been or is being taken to free the land from the burden of old and out-of-date agrarian systems of tenure. The abolition of zamindari, jagirdari and the like must be rapidly completed.

Small and uneconomic holdings are not the way of rapid advance in agricultural production. The line of advance should, therefore, be co-operative farming with the object of making the whole or a substantial part of a village, a unit of co-operative management.

The conditions of agricultural labour should be improved, especially, in the lower wage pocket. Opportunities for work and employment in small-scale and cottage industries should be afforded to them. They should be given preference in allotment of land to newly-reclaimed areas, which should be worked on co-operative lines.

The preservation of milch and draught cattle and upgrading of cattle breeds are important for increasing the supply of milk and improvement of agriculture. Increasing attention will have to be paid to this.

The burden on the land of too many people subsisting on it has to be reduced by the diversion of part of this population to other vocations. Some of these can be absorbed in large industries but, in the main, scope for absorption will come through small-scale and cottage industries.

It is not possible to pursue a policy of 'laissez-faire' in industry. This has been rejected in most countries and is peculiarly unsuited to present-day conditions in India. It is incompatible with any planning. It has long been the Congress policy that basic industries should be owned or controlled by the State. This policy should and must be progressively given effect to.

A large field for private enterprise is, however, left over. Thus, our economy will have a public sector as well as a private sector. But the private sector must accept the objectives of the national plan and fit into it.

The progressive extension of the public sector in the field of what is now the private sector must depend on various factors, including the results achieved, the resources available and the capacity of the country at the moment. The test should always be what serves the social ends in view.

No vested interest or inherited privilage should be allowed to come in the way of the country's economic progress, nor should we allow ourselves to be distracted by slogans and doctrines which sound attractive but which might lead to a worsening of the condition of our people.

The general objective of economic progress has to be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

translated into concrete programme in close relation to the needs of the people and the available means and resources. The first consideration must always be to avoid a breakdown of any point in respect of whatever is essential for the life of the community.

This necessitates a system of controlled distribution in regard to commodities which are in short supply. It is also of the highest importance to keep prices from rising and to endeavour to reduce them. Many of our difficulties to-day are due to a high and rising price-level, and economic development has been seriously hampered because of this.

Therefore, it is of essential importance to follow firmly a price policy aiming at first, a prevention of a further rise, and secondly, to reduce present structure of relative prices as between agricultural commodities 'inter se' and between them and manufactured articles.

If prices have to be held and reduced, some measure of controlled distribution becomes essential. In the matter of food, the fate of millions of people is bound up with the presence of a nation-wide system of controls. But for these controls, the threat of famine might have materialised in different parts of the country.

We must endeavour to create conditions of relative abundance of articles which are necessary for the masses. As this happens, these controls can be progressively dispensed with.

But till we have an adequate supply, we must cooperate to make the controls function more effectively. Hesitancy and opposition to controls themselves produce weakness in their working. It is true that controls have led to corruption. The way to deal with this is to make the controls effective and to improve their administration.

Considerable progress has been made in the development of scientific research and the application of science to industry. This must be continued and adequate provision made for technical education.

Top priority has been given and must continue to be given to river valley schemes which are basic for the development of agriculture and power supply.

In regard to heavy industry, priority should be given to those industries which are considered of basic importance, such as steel, heavy chemicals, fertilisers and machine tools.

Any all-round development of the country on a significant scale must strain its resources to the utmost necessitating the need for much larger savings on the part of the community. In order to build a better future we must be prepared to suffer hardships at present.

The achievement of economic equality and social justice must proceed side by side with economic progress. The post-war shift in relative prices has, to some extent, rectified the disparity between the rural and the urban sectors.

Direction of public expenditure in the interest of social welfare and the imposition of estate duties in succession should be fully availed of as a means for the removal of inequalities. The tax structure should be examined and other methods explored for bringing about a reasonable relationship between the minimum and the maximum incomes, both in the private and the public sector, in keeping with the economic conditions of the country.

Inequalities have been accentuated during recent years largely in consequence of illegitimate gains from black-marketing, tax evasion, certain forms of speculation and other anti-social activities. To give immediate relief to the people and to promote social justice, these evils should be curbed with a strong hand.

The concern of the State for safeguarding the rights and interests of labour has expressed itself in several advanced measures of legislation. There is, however, much room for improving the implementation of these laws. Housing for workers is of great importance and should be encouraged by the State to the best of its ability and resources in co-operation with the employers and the workers.

A rise in the standard of living of the workers is not only desirable in itself, but leads to greater productivity. The 'per capita' productivity in India, when compared to some other countries, is low. This may be due to a variety of causes which must be investigated. It must be borne in mind, however, that without higher productivity, the interests of the nation as well as of the workers must suffer.

The machinery and procedure relating to arbitration and adjudication of disputes should be so improved as to secure fair settlements, based on the principle of social justice and with the least expenditure of time and money. Legal technicalities, formalities and appeals should be reduced to the minimum.

Considerable improvement has been made in our railway services. The Chittaranjan Locomotive Works have been established as a State enterprise for the production of locomotives. The Hindusthan Aircraft Limited are also producing railway wagons. The objective is to move towards self-sufficiency. Progress is being made in this direction, though it will necessarily take time. Continuous attempt has to be made to bring about further improvements in administration and for the convenience of passengers, more especially those travelling in the lower classes.

In some States, transport services have been nationalised resulting in greater efficiency and convenience to the public. This policy should be continued.

The public services and methods of recruitment have to be conditioned and adapted for the purposes of the national plan. Special training should be given, where necessary for the purposes of the nationalised or public sector of our economy. It is essential that high moral standards should be maintained in our public work; and while good work should receive commendation, bad work should be condemned. An effective machinery for this should be devised.

There has been frequent reference to corruption and there is little doubt that various forms of corruption exist as social evils to-day. Every effort must be made to put an end to this evil and some form of summary method must be devised to deal with such cases. At present, the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

real difficulty in dealing with these matters is due to the dilatoriness of procedure in departmental inquiries and judicial proceedings in the law-courts, and the standard of proof required, which often leads to the guilty escaping punishment.

The importance of education and public health is well recognised, and yet, no marked advance can be made in them so long as our resources are limited. At the same time, it is necessary to direct education in the right channels and remove many of the evils from which it suffers today. Education should be looked upon as something which trains the intellect and builds the character of the student, and not merely as a means for employment. What the next generation will be, depends upon the education given now and the importance of this cannot, therefore, be exaggerated. Our system of education should not be divorced from the productive aspect and other needs of the community, but should be related to and be conducive to their fulfilment. The principles of basic education, *i.e.*, learning through a craft, should be utilised to the largest possible extent. Even in general education, some form of manual work should form an essential part of the curriculum, without which degrees or diplomas should not be given. An essential part of education should be an appreciation of and devotion to truth and beauty in their various forms.

In regard to public health, considerable progress has been made in the control of epidemic diseases and provision of improved water supply and general sanitation.

The Constitution has laid a special duty on the Government to bring about the economic and cultural advancement of Scheduled Castes and Tribes and other backward classes. Both the Central and State Governments have given particular attention to this important matter. The Congress, under Gandhiji's lead, has always made this social uplift of the backward classes as one of its principal planks and has laboured to this end with considerable success. This work must continue until these classes enjoy the same economic and educational opportunities and advantages as others. In particular, the tribal people have to be helped to develop according to their own genius.

Owing to certain historical and administrative necessities of the moment, certain States in India were classified as Part B, and Part C. States. This classification was transitional and cannot be considered to be permanent. It has to be remembered that certain parts of India have developed differently during past years. Certain border areas, as well as certain areas inhabited by Tribal people, require special treatment. The general policy in regard to Parts B and C. States should be to speed up the removal of differential treatment as rapidly as possible.

One of the major problems before us during the last four years which has demanded and must continue to demand priority and full attention, is that of the rehabilitation of the displaced persons from Pakistan. According to the figures of the last census, 49 lakhs came from Western Pakistan and about 26 lakhs from Eastern Pakistan. Of those coming from Western Pakistan, about 30 lakhs came from rural areas. Rural displaced persons connected with Western Punjab, who owned land or had been carrying on cultivation there, have been settled on land except those who preferred urban occupations. These latter number about 5 lakhs. Of the urban people from Western Pakistan, it is estimated that 13,17,000 have been rehabilitated in some way or other, by finding gainful employment in Government or other services or by being given special training in production at various training centres. Of the remaining, about 2 lakhs of urban dispossed persons did not require or ask for Government assistance.

The problem of displaced persons from Eastern Pakistan became serious early in 1950 and rehabilitation schemes were drawn up. The position was rather fluid, as large numbers of migrants returned to their homes. Of the 26 lakhs that remained, a little over half, 13.50 lakhs have been rehabilitated.

During the last few weeks, a new problem has arisen in West Bengal, where a continuous stream of migrants from Eastern Pakistan is flowing in.

By the end of the current financial year, the Central Government will have to spend about Rs. 140 crores on relief and rehabilitation of displaced persons from Western and Eastern Pakistan. In addition, about 56 lakhs of acres of evacuee and other land have been given to them and about 3,56,000 urban houses, shops and industrial premises have been provided. Of these, 86.000 were new houses constructed by Government.

The question of properties left by displaced persons in Pakistan have remained unsettled, in spite of repeated efforts of Government. This is a vital matter affecting millions of people, which should be settled as early as possible.

As India is a secular State, every citizen has the same duties, rights, privileges and obligations as any other. He has full freedom to profess and practise his religion. It is the particular duty of the State to protect these rights of all minority communities in the country and to give them full opportunities for development, so that they might play their part in the economy and public life of the country.

The women of India in the past, and especially in the struggle for the country's freedom, have played a notable part and distinguished themselves in many ways. They suffer, however, from a number of social and other disabilities. It is important that these disabilities should be removed, so that they may take their full part in the economy and social progress of the country.

Demand for a re-distribution of provinces on a linguistic basis has been persistently made in the south and west of India. The Congress expressed itself in favour of linguistic provinces many years ago. A decision on this question ultimately depends upon the wishes of the people concerned. While linguistic reasons have undoubtedly a certain cultural and other importance, there are other facts also, such as, economic, administrative and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

financial which have to be taken into consideration. Where such a demand represents the agreed views of the people concerned, necessary steps prescribed by the Constitution, including the appointment of a Boundary Commission, should be taken.

In regard to foreign policy, India has pursued independent line in her own national interest and in the interest of world peace, and has sought to maintain friendly relations with all countries. This has been a positive policy, and, though sometimes criticised by others, has been vindicated by subsequent developments.

Certain small foreign establishments continue in India. The Congress has declared that these must revert to India, and our policy must be so aimed as to bring this about by peaceful means.

India's policy with our neighbour countries has been very friendly. We have welcomed the recent developments in Nepal. Unfortunately, we cannot say this in regard to Pakistan with which our relations have been full of difficulty. We have repeatedly endeavoured to find a solution of the many issues on which we are at variance, but without success. The chief among these issues is that of Kashmir. In spite of the aggression of Pakistan and the continuous provocative propaganda there, we have endeavoured to find a peaceful settlement in accordance with the wishes of the people of Jammu and Kashmir State. That policy holds and we cannot permit the Kashmir State to be disposed of in any other way.

The K.M.P. Manifesto

The following is the substance of the Krishak-Mazdoor-Praja Party:

It is easy to lay down certain general principles of social and economic reconstruction by which a political party may promise to lay the foundations of a new social order. Every party manifesto contains some excellent principles to which no progressive school of thought can take exception. We know, however, to our cost that the great aims enunciated in Congress manifestoes or in the directive principles of the Indian Constitution have little value because there are no corresponding plans and policies to give effect to them. Above all, the administrative machinery, as it is today, cannot be depended upon for the effective implementation of any plans. Its members have to deal with problems unknown to them before and in a spirit they never cultivated under foreign rule. As it is constituted today the administration lacks efficiency, integrity, and a spirit of service.

The constitution of our party lays down as our objective the establishment of a casteless and classless society free from political, economic and social exploitation. But here we propose to lay down our immediate programme of work. Our first task will be to overhaul the administrative machinery so that the services instead of acting as masters of the people act as their helpers anl servants. The task is urgent because in the complicated economy of today, even the prime necessaries of mere existence cannot be obtained except through a clean and efficient administration. Till a few years ago the State apparatus touched an ordinary citizen's life occasionally and at a few points only. Today, for a variety of reasons, the sphere of administrative regulation and interference has widened enormously. A corrupt and inefficient administration under the circumstances is bound to harm the country and lower public morale. It shall, therefore, be our endeavour to reform the services. We shall also examine to what extent and in what direction it is necessary and possible to reduce the scope of controls and of administrative interference in the citizen's life and work. In some spheres it may be desirable for the State to extend and intensify its activity to bring under effective control anti-social and disruptive forces. The State must also create a separate cadre for economic as distinguished from political service.

There is a general recognition of the fact that the great mass of our people live at a sub-human level. They are short of the vital necessaries of life such as food, clothing, shelter, education, sanitation and medical aid. Our economy is so unbalanced that it leads to the concentration of wealth and power in the hands of the few, exposing the many to unemployment, poverty, squalor and ignorance. No government which does not address itself to the solution of these grave contradictions has a right to the confidence and affection of the people. The situation we find ourselves in today can be improved only by radical changes to be brought about with the full and enthusiastic co-operation of the people. This co-operation, we believe, will be forthcoming in a generous measure if the leadership sets the example in service and sacrifice and is vigilant, earnest and careful, holding the interests of the masses as paramount. But no government is deserving of such co-operation that lacks the will or the guts to put down with a strong hand hordes of black-marketeers and other anti-social elements that have achieved so vicious a stranglehold on our economy.

In the political field we are pledged to democracy, both by the nature of our struggle for independence and by the Constitution framed for free India. But we believe that this democracy cannot function properly and effectively unless there is devolution of political authority and the local units are given reasonable power to shape their own life according to their requirements and genius. We believe that democracy works best in small units. This, however, need not mean a weak Centre. There are internal and international forces working today which necessitate a strong Centre. But a strong Centre, in a democracy, cannot rest for long on weak and helpless foundations.

The vast mass of Indian humanity is in a suppressed condition and yet there are classes, such as the Harijans, the aborigines and the hill tribes whose condition socially and economically is especially deporable. Their uplift shall receive the urgent attention of the State.

Our economic life must greatly improve if the miserably low standard of life of our masses is to be appreciably raised. This can be done by increased production, in all fields. For this increased production, it is necessary that for the time being at least there be an austerity drive to create the necessary capital and to solve our present

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

difficulties. The example of austerity must, however, be set by the leadership in and outside the Government, the administration and by those who today are living in ease and luxury. In the past this austerity drive was sustained by the spirit of Swadeshi. We must review this spirit and impress upon the people the need for using home-made articles in preference to foreign goods, even at a sacrifice which ultimately will replenish the nation .As far as possible no consumer goods should be imported except such as are needed for the health and vitality of the people. Whatever foreign exchange we can build should be used exclusively for the import of capital goods and expert services which we lack. But this lack must be speedily filled so that we may not rely, in a war-threatened world, upon imports from outside for our vital requirements.

With the Industrial Revolution in the West there has been a progressive unbalance in the economy of modern countries. Instead of agriculture being the axis round which industry should revolve, the latter has been the chief concern of modern nations. This over-emphasis on centralised industrial production was made possible by the imperial policies of the Western nations. They got raw materials and food from colonial countries where they dumped unwanted and sometimes injurious manufactured articles. India was one such victim. The loss of balance between agriculture and industry and between the rural and urban economy has now to be restored.

Our agricultural methods are primitive. Our peasants are poverty-stricken and ignorant. There is little incentive to increased and better production. Intermediaries draw away from the cultivator much of the fruit of his labour. Our aim will be to remove all hindrances that impoverish the peasant, creats conditions of serfdom and impede increased production. For this the first necessity is to see that all land belongs to the tiller of the soil with necessary safeguards against its misuse. The place of the robust, self-reliant and resourceful peasant proprietor in our agricultural economy should be recognised. It is, therefore, necessary to check the further sub-division of land below on economic holding. The village cannot survive unless there is consolidation of scattered holdings and further sub-division of land is checked. However, we cannot at present deprive the peasant of his uneconomic holdings. We must, therefore, provide him with facilities for co-operative farming whereby the resources of land, labour, instruments and cattle are pooled. Even the holders of economic units must be encouraged to co-operate for various purposes, specially for the disposal of surplus produce and purchase their necessary requirements.

In recent years the question of landless labour has assumed a critical position. It can be solved only if there are schemes for the reclamation of waste and marshy lands. This reclamation must be speedily undertaken and the land divided either into economic holdings to be offered to landless labourers or worked in big farms on co-operative basis. Landless labour must also find employment in decentralised industry. Where there are big farms worked through machinery and hired labour they must be worked on a co-operative basis or labour there must be organised and so far as possible a scheme of co-sharing must be worked on a co-operative basis.

Our agriculture depends largely on rain. Yet in our streams and rivers we have water enough to make our agriculture largely independent of nature's vagaries. By training our rivers we can secure an assured supply of water to irrigate the land and thus save the agriculturist from the ravages of both drought and flood. This should also help us to get cheap hydro-electric power.

In the field of industry, considering the restricted amount of land available for cultivation in proportion to the population, it will be necessary to encourage cottage and decentralised industry. Our party will, therefore, lay great emphasis on this. Through decentralised industry, we believe, wealth can be widely and evenly distributed. Moreover, decentralised industry avoids a costly and complicated distributive mechanism and greatly reduce, if not eliminate, industrial conflict and unrest. It utilises and stimulates local initiative and skill. It is the only way to provide employment to the largest number of our unemployed and semi-employed population. The guiding principle of our industrial economy will be that whatever can be produced efficiently and adequately through decentralised industry must be so produced, leaving to large-scale production of defence and key industries, such as generation of power, mining and metallurgy, the production of heavy engineering machinery, machine tools, etc. Resources of science will be made fully available for making decentralised production efficient and plentiful, eliminating drudgery. A high priority will, therefore, be accorded to the electrification of the country so as to make available cheap power to the worker in the rural area.

While our bias will be in favour of decentralisation we realise that in the complex conditions of the present-day world, large-scale centralised industry cannot be avoided. For speedy and full exploitation of our resources, it would be necessary to utilise all modes of production, small-scale, large-scale, private and socialised. While some defence and key industries must be nationalised we do not believe in the necessity of the Government directly undertaking and conducting all industrial enterprise. This often creates State monopolies, indifferent to efficiency and cost of production and hence to the consumers' interests. This is more so the case in India where the administrative services are not equal to their own limited tasks. Under nationalisation, labour too in the end fails to get a square deal. Wholesale nationalisation of industry would ultimately create State capitalism inimical to democracy. Therefore, an increasing sector of centralised industries instead of being in private hands will be socialised and run by autonomous corporations or by co-operatives representative of various interests including the State. Some centralised industries would serve as auxiliaries to decentralised industry providing the latter with efficient implements to increase its productive capacity. The destructive competition between centralised industry and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

decentralised industry will be discouraged by, among other measures, assigning to each its definite sphere. The large-scale private enterprise, in the sector which may be assigned to it in the light of the guiding principles we have stated above, will be subject to social control and regulated in the interest of the common man who is the labourer as also the biggest consumer.

So far, we have talked of production of wealth only. Proper and equitable distribution of the wealth produced is no less important. We have already said that our economy is unbalanced. Extremes of wealth and poverty not only disfigure our economy but are a menace to any prospect of peace and progress. Therein lie the seeds of greed and hate which are fruitful causes of war and violence. Wealth created must, therefore, be equitably distributed. This distribution can be effected even at the source of production through a decentralised and socialised industry and through co-operatives. This is the only way towards a peaceful and non-violent society. For this it is necessary also to prescribe for all practical purposes the minimum and maximum emoluments that a worker in any field of social activity can enjoy. Our effort will be to level up lower incomes and level down upper incomes so that there be some equitable adjustment between the different strata of society and the various vocations. The emolument potential must bear some proportion to ability and utility potential. Our aim will be to see that no worker in any walk of life gets more than twenty times the emolument or the standard wage the labour gets in the field or factory. The minimum wage must be high enough to enable the worker and his family to live a healthy, happy and decent life.

For all this we must devise a new scheme of education suited to our present needs. The intellectual bias given to our education by our foreign masters who needed cheap local talent in the administrative field needs to be modified. But this need not mean any lowering of the standard of intellectual attainment. Practical education through fruitful co-operative work and activity and the development of the artistic sense will enhance the intellectual capacity of the pupil and make it less theoretical and formal. Co-operative work is the best training for morals. Education will be related to the practical needs of the life of the community. This will not impoverish higher knowledge but will rather enrich it. It will also stimulate original research. But situated as we are to-day, the first great need of the community is a practical kind of basic education for the child and the illiterate adult. It will be our endeavour to wipe off illiteracy in the shortest possible time as had been done in many modern lands, specially in Russia.

There is one question that has affected our economy adversely after the partition of the country and that is the question of the displaced. We could have taken advantage of the enthusiasm of the people for our brethren, who had been made to pay the highest price for freedom, and we could have speedily solved the problem with the help and co-operation of the former. But we got unnerved at the immensity of the problem and allowed local and provincial considerations to weigh with us. The large-heartedness of the Centre was nullified by want of sympathy of its officers and the apathy of the provinces. The addition of the displaced persons to the Indian population could have been made an economic asset. We could have created with their help model townships and introduced co-operative farming and small-scale industries. However, it is no use regretting post mistakes. Whatever remains to be done must speedily be done, specially with regard to the claims of the displaced persons to their lost property. It must be settled with the co-operation of Pakistan. We recognise the claims of the Muslim evacuees to their property left in India. We expect reciprocity in the matter. However, if this is not possible our Government must settle property claims of the displaced persons on a voluntary basis under mutual guarantees, if Pakistan is agreeable.

We would fain not talk of foreign policy but a party statement is considered incomplete unless this complicated problem also finds a place in its aims and objects. We believe that our foreign policy must spring from, and be directly related to, our home policy. If we are adequately aware of our internal weaknesses and are conscious of the urgent and paramount necessity of building up a decentralised economy that is neither capitalist nor Communist, then the only alternative foreign policy for us is one of strict neutrality. Whatever the inclination of our intellectual sympathies, we must scrupulously avoid any involvement in international commitments which is likely to drag us into a war, either on the side of this bloc or that.

In all this we have concentrated attention on what is immediately possible given the determination and will. We have not talked of any ideology or ism. This we have purposefully refrained from doing. Unfortunately political ideologies have become fanatical creeds over which groups, parties and nations fight. They fight more over undefined, general and abstract terms than facts and substance. Whenever we talk outside ideologies we find that we understand each other better and appreciate each other's efforts at practical reform. In the world today each ideology in practice takes something from the other.

The Socialist Party Manifesto

The Socialist Party has issued a manifesto through its Secretary Sri Limaye. The following are the salient points in the Five-Year Plan therein:

(1) Abolition of zamindari without compensation. The maximum holding per farming family will be 30 acres of average productivity: all land above this holding to be taken over and distributed among peasants and agricultural labourers.

(2) Petty zamindars, however, will be given rehabilitation compensation and proprietors of land possessing more than 30 acres will receive an annuity for 10 years on holdings up to 100 acres.

(3) Village panchayats elected by universal suffrage and the multi-purpose co-operative societies will be the pivot of the reorganized agrarian economy. The panchayats will tabulate the resources and needs of their village

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and prepare a crop-plan which will be sent to their higher organs of the Planning Commission.

(4) There will be a thorough overhaul of State machinery, and the present multiplicity of agricultural departments will give way to an integrated administrative machinery consisting of land commissions on regional, State and Union levels.

The commissions will consist of representatives of village panchayats, co-operatives, the Government and agricultural experts. They will deal with rural credit, technical help, land revenue, irrigation, cottage industries, crop-planning, river training, flood control, export and import of agricultural produce and supply of agricultural implements. There will be as great a diffusion of power and responsibility as possible.

(5) To improve land productivity, land volunteers will be organized who will undertake minor construction work, such as digging of wells and compost pits, draining of water-logged land, and the building of bunds, roads, etc.

(6) A food army raised and equipped by the State will bring new and waste land under cultivation.

(7) All forms of co-operation, including joint farming, will be encouraged; collective farms will be organized on land reclaimed through the food army. Here landless labourers will find work, home and land.

Industry

(1) In order to release the productive power of the community, certain industries will be taken over by the State.

Nationalization of banks and insurance companies will help capital formation; social ownership of key industries —like iron and steel, power, mines, chemical fertilizers and plantations—is essential for planned economic development; taking over of the "derelict" textile, sugar, and cement industries, "which have failed the consumers so utterly," will enable the State to satisfy the basic needs of the common man.

(2) All other industries will be in private hands. State control will be so devised as to remove all restrictions on production and to give an opportunity to those with initiative to explore, experiment and expand.

(3) Emphasis will be not on capital intensive but on labour intensive technique. The world's best technical talent will be availed of.

(4) In the nationalized sector there will be autonomous public corporations competing among themselves and municipal enterprise which will avoid the dangers of monopoly, centralization and bureaucratization.

(5) Workers will be represented on these corporations through their works committee and production committees. In joint stock company concerns workers' participation in management will be compulsory. In proprietary concerns their interest will be safeguarded through a system of double audit. Management, however, will be the responsibility of the proprietors.

(6) Provision will be made for sickness insurance, maternity benefits and old age pensions. The principle of unionship—every worker a union member—will be introduced and internal democracy within the Union will be safeguarded.

(7) Producers' co-operatives and handicrafts will be encouraged by reserving certain lines exclusively for them. State initiative will break "the stalemate in industry."

(8) Planning machinery will be built from the bottom upwards: Village panchayats, public corporations, local bodies, co-operatives and associations of small manufacturers, workers and "handicraftsmen" will prepare inventories of their resources and their productive capacity, as well as the facilities required to increase productivity.

These plans will be finalized by planning commissions on State and Union levels. On the commissions will be represented all interests, including the consumers. The primary bodies mentioned above will be responsible for carrying out these plans.

There will be State trading corporations which will import and procure all requirements of the nationalized sector and scarce capital goods and industrial raw materials. All products of nationalized industry will be exported and distributed on a wholesale basis by them as well as important raw materials like jute and cotton.

Village produce will be disposed through multipurpose co-operatives which will also buy the requirements of the village on a wholesale basis. Other trade will be in private hands. "State control over it will ensure both traders' and consumers' interests."

In order to avoid corruption and black-marketing, instead of "the present partial and ineffective controls," rational and integrated controls "right from raw materials and capital goods," will be devised. A "democratic check" will be provided by associating consumers and workers at every stage of manufacture and distribution.

Measures of economic equality, such as capital levy, ceiling on income, etc., will change the character of public finance. Public revenue will be so distributed as to leave increasing resources to the organs of administration closest to the people. Public expenditure will seek to augment production and not merely maintain law and order.

To reduce disparities in wealth the State will abolish "all privileges of Princes and their Saliyanas."

Taxation measures and graduated capital levy will be used; to curtail privilege and concentration of property, and to bring all incomes within the range of a "floor" of Rs. 100 and a "ceiling" of Rs. 1,000. The floor and the ceiling will rise with increase in production.

All barriers of caste will be pulled down. The scheduled castes and tribes will be settled on reclaimed land. A sum of Rs. 100 crores will be spent over a period of 10 years to provide educational opportunities to scheduled castes and tribes. In public services there will be reservation for them at least in proportion to their population.

All disabilities imposed on women will be removed. They will get equal pay for equal work. A civil code guaranteeing equal rights will be framed and there will be reservation for them in such lines as teaching and nursing.

Minorities will have the right to profess and practise their religion and to promote study of their language, script, literature and religion through their educational institutions and cultural associations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Refugee agriculturists will be settled through co-operative land reclamation schemes; middle-class people and artisans will be fostered by the State.

Constitutional changes directed at (1) restricting the property rights enjoyed by a microscopic minority, which stands in the way of community's advance, and (2) expanding the sphere of the people's freedom, will be introduced.

Provinces will be rearranged on a linguistic basis, the boundaries of which will be determined by a boundary commission. All States thus brought into being will have equal status.

India will withdraw from the British Commonwealth and thus redeem the pledge of complete independence.

Administrative reforms will root out corruption, bribery, inefficiency "and red-tapism."

(1) Justice will be made cheap and fact-finding and punitive functions will be separated; (2) Public opinion will be associated at each level of the Executive; (3) There will be periodic departmental meetings of the staff to improve efficiency and abolish red-tape; (4) Talent discovered in the ranks will be offered opportunity of special training and exercise of initiative; (5) Legislative standing committees "will act as vigils"; (6) Promotion and demotion will be based on fulfilment of targets and efficiency audit; (7) An anti-corruption authority will deal with all cases of bribery and corruption; (8) Major offences will be dealt with by special courts.

India's foreign policy will be based on:

(1) Abstention from disputes between "the Atlantic and Soviet camps;"

(2) Collective security arrangements for the belt stretching from Indonesia to Egypt;

(3) Co-operation with such U.N. agencies as might help to increase living standards of retarded peoples and abolish hunger and war;

(4) Opposition to all charters and agreements that bolster up the international caste system of rich and powerful nations on the one hand and the weak and poor nations on the other.

India will also support freedom movements in Africa and Socialist movements everywhere.

Manbhum Satyagrahi's Statement in Court

It is well known in Manbhum how due to a previous intrigue between the local officers and some men of Jhalda, Sri Bibhuti Bhusan Das Gupta, Secretary of the Loksevak Sangha and six workers of the Sangha were arrested at Jhalda on the 22nd April last while they were conducting a peaceful public meeting there. They were charged with the offence of rioting, assault, theft and illegal detention. As Satyagrahis they did not put in a defence but filed a written statement in court—which was held not in public but inside the jail. They were convicted for rioting and assault and sentenced to six months rigorous imprisonment. The judgment delivered by the Magistrate of Purulia shows how justice can be prostituted in the interest of mean and selfish politics. The joint statement filed in court by Sri Das Gupta and others throws a flood of light on the condition of the people of Manbhum. We publish a substantial portion of this statement which we consider a very important document in the history of the people's struggle against oppression and corruption.

We know this *Sangha,* and have not the slightest doubt that as true followers of Bapu they have observed *Truth* in all their statements and actions. Their punishment is martyrdom, suflered in the cause of humanity. Bapu is dead and so is his beloved Congress, who is there then to offer redress? Even his *Harijan* is silent on this matter.

"We had the duty, as Satyagrahis, to fight against the foreign rule in order to end its autocratic role along with the slavery under foreign domination, we have had our duty also to fight against our countrymen's rule that has become synonymous with misrule and autocratic rule, in order to establish the real "Swaraj," in our country for which we fought so long a period of time. With that conscious sense of duty and responsibility, we have been giving a sincere fight from our Manbhum front against the bankruptcy of this Congress Rule for the last three years; and the Provincial Government also have been fighting against us the Satyagrahis, devising undesirable methods to vainly crush our rightful plans of Satyagraha launched against the misdeeds and falsehood and oppression of the powers-that-be. The Centre have given long ropes to the Provincial Autocracies to do according to their ill-will, and we saw in our own field how the Provincial Government having been aware of this unhealthy state of things, have plunged unrestrained into the unholy games of power-politics and exploitation. So as a last resort, we had to launch Satyagraha to lead Non-violent Crusade against the wrong-doers and to secure civic rights to the People.

This statement of ours is to express our stand as Satyagrahis in a Court under this Swaraj Government. We have realised the necessity of giving this statement, *as we have decided not to defend our case, as Satyagrahis, even though the charges are concocted and not those which the Satyagrahis cherish to break.* If the charges be according to the laws which a Satyagrahi deliberately and conscientiously breaks, the question of defence does not arise herein. But if the charges are otherwise, the question of defence may naturally arise therein in a free country which is ready to secure justice for its citizens. *So, there are baseless charges against us;* the court is sitting with us which is expected to do justice to the case in question; there is a Constitution for India which has assured to have provided safeguards to secure rights and justice the people deserve; and every citizen is naturally expected in this situation to exercise his rights to have justice for him through Constitutional ways, when all those things are there. We are fighting today against the mischievous laws, mal-administration and the misdeeds of the Government. We have waged non-violent fight against the misdeeds of the Government; not only not having met with a single instance of justice being done from the part of the Government in hundreds of appeals for rectification of wrongs done by the Government, but also having met with the Governmental attitude of doing more harm in

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the matters in question for which the rectification was solicited.

It may be suggested that, if we defend our case we may at least torpedo the false story of the case by the very instrument of their own, having foiled *the design of the government to inflict punishment on us for untoward charges which we never dreamt to commit;* and that by this, our case may be cleared of all wrong imputations that are made and the opposite party may be exposed therein. By our deliberately refraining from defending our case, we express our protest against the condemnable condition that has come to stay in the field of justice and rule under a National Government.

We know that there is the Bihar Maintenance of Public Safety Act. We unequivocally declare here that we have violated this aforesaid Act with the full consciousness of the action of ours; and we may be considered guilty in the eyes of the unjust executor of that undesirable Act, but we feel ourselves to be not guilty to our conscience and to our sense of duty towards our country and the cause we serve. But here we would do well to mention that such violation on our part of this infamous Act has been made by the holding of many a similar meeting in the recent days, for which the Government have not had the moral courage to take legal actions against us. The Government know that we are on the right and that the Government lack in the moral stand and moral actions.

Hence where the straight way was lacking, the authorities have had to invent, and to take recourse to, many improper and immoral methods to achieve their object. *We have been charged with rioting, theft and making illegal detention of a person* whom we are alleged to have assaulted and robbed. Before saying anything about it as our reaction to it, we would like to say that this is not a question of mere defending the particular case of ours in which our pisition is seemingly at stake, but this is a question *how an entire Government machinery is engaged in unclean practice of cooking false stories to serve their purpose for the reason of which,* defending of the whole position is involved in the question. *What can we gain in fighting our individual cases, in which we are falsely implicated, if the Government themselves are there to enjoy freedom for endangering anybody and everybody they like,* having engaged themselves in doing so with unchecked liberty, by taking advantage of their having Governmental powers in their hands? A very important question also is how the agencies of the *Government dare to concoct a false and baseless case out of an incident that has occurred before the eyes of thousands of people who are there to reveal truth for the sake of truth.* The reason is clear as daylight. Such a deplorable state of things has been made possible to happen openly and daringly in an Independent Country and before the eyes of millions of people to-day, since there is nobody in all the Governmental spheres of India to raise any question for whatever wrongs they commit under this Swaraj life. *The Provincial Government is there as the perpetrators of these evil deeds, and the Central Government is there as willingly silent spectators of all wrong doings of those whom they have had to conduct and control.* In this state of things today, it is not the question of defending only this individual case of ours that matters much in the civic life of our present-day country, regard being had to the broader question involved in the case, but what matters much for us to consider is what has become the general condition of the administrative ways of the country in which such cases like that of ours are possible to be made. So our case is a broad-based case; and the defence for it, in order to have the real justice as required for the same, may only take place in some other competent court than the court we are in—that is, the Court of the people at large. In this present setting of things if this present Court expresses his willingness to administer true justice that the case and the condition of things deserve, then it would have to extend the range of its field of investigation, which, we are compelled to say, it is not competent to do, even though it be willing to do the same. *If it could do so, then it could see that persons have been made accused by conspiracy on the part of the Government of wrongful confinement of a person after robbing and assaulting him, as a reward of their saving the very person from a trouble at some risk.* In such investigation it would have been seen that the peaceful persons are being wrongfully confined in the jail by the very persons who have raided them, without reasons, with deadly weapons and have mercilessly lathi-charged their peaceful assembly. It would also show that these men of power who are the cause of this case are men who have unfortunately undertaken to lead a life in which they have left recorded endless unattended crimes all over the district in the wake of their unfortunate Hindi Imperialism and their ill-conceived autocrative exploitation in Manbhum, having been armed with the power of the Congress regime of the country. *We say all these with due responsibility involved in it and are ready to fully substantiate what we say;* and we think all these evidences are really necessary for arriving at the truth in the case.

We know that the moral and prospering existence of a country consists in its observing the rules of justice in its own life. The Father of the Nation gave us light for it. The Congress of the by-gone days committed itself to it. But now the Congress regime has deserted it in such a pitiable way that the country is on the verge of disintegration to-day. So in this distressing state of things in our country we the Satyagrahis of Manbhum voice our humble warning from a remote corner of India, that by forsaking justice and justice thus we shall bring in our doom."

Liaquat Ali Khan's Statement

"I am deeply disappointed to read your telegram dated July 17, 1951. Instead of revoking the concentration of Indian troops on Pakistan frontiers, which you have admitted, and thus removing a serious threat to the security of Pakistan and international peace, you have proceeded to make a series of allegations and statements unrelated to facts.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"You have asserted that India's policy continues to be to preserve and ensure peace and to avoid war. The use of military force in Junagadh, Hyderabad, and more recently in Nepal, are grave warnings against the acceptance of these assertions at their face value. The continued denial by force of arms to the people of Kashmir of their right of self-determination and repeated threats to the security of Pakistan by massing of Indian troops on its borders are hardly indications of a desire for peace.

"You have referred to a reduction of the Indian Army last year. The facts proclaim otherwise. Your defence budget has risen from 151 crores in 1948-49 to 195 crores in the current year. Last year the original defence budget was 176 crores, but, the revised budget rose to 191 crores. In the current year's budget an announcement was made of a small reduction in the strength of the Indian Army counter-balanced by increase in the Navy and Air Force; but two months later it was reported that even the proposed reduction would not be made. Actual defence expenditure in the current year is thus likely to rise to still higher levels.

"Your allegation that the armed forces of Pakistan were largely massed on Indian frontiers is completely without foundation. This would be borne out by any impartial observer. You have been at pains to distort the significance of expressions of discontent which have appeared in the Pakistan Press over your persistent refusal to allow a peaceful solution through a free plebiscite in Kashmir as propaganda for war against India. At the same time, you have either ignored or belittled the continuous and blatant propaganda for war against Pakistan by the Indian Press, prominent Indian leaders and political organisations. This propaganda has been going on in spite of the Delhi Agreement of April, 1950.

"As any impartial observer will testify, for a long time after the Delhi Agreement, the Pakistan Press strenuously propagated goodwill towards India while the Indian Press and political leaders continued to fulminate against Pakistan and to make attacks aimed at the integrity of Pakistan. When I drew your attention to this violation of the Agreement and asked for action against those responsible for it under Clause C.8 of the Agreement, you pleaded your inability to carry out the obligation undertaken by you.

"You have referred to the recent border incidents which you have reported to the United Nations. These incidents have been magnified by you out of all proportion and attributed entirely to Pakistan.

"I would draw your attention to the statement made by General Nimmo, Chief U. N. Military Observer on July 13 that quite a number of such violations of the cease-fire agreement have occurred on both sides and that the recent incidents were less serious than some of those which occurred in the past. Surely, it would be a gross distortion of facts to treat these incidents as any evidence of a desire for war.

"You have also referred to the no-war declaration. But as you are aware, the proposal for a no-war declaration could not be carried to a conclusion only because of your refusal to agree that if disputes between India and Pakistan could not be settled by negotiation and mediation, they should be referred to arbitration. In spite of the clear direction in your Constitution calling for the settlement of international disputes by arbitration, you maintained that it was beneath your national dignity to agree to this procedure.

"There can be no clearer proof of Pakistan's desire for a peaceful solution of its disputes with India than the proposal I have repeatedly put to you that all our disputes should be settled by negotiation and mediation and failing that by arbitration. Unfortunately you have preferred the threat of use of force in settling disputes in your favour wherever the opportunity has offered itself.

"You have admitted that troops movements have been ordered by you but you claim that these are for defensive purposes. The nature and magnitude of these movements and in particular the forward move of your armoured division and armoured brigade would not lead anyone to feel that their presence so close to Pakistan frontiers is for defensive purposes.

"This plea of defensive purposes loses all validity in the face of the fact that Pakistan had made no troop moves before the concentration of your forces against Pakistan borders.

"There can be no severer strain upon the relations between our two countries than to be subjected time and again to the threat constituted by concentration of forces. I would again urge you most earnestly to withdraw these forces so that this threat to the security of Pakistan and international peace is removed."

Nehru's Telegram to Liaquat Ali Khan

"I am in receipt of your telegram dated July 20. I regret deeply that my message of July 17, which I tried to make as frank and straightforward as possible should have evoked an answer which I can only describe as propagandist.

"Your references to Junagadh and Hyderabad are wrong and irrelevant. Do not propose to discuss these issues because our position in respect of both has been repeatedly explained. Your reference to Nepal is extraordinary and wholly unjustified. The Nepal Government itself has issued a strong protest against it. At the request of the Nepal Government small Indian forces are cooperating with Nepalese forces near the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

border in rounding up some terrorist gangs engaged in looting and other acts of lawlessness and violence.

"As regards our defence forces, the Central fact is that our Army was reduced in 1950-51 by over 52,000 men. This is easily verifiable. Your reference to our budget figures is irrelevant and misleading as these reflect certain economic factors, such as rise in prices and change in exchange value. We frame our budget every year in the hope of reducing our Army still further.

"If the further reduction in our forces proposed for the current year has not been carried out, this has been due to Pakistan's war propaganda and to the absence of any reduction in her armed forces. You have not controverted our statement that the size of the Pakistan forces has been steadily increasing. Thus while we have been reducing our Armed forces, you have been increasing yours.

"I have neither ignored nor belittled what you say about the Indian Press. Outside a small and irresponsible section there has been no such propaganda as you suggest in the Indian Press: I am quite willing to leave the judgment on this to any impartial student of the Press of the two countries.

"I am surprised that you should dismiss the virulent and persistent propaganda in favour of *jehad* in the Pakistan Press as 'expressions of discontent over' our 'persistent refusal to allow a peaceful solution by a free plebiscite in Kashmir.' Threats of war over Kashmir in the Pakistan Press have occurred almost daily for many months. I would quote only a few extracts from reports of views publicly expressed by persons in Pakistan holding the highest offices:

> 'You can take it from us, that the day we become desperate and lose all hope of a just solution of the problem, not only the entire Pathan population of Pakistan and the tribal areas will rise up for the *Holy Jehad* in Kashmir, but our brothers from across the Afghan frontier will also throw in their lot with us for the cause.'—(Khan Abdul Qaiyum Khan, Prime Minister of N.-W. F. P.).
>
> 'So long as a single Pakistani is alive, nobody dare snatch Kashmir from Pakistan by force—if the problem was not settled immediately the whole of Asia would be engulfed in the flame of war which might lead to a world conflagration.'—(Sardar Abdur Rab Nishtar, Governor of West Punjab).
>
> 'I say this with full responsibility that India has now over several months taken up the attitude with regard to Kashmir which deliberately blocks progress along peaceful lines. What does India desire? It has no right to complain if it gets something else.'—(Sir Mohammad Zafrullah Khan, Foreign Minister of Pakistan).
>
> *'Prime Minister Liaquat Ali Khan told a Press Conference in Karachi that the Kashmir question cannot brook any delay. He said there were only two courses open to Pakistan to settle the issue—One was to pursue the matter in the Security Council. The second I would not tell you.'*

"The charge that India has persistently refused to allow a peaceful solution through a free plebiscite in Kashmir is, as we have repeatedly pointed out, wholly baseless. It is the armed aggression of Pakistan against Kashmir and the continuing presence of Pakistan armies there that has come in the way of a peaceful solution. Progress towards a peaceful settlement has not been made because of the non-fulfilment on the part of Pakistan of conditions under which alone a free and impartial plebiscite could be held.

"In these circumstances, it is difficult to draw any other conclusion from the views of Pakistan's spokesman and the virulent and frequent comments of the Pakistan Press, than that Pakistan is preparing to seek a settlement of the Kashmir dispute by resort to force. This, and this alone is responsible for the wholly precautionary and defensive measures that we have taken. After what happened in Kashmir in 1947, we should be failing in our duty if we did not take adequate steps to safeguard ourselves against a repetition of those events and the far-reaching consequences to which these would lead.

"I would once more affirm in complete sincerity, that military movements on our side have not been inspired by any aggressive intent or design on our part against Pakistan. India has no intention whatever of attacking Pakistan or of seeking the solution of any problem by force, but if Indian territory, including Kashmir, is invaded by Pakistan then India will take all measures in self-defence. If, as you say, it is also Pakistan's policy not to attack India, I see no reason why peace between our two countries should be in any way threatened. My proposal for a 'No-War declaration' by both countries was a simple and straightforward one without strings attached. You did not accept this and added many conditions.

"What is needed to ease the present tension is a declaration by your Government that on no account will they attack or invade Indian territory. Even now anyone can contrast the war propaganda and preparations in Pakistan with the absence of any such activities or propaganda in India. If the militant propaganda against India and talk of war in Pakistan cease, I am confident that not only will the present tension ease, but the way will be prepared for a calm discussion, in a peaceful atmosphere, of disputes outstanding between our two countries, and for their amicable settlement."

Liaquat Ali Khan's Invitation

Mr. Liaquat Ali Khan, Pakistani Prime Minister, invited Mr. Nehru to visit Karachi. The invitation was contained in Mr. Liaquat Ali's latest reply to Mr. Nehru, which outlined a fivefold plan for the restoration of a peaceful atmosphere and the establish-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ment of friendly relations between India and Pakistan.

The Pakistani Premier said that the visit should come off "as soon as the first essential step towards the restoration of a peaceful atmosphere, namely, withdrawal of concentration of forces, has been carried out." Other points of the peace plan are:

1. As soon as the troops have been withdrawn both India and Pakistan should reaffirm their agreement that the question of accession of the State of Jammu and Kashmir to India or Pakistan be decided through the democratic method of a free and impartial plebiscite held under U. N. auspices."

To this end both Governments should state their readiness to implement without obstruction or delay, the obligations undertaken by them under the UNCIP resolutions of August, 1948, and January, 1949.

These obligations include observance of the cease-fire agreement, withdrawal of armed forces from the State and acceptance of the decision of the Security Council in the event of any difference in regard to the interpretation and execution of these agreed resolutions.

2. Both Governments should also declare their renunciation of the use of forceful methods in the settlement of any dispute and refer such disputes to arbitration or judicial determination if they are not resolved by negotiation and mediation.

3. Both Governments should reaffirm the obligation undertaken by them in the Delhi Agreement, particularly that "they shall not permit propaganda in either country directed against the territorial integrity of the other or purporting to incite war between them, and take prompt and effective action against any individual or organization guilty of such propaganda."

4. Both Governments should make a declaration that they will on no account attack or invade the territory of the other.

Auchinleck's Activities in Pakistan

Statesman's Diplomatic Correspondent at New Delhi reports:

"New Delhi, July 27: Informal discussions have taken place between the External Affairs Ministry and the Deputy High Commissioner for the U. K. over the Prime Minister's recent reference to British military officers in Pakistan.

"An informal approach is believed to have been made by Mr. Garner to obtain an amplification of Mr. Nehru's allegation that British military officers in Pakistan had 'added greatly to the prevailing tension.' While it is not known what specific complaints Mr. Garner received during his conversations, India's main charge is believed to relate to the activities of F.-M. Auchinleck, who has been in Pakistan since April.

"A complete dossier about the Field Marshal's movements in Pakistan over the past four months, now in the possession of the Indian Government, suggests that his interests may have been connected with more than trade and business.

"Meanwhile the U. K. High Commissioner's Office here is believed to have received from F.-M. Auchinleck an explanation regarding his movements, apparently in answer to inquiries made by the High Commissioner.

"According to Indian sources, bellicose statements about Indo-Pakistani relations have also been made by General Gracey, whose visit to Pakistan was brief, and certain serving officers.

"That Mr. Nehru could not have intended a sweeping statement about British officers generally is evident from the fact that India herself has two senior British Army advisers and British Chiefs of the Navy and the Air Force.

"A *PTI-Reuter* report from Karachi says that Auchinleck had a meeting today with Chaudhry Nazir Ahmed, Pakistan's Minister for Industries, according to a Pakistani Government handout.

"The handout said that the Field-Marshal met the Minister 'to inform him of the progress of the carpet manufacturing concern he was going to sponsor'."

Conditions in India and Pakistan

Especially since the latest ration cut there has been severe criticism of the policy that our rulers, both Central and State, are following. It is said that the land of Pakistan has become by comparison a land flowing with milk and honey. Whatever may be the faults of our rulers—and we are not defending them, Pakistan is not a land flowing with milk and honey. The following statistics are self-revealing:

Unemployment

	India	Pakistan
1948	224,900	77,983
1949	293,043	70,996
1950	314,336	96,439

Index of general consumer prices and food prices:

General
1939=100

	India (Bombay)	Pakistan (Lahore)
1947	263	398
1948	286	444
1949	290	408
1950	295	415

Food
1939=100

1947	302	460
1948	305	497
1949	321	452
1950	334	453

The above informations are taken from the latest issue of the *International Labour Review*, U.N.O.

The Unity of Leftism in India

We share the opinion of the *Behar Herald* of July 7th last. "There are today a dozen Leftist Parties in Bengal, and more will sprout up by December next. These are: (1) The Socialist Party of India; (2) The Communist Party of India; (3) The Krishak-Praja-Mazdoor Party; (4) Forward Bloc of Nanu Ghosh of Howrah; (5) Do of Leela Roy; (6) Do of Shilbhadra Yajee; (7) The Revolutionary Socialist Party of India; (8) The Revolutionary Communist Party of India of Soumyendra Nath Tagore; (9) Bolshevik Party; (10) The Socialist Republican Party; (11) The Democratic Vanguard; (12) The Party of National Synthesis. While the Leftists will be quarreling among themselves, the Rightist Congress will have an easy victory in the elections."

We desire, however, to ask a question: Why have the esteemed lady and the gentlemen who have felt impelled to captain these shows differed? They are by profession all followers of Marx and Lenin. Are we then to think that like the pre-1917 Russian revolutionaries they differ because they cannot agree to the position of a coma, or a semi-colon at which Israel Zangwill poked fun?

Zemindari Abolition in Madhya Bharat

The Madhya Bharat Zamindari Abolition Act received the assent of President Prasad on June 25 last. The Act which will be promulgated within 48 hours will bring a new era in the history of the newly-created Madhya Bharat State.

More than 8,600 zamindaries, covering an area of 18,636 sq. miles, will be taken over by the Government after the promulgation of the Act. This Act, it is said, would affect 1,21,993 zamindars of the State.

The Patels appointed by the Collectors will take possession of the lands, forests, etc., belonging to the zamindars on behalf of the State Government. The Government have made provision for the grant of compensation to the zamindars, the official announcement said.

The compensation grant would be paid in fifteen instalments. The zamindars have been divided into six grades for the compensation. Those paying an annual revenue up to Rs. 100 to the Government have been placed in the first category, those paying Rs. 101 to Rs. 500 second; Rs. 501 to Rs. 2,000 third; Rs. 2,001 to Rs. 3,500 fourth; Rs. 3,501 to Rs. 5,000 fifth; and above Rs. 5,000 in the sixth and last category.

Zamindars belonging to the first category would receive compensation amounting to 20 times of their net income, the second category 17 times, the third 15 times, the fourth twelve times, the fifth ten times and the sixth eight times. Zamindars whose annual income does not exceed Rs. 3,500 were also to draw a rehabilitation grant to enable them to settle down in other occupations.

The compensatory rates are patterned after those fixed in the Uttar Pradesh and Bihar Acts. These latter are subjects of litigation in the Supreme Court.

Orissa's Financial Crisis

A Cuttack news dated June 21 last told the world that the Governor of Orissa, Mr. V. P. Menon, and the Chief Minister, Mr. Nabakrushna Chaudhuri, are now daily "holding conferences at Government House to find a solution of the financial crisis" which the State is stated to be passing through. It is understood that as a result of the deficit budget of the State during the last three years the State Government had to overdraw to the extent of about Rs. 2 crores 50 lakhs from the Reserve Bank of India against its capital investments. The over-drawings being progressive without any possibility of repayment so far from Revenue Account, the Reserve Bank of India and the Government of India are understood to have drawn the immediate attention of the Government of Orissa and asked the latter to revise its financial position.

Meanwhile the Ministers of Orissa are understood to have been asked not to leave the headquarters but be in readiness to attend a short notice cabinet meeting likely to be held before June 25 to consider the joint report of the Governor and the Chief Minister and finalise the proposals for the resolution of the "financial crisis."

It is considered likely that the first announcement of the crisis and the steps taken to meet will be made in the Orissa Assembly which meets on July 11.

Drastic cuts in expenditure on unproductive schemes and retrenchment are anticipated in the Public Works Department.

Since then, the Governor and the Chief Minister had been to Delhi and the public have been informed that the news created a darker impression of the situation than the facts justified. Now that the old Governor, Janab Asaf Ali, has returned with health refreshed, we hope our neighbouring State will share his freshness.

India's Food Problem

During the second Vana-Mahotsav (Tree-planting ceremony) a fresh spate of speeches has been released over the country. Its inaugurator, Food Minister Munshi, fertile of ideas and compact of imagination has not learnt wisdom from the first year's result of his brain-wave.

We do not know who is responsible for the present food scarcity. War and profiteers are there to twist natural economic relations. But with all this, we are afraid that our Prime Minister with his craze for "planning" must have to share a part of the blame.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

forgetful of the lesson of American experience in this line.

For the benefit of his advisers we desire to draw attention to a report of the Rockefeller Foundation in which occur words of wisdom that should have a lesson for all of us. We quote these below:

"The capital required (for the better utilization of natural resources), particularly in agriculture, need not at the start take the form of spectacular dams, power facilities and industrial plants. Rather it could consist of thousands of small improvements, such as local water systems, small dams, wells and a variety of other constructions and implements."

India's food problem can be solved not by 'spectacular' planning but by making the agriculturist realize that his habitual practices have grown out of date. We hope our rulers will yet realize the generally incomplete nature of the *experts'* advice.

Animal Husbandry—Its Regionalization

We thank the Central Publicity Department for sending us a reprint of an article from the *Indian Farming* of June, 1950. A summary says that the Indian Council of Agricultural Research was established in 1929. But there was lack of co-ordination amongst its various organs and over-lapping. After 1945, this experience led to certain reforms and the setting-up of Regional Committees which work under the following scheme, the result of the enquiry by a Research Regionalization Committee. We cull the following from the article:

"(i) *Dry Northern* (*Wheat*) *Region*—comprising of the Punjab, Wetsern Uttar Pradesh, Western Madhya Pradesh, Madhya Bharat, Rajasthan, and Patiala and East Punjab States Union.

(ii) A. *Wet Eastern* (*Rice*) *Region*—comprising of Assam, West Bengal, Bihar, Orissa, Eastern Madhya Pradesh, Eastern Uttar Pradesh and North-east Madras.

(ii) B. *Coastal Region*—comprising of the two coastal strips in South India bordering on the Eastern and Western Ghats, parts of Mysore, Coorg, and Travancore-Cochin.

(iii) *Southern* (*Millet*) *Region*—comprising of Jhansi Division of Uttar Pradesh, Madhya Pradesh, Madhya Bharat, Eastern Hyderabad (Deccan), West Madras, Bombay and part of Mysore.

(iv) *Temperate Himalayan Region*—consisting of two sub-regions, *viz.*, the Eastern Himalayan Region including Assam (hilly parts), Sikkim, Bhutan, Nepal and the Western Region including Kumaun, Garhwal, Simla, Kulu, Chamba and Kashmir.

Four Regional Committees were appointed to consider the schemes of research, both current and proposed, with a veiw to fit them in, into the regional plan. The Committee have since made their recommendations and these would now be placed before the Scientific Committees.

Some of the new schemes recommended for consideration on a regional basis are:

(*i*) Setting up Regional Nutrition Centres—one in each region.

(*ii*) Study of sterility in cattle on a regional basis and in various areas.

(*iii*) Study of trace elements and deficiency diseases.

(*iv*) Improvement of wool.

(*v*) Utilization of industrial by-products and unusual feeds for liverstock."

There is, however, another side of the problem which mechanized-minded people in India have been pressing forward for acceptance by the people. Their attitude was reflected in an article in the Nagpur *Hitabada* of June 25 last entitled "Draught Animals—A Major Obstacle to Efficient Food Production," with a second title "Form Mechanization is the Key to Prosperity." The thesis contradicts all the purpose of the work of our Animal Husbandry Department. Our readers should know the process of their thought.

According to the standard rations for livestock in Britain, something like five acres of land is needed to feed a horse. If the total number of draught animals in the world is multiplied by five, we find the staggering total of 1,114 million acres are occupied unnecessarily. The best estimates show that between 3 and 4 thousand million acres of the world are cultivated, which means that an area equal to one-third of the world's cultivated acreage is given over to feeding draught animals. Is it any wonder that the progress of civilisation is so halting and spasmodic when the availability of food—the first essential—has such shaky foundations?

It may be argued that some draught animals do not require five acres for feed. It is just likely that a high proportion occupy a much greater area of rough, uncultivated land. The precise area is not important. The vital point is that almost all land used for draught animals could be made available for human food production. If we reckon only three acres for each draught animal, the result is still shocking.

Here are up-to-date figures of draught animals and tractors in the main regions of the world:

	Draught animals	*Tractors*
Europe	29,982,617	1,300,000
North & Central America	14,558,000	3,214,190
South America	15,155 000	54,638
Oceania	1,076,000	99,759
Asia	148,248,500	27,177
Africa	13,950,000	63 354
	222,970,117	4,759,930

With so great a proportion of the world's cultivable area given over to draught animals, the wonder is that famine is not more constantly recurring than it is in one or other part of the world. Land hunger lies at the root of agrarian unrest in nearly every country. Draught animals are a major cause of land hunger, but their braking effect on human endeavour is, per-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

haps, greater in that they rigidly limit man's own effort. The output of work from a man driving horses or oxen is not more than a quarter of what he would accomplish from the seat of a tractor. Thus, tied to draught animals he cannot earn the reward that is expected to meet present-day standards of living.

Bombay's Milk Plan

For sometime past a pamphlet on the subject has been lying with us written by Sri D. N. Khurody, Milk Commissioner, Bombay, holding a position analogous to that occupied by Dr. L. Sikka, Milk Commissioner in West Bengal. There is an impression prevalent in Bharat that Bombay's Milk Scheme has been made a success, and it will continue to serve as a model to others in Bharat's other States. The pamphlet has helped to justify this impression. The Prime Minister of India by laying the foundation of the new offices of the Are Milk Colony on March 14 last added strength to it, and the Bombay press rose enthusiastically to boost it. Friends have told us that the praise showered is fully deserved. We accept their opinion, and wish that other Milk Commissioners make up their minds to be as active as Dr. Khurody.

Plantation Labour in Assam

In the July issue of *Employment News* appears an article on the subject under the signature of Srijut H. P. Duara, Labour Commissioner. A summary of it is published below:

"Plantation labour comprises nearly one-eighth of the total population of Assam and plays a very important role in the industrial harmony and peace of the State.

"The tea industry is by far the most important industry in Assam. The name of Major Robert Bruce is associated with the early discovery of tea in India, who, in 1823, found indigenous tea growing in Assam.

"The tea industry in Assam employs nearly a million souls scattered over a wide area, spreading from the heart of the State and extending as far as the foot of the Bhutan Hills in the north, Burmese frontier in the east and East Pakistan border in the south. There are at present nearly 1,000 tea estates in the State.

"The tea labour population of Assam consists of emigrant labourers from West Bengal, Bihar, Orissa, Madras, the Madhya Pradesh and the Uttar Pradesh. The Tea District Emigrant Labour Act of 1932 now regulates the condition of recruitment of plantation labour in the tea gardens of Assam. Although some of these emigrant labourers return to their native lands after the expiry of the contractual period, the majority of them have settled down in the tea estates for generations and have become a part of the population of the State.

"When the Congress Government came into power their first and foremost task was to improve the conditions of Plantation Labour and accordingly, labour laws, enacted by Government of India, were enforced and extended to all tea estates.

"Recently, the State Government have sanctioned a lakh of rupees for the inauguration of a scheme for the welfare of the Plantation Labour, with a view to bringing about all-round improvement in their standard of living.

"It is proposed to open fifteen centres for the male workers in the first year with a target to open fifty centres in course of three years. For the female workers, fifteen centres are proposed to be opened in course of three years; and for the ex-garden labourers five centres will be opened in the first year with a target to open fifteen such centres.

"In housing, the tea industry in Assam has made quite a good start although there is still a lot more to be done to bring it up to the standard as envisaged by the Royal Commission of Labour on plantations."

Corruption in India

We have been making such a display of our own shortcomings and corruptions in places high and low that we lose sight of the fact that other countries have had these experiences. In issues of this journal we have on more than one occasion drawn attention to how the U.S.A. fared after the exaltation of the War of Independence (1772-87) and of the Civil War (1860-64). Today we refer to Italy and to what one of its makers, Cavour, said. When his friends urged the difficulties caused by corruptions amongst Neapolitans (Naples) he is reported to have said in justification: "It is not their fault, poor people; they have been ill-governed; you must moralize the country; but it is not by insulting of Neapolitans that you will modify them." There is a world of wisdom in these words which rivals of the Congress should take to their hearts.

Recognition of Labour's Dignity

Labour has through struggles and conflicts attained the dignity of a separate "estate" in every State in the modern world more than equal with the others. This has been brought out in the news-item published on May 23 last. Much of the tensions in strikes and lock-out is ultimately concerned with this "dignity" question as the following will show:

"Agreement was reached on a large number of important issues concerning industrial relations at the meeting of the development committee on industries which concluded its two-day session here this evening.

"The meeting discussed various aspects of industrial relations in order to formulate an agreed basis for industrial relations in the country as a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as future legislation on the subject. It was agreed that industrial relations are not a matter between employers and employees alone but a vital concern of the community as economic progress is bound up with industrial peace.

"While it was agreed that in an economy organized on the basis of competition, private monopoly or private profit, the workers' right to have recourse to peaceful direct action for the defence of their rights and the improvement of their conditions cannot be denied and should not be curtailed unduly. It was generally accepted, however, that in an emergency, as at present, these things should be dealt with on a special footing. The objective should be just treatment of all concerned.

Complete unanimity was reached on the view that the employer-employee relationship should be conceived of as a partnership in a constructive endeavour to promote the satisfaction of the economic needs of the community in the best possible manner. The dignity of labour and the vital role of the worker in such a partnership must be recognised.

"It was also agreed that industrial relations should be so developed that the workers' fitness to understand and carry out his responsibility grows and he is equipped to take an increasing share in the working of industry.

"Members also found themselves in complete accord on the fact that adequate machinery should be provided for arriving at impartial decisions regarding disputes which are found incapable of settlement by conciliation. It was considered advisable to empower labour courts to take cognizance and dispose of any complaints relating to working conditions, health, safety, welfare and kindred matters.

"Reference of disputes relating to such crucial questions as wages, hours, rationalisation schemes, should, as far as possible, be left to be settled by voluntary arbitration, it was further thought.

"The most honourable and patriotic course for both employers and employees, it was felt, would be to agree to submit any present or future dispute or classes of such disputes to arbitration of any person or board of their choice. The number of such agreements would be a good index of real progress in industrial relations in the country.

"It was considered that there was ample need for continuous education of employers and employees as well as the public with regard to their duties and mutual obligations. The conduct of the parties must be in keeping with the objectives of the Constitution and the declared social policies of the State."

Calcutta's Dockers—Their Noble Deed

When a section of the so-called "Leftist" press appear determined by means fair and foul—more by the latter than the former—to stiffen labour's non-co-operative mood, it is a crowning mercy that Calcutta's dockers should have refused to toe this dirty line and seem to accept a challenge to their human instincts.

Between last May 1st and May 20th, the hottest part of this summer's abnormal weather—one lakh tons of foreign food-grains were expected in Calcutta. And it was apprehended that the dockers would refuse to work during these dog days. But as the event showed they were fully aware of their duty.

And the Port authorities are glad that their fellow-workers should have helped in releasing the ships and in moving 90 thousand tons out of this food-grains to Bihar. Thus was a great anxiety relieved both for Calcutta and for Bihar. And they desire that their noble deed should be known all over India inspiring others to similar deeds. We are glad to act on this suggestion, as ours is an all-India organ of public opinion.

Central Aid to Part B States

"The States of Hyderabad, Mysore, Travancore-Cochin and Saurashtra will receive from the Central Government annually for five years, beginning 1950-51, a sum of over Rs. 10 crores in all as grant-in-aid. Following federal financial integration, the Centre entered into agreements with these States which provide for such assistance on a graduated diminishing scale subject to the review of the Finance Commission to be set up under the Constitution.

"Under the above agreement, the Centre will also assume liability for an equitable share of the public debt of Hyderabad, Travancore-Cochin and Mysore. No other Part B State has any public debt. The Central Government's share of the public debt of Travancore-Cochin has been fixed at Rs. 276.4 lakhs and for Mysore at Rs. 470 lakhs. The figure for Hyderabad has yet to be worked out. Privy purses of rulers to the tune of nearly Rs. 4.8 crores annually are already charged to the Central revenues. The two-year and five-year plans now being finalised by the Planning Commission are likely to lead to further substantial Central assistance to Part B States.

"The aid proposed, it is pointed out, is not in the nature of 'compensation' for the loss of 'federal' revenues. It will be recalled that the Krishnamachari Committee laid stress on the principle that there could be no question of compensation for the Centre taking over the 'federal' functions, together with the connected revenue and expenditures, assets and liabilities. The Committee, however, realise that the States which had so far depended to a greater or less extent on their 'federal' revenues would not be able to maintain their existing scale of expenditure in the 'provincial' field immediately after financial integration without special assistance for a transitional period.

"The guaranteed annual recoupment for Travancore-Cochin has been fixed with reference to a 'revenue-gap' of Rs. 280 lakhs. The 'revenue-gap' represents the measure of the immediate transfer of 'federal' revenues and expenditure to the Centre. The computations have been made according to the principles laid down by the Krishnamachari Committee with reference to the 'federal' revenue and expenditure of the State concerned during an agreed basic period. The corresponding figures for the three other States are: Mysore Rs. 345 lakhs; Saurashtra Rs. 275 lakhs and Hyderabad Rs. 135 lakhs (O.S.).

"The grant-in-aid to cover the revenue gap will include the State's share of divisible Central

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

taxes, which at present applies only to income-tax. If in a year the divisible tax share of a State exceeds the annual grant, the State will receive the higher figure.

"When the Centre took over the 'federal' revenues and expenditure of Mysore, Saurashtra, Travancore-Cochin and Hyderabad, it was found these States needed special assistance to maintain their expenditure on subjects in the 'provincial' fields as before the financial integration, in order to avoid any dislocation. In the case of PEPSU, Madhya Bharat and Rajasthan the reverse was the case, federal expenditure being in excess of federal revenues and, therefore, there was no immediate dislocation to their finances as a result of the transfer to the Centre. A similar scheme of financial adjustments between the Central Government and Part A States is being evolved in respect of the merged States. For Part C States the problem does not arise as the Centre is responsible entirely for Central as well as State subjects.

"With these arrangements there is now complete equality between Part A and Part B States in all matters of financial assistance, subsidies, grants, etc., from the Centre. These settlements between the Centre and the States will be reviewed by the Finance Commission under the provisions of Article 280 of the Constitution. The President may terminate or modify the Federal Financial integration Agreements after the expiration of five years from the commencement of the agreements as provided for in Article 278."

The above New Delhi news, dated June 15 last indicated the financial help that the Central Government of India proposes to extend to its B class constituent States. The cases of A class and C class are being separately considered causing not a little heart-burning.

Somnath's Revival

The colourful ceremony that signalized the rebuilding of Somnath has given rise to various feelings in India. In Pakistan there is fury; in Bharat there is elation. But we are concerned with the revival at the same time of the so-called Dravidian-Aryan conflict that has become the stock-in-trade of a certain school of politicians in the Tamil country (South India). The *Sunday Express* of Madras has become its mouth-piece. And in a recent issue, it summarized from various publications what it represents as a true version of the "Mohmed Gazani" episode. We quote portions of the article :

"Mohmed Gazani Never Reached Somnath"

"There is no historical proof to substantiate the legend of the sacking of Somnath temple. In fact, there is no evidence to substantiate the belief that Mohmed Gazani ever reached Somnath.

"It is believed according to legend that the invasion of Somnath took place in 1025 A.D. There are two great contemporary works of history of Gujarat of the same period. One is the great classic *Dvayashraya* by Hemchandra Acharya, and another is called *Prabandh Chintamani*. 'Neither of them mentions even casually the invasion of Somnath.'

"Muslim historians of that period would have jumped at this subject. Even if Gazani had just reached Somnath, they would have painted in glaring colours as to how the Kaffir's temple was demolished by the Lord of Gazani. 'But they too make no mention of Somnath.'

"The great Sanskrit scholar and historian of Gujarat, Sri Rasiklal Parikh, writes:

'It is, however, strange to find that no mention of sacking of Somnath is found in the *Tarikh-i-Lamini* of Al-'Utbi who was a sort of a private secretary to Mohmed. He wrote a good account of Mohmed's biography, and is definitely known to have lived for years after this event. Rasinuddin and Hamidulla who came more than two hundred years after and have written accounts of Mohmed also make no mention of this account.' (*Kavyanusasana*, Introduction).

"The first Muslim mention is by Ibu Asir in 1230 A.D., Shri Parikh concludes:

'From this absence of reference amongst early Muslim historians, we are driven to the conclusion that this expedition against Somnath must not have been an event of that importance which it is reported to be by later Muslim chroniclers upon whom the modern historians have almost uncritically relied. It might have been just ordinary looting of a marauding army as the places came on its way'." (*Ibid*).

"All evidences prove that the idol of Somnath was of pre-historic antiquity. It stood there before the Aryans came to what they contemptuously called the *linga-sisne-devah*. In their onward barbarous march across India, it would be no hazard to assert that the very first destruction of the ancient Somnath temple built by the Sivaite Dravidians was perpetrated by the Aryans. Even as the destruction of Somnath and thousands of other temples and idols by the Muslims did not destroy Hinduism, the destruction of hundreds of *sisne-devahs* by the early Aryan barbarians did not destroy Saivism or the traditional Dravidian form of phallic worship, which was, however, common to all early human civilisations and still goes strong in India. Failing in their attempt either to destroy *linga* worship or the higher civilisation of the Dravidians, the Aryans got civilised by the Dravidians and incorporated Indian phallic worship and the whole system of religion connected with it in the whole system of religion connected with it in Brahmanism, which slowly widened into the all-embracing Hinduism. The *linga* worshipped in Somnath was the *linga* discovered in Mohenjo-daro. When the Aryans destroyed Mohenjo-daro they must have destroyed the prosperous Somnath in the same period."

National Library at Calcutta

We draw the attention of the authorities to the following letter received from an eminent scholar of international standing:

"The present administration of the National Library has spent large sums in buying expensive racks from England, replacing quite good serviceable old book-racks. But very little money is being spent in buying most necessary and important books of Indian history and culture. For instance, the following books though published a year ago have not been purchased:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dr. J. Leeuw: *The Scythian Period of Indian History*, published in 1949.
Basil Gray: *Royal Academy Exhibition Catalogue of Indian Art*, published in 1950.
Mazumdar: *Vedic Age* (*National History of India*, 1951).
G. H. Gjirue; *Caste and Class in India*, 1950.
Sir J. Woodroffe: *Serpent Power* (4th Edition), 1951.

This list is not exhaustive. Formerly, the Library used to maintain a suggestion book, book for suggestions on the part of readers. This has been stopped. The Library publishes a Report of its administration. But this is not available to the public, so that no criticism could be made."

This system has militated in every way against the usefulness of the library for scholars, therefore this procedure has to be altered.

Massacre of the Innocents in Bengal

The public have learned with admiration how the devoted and thoughtful Vice-Chancellor Mr. Justice Shambunath Mukherji has added another task to his tireless activities for improving the Calcutta University. He has held a conference with the heads of colleges to discover how it was that only 27 per cent of the students who sat for the last Intermediate examination have passed. That over seventeen thousand youths have wasted one year of their lives and all the expenses of study for twelve months and gained nothing in return—except bitterness of soul—is not a matter to be dismissed with one day's thundering in the morning papers and two days' talk in the public parks. It needs probing; but no committee is necessary for discovering the cause, which is well-known to guardians and teachers alike.

The roots of the mischief are two—lack of common sense in the teaching and examination and greed for money as the supreme consideration on both sides. Any honest teacher could have told half of these youths after their test examination (I am assuming for the moment that the test examination is not a sham in most colleges) that judging from their state of preparation they had no earthly chance of passing the University examination three months later. Any honest head of a college should have told them that he was not going to send up such palpably immature candidates. A college venturing to do so would at once lose customers.

But why blame the colleges? The holy mother (*alma mater*) herself is not sinless in this respect. A Matric examination that does not truly sift those who have received the necessary preliminary grounding for a college course from those who are unfit, brings shoals of lads to the University, and thus swells the University's income in various ways, particularly that "best seller in India," the I.A. English Selections, a paper-cover booklet of some 200 pages, costing Rs. 3, without any illustration or copyright extract that has been paid for. And the University's own Bible Selection too,—which happily few students buy and fewer still read; a note-book sufficeth. If, under the inexorable law of nature, the myriads thus easily entering the colleges, are two years later subjected to a 73 per cent massacre, the University has at least pocketed six lakhs of rupees in fees (of diverse kinds) from these failures alone, without giving them anything in return. After all, the ancients hit at one or two truths in spite of their lack of modern civilisation: the Christian Chhrch has proclaimed *Radix malo-rum est cupiditas* (Love of money is the root of all evils). And Sankaracharya too, with his *Artham anartham bhavaya nityam.*

The path of reform lies in (1) freeing the curriculum of its cumbrous pretentious mass of books (whose mass and cost drives the student to seek refuge in Notes). (2) Holding a commonsense practical test in modern English prose, as an instrument for reading, —and no niceties of grammar or subtleties of aesthetic criticism below the Honours stage. (3) Curbing the natural tendency of the (compulsory) Bengali paper-setter to maintain the dignity of his subject by making it as stiff as the Honours paper in English. (4) Ensuring that the questions are fairly well-distributed over the entire subject or book, and not confined to one corner of it, which happens to be the examiner's special preserve. In 1927, the question paper in Pass Economics III (Indian Economics) was almost entirely confined to Banking,—in which the paper-setter had taken his Doctorate. Such irrational action on the part of the question-setter drives the student to be dishonest; it discourages industry, as leaving everything to chance. A revision (called *moderation*) of question papers by actual teachers of the subjects, before they are printed, is indispensably necessary. The chance of leakage is not ruled out, I admit; but that is a lesser evil than the present freaks and caprices.

Above all, disciplinary action against the inefficient mercenary colleges—which swell the percentage of failure, should be rigorously taken. Mushroom colleges after the first year's trial, should be compelled to die out like mushrooms. And that hoary-headed sinner—with 2,000 youths on the rolls (which was the laughing stock of the British members of the Radhakrishnan Commission) and whose boys pointed out the Sealdah Station third class passenger shed as their Students' Common Room to the Sadler Commission, well, a little blood-letting reducing its numbers to 500 will certainly cure it of its present elephantiasis. The accepted conditions of affiliation, if honestly enforced, can effect this surgical operation.

Assassination of King Abdulla

The assassination of King Abdulla will have consequences far into the Arab world. He became a part of history during the first World War of the 20th century helping to overthrow the empire of the Turks. All seemed hopeful for his family. His younger brother, Emir Feisal, was the instrument through whom the fates found a leader of the Arab Revolt. In Lawrence's book *Seven Pillars of Wisdom,* we get a glimpse of the policy of the British Government, and the betrayal of Arab hopes by Prime Minister Lloyd George and his civil advisers.

Lawrence was an archaeologist, digging into the ruins of the area in Syria, Palestine, Lebanon, Trans-Jordania and the Hejaj. Then unconsciously to himself he got entangled in Britain's far-flung scheme of a vast South-West Asian Bloc with herself as the boss. This required the break-up of the Turkish empire; and Sheriff Hussein, Emir Abdulla and Emir Feisal were its dupes. Lawrence saw before his eyes the wreck of all he had laboured for, and was naturally very bitter with Lloyd George and Clemenceau. And throughout the book he gave the freest expression to it on every conceivable occasion.

In the earlier pages he threw out pen-pictures of men and things that will remain enshrined in the English language. Of Emir Abdulla he had no high opinion; Emir Feisal was his hero. We quote from the book portions that have become relevant today:

> ". . . nothing was futile in the atmosphere of higher thinking and responsibility which ruled at Feisal's . . . Abdullah would sometimes ride a little, or shoot a little, and return exhausted to his tent for a massage . . . He was fond of Arabic verses and exceptionally well read . . . He was also interested in history and letters . . . He affected to have no care for the Hejaj situation, regarding the autonomy of the Arabs as assured by the promises of Great Britain . . . The leaven of insincerity worked through all the fibres of his being. . . . His brain often betrayed its intricate pattern, . . . Yet they never separated into straight desires or grew into effective desires. . . ."

Feisal was driven from Damascus by the French, and the British looked indifferently on. The latter made him King of Iraq, Abdulla, King of Trans-Jordan. But when King Hussein was driven from Mecca by Emir Ibn Saud, they did not raise even their little finger to help their protege. This betrayal explained much of the Arab distrust of British promises; the Palestine episode with a promise for "a Jewish home" in Palestine, was the limit of ignominy.

Abdulla, however, had to pocket it; and in recompense he has been protected by the Arab Legion captained by Glubb Pasha, the best trained and equipped force in Arabia. But this did not avail against Jewish idealism and endurance. The State of Israel was born. The Arab world, however, feels that in the pursuit of his Hashemite kingdom fantasy—made up of Syria, Lebanon, Palestine and Iraq—Abdulla has been lukewarm in the common Arab fight against Israel. This feeling will minimize the grief that would otherwise have been felt by them.

But the real loss will be Britain's. With Iran threatening her oil interests, there remains none in the Arab world to speak a good word for her or stand up for upholding these. This appreciation of the Arab situation supports our contention that in life King Abdulla had been a stabilizing factor in the maelstrom of Arab nationalism and the creeping inroads of Communism.

"Birth of a Nation Suspended"

Under the above heading Andrew Roth wrote in the London *Daily Herald,* reprinted in the *Leader,* an article indicating the multi-racial elements of the problem.

> "Those who planned the Communist revolt in Malaya fervently hoped that the Malays would help them. Instead, hardly a single Malay has joined them in their jungle hideouts, while 30,000 have volunteered as special constables against them.
>
> "Under the harsh impact of the eight-month-old anti-British rising, the growth of Malay national consciousness, rapid after the second World War, has accelerated. The Malays, as a people, are waking up. Except for 30,000 aborigines, they are the oldest inhabitants of the peninsula into which their ancestors penetrated 4,000 years ago.
>
> "During 140 years of British rule these hardy, cheerful people have multiplied more than seven times, but even so they are being outnumbered by the Chinese. Predominantly agricultural, the Malays bitterly resent this influx, which began in strength 70 years ago to meet the labour shortage in the tin mines and on the rubber estates.
>
> "Though immigration has officially stopped, the Chinese in the peninsula and Singapore today number about 2,600,000 compared with 1,700,000 in 1931. The Malays number 2,200,000, compared with 1,900,000 in 1931.
>
> "In the Federation the Malays are in the majority, while in Singapore they form a small minority. The relentless increase in the Chinese population makes the Malays feel they may ultimately become strangers in their own land.
>
> "Since the revolt began, Sino-Malay differences have so widened that some leaders darkly prophesy that if the British left tomorrow there would be inter-racial violence on a large scale. Recently some of the country Malays have been taking their *krisses* (scimitar-like national swords) to sorcerers to be blessed. One of them assured me that the spells were so powerful that they can deflect bullets.
>
> "Asking for special benefits to help them increase their members and ensure their security, the Malays assert with justice that the terrorists are almost one hundred per cent Chinese. With equal truth they insist that the ordinary Chinese inhabitants have done little or nothing to combat the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

terrorists, while many have actually helped them either by paying 'protection money' or in other ways.

"Of Chinese claims for political rights, made two years ago when the constitutional future of the country was in the melting pot, Malay leaders now suggest that those who gain rights also incur obligations. In a determined effort to bring the communities together, a nine-man Malay-Chinese goodwill committee, with Mr. Malcolm MacDonald, U.K. Commissioner-General in South-East Asia, as liaison officer, has been set up. The leading Malay member is Dato Onn Bin Ja'afar, Chief Minister of Johore and President of the United Malays National Organisation. Dato Onn is personally convinced that the future of his race is at stake. With other leaders he is trying to find a way out. . . .

"Most Chinese in Malaya heartily wish that the terror would end, but they seem incapable of assisting openly in its elimination. Only recently have Chinese miners begun to stop paying 'protection money' to the terrorists. As more of the security forces swing into action more information should begin to come in.

"One significant result of the revolt has been its effect on Malaya's embryo Trade Union movement. Before the outbreak in June, 1948, there were in the Federation 302 trade unions, with 149,946 members. Today, with the Communist elements gone, there are only 162 trade unions with 76,925 members. But they are unions, not rackets. Aiming eventually to paralyse industry, the Communists early got a grip on the unions by mailed fist methods. Chinese secret societies, with schoolboy thriller names like 'Red Face' and 'Skeleton Gang' and wired initiation rites, also infiltrated, and through them extortion and victimisation boomed."

Later news from Malaya, dated June 18 last, described how a purely Malayan nationalist leader proposed to solve it. We share it with our readers:

"Plans for the achievement of Malayan independence, sketched by the Malay leader, Dato Onn Bin Ja-afar, early this month, have had their strongest critics so far in a section of the Malays themselves, writes K. N. Ramanathan, the *P.T.I.* staff correspondent in Malaya.

"Some observers see in this opposition to Dato Onn from a section of his own community, the working of a "hidden hand," which, they consider is trying to divide the Malays and obstruct the development of national untiy.

"In the ten days that have elapsed since Dato Onn "caused a sensation" in Malaya (to quote one newspaper) by his announcement, public opinion has had the time to consider his plans. The Indian and the Chinese communities have generally welcomed them. The British comment has been cautious. It has expressed appreciation of Dato Onn's approach but has also dwelt on the difficulties of the problem.

"Dato Onn, president of the United Malaya National Organisation, probably the most outstanding leader in Malaya today, said early this month that he would form a political, non-communal 'Independence of Malaya' party to work for the achievement of independence.

"He thought that an independent Malaya would seek to remain within the Commonwealth but there is no such thing as independence in self-government, if it is strangulated by preconditions of what it can or cannot do.'

"The Malayan Indian Congress—one of the three Pan-Malayan Indian organisations in this country—at its annual session during the weekend, adopted a resolution in favour of forming, or assisting in the formation of a Malayan organisation with membership open to all Malayans. He said that the Congress would give him every support.

"The Indian-owned newspaper, the *Indian Daily Mail*, has found it difficult to believe that Dato Onn could be really interested in forming a party for the achievement of Malaya's unity or freedom."

We have a certain feeling that the resident Chinese have lost their chance by aligning themselves more secretly than openly with the "fifth-column" activities of their own nationals.

Soviet Post-War Reconstruction

Prof. Maurice Dodd, lecturer in Economics, Cambridge University, who is a visiting professor at the Delhi School of Economics from January to March, 1951, spoke to members of the Indian Council of World Affairs on the above subject. Speaking on the success of "planning" there during the last 30 years, he appeared to be appreciative of the courage and endurance of Soviet leadership of rulers and the ruled alike. The following extract from the address will give our readers an idea of the various undertakings. We make this quotation from the *Indian Quarterly*:

> "As regards the canal schemes: one of the most interesting is the famous Volga-Don Canal, joining the Volga just below Stalingrad with the river Don. It is a difficult engineering feat because of the substantial difference (some 90 ft.) between the levels of the two rivers. The canal will be just over 60 miles in length when it is completed. It was apparently started before the war, but was interrupted by the war; and the intention now is to complete it by the spring of 1952, if nothing in the international sphere occurs to interrupt it again. The importance of this project is that it will provide a continuous inland waterway system from the Baltic to the Black Sea, and one which will link Moscow with the Black Sea, enabling ships, for example, to carry fresh fish from the Black Sea to Moscow. To give some idea of the carrying capactiy of the waterway: it will be capable of taking large cargo ships, and with the deepening of the channel of the lower Don and a raising of its water level, these cargo ships will be able to proceeed from the Volga down to the mouth of the Don near Rostov and into the Black Sea. Diesel-engine ships carrying 500 passengers apiece are to be constructed for the Moscow-Stalingrad-Black Sea service when this canal is completed. Power stations with 2½ million and 1½ million kilowatts capacity are to be simultaneously built on the lower and middle Volga at Kuibyshev and Stalingrad, and are designed to be completed in 1955 and 1956 respectively. The first of these, the Kuibyshev scheme, will be linked with an irrigation scheme covering 21 million acres of land,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Finally, what the article from the London *Times* calls 'the boldest in conception and most difficult of all these schemes'—the highly interesting project of the Turkmenian Canal, which will run from the river Amu Darya or Oxus, across the Kara Kum desert to the Caspian Sea. The canal will extend to nearly 700 miles and will bring some 3 million acres of desert under cultivation (mainly for cotton). This scheme is to be completed in the year 1957. The forest shelter-belt schemes will be applied here also, and according to the plan shelter-belts will be planted on either side of the canal, and subsidiary dams and power stations will also be constructed along its route. Like the Volga-Don Canal it is designed to carry cargo ships."

Korea War's Cost to U.S.A.

The Korean war has cost the U.S.A. from $2,000,000,000 to $10,000,000,000 depending on how the main figure is worked out, according to the Assistant Defence Secretary, Mr. McNeil.

And if it continues, he told the Senate Finance Committee, the Armed Forces will have to ask for another $2,000,000,000 to $3,000,000,000 during the 12 months ahead.

Mr. McNeil was reluctant to give an exact estimate of the war's cost to date because of the difficulty of deciding what factors were to be included. He said he could 'prove any figure from two to ten thousand million dollars' depending on what assumptions were used.

Mr. McNeil said afterward that he would try to get the Committee as accurate a figure as possible on the cost of the Korean War.

A Washington news of date July last told us this story. We have read somewhere that the last World War cost about 4 lakh crores of rupees. Mr. McNeil's estimate is rather vague, and he declined to make himself responsible even for any near exact figure. We do not know what the American ruling classes mean by publicizing this huge expenditure of money and men, the latter being about 60,000 in killed and wounded and prisoners taken by the Communists of North Korea and China. It is time they realized that leadership in international affairs cost money.

Europe's Encroachments into Middle East

In the *Hitavada*, Sri M. F. Soonawala threw light on the doings of European powers in the areas washed by the Atlantic in North Africa and the Persian Gulf in Asia. They are on the retreat today, and their burden is being increasingly thrown up on the United States. And she is, willingly or unwillingly, playing her part, this being her destiny, as her politicians and publicists say with pride. She is inheriting Britain's hegemony; and thus do we find her intervening in Persia's oil trouble, trying to mediate between the rising nationalism of Iran and Britain's vanishing capitalistic exploitation.

The most interesting and informing portion of the article, however, is where the writer quotes the British publicist Marvin on the contrast between British and Russian technique of dealing with Asian peoples. He thus summarizes the argument:

"During the 19th century the Russian influence over the Muslims became so great that the latter almost completely identified themselves with their conquerors. One proof of this is to be found in the names of Muslim generals and politicians like General Alikhanoff, the Governor of Merv, General Nasirbegoff, Muratoff and last but not the least, Jacob (Yakub) Malik, the present-day Chief Russian delegation at U.N.O., the Suffix 'off' added to the names means 'son'."

And to give added strength to it he quoted Marvin's exact words, written in 1885:

> "The people not only identify themselves with Russians, but the Russians identify themselves with the people. Englishmen would never think of placing their home army under a Sikh or a Maratha, or permitting a Bengali to become a Cabinet Minister. An Indian has practically no career in England; on the other hand, every avenue in Russia is open to the Caucasian. The Alumenian, Loris Melikoff, rose there to a position next to that of the Czars. Generals Tergonkasoff and Lazareff, two other Asiatics, commanded Russian troops in the Turkish War of 1877-78, and when Alikhanoff accomplished his famous raid upon Merv, the exploit was acclamied as a Russian exploit, and not as the achievement of a mere native."

Crown Prince William & Marshal Petain

Within a few days have died two leaders of armies of the First World War—Crown Prince William of "Imperial Germany," first son of Kaiser William, and Marshal Petain who beat back the German attacks on the Fortress of Verdun. Both of them have departed from the field of their mundane activities in disgrace. William shorn of his glory, and Petain as the man who made his peace with Hitler. William's come-down was a fruit of Germany's defeat in 1918; Petain's of 1940. He was put up by French appeasers as the most considerable French leader who would be able to save some part of France's glory. History will say whether or not he succeeded in his venture. But this we know that the conquerors of the Second World War did recognize his status and treated him with courtesy. The death of these two men would, in no way, affect the fortunes of their country. Peace to their souls!

ROLE OF VILLAGE PANCHAYATS IN INDIAN ECONOMY

By Prof. C. B. MAMORIA, M.A. (Geog.), M.com.

Village Panchayats

India has been a land of Village Communities or Gram Panchayats from time immemorial. It is claimed that the syetem was first introduced by King Prithu while colonising the Doab between the Ganga and the Jamuna. There are definite references to the existence of these "Grama Sanghas" in the *Shantiparva* of the *Mahabharata* and in the *Manusmriti*. Kautilya, who flourished in 400 B.C., has also described these Village Communities in his *Arthashastra*. In the Valmiki *Ramayana* we hear of the Janapada, which was, perhaps, a sort of federation of the numerous village-republics. It is also certain that the system was widely in existence in this country at the time of the Greek invasion, and Megasthenes has left vivid impressions of these "Pentads" as he termed these Panchayats. Chinese travellers Hieun Tsang and Fa Hien tell us how India at the time of their visits was very productive, and the people were "flourishing and happy beyond compare." An account of these Panchayats during the middle ages is provided in Sukracharya's *Nitisara*.

The Village Communities which were self-governing little republics all over India flourished under Hindu and Muslim governments and survived the wreck of dynasties and the downfall of empires. Even the Committee of Secretary of the East India Company reported in 1812 :

"Under this simple form of Municipal Governments, the inhabitats of the country have lived from time immemorial . . . The inhabitants give themselves no trouble about the breaking up and division of the kingdom; while the village remains entire they care not to what power it is transferred or to what sovereign it devolves; its internal economy remains unchanged."

"One foreign conqueror after another has swept over India," comments Sir Charles Trevellyan, "but the Village Municipalities have stuck to the soil like their own Kusha grass."

In 1930, Sir Charles Metcalfe described these Village Communities as little republics having nearly everything within themselves, and almost independent of any outside relations:

"They seem to last where nothing else lasts. . . . The Union of the village communities, each one forming a separate little State in itself, has, I believe, contributed more than any other cause to the preservation of the people of India through all revolutions and changes which they have suffered, and it is in a high degree conducive to their happiness and to the enjoyment of a great portion of freedom and independence. I wish, therefore, that the village constitutions may never be disturbed and I dread everything that has a tendency to break them up."

It is interesting to note that the attention of sanitation and public works such as erection and main-

Karl Marx was also drawn to these Indian Village Republics. He writes in his *Das Capital*:

"The small and extremely ancient Indian Communities which still exist to some extent, are based upon the communal ownership of the land, upon a direct linking up of manual agriculture and handicraft and upon a fixed form of the division of labour which is adopted as a cut-and-dried scheme whenever new communities are founded. They constitute self-sufficient productive entities, the area of land upon which production is carried on ranging from a hundred to several thousand acres. The greater part of the products is produced for the satisfaction of the immediate needs of the community, not as commodities; and production itself, is, therefore, independent of the division of labour which the exchange of commodities has brought about in Indian society as well . . . In different regions of India we find different forms of such communities. In the simplest form the land is commonly tilled and its produce is divided among the members of the community, while every family carries on spinning, weaving, as an accessory occupation. The simplicity of the productive organism in these self-sufficient rommunities . . . unlocks for us the mystery of the unchangeableness of Asiatic society, which contrasts so strongly with the perpetual dissolution and reconstruction of Asiatic States, and with the unceasing changes of dynasties. The structure of the economic elements of the society remains unaffected by the storms in the political weather."

Sir Henry Maine points out that

"Indian village community was a living and not dead institution and the Indian and the ancient European systems of village communities were, in all essential particulars, identical."

He further observes:

"That the earliest English emigrants to North America organised themselves at first in village communities for purposes of cultivation."

The Indian villages had evolved a well-balanced social, economic and political system by eschewing the two extremes of laissez faire and totalitarian control. They had developed an ideal form of co-operative agriculture and industry in which there was hardly any scope for exploitation of the poor by the rich. As Mahatma Gandhi has put it, "The production was almost simultaneous with consumption and distribution," and the vicious circle of money-lender economy was conspicuous by its absence. Production was for the immediate use and not for distant markets. The whole social structure was founded on non-violence and fellow-feeling. The Gram Panchayat administered the village affairs either on its own responsibility or as an adjunct to the village Headman or Patel. It also administered justice and peace, maintained local order by watch and ward, provided facilities for education,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tenance of public buildings, roads, tanks, wells and the keeping of village tracts in order, provided all other common amenities—social, and economic—of the village life and collected and distributed the charity to the needy and the poor. It derived its finances from the rich and wealthy inhabitants of the village and from other donations. The labour for the works of public utility the village community could get from the village people. In this way it was self-sufficient and self-supporting having little to do with the outside world. In the past, indeed, these Panchayats played a very useful role in developing the village corporate life but unfortunately the advent of the British Rule in India led to their decay and disappearance.

An extreme anxiety to enhance the land revenue to its utmost limits induced the East India Company to make direct arrangements with every individual cultivator, instead of with the village community as a whole. An equally unreasonable anxiety to centralise all judicial and executive powers in their own hands led the British administrators to virtually set aside the village functionaries, and thus deprive them of their age-long powers. These republics, therefore, fell into decay. This decay was further helped by a number of factors. The administration of the village by the agencies of the Central Government, the extension of the jurisdiction of the modern civil and criminal courts of the towns, the new land revenue system, increase in the means of communication, progress of education, police administration, migration of the best and ablest persons from the villages to the towns, the growing spirit of individualism and the break-up of the joint family system—led to the decay and disintegration of the so important an institution like the Panchayats. Thus the self-sufficient nature of the old quasi-democratic rural polity was broken and consequently the village Panchayats as a rural institution sank into insignificance. As R. C. Dutt remarks:

> "One of the saddest results of British Rule in India is the effacement of that system of village self-government which was developed earliest and preserved longest in India amongst all the countries of the earth."

Gradually the British Government took steps to establish such local bodies as could look after their own affairs. This led to the enactment of a number of Acts between 1842 and 1862 resulting in the setting up of Municipalities in the towns but no attempts were made to reorganise or newly start the village institutions, although in urban areas the municipal bodies rapidly increased. Later on, with the systematic attempts and sympathetic attitude of Lord Ripon (1882) a number of sub-district boards were set up in Madras and Assam, and in other provinces powers were wholly concentrated in the hands of the district boards but the start was made at the wrong end because the process did not lead to the federation of smaller units transforming them into large ones but instead it led to the devolution of powers by District Boards to smaller bodies.

The Royal Commission on Decentralisation remarked :

> "The scant success of the efforts hitherto made to introduce a system of rural self-government is largely due to the fact that we have not built from the bottom—the foundation of any stable edifice which shall associate the people known to one another and have interests which converge on well-organised objects."

It recommended that an attempt should be made to constitute and evolve Village Panchayats for the administration of the local affairs, even though the system can be gradually and tentatively be applied to make the village a starting point of public life. Consequently the Government of India passed a resolution in 1915 and issued definite instructions to all the Provincial Governments to give full trial to a practical scheme of Village Panchayats, wherever it could be worked out in co-operation with the people. The Act of 1919 which transferred local self-government to ministers was followed by measures in several provinces leading to legislative enactments. Consequently a number of Acts were passed in various provinces, *e.g.*, in Bengal the Bengal Village Self-Government Act was passed in 1919; the Madras Village Panchayats Act 1920 (replaced and supplemented by Madras Local Boards Act, 1930); the Bombay Village Panchayats Act, 1920 (replaced and supplemented by the Act of 1933); the Central Provinces Village Panchayats Act, 1920; the U. P. Village Panchayats Act of 1920; the Bihar and Orissa Village Administration Act, 1926; the Assam Rural Self-Government Act, 1926; etc, were also passed respectively in the provinces.

Functions and the Working of the Panchayats

For the establishment of Village Panchayats there is no uniform practice and hard and fast rules in India owing to the diverse circumstances and conditions prevailing in the different parts of the country. Thus in Bombay the Village Panchayat Amendment Act of 1939 has made it compulsory to have a village panchayat for every village with a population of 1,000 and above. By the end of January, 1950, the number of such panchayats stood at 3,500, whereas in West Bengal, Uttar Pradesh and Madras every village area is a panchayat area and there has to be a statutory panchayat. In West Bengal there are 5,000 panchayats, in U.P. 34,755 village panchayats and 8,190 *adalati* panchayats; and in Orissa 528 gram panchayats and 173 *adalati* panchayats. Similarly in Baroda, Travancore, Cochin and Mysore and Madhya Pradesh there is a statutory panchayat for every village. Since the formation of Himachal Pradesh the Punjab Municipal Act, the Punjab District Board

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Act, the Punjab Small Town Act and the Punjab Panchayat Act have been applied to this state and fresh incentive has been given to the growth of *gram* panchayats. According to the Madhya Bharat Panchayat Act, every villager will be a member of a panchayat. A group of such panchayats will constitute a *kendra* (central) panchayat. The heads of these Kendra panchayats will form a larger unit known as *mandal* panchayat. The members of village panchayats will be elected on the basis of adult franchise and the *kendra, mandal* and *nyaya* panchayats will be elected indirectly.

The constitution of the village panchayats however varies from province to province. They usually consist of 5 to 11 members. In some Provinces like U.P. they are wholly nominated, while in others they are elected by voters having property, taxation or educational qualifications. In Madhya Pradesh, the members are elected by adult franchise.

The functions of the panchayats at present are judicial or administrative or both. In Bombay and Madras, panchayats are administrative, *e.g.,* in Bombay, the panchayats have been empowered to exercise control over government properties like open sites, waste lands, vacant lands, grazing lands, trees, public roads under the revenue department. In Madras, the panchayats look after the construction, repair and maintenance of public roads in the village, the lighting of public roads and public places, the construction of drains, as well as sanitation and public health. They also have the power to administer civil and criminal justice, besides registering documents. In Madhya Pradesh, the panchayats perform a variety of functions, such as promotion of public health and medical relief, water supply, lighting of streets, opening of schools. The judicial work of the *gram* panchayats has been entrusted to *nyaya* panchayats. In U.P. wide powers and duties with regard to organisation and maintenance of schools, hospitals, community buildings, pastures, public wells, sanitation, justice, village statistics, improvement in agriculture, commerce and industry, have been given to the panchayats. The list of discretionary functions is also very large and includes plantation of trees, breeding and medical treatment of cattle, organisation of village volunteer force, assistance in agricultural credit, co-operation and famine or other calamity and establishment of libraries and village *akharas*, Control of village streets, waterways and power to effect improvements in them and in village sanitation is vested in the panchayat. In West Bengal, these panchayats have been entrusted with the responsibility of village roads, excavation of tanks, planting of trees and sanitary arrangements in the village.

From the foregoing description it will be seen that the functions of the panchayats are of two kinds, administrative and judiciary. The administrative powers relate to village lanes, ponds, wells, drainage, epidemic protection through vaccination, maintenance of school buildings, night watch, etc. Occasionally they may also arrange for lighting, libraries, improvement of agriculture and handicrafts, organisation of festivals and management of travellers' rest houses.* Thus they do useful work particularly in respect of education, health, conservancy and public works. They have been of special service for maintaining dispensaries for villagers in Bengal; for supplying electricity and for enforcing Town Planning Act in rural parts of Madras; for spreading adult education in U.P., C.P., Berar and Assam; for introducing agricultural improvements in the Punjab and Mysore and giving effect to sociol legislation, such as the Marriage Registration and Child Marriage Restraint Act, the Marriage Expenses Controlling Act in Indore.**

The judicial powers of the panchayats relate to the trial of civil suits for money due on contracts, recovery of moveable property or its value, etc., of a value up to Rs. 200 (the maximum varies in different provinces) and of petty criminal cases wherein they may inflict fines up to Rs. 50. Judicial powers have been conferred on the panchayats in various provinces. In Bengal, U.P., Bombay, Bihar, Baroda, Cochin, Mewar, Travancore the panchayats are empowered to try minor cases like theft, simple hurt, offences of cattle trespass.

Every panchayat is given exclusive jurisdiction and no other court entertains complaints falling within its jurisdiction. The procedure of trial is informal. No lawyer is allowed to appear on behalf of the party. Usually the only punishment which the panchayat can impose is fines. Whatever the functions of the pachayat be it is regretted that where panchayats have both administrative and judicial duties, they have generally concentrated on the latter to the neglect of the former.

Control

In all provinces adequate provision is made in the Act for the control of panchayats. In judicial matters its actions are controlled by a competent authority with power to quash its proceedings, to revise its decisions, to withdraw or transfer cases to the higher courts, and in the last resort to cancel the jurisdiction or to supersede it.

The administrative control of the panchayat is in some cases entrusted to the government agency ranging from a Tahsildar to the Collector or Commissioner; and in most cases to superior local bodies like the Local or District Boards, *e.g.,* in U.P. the panchayats are requested to co-operate with the District Boards which can delegate duties to them. In C.P., the panchayats are controlled by the District

Digitized by Arya Samaj Foundation Chennai and eGangotri

Board subject to the supervision of the Government officers. Again in Madras and Bengal the village panchayats are controlled partly by the Government and partly by the District Board. In many provinces special government officers or regular salaried staff of panchayats like the Registrars and Circle Officers are appointed to supervise over the panchayats and to direct their growth. Where special officers are appointed the panchayats work efficiently as in Madras, Mysore and Baroda. The control is exercised through audit and inspection. The officers have power to cancel its resolutions and enforce performance of particular duties, and in extreme cases the panchayats may even be superseded or dissolved.

Sources of Income

According to the provision made in the Act, nearly every panchayat has a village panchayat fund, to which are credited all allotments, general and special contributions and donations from the Central, and the Local Governments, Municipalities, District and Local Boards. The panchayats also derive their income from some other sources too, *viz.*, all kinds of grants-in-aid, taxes, cesses, rates, tolls, fees and costs, income from property and endowments, sale-proceeds, interest or penalties on arrears, forfeitures, fines and compensations and donations from private persons. In nearly all provinces the panchayats are authorised to augment their income (according to need) and levy fee, tax, or assessment on land with approval of the government or superior local body.

The principal sources of income vary widely from province to province, *e.g.*, in Bengal, the panchayats derive half their income from the proceeds of the Chowkidari tax and one-sixth from the Union rate. In Madras, 46 per cent of the income is derived from house tax, 17 per cent from the markets, cart-stands, and slaughter houses, 16 per cent from the property tax. In the Punjab, special rates and village rates together account for 18 per cent of the total receipts.

Items of Expenditure

As in income so in expenditure, the principal items vary from province to province, *e.g.*, in Bengal (1939-40) out of the total expenditure of Rs. 103 lakhs, Rs. 8.4 lakhs were spent on roads and communications, Rs. 7 lakhs on water supply, Rs. 3.6 lakhs on medical relief, Rs. 8 lakhs on education and Rs. 2.7 lakhs on sanitation, drainage and conservancy. In Madras Province education absorbed the largest amount, it being Rs. 16 lakhs; Rs. 9 lakhs were spent on sanitation, Rs. 7.9 lakhs on lighting and Rs. 3.1 lakhs on road construction and repair in 1940-41, out of a total expenditure of Rs. 65 lakhs.

Many panchayats have also accumulated large balances often disproportionately high when compared to their incomes. It may be possible that the panchayats may be collecting these sums to be spent over some capital projects in future. Even where this is the case, such a course would mean the postponement of items of minor expenditure but of greater need for some future date. In such cases the better course to follow is that arrangements should be made to give the panchayats financial assistance by way of loans so as to expedite the bigger works for immediate relief and benefit of the people.

Defects in the Working of the Panchayats

The experience of the working of the panchayats has shown that they have not fulfilled the high expectations that were raised about them on the basis of their glorious past. Various reasons have been advanced for the deficiencies in their working. Among them may be mentioned the following as being the most commonly put forth :

(1) That there is faction among the villagers which makes the common acceptance of the decisions of the panchayat impossible. Faction also makes it impossible for a common mind to develop within the panchayat and decisions are coloured by the factious interests of the members.

(2) That there is a lack of proper leadership in the village so that the panchayat becomes a tool in the hands of irresponsible elements in the village population. No respect is possible to develop among the villagers for an institution which is so abused.

(3) That there is indifference among the villagers to the need for the maintenance of proper civic amenities in the village.

(4) That the panchayat is often under the overpowering influence of the big landlord or moneylender in the village and therefore, fails to inspire confidence among the majority of peasants in the village. Further, the powers that are parted with by the Provincial Governments in favour of the village panchayats with a view to training the villagers in the art of self-government are always usurped by this small group. The interests of the small minority are served at the cost of the needy majority. Thus the main ideal of democratic training and exercise of local power for the benefit of the people gets frustrated. Instances have been common where the subsidies given for the village roads or sanitation were spent on the roads in front of the houses of this small group, or only the insanitary and ugly spots near them were attended to while the rest of the village was neglected. Sometimes the funds disappear altogether but the villager cannot dare to call for the explanation of the small group. The villager is loath to court trouble on account of the very scant protection given to him by the distant Central Government and also because he is lost in toil and care for his daily bread.

(5) That the financial resources of the panchayats are very meagre so that they can never hope to look after even the elementary functions assigned to them. Government subsidies go only a little way towards removing this want. Some local works have to be left out on account of their heavy cost, in spite of their urgent necessity. For example, village water-works are in a lamentable condition, because they cannot be constructed on the scale required for the population, and even if constructed, they cannot be maintained for want of funds for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

repair. Approach roads furnish another example; they cannot be constructed on account of costs of and opposition to acquisition proceedings as well as of the cost of the construction of bridges and culverts.

(6) That the villagers resist the imposition of taxes like the house tax and would rather go without the panchayat than have one and be subjected to taxation.

Rehabilitation of Gaon Panchayats

In order to reconstruct India on peaceful and democratic foundations, it is desirable to establish self-governing Village Communities or Gram Panchayats as of old, with necessary modification to suit the modern conditions. These Panchayats will be very different from the present Local or District Boards which posses limited powers. They will be autonomous so far as their internal administration is concerned, and will be, as far as possible, self-sufficient in regard to at least the basic requirements of life like food, clothing and building materials. They will be linked up with the Taluka, District, Division, Province and country as a whole, for purposes of common policy and interests.

Every village with a population of 1,000 or more and having sufficient income for its needs should be declared a *Gaon* (village) Panchayat, and that villages with population below 1,000 should be grouped together to make a panchayat. Grouping of villages should be undertaken when lying within a radius of two miles and after taking into account the local conditions of those villages and their ability to raise the finances required.

Any person of 21 years of age or above, residing within the Panchayat area, should be elected a member and entitled to vote. No voter should be entitled to vote or to stand as a candidate for more than one Panchayat. There should be 9 to 15 members in a village Panchayat and the electoral roll, like the register of voters for each village, should be prepared by a Patwari, and revised periodically by a Kanungo. The assistance of a few non-officials in the preparation of the electoral roll will be appreciable. It will be opposed to democratic principles if the zamindars and moneylenders should be disqualified from standing as members of the Panchayat, although the legitimate fear of the Kisans is for the Zamindars who as a class have considerable power and influence in villages and dominate the Panchayat. Therefore, it will be desirable that at least three-fourths of the members should be peasants and field-workers. The inclusion of the village artisan, the patwari and the chowkidar would, no doubt, facilitate the work of the Panchayat.

Every village panchayat should be assured of a certain income for the efficient working of its plans. The sources of their income should be:

(*i*) *Fasli Chanda e.g.*, 5 seers after each plough in the village may be charged as *Fasli Chanda* per harvest. Such payments in kind are, undoubtedly, very convenient to the cultivators.

(*ii*) Manual Labour: It is a very natural form of public co-operation. In ancient India, and even now in certain villages of Mewar, public buildings, tanks, wells, etc., were and are constructed by the joint efforts and voluntary and honorary labour of the villagers. There should be at least 5 days of free manual labour after every plough in the village. This will facilitate the work of the Panchayats a great deal without any botheration regarding money and cash.

(*iii*) Private donations, on the occasion of social functions like marriages, sacred-thread ceremonies, etc.

(*iv*) Miscellaneous receipts, in the form of arbitration fees and fines, grazing charges and other special cesses for various purposes. Such cesses must, however, be realised in kind.

(*v*) Capital grants or grants-in-aid for recurrent purposes should be freely provided by the various reconstruction funds set up by the Provincial Governments.

(*vi*) Borrowings may also be allowed in special cases as regards Panchayats whose position is sound.

Each Gaon Sabha should have a Gaon Fund to which shall be credited the following: (*i*) Taxes on the rent payable not exceeding one anna in a rupee, and on rent received not exceeding six pies in a rupee, on trade, calling, and profession, and on buildings owned by persons who do not pay any of the aforesaid taxes; (*ii*) sums handed over or assigned by the Provincial Governments, District Boards, Courts or gifts; (*iii*) portion of rent or other proceeds from the *nazul* property; (*iv*) rent or revenue collection charges; (*v*) income, *adalat* panchayats, fairs and markets; and (*vii*) loans and the existing balance of the village panchayats.

As regards the functions to be followed by the Panchayats two things must be borne in mind. Firstly, the Panchayats should not be the only local authorities for the villages but there would be the District Boards also exercising jurisdiction over them. It is not, therefore, necessary that all the local services for the villages should be provided by the Panchayats. Secondly, the amount of political initiative and talent available in the village is bound to be small and their financial resources too cannot be very large. In view of these considerations it does not seem feasible to entrust the Panchayats with the maintenance of costly institutions whose clientele should be under the District Boards.

Functions of the Village Panchayats should be of three kinds:

Firstly, their own independent functions should be only a few relating to construction and upkeep of village works like roads, wells and tanks, and buildings; lighting, provision of village libraries, reading

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of public utility. They should also allot the land to the peasants and collect the Land Revenue on behalf of the village. The regulation of the inter-village markets, celebration of the local festivals, establishment and maintenance of the village primary schools, and the organisation of basic and adult education, and management and care of village grazing lands for the benefit of all the people—should also fall under the ambit of the Panchayats.

Secondly, they should be entrusted by the District Boards with a large number of agency functions in connection with the repairs of Board's buildings situated in the village, distribution of seeds and manures, starting of cottage industries, encouragement of co-operation, and consolidation of holdings, marketing of agricultural produce, improvement in the means of communications, regulation and distribution of water-supply for irrigation purposes, extension of village sites and control of rural housing, regulation of hours of work and conditions of employment in agriculture, making arrangements for the co-operative purchase of raw materials and consumption goods, and the co-operative sale of the articles of village handicrafts, and the regulation of village trade, industry and commerce by organising credit and non-credit co-operative societies under the supervision of the experts.

Thirdly, they should have the right of making representation and complaints to the Government and the District Boards regarding the inadequacy or mismanagement of any of the services which it is the duty of these authorities to provide for the villages. Thus they should have the power to enquire and report about the misconduct of certain officials, *e.g.*, Amin, Vaccinator, Constable, Patwari, Patrol, Peon, Process Server, to contract for collection of taxes and other dues on behalf of the Government and proprietors on payments and to acquire land through the collector.

Lastly, the proper judicial duty of the Panchayats should be conciliation and arbitration rather than adjudication. Conciliation is resorted to by disputants for resettlement of disputes informally, even in the absence of legal revision but if the law recognises it as a regular part of judicial administration, its utility and effectiveness will be greatly increased. To this end in view the law should provide that civil suits shall not be filed in a court, until the plaintiff has tried conciliation with the help of the Panchayat of appropriate jurisdiction. A certificate of failure of conciliation from the Panchayat should be necessary to enable the plantiff to go to a court. When a dispute comes before the Panchayat for conciliation it should summon the parties before it, hear the statements, note the points of disagreements and try to effect a reasonable compromise by arousing their friendly feeling and pointing out the troubles, delay and cost of litigation. No lawyers should be allowed to appear and nothing said before the Panchayat should be admissible as evidence before the courts should the case ultimately go there.

If an agreement between the parties is reached, it should be formally recorded and signed and should have the same validity as a formal judgment of a court of law. In cases arising out of contracts the Panchayats may also act as arbitrators. The law can help by providing that debt and other contracts up to a certain value shall compulsorily contain an arbitration clause binding the parties to the acceptance of the Panchayat's award, should a dispute concerning it arise.

Conciliation and arbitration have been the traditional role of the Panchayats. If properly organised they can dispose of a very large number of cases out of the courts. It is said that in Denmark and Norway about 75 to 90 per cent of the suits are settled in this way. The Panchayats should have no jurisdiction in criminal cases.

Supervision of the Panchayats

The duty of inspection of the work of the Panchayats should belong to the District Boards and they should create for the purpose a force of Panchayat Supervisors or Inspectors each of them having under him 40 to 50 Panchayats or fewer. Their qualification and pay should correspond to those of the organisers of rural development work. The District Boards should be allowed to dissolve the Panchayats where necessary. Their initial establishment and supervision should not be the duty of the District Boards. This work should be entrusted to a Panchayat officer maintained in each district by the Provincial Governments who would work in close collaboration with, but independently of the District Boards. He will also act as a kind of Super-Inspector of the Provincial Government supervising the work of the District Boards' Panchayat supervisors and inspectors in relation to these bodies. He will as well report to the Government cases of failure of the District Boards to foster and promote the Panchayat organisation.

Smooth and cordial relations among the Gaon Sabhas will also be necessary. The spread of proper type of education and appointment of honest selfless workers as Panchayat officers for organising and supervising the working of the Panchayats in early stages of their growth appear to be essential factors for efficient working of the Panchayats. These duties can be entrusted to the development staff appointed for the development work in rural areas, instead of Panchayat officers, although the existing system of appointment should be considerably changed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The rural development officer, on the one hand, should create interest in the village activities for self-help and self-improvement and, on the other, it should represent the village to the Government in the spirit of a spokesman of the former. The Village Panchayat area should be a seat of all public services or a unit thereof. For instance, it must have a veterinary sub-dispensary, a civil sub-dispensary, and it must be the headquarters of the agricultural supervisor, the Sub-Inspector of Weights and Measures, the Head Constable of Police, and the Chief Village Patel for all villages in the group, the beat-guard of the Forest Department; it must have also a small branch of post office, and a secondary school for boys and girls.

During the last 200 years, the spirit for co-operative action and corporate life has been greatly destroyed. Individualism and materialism have replaced community life and moral obligations. The present-day experience of the way democracy is functioning and of party factions even at the top cannot but make one a little pessimistic about the practical working of the existing Panchayat Acts in the provinces. It is certainly a great responsibility on the people's government to see that the provisions of the Act are not misused for the sake of party aggrandisement and for destroying the last traces of the community life. The dangers are not imaginary but real. Finally, let us not lose faith in the innate goodness of human nature and let us share the optimism with Dr. K. N. Katju that

> "What is definitely a poisonous fungus of recent growth of human origin can also be destroyed by human endeavour."

Model Gaon Sabhas for U.P.

The U.P.'s lead to the rest of India in promoting Panchayats all over the State is well-known. Finding that the response of the villages to the scheme has been very encouraging, the Government has now embarked on the second stage in the scheme, *viz.*, establishment of an ideal Gaon Sabha in every tehsil to serve as a model to the other Gaon Sabhas in the district and the State.

These ideal Gaon Sabhas will work to bring about conditions in the rural life as can promote the moral, spiritual, moral, physical, economic and social uplift of the people.

In order to implement the ideal Gaon Sabha scheme, a committee will be set up in each district, consisting of the president of the district board (chairman); district panchayat officers (secretary); president, district development board; president, district congress committee; district inspector of schools; officer-in-charge, P.R.D. in the district; district medical officer of health; district agriculture officer; district co-operative officer; district engineer; district information officer and two others to be co-opted by the committee.

The committee will select a suitable site in every tehsil for the location of the ideal Gaon Sabha. Though the initiative for building up an ideal centre will rest with the committee, actual work will have to be done by Gaon Sabhas and the members of the panchayats. These ideal centres will be given a 16-point constructive programme and the committees will be expected to secure co-ordination and co-operation of the Village Sabhas in its execution.

The aims and objects of this programme may be summed up as follows:

(*i*) To arrange for land for the panchayat house, office of the panchaytai adalat, a hall for meetings, and accommodation, for a library and reading room;

(*ii*) To display in the panchayat house the exhibits of village crafts;

(*iii*) To arrange entertainments with moral and educative background;

(*iv*) To open a dispensary or arrange for a medicine chest;

(*v*) To arrange for the education of adults and children;

(*vi*) To conduct games and exercises;

(*vii*) To hold practical demonstrations to educate the people in regard to sanitation;

(*viii*) To demonstrate how nightsoil could be disposed of and how it could be turned into manure;

(*ix*) To arrange for the construction of roads, drainage, etc.,

(*x*) To arrange for lighting in villages;

(*xi*) To plant shady trees on the road-sides;

(*xii*) To educate people in respect of animal husbandry problems and proper maintenance of the livestock;

(*xiii*) To install cane-crushing and fodder-cutting machines for the village public;

(*xiv*) To introduce compost-making schemes;

(*xv*) To make provision for the improvement of the breed of milch cattle; and

(*xvi*) To organise boy scouts, women uplift societies, etc.

LONDON LETTER

By Major D. GRAHAM POLE

Midsummer Day has come and gone and what seems to many to be the longest year in our history pursues its dismal course. History is full of ironies but it cannot often have happened that in a given year, in a matter of days, its greatest achievement and its greatest failure should be embodied in the person of one man. But such is the present case. 1951 will be remembered in our history books as the year of the Festival of Britain. The Festival it will be recorded owed its inspiration and its success to the organizing genius of Mr. Herbert Morrison. But the year will also be remembered for the crisis which arose in the Anglo-Iranian oil-field. And that crisis it will also be recorded was mishandled from the beginning by the same Mr. Herbert Morrison, now turned Foreign Secretary. Foreign affairs have been the grave of many a reputation. Sir John Simon was too legal and Neville Chamberlain too vain. And Mr. Herbert Morrison? The verdict is: suicide. Hanged himself in his own garters, the garters being the narrow circle of his atrophied views on 'imperialism.'

There have been many important debates on foreign affairs in the House of Commons. There has too for a long time been the assumption that such matters are the concern of the whole nation, to be approached objectively and not from the party angle. On these occasions the House feels entitled to be taken to a certain extent into the Minister's confidence, to be given a survey of the situation and rather more than a hint of the course which the Government proposes to follow. Nothing like this occurred last Thursday when the Foreign Secretary wound up the debate on the Persian crisis. The only hint that the speech gave, it is fair to say, was to the Persians. Plainly they could go ahead without any fear of a check from Whitehall. Mr. Morrison indeed never came down to realities. Instead he spread himself in gibes at the Opposition and the 'imperialism in which they had been brought up' or stooped to a cheap joke about the action of the Persian Government in closing the Oil Company's information bureau. But the most astonishing levity of all was an entirely gratuitous comment about wanting to 'colonize Persia.' This of course brought Mr. Anthony Eden to his feet (with a graceful reference to Persia's long history). But what a gift to Persian extremists was all this irrelevance. For their propaganda hand-outs to the Press, to the world, they have only to garble Mr. Morrison just a very little.

Our modern anti-imperialists are very like Pontius Pilate. All they think they need do is to wash their hands of the past. But who is going to benefit if the Anglo-Iranian Company pulls out? For if ever an 'imperialism' has done more good than harm, it has done it in Persia. An article by Mr. Hilary St. George Saunders has just appeared in the *News Chronicle*. He was formerly Librarian of the House of Commons and is the author of many best-selling War Reports. And since the War he has travelled Persia from end to end, except north of Teheran where he was barred by Russian influence. A competent and sympathetic observer—and the tale he tells is extraordinary.

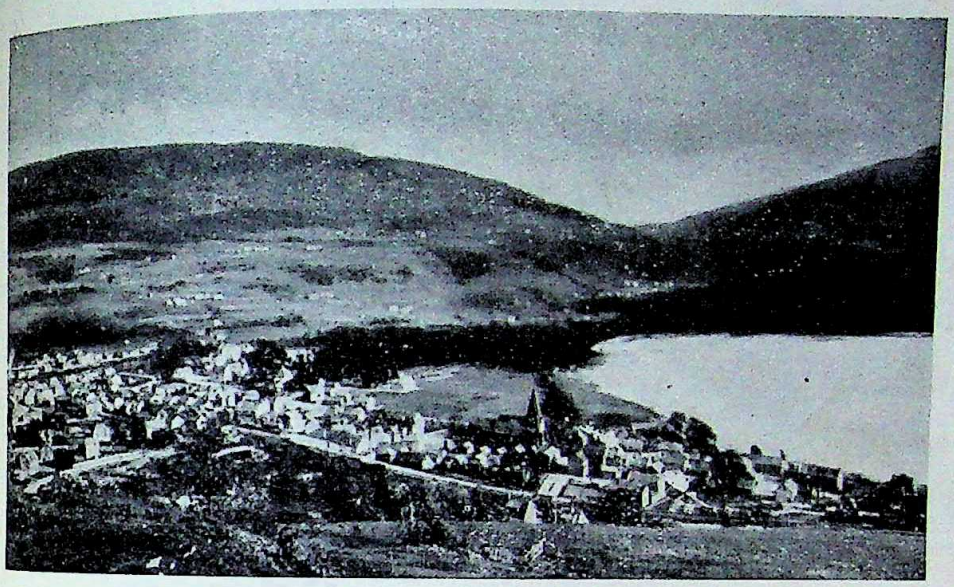
He traces the history of Abadan from the year 1909 when the Anglo-Persian Oil Company first appeared on the island. It was then utterly barren, but the land was needed for a refinery to deal with the oil which had been discovered in the hills away to the north. Today Abadan is

> "a town of 170,000 inhabitants, of whom about 165,000 are Persians . . . the most modern town in the Middle East, with drainage, electric light, well-built brick houses, lovely gardens, hospitals, schools, cinemas, everything in fact of which civilisation today is proud."

It is connected by pipe-lines with the seven main oilfields, and around the headquarters of these oilfields other towns are also rising.

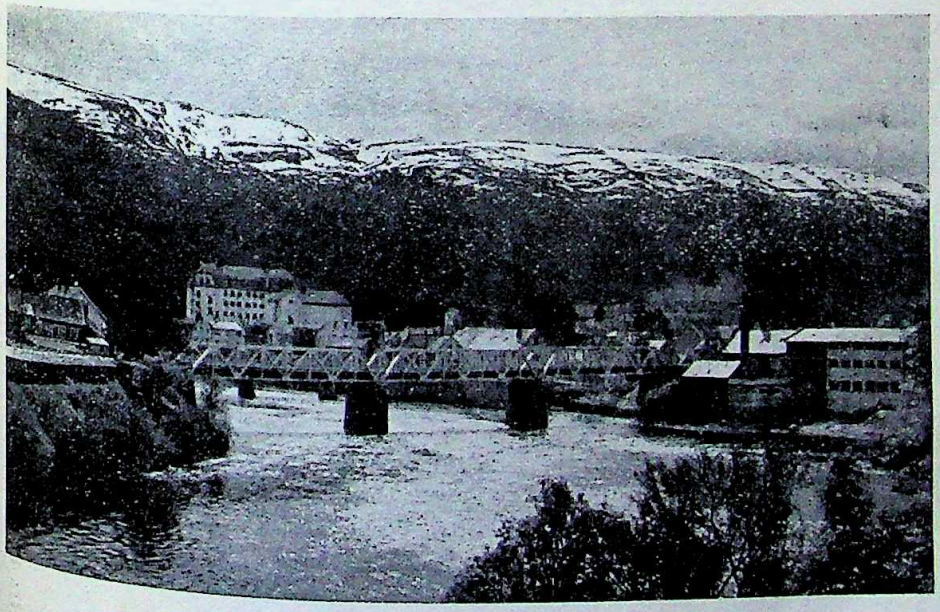
> And "in all these places unemployment, poverty and disease, as it is known in the East, do not exist. In a generation the company has virtually stamped out malaria, small-pox and typhus by an intensive programme of preventive medicine which is unique . . ."

That is what life is like in the Anglo-Iranian concession. Its area, incidentally, is larger than that of the United Kingdom and Northern Ireland put together. So that when the present feverish times are past—and the British finally gone—the Persians will have plenty of object lessons around them from which to come to a just conclusion as to the nature of British 'exploitation.' Conditions in Persia proper are very different. Listen again to Mr. St. George Saunders :



> "Outside the confines of the concession, no public health or other social services exist and the sewers run down the open streets in Teheran and Isfahan and in all other towns I visited and there are no signs of any change. You hardly see a child who is not afflicted with some loathsome eye disease, the peasants are in rags, not one in ten can read or write."

Indeed, in Abadan, the Persians can see the two systems existing side by side. Large parts of it are not under the company's control but in the hands of the local council. And, says Mr. St. George Saunders:



> "They contain the second worst slums I have ever seen or smelt. The first are to be found in Teheran."

In Teheran also are to be found the Persian upper classes. They are described as charming, highly civilised, some would say decadent. They count their wealth by the number of villages they own and it is they who are in control in Persia and who receive the royalties paid by the Anglo-Iranian Oil Company. To a large extent they control the elections to the Majlis. They have plenty of power but will not exert themselves. A 'modest' programme of social services was adopted a few years ago, but they have not implemented it. (It will be remembered that the Persian Prime Minister, in the role of the devil citing scripture for his purposes, the other day conducted foreign newspaper men round the slums of Teheran!)

And it is to these people that we are delivering over our concession and with it the defenceless Persian labourers. How long can such a state of affairs persist? Communism has already found a footing in the Persian towns, in some of which children aged four and five are employed in making carpets at the rate of 4d a day. Communists make it their business to fish in troubled waters . . .

From every point of view it is a mismanaged, mangled business, and no one can feel happy about it. Why could not the Persian Government have agreed to arbitration—and why could not our Government even have drawn up a statement setting out their view of the rights and wrongs of the crisis? In England, the man in the street feels nothing but scorn for our drifting doctrinaires. All his sympathies and respect are with the men on the spot, with the Manager Mr. Drake and the undaunted army of tankers.

Dislocation, unemployment, uncertainty. These are the heritage on which the Persian labourer is entering. The Persians have no tankers. How are they going to manage? And, as the London *Star* points out, the pipelines across Iraq and Transjordán are still the property of the Company. The Company, incidentally, could hardly have conceded more to Persia than it did already and still remain in business. The *Star* gives the split-up of the Anglo-Iranian revenue last year. To the British Government in taxes £26,000,000; to the Persians in royalties £23,000,000. Only £3,900,000 went to the shareholders of which the British Government, the principal shareholder, took half. Well, these figures do not bear contemplating. That a Government should do so well out of a Company and then abandon its servants . . . There are many Scots employed in that company. Thinking of the treatment that has been meted out to them by the Foreign Secretary many of them must be recalling that line from *Marmion*: 'His cowardice has undone us all.'

The Persians are embarking on an experiment in nationalisation. We in this country have now had several years of it and it hampers our life at every turn. The doctors are being killed off by the strains and stresses of the National Health Service. The local authorities want their hospitals back. The railways want to recover their old identities. The public get bad coal at a higher cost. They pay more for their electricity and gas. More for travel and more for freights. Of one thing we all are certain: nationalisation means redundancy. In this connection it is worth quoting from a letter which Lady Violet Bonham Carter, daughter of the late Lord Asquith, published in the press this week. She referred to three expressions of opinion—none elicited by a tendentious question on her part—and all from workers in a nationalised industry. One was from a miner who told her: "We used to grumble because there were three cars outside—one belonging to the Boss and the others to his two sons. Now we have something like twenty bigger cars and twenty Bosses in them. And not one of them *is* the Boss." Two were from railwaymen. Said the first: "Too many Bosses. We've got twelve in this station where we used to have two—all with new offices furnished and done up 'regardless.' And not one of them knows his business." He was on a northern line. On a midland line it was the same story:

> "We used to use our own judgment in this station—but now we can't settle anything on the spot. Even if we want to put on a few extra coaches we have to telephone . . . There's long delays and then the wrong answer comes back. The railways executive say they can't afford to meet our needs—but look at the waste on what we *don't* need. They've just put a gas-oven costing £40 into our waiting-room. What do they think we want to do on it? Cook turkeys? Why, we only want a gas-ring for a cup of tea."

Too many men. Too much equipment. *Everywhere* one hears that tale.

From time to time the *News Chronicle* publishes a Gallup Poll on the state of political parties in this country. Such a poll was published this week. The question posed to a cross-section of the public was: 'If there were a General Election tomorrow, how would you vote?' After excluding 12 per cent who were undecided, the Conservatives led with 48, Labour came next with 41, the Liberals had 10, and other parties 1. Thus the Conservatives have a lead of 7 points—although last February they were leading by 14. Those who conduct this poll believe that the crucial question is, to what extent are potential Labour voters influenced by the breakaway of Mr. Aneurin Bevan. Accordingly, they analysed the Labour vote still further, and asked:

> "Are you more inclined, or less inclined, to support Aneurin Bevan and his views since he left the Government?"

And 30 were more inclined, 35 less inclined, while 35 didn't know. The most interesting thing about this analysis is that the odds should be so even! How can

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

anyone say 'I don't know' in reply to a question about so catastrophic a personality as Mr. Bevan? It suggests, what I think is pretty obvious since the war, that voting Labour is becoming a habit—just as voting Conservative used to be.

Until the flare-up in Persia put every other topic out of our heads, most people were concerned with the question of the two diplomats who have disappeared. The Foreign Secretary assures us that they can have taken no important information with them. And the general opinion seems to be that they were not very valuable members of society in any event. So, setting aside the extraordinary fact that one of them should ever have been put at the head of the American section of the Foreign Office, the only point of interest that remains is—their motive. If they are gone to Russia, as it seems they must be, why should they choose to go?

Caesar could never understand why men should fear death—and I shall never understand why men should embrace Communism! Anyway as it is practised in the modern world. No free speech. No free press. People torn from their homes by the secret police. Wives not allowed to join their husbands. No one allowed out of the country. Where, in the name of all the gods at once, is the attraction? These defections to Russia are a strange phenomenon. Something has knocked these people off their balance and somehow we must discover what it is. A friend of mine had a curious experience this week. Coming up from Cheltenham in a first-class carriage she fell into conversation with her travelling companion, a man in the thirties who was reading a book by G. K. Chesterton (Chesterton the saint, Chesterton the *individualist*!) Asking him his views on the disappearing diplomats, she was startled to receive the reply that he expected there would be many more such defections. 'We intellectuals,' he said, 'have a lot of sympathy with Communism.' My friend, as it happened, once attended a meeting at which a Polish politician who had been kidnapped by the Russians gave an account of the psychological torture to which he had been subjected while their prisoner. She spoke of this to the 'intellectual.' 'Oh,' he replied, 'we are not in sympathy with *that*. We are more interested in the kind of Communism that is practised in *Burma*" I leave it to Indians to reflect upon that.

But *are* these intellectuals really drawn to Communism? Are they not, rather, a little mad? Sometimes it seems to me that just as modern art has cut itself off from tradition, has become a head without a body—so it is with these so-called Communists. Kicking away the past is the need that they feel: not the need of Communism for its own sake. And, certainly, there can be no surer way of cutting loose from the past than by getting oneself shut up behind the Iron Curtain. It is to them the great and obvious Escape.

But how will they feel if war comes? It is recorded that James II of England greatly annoyed Louis XIV by his loud admiration of the prowess of the English sailors in a sea-battle in which he and the French were engaging the English in an endeavour to restore James to the English throne. Instead of cheering on his French allies, he kept exclaiming: 'O the brave English!' Will not our muddle-headed escapists have an even more remorseful awakening?

Talk of war, alas, is in the air. The Festival may be brightening up the banks of the Thames but not many people can match its mood of gaiety. An old lift-man remarked to me this morning: 'There don't seem to be the happiness about that there used to be.' There certainly don't. Everyone fears that war is coming. In a very real sense, too, there is a feeling that the last war was left unfinished—that there can be no peace, no stability, so long as Russian armies hold down the peoples of Eastern Europe.

How far off is war? If a writer in this week's *Spectator* is correct in his assumptions, then war will come next year. First of all he thinks that war cannot now be averted, not even by Stalin. The reason why this is so, he finds in Russian propaganda.

> No Power, he says, has ever maintained "year in, year out, a campaign of such bellicose and hate-breeding defamation against its opponents . . . Propaganda of so much virulence as that now daily injected into the minds of the Soviet populations is calculated to produce a mental current towards war too strong for even its authors to resist."

That war will come in 1952 he thinks is probable on strategic grounds. In the armaments race which is now being waged, Russia is superior in land forces and in the air: America has a great superiority in atomic weapons. But both superiorites, he points out, are in process of being diminished—'the Russian land and air superiority by the working of the Atlantic Pact and the American atomic superiority by the Russians' quick use of the secrets sold to them by the traitor-scientists—Fuchs, Nunn, Pontecorvo and the rest.' And so he concludes:

> "The Russians could not wait too long lest their land and air superiority disappears; but equally they could not afford to start too early lest they find themselves without sufficient atomic weapons . . . Balancing these opposites, I have long thought that 1952 might be Russia's latest date."

All I have to say about this is that by far the worst part of it lies in what he says about Russian propaganda. What a terrible wrong to have inflicted upon a whole people—to warp and corrode their minds until nothing can turn them from their mission of destruction.

Is there no way of piercing such madness?

WHEN CONSTITUTIONS BECOME FLEXIBLE AND CURVACEOUS

Pandit Nehru at his most "Dynamic"

By C. L. R. SASTRI

"'But what good came of it at last?'
Quoth little Peterkin.
'Why, that I cannot tell,' said he,
'But 't was a famous victory'."—*Southey*

The proverb tells us that out of the abundance of the mouth the heart speaketh. What it does not tell us, however, is that when the heart is full words fail to issue from the mouth—or, for that matter, from the pen. My heart is full just now and, needless to say, my pen is fumbling for words. It all, to cut a long story short, comes back to the age-old question of patriotism. The whole point is that some are born patriotic, while, as unquestionably, some are not: the love of our Motherland is instilled in us at the time of our birth. If, for any reason, it was not so instilled, not all the King's horses nor all the King's men are likely to get it instilled thereafter. It means only that by merely taking thought, so to speak, we may not expect to burgeon into full-blooded patriots. One cannot, that is, inject patriotism into another through, if I may say so, a hypodermic syringe: one has heard of many things but, surely, not of dragooning people into an adoration of the land of their forefathers. If one has to be dragooned into such a state one writes oneself down, not as a man, but as a moron.

Congressmen Spearhead the Anti-Patriotic Hordes

Speaking for myself, I have, let me proclaim it from the housetops, loved my country ever since, in the poet's words, I was

"A six years' darling of a pigmy size."

But the longer I live the more convinced I am becoming that there are enough barbaric hordes in every clime, *and not least in our own*, to whom the love of one's country is, to put it mildly, as unfamiliar as "this goodly frame, the earth, ... this brave o'erhanging firmament, this majestical roof fretted with golden fire" must be to the congenitally blind or the heavenly harmonies of Mozart and Beethoven to the chronically deaf.

Talking of barbaric hordes I have no hesitation in including our worthy Congressmen (the partition-wallahs, naked and unashamed) among them. *Now*, of course, this testament of faith on my part is in no immediate danger of bringing down the all-consuming wrath of the "many-headed" upon me. It is a mere commonplace—like, for instance, asserting that the grass is green or that the sky is blue. Every passing moment but buttresses and bolsters up this proposition. But my supreme merit lies in the fact that I had the prescience to vote for it wholeheartedly even in the palmy days of the Congress when, as the public will recall, it was nothing less than lese majeste to question either its wisdom or its nationalism. I had a sort of hunch even in that "dark backward and abysm of time" that that *soi disant* premier political organisation of ours would, if left to its own devices, not only speedily encompass the ruin and desolation of our beloved Motherland. Those who can legitimately boast of having minds of their own, and cannot be accused, by friend or foe, of being "dead from the neck up," as the saying is, will agree with me that from 1920 onwards the Congress has led the country from one irretrievable disaster to another, culminating in the cataclysmic partition of August, 1947. But stay! Did I say "culminating" in the partition of August, 1947? A slip of the pen, gentle reader, a slip of the pen!

Partition not the End of the Story!

But now we know, having lived through four years of so-called "independence," that partition, dastardly as it undoubtedly was, was by no means the end of the story and that, as our ill-luck would have it, in the lowest deep we were destined to discover many a lower one still. It looks, indeed, as though partition had been only the beginning and not the end of the story. Partition, we have found to our utter dismay, was but *one* of the numerous offspring of that frightfully prolific parent, appeasement. "The roses and raptures" of appeasement apparently grow on one; and it is permissible to argue that we have yet to see the last of the wonder progeny of that prolific parent aforementioned. Partition, it is becoming increasingly clear, instead of, as had been fondly imagined by the mass of our countrymen and countrywomen, bringing up the rear of that sinister procession, really formed part of its more prominent vanguard.

"Secularism"

"Secularism" is the *second* offspring of appeasement; and in its sacred name those modern orphans of the storm, *the poor Hindus*, are steadily losing what I may call their "residuary" rights. The post-1920 Congressmen (or, at any rate, the vast majority of them) have, as a direct result of clamping that "putrefying albatross," appeasement, around their necks, had, perforce, to forget what patriotism is and thereby to cease to have any kind of sympathy or fellow-feeling for their Hindu brethren, fearing that it might be a glaring blot on the otherwise spotless escutcheon of their much-vaunted "secularism." This malaise has spread so far, indeed, that the very word, "Hindu," as musical as is Apollo's lute, has well-nigh been expunged, erased, unceremoniously wiped out, from their lexicons, yielding place (*horresco referens!*) to what they doubtless regard as the overpoweringly more enchanting syllables, "non-Muslim." Even after that major surgical operation on our body politic—namely, partition—the Congress's marked emphasis has been on "Muslim" and not on "Hindu," and on this vicious slant of the Congress's

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

mind must be attributed the continuing grotesqueries of the Congress Government. The latest of these grotesqueries, I need hardly remind my readers, is the Constitution (Amendment) Bill so belligerently sponsored by our distinguished Prime Minister a few weeks ago on the floor of our august Parliament, as a consequence of which our Constitution has become dynamic and flexible and curvaceous.

The Britishers' Stock Argument

It used to be the stock argument of the British whenever we demanded complete emancipation from their crippling suzerainty that, for their part, they would rejoice to transfer power into our hands at the earliest possible moment but that the trouble was that the people were not ripe for self-rule and that, anyway, no eastern country, least of all India, knew the rudiments of democracy. The implication, no doubt, was that they were loath to leave us to the tender mercies of sheer anarchy. It was, of course, never any use telling them that good government was no substitute for self-government and that how we ruled ourselves after their departure should, strictly speaking, be none of their business. The British (God bless them !) looked upon themselves as the heaven-sent trustees of the "masses"—the mute inglorious Miltons and the Cromwells guiltless of their country's blood—as well as of the "minorities" (meaning, the Muslims, their foster-children); and that sacred trust, we were given to understand, compelled them to stay on here, though, if they consulted their own interests, nothing would please them more than to shake the dust of our "vast subcontinent" from off their feet. Democracy, forsooth is a plant of slow growth in our clime, and the British were there to water it and to nurture it until it developed into a veritable Upas tree—beneath whose umbrageous branches we could shelter ourselves from the raging storms of oppression outside or from "the madding crowd's ignoble strife." If the British were lording it over us it was, obviously, only for our own ultimate good, to familiarise us to the democratic ways of living from which, for ages past, we had, it would seem, been shut out by a malignant fate. The insinuation was that, by immemorial tradition, we could appreciate only the crack of the whip and the whack of the bludgeon, not any softer mode of approach by our rulers, whoever they might, for the time being, be.

Congress Steps into their Shoes

Our political parties, and the Congress in particular, never accepted this preposterous thesis of the wily British. We all protested to high heaven that we were as democratic (as a nation) as any other, and that we could prove it, up to the hilt, the moment the British left our shores. Even if we were not, we contended (plausibly enough), that was no valid argument for their staying on indefinitely in our midst. Much less could that be a valid argument when, as a matter of bare, historical fact, democracy has never been unknown to us or we to it. Eventually the British left our shores, *though not for the reasons that Congressmen love to adduce.* Congressmen affect to believe that the British withdrawal had been necessitated by the overpowering moral pressure that they brought to bear upon them. According to these oracles, the British withdrawal was not entirely voluntary, nor did they "bestow" freedom on us: the British went because the Congress (of course, non-violently) drove them away; and the freedom that we now enjoy, or are supposed to enjoy, was "wrested" by that organization from their unwilling hands. In the last resort, perhaps, we all believe what we wish to believe; and I must content myself with simply marvelling at Congressmen's child-like credulity.

Dictatorship

But two facts are indisputable: the British went; and the Government that the Congress has established in the country since that historic date of August 15, 1947, was not conspicuously democratic at its start and has become less and less democratic with the passage of time. At the moment of going to press it bids fair to be nearly as anti-democratic as Hitler's Germany or Mussolini's Italy in the long run. The Government we now have can be called a democracy only with extreme violence to truth: it is a dictatorship rahter and Pandit Jawaharlal Nehru is that dictator. He had once been the idol of the nation. For aught I know he may still be that—for some sections of our people. But his consuming passion (as we are entitled to deduce from the evidence at our disposal) is, obviously, to become a dictator—in reality, if not in name. That is how he has elected, after mature deliberation, to repay his countrymen and countrywomen for their boundless idolatry. We may, if we are so disposed, derive a modicum of consolation from the conjecture that, probably, we get the idols we deserve; probably, also the dictators we deserve. When we elevate mere humans to such giddy altitudes it usually does not take us long to be thoroughly disillusioned. Our essentially weak systems cannot be expected to stand the stresses and strains of that rarefied atmosphere, and in the end we are shown up to be what we are in actual fact as distinguished from the extravagantly fertile imaginaton of those who love us, not wisely, but too well. This has now happened to our beloved Panditji: let me hope that his perfervid admirers will, even at this admittedly late hour, take that bitter lesson to heart and having taken it, determine to be more circumspect in their adulations hereafter.

At least for the sake of disproving the British thesis referred to above by me the Congress leaders, I am convinced, should have made a firm resolve when they "took over" from our former rulers that they would govern the country in an unmistakably democratic way and bearing in mind the greatest good of the greatest number. The British, as I have remarked, propagated the revolting view that we could not recognise democracy if it was presented to us on a platter. If ultimately they abandoned their stranglehold on us it was not because they suddenly became converts to the opposite view; they are an eminently shrewd people and were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

while, according to their calculations, the going was good; and, even then, let us remember, not without administering a parting kick in the form of the dastardly partition of our hallowed land, a kick that, as one might say, will ring down the corridors of time as the most shameful act of their hundred and fifty years' rule over us. It was Napoleon's dictum that we should not oblige our enemies by doing as they wish us to do. A kind of self-rule that is not pre-eminently democratic defeats its own purpose; and that purpose is defeated all the more when those enemies can say, unctuously: "We told you so!" Before coming to the Constitution (Amendment) Bill let me take this opportunity of cleansing my bosom of the perilous stuff that has been weighing upon it for so long and charge the Congress Government, in the light of what has transpired since 1947, of never having even toyed with the notion of administering the country in the accepted traditions of democracy. Perhaps we had expected too much of an organization that, ever since 1920, has been used to dictatorial methods and has not been on nodding terms with democratic usage. Strict obedience to the merest whim of an exalted personage has been the rule, not the exception, with the result that an abjectly slavish mentality was assiduously cultivated that could, with difficulty, "break its birth's invidious bar" overnight. A Congress Government could, in the circumstances, mean only that democracy would get short shrift at its hands; but, as I have suggested earlier, it might have done otherwise if only to disprove the British thesis that western concepts of egalitarianism could hardly be transplanted to our soil.

Worse to Come

But worse was to come. The Congress has itself been telling it in Gath and bruiting it about in the streets of Askalon that we, as a nation, are not fit for democracy. It would even seem that it would take ages and aeons for us to fit ourselves for it. In a sense, of course, they may be said to be right. The Congress would have been driven out of office long ago if the country had been democratically-minded. The Congress, however, is still in office and, what is more, strengthening its position by every means in its power, fair or foul. But I can offer another explanation for our present malaise. At the top of the Congress heirarchy is one whom the masses love dearly. If the Congress falls he, inevitably, falls with the Congress; and, much as the masses may like the Congress to fall, they have no wish that their loved one—with all his failings—should fall with it. With the advent of the Mahatma into Indian politics the "exalted personage" cult, as I may call it, has taken deep root in our minds and we love the reigning exalted personage so much that we are willing to turn a blind eye to his, as well as to his party's, manifold shortcomings. We could have "cocked a snook" at the Congress if it had not been for this crippling disability. It has severely cramped our style. In this "exalted personage" cult has lain the root of our trouble. The question of our being fit, or not being fit, for democracy hardly arises in this context; and ("sorrow's crown of sorrow!") for the Congress itself to advertise far and wide that democracy is allergic to us or that we are allergic to democracy is merely to "make the gruel thick and slab." It is merely to twist the knife in the wound. It is not to put too fine a point upon it, the unkindest cut of all. The Congress might have stopped short of *that* indignity at least. But the Congress is power-drunk; and is in no mood to listen to reason.

On this Foundation they Build

In the foregoing paragraphs I have been at considerable pains to sketch the background of the Congress's unimaginably despotic rule over our unfortunate countrymen. The poor Hindus who, on any reckoning, are the only real citizens of the present "India" have been steadily ground down between the upper and the nether millstones of appeasement and "secularism;" and what has not been so ground down is being equally steadily polished off by the draconian legislation that our new "Ma Baps" see fit to enact whenever they find themselves in a tight corner. To this legislation there does not seem to be any end. The British, during their hegemony, were wont to perpetrate some preposterous laws; and, in the midst of the last war, did not scruple to perpetrate some even more preposterous than the general run of them. The British, because they were an alien race, had, to be fair to them, a sort of excuse; and war conditions, we may concede, are an excuse in themselves. But it has fallen to *our own* Government—*and in peace time*—to out-Herod Herod, so to speak. The British can congratulate themselves on having had such apt pupils, pupils that have improved upon their preceptor. They may, not unjustifiably, apply to themselves the well-known lines of Walt Whitman :

"I am the teacher of athletes,
He that by me spreads a wider breast than my
own proves the width of my own.
He most honours my style who learns under
it to destroy the teacher."

What Price Freedom ?

Our country—at long last—gets freedom from foreign domination. But with what result? With this humiliating result, gentle reader, that the common people—you and I, in fact (the legatees of that freedom)—may be deprived even of that much of freedom, *under indigenous rule*, that we had been privileged to enjoy under an alien dispensation. We are being made helots by our own rulers. Can anything beat that in the way of anti-climax? Perhaps there is a kind of poetic justice in it. We had placed too much reliance on the innate good sense and patriotism of the Congress leaders. We even prided ourselves on possessing men of such sterling character, men who could, under all weathers, be trusted to despise low joys, low gains, "disdain whatever Cornbury disdains," as the eighteenth century poet has put it. It almost looks, indeed, as though when these gentry came to power they swore within themselves that the people should jolly well pay for it.

Let me state it starkly. Four years' of Congress overlordship has left a bitter taste of "freedom" in our mouths.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

It was—we shall do well to remember—not merely freedom from British domination that we had so incessantly clamoured for: we had clamoured for something much more than that—for freedom *a outrance*, for freedom simply as such. *We had no wish at all to appeal from Philip sober to Philip drunk.* But what has happened is precisely that: the British rarely trod on our corns more cavalierly than our own "popular" (save the mark!) Government has been doing ever since that fateful day when (the gods sleeping) it stumbled into office. I am so full of this grievance that were I to begin quoting chapter and verse in support of it I might almost become incoherent. This article would be in danger of being inordinately longer than it is if I decided to cite instance after instance of Congress's gross misrule—if I decided to pile Pelion on Ossa, as it were. Some such piling may have to be done anyway before I go much further: I cannot, obviously, content myself with simply stating that (thanks to our beloved Pandit) our constitution has at last become dynamic and flexible and curvaceous—*curvaceous, especially.*

Still They Come!

The Congress, having come into power, has all along been straining every nerve to consolidate it and to perpetuate it until "this insubstantial pageant" fades, leaving "not a wrack behind." There is nothing inherently wrong in consolidating one's power—by all *lawful* means: it is when one stoops to unlawful methods that our gorge rises. The snag, of course, is that what, indubitably, would be regarded as unlawful in an individual is only too often considered as perfectly lawful and above-board by "the powers that be." A Government, it would appear, may do *any* unlawful thing it pleases if so be it is politic enough to clothe that misdemeanour in the garb of a *new* law, a *fresh* enactment. A Government, as we are all aware, can legislate: the corollory has, somehow, been taken to follow that it can legislate itself out of harm's way. A Government is subject to law like any other institution; and if it imagines that it is at liberty to embark on any iniquitous course it chooses, merely because of that unique advantage it possesses over other bodies of initiating acts and ordinances (as and when it pleases), then we must gently tell its members that those acts and ordinances come under the category of "lawless laws": a category with which the Congress cannot pretend to be wholly unfamiliar inasmuch as it was the Congress itself that had invented that term with respect to the Rowlatt Act and the innumerable war ordinances of the British. These "lawless laws" are not "laws," properly so called: they are the very negation of laws, they bring the ordinary laws into contempt; and if even then the Government escapes scot-free it is only because of its *zabberdusti*, of its *force majeure*, which are not other names for legality but the very opposite. When such conditions prevail the Government is no longer girt round by a secure shield of unimpugned law: if there is any party in the country powerful enough to eject it the moment it [illegible] signs of going on the rampage, as it were, these lawless laws cannot save its skin and it falls like ninepins. That is all the sanctity that attaches to these mushroom growths.

Had there been a Capable Opposition . . .

If the Congress Government has not so far fallen in spite of a lengthy list of obnoxious laws that it has contrived to pass by dint of its "brute majority," by reason of its familiar steam-roller tactics, it must thank its stars that no opposition capable enough to oust it has as yet arisen: it cannot go about pretending that those laws are immaculate. The various Public Safety Acts, the Preventive Detention Acts, *and now* the Constitution (Amendment) Act form the corpus of the obnoxious laws aforementioned. *Once laws of this nature are enacted it is well-nigh difficult to foresee an end to them*: Governmental appetite grows by what it feeds on, and before one knows where one is another of those mushroom growths stares one in the eye. A vicious circle is formed thereby: there is no opposition worth speaking of to prevent the enactment of those laws, and the laws themselves prevent the formation of such an opposition by their "steel-frame" nature. If such attributes of civilised society as free speech and free assembly are strictly forbidden by a Governmental ukase there is, practically, no scope for an opposition crystallising around the nucleus of vague discontent. Our Congress leaders, smelling disaffection in their vicinity, have, obviously, made up their minds to stifle it at its very birth lest it grow into a lusty child and gradually become, so to speak, a thorn in its flesh. It is panic that is at the root of all this obnoxious legislation: in its heart of hearts the Congress knows that it has had its day and that it has ceased to be. But it is not democratic—has never been so since 1920, as I have had occasion to remark already—and it has no intention of letting go its present advantage. "The Congress must rule for ever!"—that, evidently, is its motto. It has forgotten that nothing in this world is permanent, is imperishable: least of all, the power-drunk and the vainglorious:

> "The boast of heraldry, the pomp of power,
> And all that beauty, all that wealth e'er gave,
> Awaits alike th' inevitable hour:
> The paths of glory lead but to the grave."

Even the mighty British Empire has gone the way of "the many Ninevehs and Hecatempoli!"

Equating of Party with State

There is a deeper reason for these emergency enactments: the Congress believes, or affects to believe, that it is not just *one* of the parties in the country: it believes, or affects to believe, that it is *the* country. I am prepared to concede that it is the largest and the best-organised of our political parties: that, however, is not tantamount to saying that it is *the* country. The country is vaster far than a single party, be that party's pretensions what they may. The Congress is in the saddle, not [illegible] country, but because, as every-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

where else, it is the party that commands the greatest following in the country. To be against it is, therefore, not to be against the country as a whole. *Disaffection for the Congress Government is not, on this reasoning, disloyalty towards the country.* That being so no punitive measures need be contemplated in regard to those who cannot see eye to eye with the men in authority.

I am aware that our distinguished Prime Minister is apt to go a step further than even his party and to equate himself with the State. In the recent debate on the Constitution (Amendment) Bill he had some nasty things to say about those who are disloyal to *him*—an attitude unpleasantly reminiscent of *L'etat, c'est moi.* He has been feeling like that for some time past and I, for one, was not at all astonished at his ill-mannered outburst. *It was because he felt he was the State that he accepted the infamous June 3 Plan of Lord Mountbatten "on his sole responsibility,"* as he afterwards confessed (cheerfully) before an emergency meeting of the A.-I.C.C. in New Delhi—convened for the express purpose of "ratifying" his unilateral decision on that momentous question. *It was, again, because he felt he was the State that, without consulting anyone, he took the Kashmir issue to the U.N. It was, once more, because he felt he was the State that he linked the fortunes of the country with those of the British Commonwealth. Lastly, it was because he felt he was the State that he took it upon himself to sponsor the Constitution (Amendment) Bill on the floor of our august Parliament so that it might become dynamic and flexible and approximate to the "curves of life."*

Here we see the gradual progression. *At first the Congress was the country. Now our beloved Panditji is the country.* There is nothing for us but to echo Isabella's celebrated apostrophe in *Measure for Measure* :

> "..... Man, proud man !
> Dress'd in a little brief authority,—
> Most ignorant of what he's most assured,
> His glassy essence, — like an angry ape,
> Plays such fantastic tricks before high heaven
> As make the angels weep."

A Method in the Madness

We all know that Pandit Nehru can fly into a temper like any star of a lesser world, and he was true to form during the Great Debate, trouncing his critics—principally, Dr. Syama Prasad Mookerjee, who has constituted himself "The One Man Opposition" to the reigning authority in the now famous words :

> "I say any man or any newspaper who says it" (that is, who says that the Constitution (Amendment) Bill curbs the liberty of the Press) "lies and knows that he lies."

When Dr. Mookerjee protested against such an unparliamentary expression Pandit Nehru repeated it all the more vehemently: nor did the Speaker of the House care to "curb" the Pandit's "liberty" when it was fast degenerating into that "licence" which the Pandit disapproves most and for the "curbing" of which in our newspaper editorials he is so righteously anxious.

From temperamental "Leader" to "Dictator" is a not unnatural progression and the present head of our Government can be congratulated on having "made the grade" so successfully. He is now in the true line of succession to Hitler and Mussolini: nor can we help commending his examplary courage in choosing to succeed them after noting the remarkable sequel to those twin dictatorships. But, of course, there is no accounting for tastes. *De gustibus non est disputandum.* I should, however, like to make one suggestion to Pandit Nehru. It is not uncommon for him to lose his temper before a *Hindu* audience: what would be uncommon is if, at some point or other in the proceedings, he did not so lose it. *I am afraid the madness is not without a method.* I have noticed that he *can* control his temper when he is in the mood to do so. Before a *Muslim* audience he has never been known to fly into his familiar tantrums; and whenever he felt that Hindu feeling was rising rapidly against the Muslims it was he, more than any other, who always tried to moderate it, to pour cold water on it, in the Mahatma's famous phrase. Does that not show, convincingly, that our hero's explosiveness is not *just* explosiveness but is part of a make-believe role? We, Hindus, tolerate his temperamental role: our Muslim friends, who, obviously are made of sterner stuff, do not relish the spectacle of a grown-up individual displaying temparamental spasms and generally making a nuisance of himself.

As a certain scribe has remarked, not inappositely :

> "The country is accustomed to the Prime Minister's petulant outbursts but on Saturday's debate in Parliament Mr. Nehru's temper overstepped the limits not only of private propriety but of public restraint. Impulsiveness is a quality forgivable in youth. Mr. Nehru, alas, is no longer young, and much that might have been forgiven him in the bright noonday of his impetuous youth is anomalous today. The Prime Minister's intemperate utterances do credit neither to himself nor to his high office."

This wanted saying badly, and it has now been said.

Indecent Haste

I shall not dilate further on Pandit Nehru's calculated, or uncalculated, outbursts of temper in public. As I have hinted, my own opinion is that these rather too frequent gusts of passion are more calculated than otherwise. Calculated or uncalculated we, in India, have to learn, if we have not already learnt, to put up with them as part of our Fundamental Misfortunes—in regard to which, however, we cannot rely upon anyone to bring any Amendments to "curb" their intensity in the near, or even the distant, future. These Fundamental Misfortunes have been *written into* our constitution and we cannot tinker with them as the Pandit has very successfully tinkered with the corresponding Part III (that, namely, dealing with our Fundamental Rights) of that other constitution over which there had been a great "to-do" in parliament recently. The tactics of the party in power to seek to amend the constitution *so soon (that is, fifteen months) after its creation* are gravely open to doubt; and if the party in power was able so easily to over-ride the Opposition's contention about the questionability of those tactics

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it was solely because the party could command a "brute majority" and thus could easily wriggle itself out of an otherwise insurmountable difficulty. Fundamental rights, like freedom of speech and of expression, are too precious to be tinkered with in that light-hearted fashion. As Dr. Syama Prasad Mookerjee was careful to point out in his brilliant speech opposing the Bill :

> "When the Constituent Assembly *deliberately* decided to have a *written* constitution and to incorporate in it a chapter on Fundamental Rights it *deliberately* curbed the power of Parliament. *That was the purpose of Fundamental Rights.*."

Fundamental Rights

The Lion of Bengal, than whom it is safe to say, there is no abler Parliamentarian in our country at the moment, went on to quote with devastating effect a Chief Justice of the United States Supreme Court in support of his thesis. The Chief Justice said :

> "The very purpose of Fundamental Rights is to withdraw certain subjects from the arena of political controversy beyond the reach of majorities and officials and to establish them as legal principles to be applied by the Courts. One's right to life, liberty, and property, to free speech and free press, to freedom of worship and assembly, and other Fundamental Rights may not be submitted to vote. They depend upon the outcome of no elections. There is a limit to your (legislature's) power: thus far and no further."

Dr. Mookherjee wound up by saying: "Today you are changing those Fundamental Rights." Yes: they have changed them: and four years' of "freedom" have converted us into mere hewers of wood and drawers of water.

Defenders of the Amending Bill were at pains to point out that in the United States also amendments to the constitution had been moved shortly after its formulation. But they did not pause to point out that there is a fundamental difference between the two amendments. The purpose of the amendments in the U.S. was *to broaden the base of democracy; to give positive affirmation to Fundamental Rights which found no place in the original draft.* Unlike the Indian constitution the American constitution of 1787 merely set out "to establish three great departments of Government, the legislative, the executive, and the judicial departments."

Freedom of the Press

As for the freedom of the press the American constitution specifically guarantees it. In France the French National Assembly, at its meeting of August 24, 1789, enshrined it in these famous words :

> "The free communication of thoughts and opinions is one of the most precious rights of mankind. Therefore, every citizen may express his views by words, writings, and printed matter, but he will be held reponsible for any misuse of this liberty in the cases fixed by the law."

The freedom of the press is the keystone of the arch of political freedom, and if that is taken away the whole edifice collapses. But probably it is idle to expect modern Congressmen to respect freedom of speech and of writing: they have been brought up as mere automatons in the League from the chairman

Mahatma having done the thinking for them in the past and the Pandit doing the same service for them now. What do they know of these precious freedoms? If they knew what they are, would they have voted for the Pandit's Bill *en masse* and, obviously, with so much gusto? It was reported that tremendous cheers broke out from them when the Bill was passed. It was only the valiant Mr. Kamath who had the courage to rebuke them for that tragically misplaced merriment. *It was a much greater shame for the journalist M.P.s, like Shri-s Deshbandhu Gupta and Shiva Rao, to have remained neutral at the time of voting.* The former had protested against it on the floor of that very Parliament a little earlier, and had protested against it in no lukewarm terms, but when it came to recording his vote he developed cold feet and abstained. Not that their recording their votes would have swung the voting in the opposite direction. But there is such a thing (is there not ?) as standing up to one's convictions without fear of the consequences: probably these journalist M.P.s have not heard about it.

Rajaji's Hand In It

It is a significant pointer to which way the political wind is blowing that this Amending Bill was sought to be introduced during the regime of Shri C. Rajagopalachari as Home Member. It is not, I think, an extravagant surmise that he is the real author of it, although the Prime Minister did most of the talking: the voice was Jacob's voice, it is true, but the hands, clearly, were the hands of Esau. I am prepared to stake my last bush-shirt on this theory of mine that the hands are of Esau (I mean of Rajaji) from the fact that one of the intimidating provisions of the Bill—now an Act—has to do with what has been called "our relations with foreign countries." Our liberty in criticising these foreign countries is sought to be curtailed ruthlessly. One has no need to be as brilliant as Rajaji has a reputation of being to guess what exactly he means by that "omnibus" term. *He means, gentle reader, only Pakistan,* of which he will go down to posterity as *the sole* architect—the father, the mother, and the wet nurse, too.

It was owing to him that the late Quaid-e-Azam was enabled to get his second wind, so to speak, when he was all but down and out. He (the Quaid) had received such a trouncing at the hands of his co-religionist, the Hon. Malik Khizar Hyat Khan Tiwana, the then Premier of the Punjab, that he immediately packed a carpet bag and removed himself to the Dal Lake in Kashmir to lick his wounds in private. Many, even of his tabernacle, had begun to lose faith in his ability to stage a come-back. I am not denying that he returned to Lahore soon after and started indulging in his old swagger, in his old swashbuckling; *but that had been rendered possible only through Rajaji's connivance.* Rajaji had emerged into the limelight again at Panchgani and suddenly propped up that recumbent figure with the notorious formula he devised in conjunction with the Mahatma. It was Rajaji who was instrumental in the resurrection of the Muslim League from the chasmic tomb of the Punjab debacle

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and the not less calamitous sepulchre of the Bengal muddle.

THE PRO-HINDU PRESS WILL BEAR THE BRUNT OF IT

When the history of our times comes to be written it will, I dare to suggest, be Rajaji, and not the Quaid-e-Azam, who will be unanimously acclaimed as the architect of Pakistan. It will be remarked that the Muslims were, comparatively, blameless in the matter, because even when, like Brer Rabbit, they were "lyin' low and sayin' nuffin'," Rajaji came bouncing and bounding to Panchgani and forced the hands of the Mahatma to present Pakistan to them on a silver platter.

It is this same Rajaji who has incorporated this provision about not offending the tender susceptibilities of foreign countries—*meaning, of course, as I have suggested, by "foreign countries" Pakistan and Pakistan only.* The corollary naturally follows that the pro-Hindu Press will come in for the roughest possible handling from the Government—the pro-Hindu Press as well as the Hindu Mahasabha and the R.S.S. *The Muslims, not the Hindus, are still the Congress's friends.* It is up to those Hindus that are not content to be merely "non-Muslims" and that are reluctant to see their identity swamped and submerged by an unprecedented wave of "secularism" to present a united front to this new menace to our very existence: for as Madison wrote to Jefferson :

> "Wherever there is an interest and power to do wrong, wrong will generally be done—and not less readily by a powerful and interested *party* than by a powerful and interested Prince."

NORWAY
A Cross-Sectional Glimpse of the Country

BY ADINATH SEN, M.A., B.SC. (Glas.), M.I.E. (India)

"WE have a beautiful country. We covet no other people's land. We have no army, no navy. We live in peace." Thus declared a Norwegean merchant, a fellow passenger in the train from Oslo to Bergen a few years ago, when we were passing between the snow-covered mountains of Hardangerjokeln and Hallingskorpet on either side of Finse, the highest station on the line, which is considered as one of the world's wonder works of engineering, laid in the midst of the most dramatic and beautiful scenery in Europe.

Oslo

We started from the East station of Oslo on the Oslo-Stockholm line. It made a wide curve round the city, following the crests of the heights, east and north of the city. The line north from Oslo to Trondheim through Lillehammer, on the lake Mjosa, the biggest in Norway, or through Elverum, which once gave shelter to the harassed king of Norway, started further east, from the Oslo-Stockholm line. Except the southern coast line from Oslo, and a few branch lines, these comprise all the railway in Norway.

Sea-wards, the whole panorama of the Oslo Fjord, sometimes scene of fierce fighting, was spread, dotted with the dark shapes of pine-clad islands and the white sails of yachts. Inland, the valley lands came into view right up to the station of Honefross with big waterfalls on lake Tyrifjord. The route then ran along the side of the great lake Kroderen through the station Gulsvik, the

Trondheim

gateway to the valleys beyond. On the far shore of the lake, were seen old farmsteads, set against dense forests, below high mountains. We pass Nesbyen station as the railway winds for nearly 70 miles, winds through the historic Hallingdal Valley of famed fiddlers, of stirring melodies which have some strange wild fairy spirit in them, and of the famous national dance, the Halling.

Digitized by Arya Samaj Foundation Chennai and eGangotri

The farms now became rare and the forests spread. From Gol, the well-known local centre of peasant culture, the country. Gradually the fir forests dropped below the line and the hardy birch trees appeared, which later

Geilo, at 2,600 feet altitude, is a ski-ing resort in winter and a popular summer centre, midway between Oslo and Bergen. From here starts the most remarkable stretch of the journey. We pass Ustaoset Ski-ing centre and Maugastal next. From a cleft between the mountains, through which the train passed, the snow of Hardangerjokeln gleaned on the south like a fantastic citadel, with great boulders of ice on the Ustavatn lake, and the glaciers of Hallingskarvet in the north flickered like jewels in the clear mountain sun-shine. Tunnels and long screens in echelon, of wood, kept back the enormous snow-drifts from blocking the line. Loneliness and

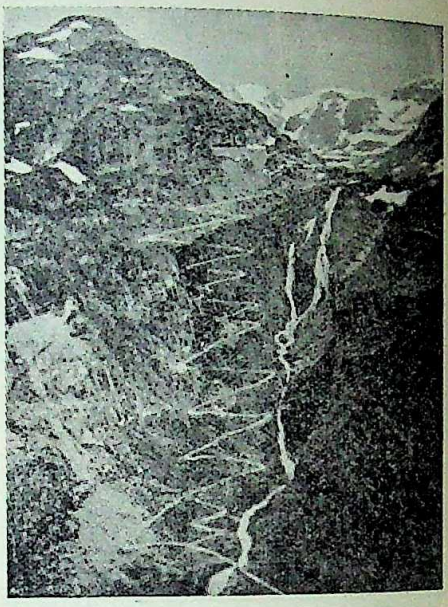
bleakness were almost overpowering in intensity, but there was a strange beauty in the scenery, all the same, while Finse 1000 feet over sea-level was being reached. This is a townlet with hotels and ski-ing cabins. There

Tunnels to keep out snow. Oslo-Bergen Railway

are also engineering plants equipped with rotary snow ploughs, reserve locomotives and other requisites for maintaining a difficult train service. There were no trees for 60 miles, the only vegetation being reindeer moss and tough grass round swampy expanses, here and there. For 30 miles the country was absolutely bare of plants of any kind. Horizons are enormous. One is so close beneath the sky. Cloud and snowy mountains meet, so



Snow-ploughs. Oslo-Bergen Railway

that one cannot sometimes quite say where the earth ends and the heavens begin.

Beyond the highest point, 4263 feet, mountain torrents run from the watershed towards east and west. Myrdal station was reached in the descent, where a magnificent view was obtained of the Flam Valley, the Flam winding like a canyon. Waterfalls crashed down the ragged mountain sides, and the road in the valley, winding like a thread in 21 spirals, led to the shores of Aurlands Fjord at the head of the Sogne Fjord, the biggest in the country, penetrating a long distance from the North Sea

inland. On another head of the Sogne, lies Ardal, where a more zigzag road to Tyin astonishes the eye. We came next to the Voss station from which there is access by motor service to the Sogne Fjord, largely used by the

Flamstad Valley Waterfalls

Sor Fjord

tourists from the Voss station, further along, only about 200 feet from the sea-level. This place occupies a famous position in Norwegean peasant culture, as the junction point between the Sogne Fjord districts in the north and the Hardanger country in the south on the shores of the Fjord below the mountains, all of the same name. An Electric Railway runs to the south from Voss. Through Vaksdal station on Sor Fjord, Bergen was reached in 2 hours time, after running along the beautiful banks of the Fjords, the total journey of 306 miles taking just about 11 hours.

COCONUT—THE KALPABRIKSHA

Digitized by Arya Samaj Foundation Chennai and eGangotri

By MURARI PROSAD GUHA, M.A.

(Illustrations by the author)

News flashes across the country when a coconut is broken to launch a ship or to inaugurate something in an auspicious moment. In ceremonies a green coconut is placed on a full pitcher as an auspicious sign. But why is coconut given this honour? Beginning from the dawn of civilization to the middle ages, religion got the upperhand over politics and the seers of truth found it very convenient to impregnate what we should do through religious rites. So, we find that the coconut, one of the most important economic plants, has established its rightful place in every home in India from pre-historic times, our *Puranas* mentioning it on every occasion. Today coconut has got its own certifications, but lest we forget, we are still importers even from the little island of Ceylon of the copra, and like many other crops are lagging behind other countries in production per acre.

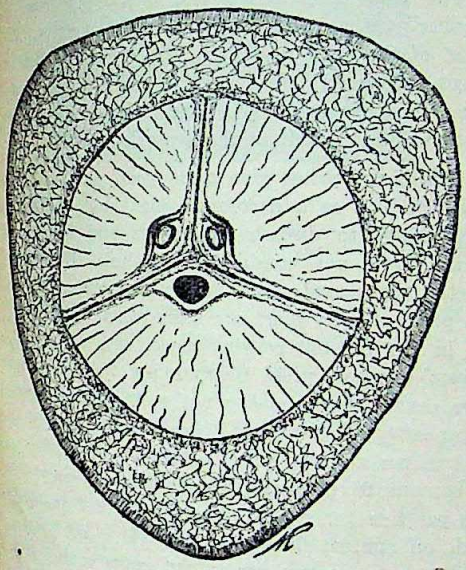

Fig. I. A dissected fruit from which the upper half of the fibrous mesocarp has been removed to expose the endocarp (nut). The shortest side of the triangular fruit is always on the reverse of the widest angle in the nut formed at the centre by the three carpels with the three eyes. And this widest segment contains the 'soft' or germinating eye hiding the only embryo (towards the base of the illustration)

Origin and Geographical Distribution

It is believed that the original home of the coconut was either the Indian archipelago or some of the Pacific islands in the southern Indian ocean. From this original home it spread to the tropical and sub-tropical regions either by the primitive seafarers or by the tide of the ocean currents from one shore to the other. The fibrous mesocarp of the fruit which helps floating, is water-proof and also protects the life of the plant for very long durations and as such explains the theory. The coastline habitat of the plant and its love of saline soil conditions with the dropping of the mature nuts to the sea even today is an additional proof. It might have spread from India to Malaya, East Indies and the Philippines, earlier than the spread of Indian culture to these areas as well as to the coast of America and its tropical islands.

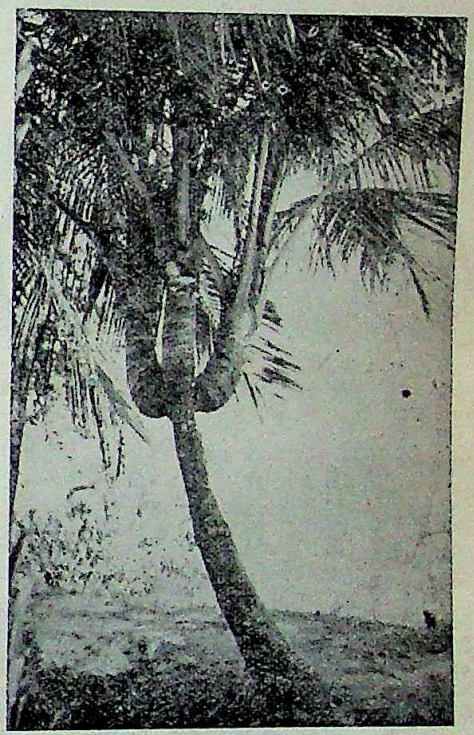

Fig. I-A. Photograph of a branched palm taken by the author at Sagar island. At an early stage due to attack of pinceros beetle growth was taken by secondary bud and the apical bud also revived giving it a *trshul*-like appearance

In India it distributed itself throughout the coastline and probably the Malabar coast is the original home with its maximum development of coconut cultivation in that land and the coconut is intimately associated with the daily life problem of the bulk of the population there. In West Bengal, it has spread maximum into the interior even in the extreme

North-West Bengal, more than 300 miles away from the coast.

Botanical and Common Names and Important Varieties

Cocos nucifera Linn. is the 'Indian nut' belonging to the family Palmaceae. The name cocos might have been derived from the Spanish *coco*, applied to a monkey's face,[4] a beautiful allusion which the three scars (one hiding the embryo) on the stony endocarp suggest. [Fig. I.]

The Hindusthani name 'Narial' is derived from the ancient Sanskrit name *narikela* mentioned in the *Puranas*. There are many other names original to the locality which helps to prove the primitiveness of the fruit tree here.

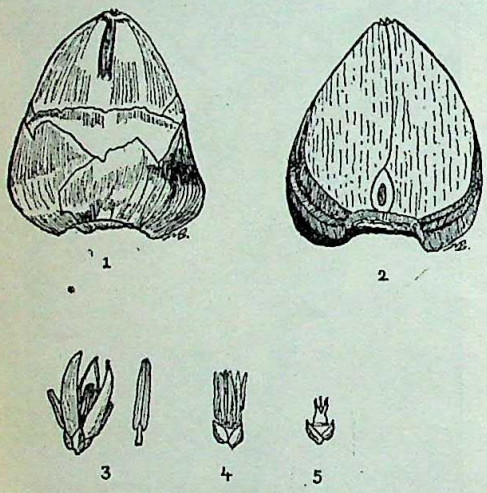

Fig. II. The flowers of coconut. (1) The mature female flower with 2 whorls of (3 each) perianth enclosing the united carpel with the beak shaped stigmas at the apex. (2) The female flower dissected through the ovary. (3) The male flower with two whorls of perianth leaves, one small, the other long enclosing the six stamens. A single stamen a little enlarged. (4) The inner whorl of perianth removed to show the position of the stamens. (5) Perianth and stamens of the male flower removed to show the undeveloped carnel

As with other crops a study of varieties of coconut has also been neglected in our country. In India we have mainly two varieties, one is the "Tall" variety found over-topping the buildings of the coastal or semi-coastal cities and towns and the other a "Dwarf" form, an early maturing variety which when starts fruiting still remains within the reach from the ground.

The tall variety also known as the "West Coast-variety" is most widely cultivated through the coconut-growing areas of India from very ancient times and may be indigenous to our country. It is one of the most economic multipurpose varieties from the point of view of its yield of nuts, copra, oil and coir of good quality as well as the tapped juice (toddy) convertible to jaggery or sugar if not used as country wine. According to growers, sub-varieties exist from the point of view of size, shape, colour of fruit and thickness of the kernel. Under favourable conditions this variety may start fruiting in six to eight years which, however, may be deferred to ten to fifteen years when conditions are not favourable. The average yield of copra per nut is about 5 oz. and the oil content in the copra is about 72 per cent.[5]

The dwarf form also known as the "Andaman" or "Nicobar" variety is quite different from others. The colour of the nuts may range from green, yellow to orange and starts bearing within three to four years, even when the tree has not quite developed and one can pluck the nuts from the ground.

The dwarf palms give quite good yield and looks very beautiful as a decorative plant but due to its susceptibility to diseases and pests and to irregular bearing it is not considered economic. Usually the varieties are named after the place of origin and from that point of view there are some other varieties familiar in the coconut-growing areas, such as, (1) *'New Guinea'*—average yield 65 nuts per tree per annum; copra content 8oz.—quality not quite good, oil content 66 per cent, (2) *'Cochin China'*—average yield 86 nuts per tree per annum; copra content 8 oz.—quality fair, oil content 66 per cent, (3) *'Java'*—average yield 95 nuts per tree per annum; copra content 7 oz.—quality good, oil content 66 per cent, (4) *'Siam'*—average yield 50 nuts per tree per annum, copra content 8 oz.—quality good, oil content 74 per cent, (5) *'Laccadive Ordinary'*—average yield 124 nuts per annum; copra content 5 oz., oil content 72 per cent, (6) *'Laccadive Small'*—alternate bearing, average yield 150 nuts per tree per annum; copra content is only 2 oz., oil content 75 per cent.[6]

Description of the Plant and Flower

The tree with its uniform cylindrical trunk and the umbrella-like tuft of pinnate leaves gives one of the most beautiful and graceful appearances amongst the palms with the patent leaning habit, in case of small varieties. The stem marked by the scar of the fallen leaves sometimes takes peculiar shapes due to obstruction of light by adjacent trees or buildings. Usually they attain a height of about 60 feet, sometimes more, the longest recorded being 117 feet in Ceylon,[14] and live a century. Sometimes, due to the destruction of the apical bud by beetle, secondary buds take up the growth and the result is an apparent branched palm (Fig. IA). Though the tree is long, the root system is characteristically shallow and developed bottom of about 4 feet

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

depth, which however, can spread latterally up to 20 feet. The roots are of uniform diameter, but the rootlets are thin and fibrous. The leaf scar adjacent to the root system can also develop roots if covered

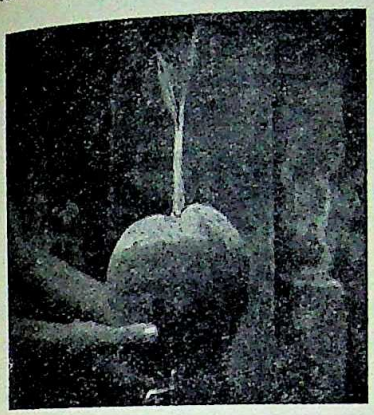

Fig. III. The ideal medium-sized round-shaped seed nut of the Tall variety developing ideally. Germination started when the nut was attached with the palm

with earth and watered and this property comes to the aid when mature trees are transplanted or dug down deeper. A tree may have at a time 25-30 leaves with a length of 18-22 feet each.[4] The leaves slightly grooved and swollen at the base, are protected by strong net-like bracts and form an angle with the stem to give the appearance of an umbrella. The groove in the leaves helps the rain water to run down to the crown preventing its drying and also to the bole of roots helping in its development. The inflorescence is a much branched monoecious spadix enclosed by a woody spathe, in the axil of each of the leaves, abortions being rare. The trimerous flowers borne in the branches are unisexual, the female flower being at the base and male at the apex of each branch.

Liyanage[5] has observed that the tall variety palms, which remain productive for over 70 years, are protandrous and are generally cross-pollinated. But in the dwarf palms, the male and female phases overlap and self-pollination is the general rule. A saturated atmosphere seems to be injurious to the viability of the pollen grains but this viability can be prolonged artificially by creating an atmosphere with 50 per cent relative humidity.

The whorls of perianth leaves of the somewhat cone-shaped female flowers are persistent and develop along with the development of the fertilized flower. (Fig II).

Soil and Climate

The ideal soil for coconut is a rich alluvium or a deep friable loam with adequate soil moisture derived either from well-distributed rainfall, percolation water or proper irrigation with drainage facilities. Land with faulty drainage should be avoided. The sandy soil is also ideal in this respect but it must provide subsoil anchorage to the tall palm, which, as will be observed, is available almost throughout the coastline. But with drifting sandy soil it is a failure.

The coconut is a true tropical palm extending its domain within the actual tropics. It loves a climate with heavy but evenly distributed rainfall, high humidity and fairly even temperature (85 deg. to 95 deg. F mean temperature)[13] all the year round. Thus it will be found that coconut fares better in Ceylon and Malaya than in India. In Ceylon there is practically no month when the rainfall is below 0 foot 75 inches and in Malaya, the rainfall always exceeds 1 foot 25 inches in every month[12] whereas in India we have only 2 mon-

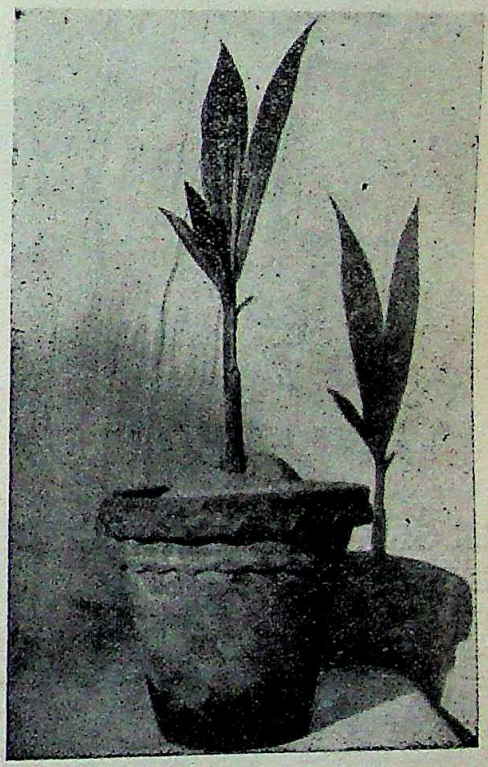

Fig. IV. The ideal seednut raised by the author in sand in an earthen pot, developing ideally (age 2 months)

soons. It is, therefore, natural that the average yield for gardens in India is below the average yield in Ceylon and Malaya. It has been found that the coconut thrives best in saline soil conditions close to the seacoast but this is not essential as will be found in Mysore and Bengal. In Bengal it flourishes even in Northern Bengal hundreds of miles away from the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

coast. The love of seacoast areas by this palm is directly related with climatological factors, because the coastline always have a high humidity and the temperature is never subject to great changes. Again although it grows best in the plains of the coast or the interiors, it grows equally the same 3,000 feet above sea-level in the Mysore Plateau.

Propagation

Propagation is always from seedlings raised from mature seednuts. The longevity of the coconut palm reminds us of the care taken by foresters in the laying

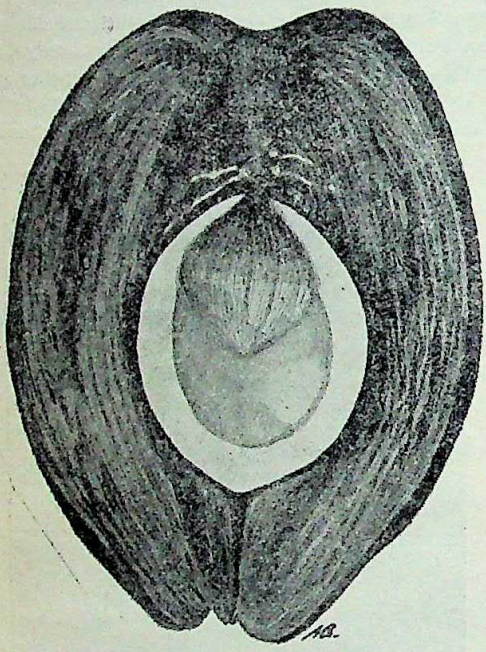

Fig. V. A dissected nut that dropped from the tree (X¼). This nut after full maturity started germinating with the development of the spongy cotyledon (*copra*) corroding the kernel a little from the top, while still attached with the tree. The roots developing through the fibrous mesocarp above the endocarp (stony) as also the first leaf just touching the point of attachment of the fruit

out of a forest with the best plantlings, that will give the choicest timber in years to come. Coconut plantations laid out for its fruit should similarly be of plantlings of the highest yielding, best quality and vigorous mother palms in its prime. As coconuts are usually cross-pollinated, to get the right type mother palms as above should be selected out of an entire plantation of the same variety. The mature seednuts, one year old, should be collected during winter and must be roped down from the top of the tree to avoid any injury. The medium-sized round-shaped nuts should be preferred and a few nuts at the base and apex of each bunch should be discarded. After harvest the seednuts should be stored indoors in a cool dry place on a 3-inch bed of sand for a month. (Fig. III) In the meantime nursery beds should be prepared preferably in a sandy soil and where that is not available the local soil should be replaced by sand to a depth of 1½ feet as this will prevent the attack of white-ant and facilitate proper drainage. Where this is also a problem, seednuts may be planted in pots of 1 foot height and 1 foot diameter or wooden boxes of 1 foot cube may be filled with sand and utilized for this purpose. These methods are customary in industrial areas like Calcutta and suburbs.

The beds should be of convenient length, say 25 feet or 50 feet, but the breadth should be preferably 4½ feet to 5 feet as in the absence of rains the seedlings should have to be watered daily or on alternate days from the sides without disturbing any of them. And according to Dorasami,[3] the nuts should be placed in the bed of sands with their stalk ends up and an inch of the tip protruding above the surface, with a spacing of 1-1½ feet from nut to nut and row to row. To avoid the cost of watering, planting is preferred at the beginning of rains. Nuts without water should be discarded before planting. (Fig. IV) In three to five months most of the seeds germinate and they are allowed to grow for an year, and the seed-beds should never be manured as this masks the initial defect in vigour. At the end of one year when the main characters are visible, only the healthy and good looking seedlings should be selected as planting material.

Seedlings that germinate early and split their leaf soon should be preferred as they bear early. Just before planting, seedlings should be removed from bed without tearing the roots and should be packed very neatly for forwarding to distant places. Sometimes seedlings older than one year are planted but they are always removed from the seed-beds of the first year and planted wider till final planting. But this is costly and moreover the one-year seedlings establish themselves more quickly. The small-scale planters should always get their seedlings from reputed plantations.

Preparation and Planting

Lands already under cultivation need no special preparation. Otherwise two or three ploughing before the rains followed by planting of some legume to be ploughed in is ideal. The land should be free from all weeds and properly levelled and in case of slopes should be properly terraced with bunds to check soil erosion of soil with run-off of rain water. Arrangements for irrigation during the dry months should be made by laying out drains and intermediate reservoirs. Along with this arrangement for a boundary fence a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

wicket gate is to be made to protect the saplings from grazing animals.

One year after this pits of three feet cube are dug in regular rows with specified intervening space of 30 ft. or as desired. Dried leaves are burned in the pits, which, it is believed, prevents white-ants. Also all nests of white-ants are to be dug out of the plantation at this time. Just before the rains one-year-old selected seedlings are to be planted in the pits.

The bottom of the pit is sometimes filled with loose earth or sand up to a foot to facilitate root growth of the root forming bole of the plant and to check white-ants. Sometimes *Neem* (Margosa) cake is also added to prevent white-ants. A handful or two of common salt and/or bonemeal is also added by some planters, in the soil of the pit surrounding the plantlings. The seedlings should be planted in right position firmly and the soil pressed like a cone. In case of high winds triangular supports are to be given to plants and a shade when the sun is very hot.

Maintenance of Soil Fertility

In our country there is a traditional neglect in the culture of permanent trees or rather long-living trees. Not only that we do not plant them in a planned way but we start our neglect as soon as the plant is established in the soil and is not eaten away by the Rhinoceros beetle. We never take care to know that the life of a plant is almost similar to the life of a human being growing to maturity. The coconut palm after gaining maturity in a few years after planting starts flowering which never stops till death. An inflorescence comes out every 4-6 weeks and one can find all the developing stages from the flower to the mature nut in the same plant. After flowering the fertilized nut comes to full maturity in 12 months. So, it is easy to guess that there is a continuous development and utilization of the available food from the soil which must be replaced to maintain the *status quo* of the soil. And this draws our attention to the scheme of manuring.

Sampson[15] observes that an individual palm growing on poor sandy-loam soil and producing 128 nuts per annum (not an unusual yield on the Malabar coast) removes from the soil 1.93 lbs. of nitrogen, 0.28 lbs. of phosphoric acid and 1.37 lbs. of potash. Pillai[13] has calculated that a crop of 2,000 nuts per acre removes from the soil of medium fertility about 18 lbs. of nitrogen, 5 lbs. of phosphoric acid and 38 lbs. of potash. Leaving aside others' findings, we find great disparity in the above figures.

Based on the observations of Sampson and taking 50 nuts as an average yield and 50 trees per acre as the usual method, the requirement for an acre will be 45.23 lbs. of nitrogen, 6.56 lbs. of phosphoric acid and 32.10 lbs. of potash. It should always be remembered, however, that if the well-being of the palm is also taken into consideration, a large proportion of N, P and K is to be added with the above in time of application to the field and the quantity of potash will have to be naturally increased giving due consideration to the huge fronds and the floral bunches. Also that 60 nuts is the average figure and this will be exceeded almost always with application of balanced manure. Again, the dosage of manures and fertilizers are obtained by personal experience and is varied in every locality as in our vast country we are subject to different soil and climatological factors and there can not be any hard and fast rule delimiting the

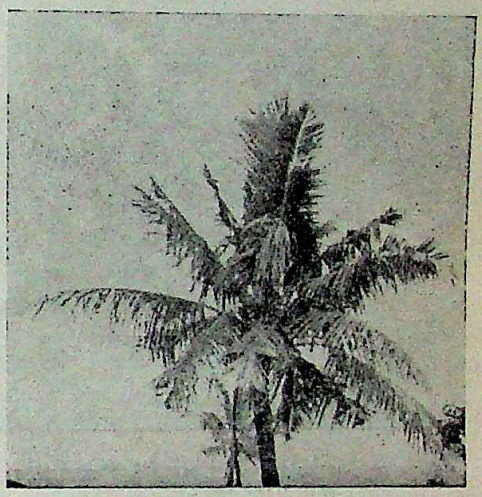

Fig. VI. A coconut palm affected with leaf disease. Bearing has almost stopped

application and the figures of intake are only a guide to this.

Manures are to be applied round the palm with a 4 feet to 5 feet radius after digging the earth a little and the costly ones to be applied close to the bole of roots. The following manure mixture adapted from John[6] is recommended :

		Per tree per annum. lbs.
	1. Cattle manure or compost or Groundnut or other oil cake ..	100 15-20
½ of these up to 5 years	or Ammonium Sulphate	3-4
	2. Muriate of Potash or potassium sulphate ..	2
½ of these up to bearing age	or Wood ash ..	30-40
	3. Superphosphate & Bonemeal or Bonemeal ..	1+1 2

Selection from this should be made according to the economics of the manure available at the locality

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

as well as the physical aspect of the soil. But green manuring should be the fundamental principle of all manuring schemes and it has been found that sunn-hemp and cowpea, which comes to its age in 2 months, being sown in April-May is ideal as it can be ploughed in before the end of the rains in July so that it can help the good rotting of the green manure in the field. There are other green manure crops, such as (1) Cowgram, (2) Dhaincha and (3) Wild sunn-hemp that are also recommendable.

Fig. VII (a). An old coconut plantation in West Bengal

It has been found that cultivation increases the number of leaves per palm even when they are not manured, but manuring is necessary to replenish the loss due to heavy bearing, as in palms with many leaves the bearing is heavy always.

Food Value of the Kernel and Milk

The sweet water inside the green nut, known as 'milk' is a delicious and refreshing drink. During the summer months millions of nuts are sold in our Calcutta city alone leaving aside the suburban towns and all the wayside Railway stations within 50 miles radius from Calcutta where a thirsty passenger calls for a green coconut and gets it always with less than a lemonade's price (Fig. IX). The list of liquid diets prescribed by a doctor always contains green-nut-milk specially for patients having nasuea with fever and bowels troubles, as it has diuretic and laxative properties. It is a general practice in West Bengal to wash the pox-marked face just after recovery from pox with the milk as it is believed to make the marks less prominent.

The soft kernel inside the green nut is also delicious but does not keep and is eaten at once. The mature kernel or the 'meat' along with the 'milk' is the endosperm of the seed, the embryo being embedded in the hard endosperm, which is used either as copra for manufacture of oil or used for good preparations or delicacies and also taken along with tiffin foods.

The total weight per cent of the husk, shell, kernel and milk are 57.28, 11.59, 18.54 and 12.58 respectively.[11]

The food value of the kernel taken from the *Health Bulletin* No. 23 is given below:

Moisture (per cent)	36.3
Protein (per cent)	4.5
Fat (ether extracted) (per cent)	41.6
Mineral matter (per cent)	1.0
Fibre (per cent)	3.6
Carbohydrate (per cent)	13.0
Calcium (Ca) (per cent)	00.01
Phosphorus (P) (per cent)	0.29
Iron (Fe) Mgs. (per cent)	1.7
Calorific value per 100 gms.	444
Carotene (International Vitamin A units per 100 gms.)	Trace
Vitamin B_1 (International units per 100 gms.)	15
Vitamin C (Mgs. per 100 gms.)	1
Calories per oz.	126

Carey[2] has isolated sucrose, fructose, and glucose from the milk and raffinose, sucrose, fructose, galactose and glucose from the copra meal.

The high amount of heat energy available per ounce of coconut kernel speaks of itself as a valuable food. And it has its rightful place in the dietery of every citizen of India.

Fruiting Time and Yield Per Acre

I have already told you that the dwarf variety starts flowering in 3-4 years and the tall one in 7-8 years. But usually the yield is poor at the beginning and becomes normal in half a decade. Usually an individual plant yields 60-70 nuts per annum which limit, however, is always exceeded with good management and cultivation. Usually about 50 plants per acre is planted with 30 ft. intervening space in between the palms. And as such 3000-3500 nuts can easily be obtained from an acre. But in most cases this figure is far exceeded with better cultural practice and more close spacing. As every leaf bears an inflorescence in its axil, all the stages of fruit development will be found in the palm always, but a fertilized female flower takes about a year to come to full maturity. Periodicity in bearing is quite common in coconut. The best copra (and maximum oil) as well as coir is obtained when the nuts are harvested before they are dead ripe and the husk is still green, because at this stage (when 9-10 months old) (Fig. V) germination does not start and as such copra content is

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

highest and likewise the fibre not being over-mature is of the best texture and colour. Harvesting is done usually twice in a year in Bengal but in the main coconut-growing areas 4-6 times throughout the year and June-July is the best harvesting time throughout India.

Patel[18] observed that with general manure an average yield of 33.9 lbs. of copra and 18.6 lbs. of oil can be obtained from 100 nuts, which however can be raised to 40 lbs. of copra and 22.6 lbs. of oil per 100 nuts with the application of N, P, K fertilizers, almost similar results being obtained by green-manuring and application of lime.

In judging the yield per acre the total yield of copra per acre is really taken into consideration, in case of large plantations, instead of the number of nuts, as the thickness of the kernel of the nut is variable, and a thick nut may contain kernel double of the thin nut. Aiyer[1] observes that this variation may result in 1,000 nuts yielding copra from 9-13 mds., even 14 mds.

Control of Diseases and Pests

A healthy plantation is a sign of the owner's care. As soon as any disease or pest is observed it should be stopped at once to prevent further spread. Because with the spread of disease and decay the whole economic equilibrium of the plantation is lost with the loss of production and of the bearing trees which cannot be replaced in a year or two.

The most important disease of coconut is 'Bud and Fruit Rot,' caused by *Phytophthora palmivora*. The disease starts with the withering of the young innermost visible leaves, which gradually become slight brown to light brown and finally bend and break down at the base. The infection spreads inwards emitting bad smell sometimes and ultimately kill the apical bud which stops all further growth and the plant dies. And when they attack the nuts, they either fall off immature or the kernel is rotten. Effective results have been obtained by spraying the crown with 1 per cent Bordeaux and it is better to use Bordeaux-resin-soda mixture, as resin helps to stick on the smooth surface of the coconut leaf. Similar doses of 'Perenox' may be used which is more handy. As the disease usually spreads during monsoon like most of the fungus diseases, two sprays may be given one before the outbreak and another before the close of the monsoon.

The other important disease is 'Leaf Rot' caused by more than one fungi (Fig. VI) *Helminthosporium halodes, Collectrotrichum paucisetum* and *Gliocladium roseum*, the first one being most virulent. This disease does not kill the palm but much of the leaf surface is lost due to death of the leaflets by gradual blackening and shrivelling of them and ultimate loss in yield. The same treatment as above is recommended.

Stem bleeding caused by *Ceratostomella paradoxa* shows brown fluids oozing out of longitudinal cracks of the stem. The tissue inside is rotted and the plant is weakened with loss in production. The diseased

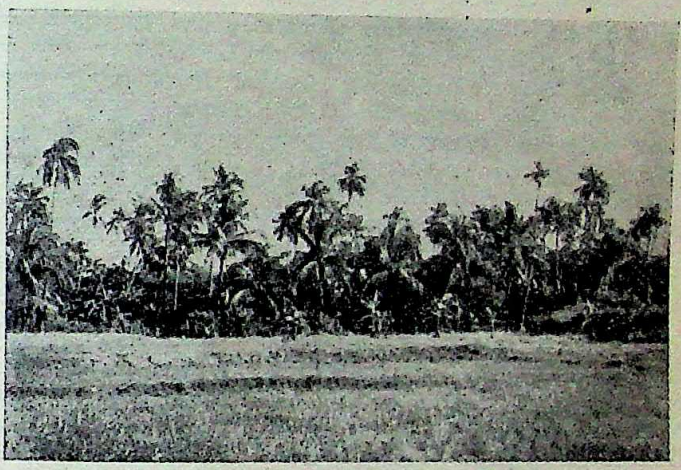

Fig. VII (a). The coconut grove

portion should be chiselled out and Bordeaux paste applied on it. Some people use coal tar.

There are other diseases of minor importance like leaf spot caused by *Pestalozzia palmarum*. Root rot caused by the bracket fungi *Ganoderma lucidum* and root disease caused by *Bortryodiplodia theobromae, Rhizoctonia bataticola* and *Rhizoctonia solani*.

Last but not of least importance is the highly destructive 'unknown disease' in the West, which brought in bold relief the activities of the plant pathologists there in the present decade.

The disease starts with nut fall, soon followed by the death of the heart and the whole crown and becomes epidemic over considerable areas where coconuts are grown closely. In a young non-bearing palm the disease starts with the drying of the still folded heart leaf or young inflorescence within a closed spadix due to the death of the young tissue at the base of it near the growing point and subsequent rottage by secondary saprophytic organisms. The disease was first reported by Leach[7] from Jamaica in 1946 which was confused by Martyn[9] with the mechanical injury caused to coconuts in the form of girdles round the nut due to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

variable supply of water. Innes[5] trying to connect it with deficiency of Manganese proved that it has no relation with the disease. Martyn's[10] recent observations lead us to the belief of a virus as the causal organism which is unlikely carried by air-borne vector, but by soil-borne organisms as will be evidenced in the rapid transmission of the disease in close-packed plantations of certain soil types. It may be noted that the symptoms are similar at the start to 'Bud Rot,' etc. Is it that in India also the virus is prevalent and the 'Bud Rot' is only the secondary stage of infection by saprophytic organisms?

Of all the pests of coconut, Rhinoceros beetle (Oryctes rhinoceros) is the most destructive and is known to every coconut-grower throughout the coconut world. It is a strongly built powerful beetle with a strong blunt recurved horn on its head like a rhinoceros, which gives it the name. Chewed fibrous materials either at the bore holes or at the base of the palms are the first signs of its attack. It attacks the crown and tender parts of the palm either destroying the apical bud and thus killing the palm or tunnel through making the inflorescence missing and twisting and disfiguring the crown. The beetle breeds freely in dung heap or decaying organic matter throughout the year.

As soon as the attack is detected the beetles should be destroyed by means of a very sharp pointed spike like the big ones used by the elephant tamers. The beetle will be pinned to death by the point and brought out by the curved iron. Close watch should be maintained to destroy the attacks and strict sanitary conditions maintained to prevent breeding.

The largest weevil known as the 'Red Palm weevil' (*Rhynchophorus ferrugineus*) is the other important pest of coconut and most of the damage is caused by the larva which feeds on the soft tissues.

The attack of the weevil and the beetle goes hand in hand, the beetle bores into the palm and the weevil lays its eggs inside the bores and the larva starts eating away the soft parts and kills the palm. And even if you kill the beetle, the destruction goes on. So, along with the measures suggested for beetle one should always seal the bores made by the beetle with sand. The crown of the palm should also be kept clean always from bird's nests, dead spathe, etc., and any damage to the palm should always be avoided through which the weevils can get access.

The black-headed caterpillar (*Nephantis serinopa*) eats away the green matter of the leaf and builds its nests under the leaf, thus destroying the leaf. It causes considerable loss to production due to large loss of leaf area. Predators help in the control of this pest.

White-ant with its large domain of destruction [illegible] has taken also coconut as one of its subjects. Local application of D.D.T. or Gammexane and destruction of their nests wherever found keeps it in check.

Rodents, squirrels and bats destroy young nuts which can be prevented through watchful eyes and by keeping the crowns clean and also by girdling the palm with an arm's length of tin sheet above human height.

Plea for Plantations—Importance as a Fruit

From the usage point of view it is an ideal plant for cultivation and where suitable land permits for starting up a plantation. Right from the roots to the leaves nothing is wasted and the kernel and the sweet milk received from the same fruit is an ideal food and drink which man can expect from nature. The use of every bit of the coconut plant even when it dies reminds us of its importance and we should grow it with care instead of haphazard planting of one nut here and another nut there. More so, because we are still in the stages of under-production and with our 1.5 million acres, out of the estimated world acreage of 8 million acres, India ranks third with a production of 3,000 million nuts annually. Philippines with 2 million acres produces 3,200 million nuts and Netherland East Indies with 1.5 million produces 3200 million nuts annually. Ceylon with 1.1 million acres produces 1,800 million nuts annually and from this little island and other countries we are annually importing on an average 38,288 tons of copra worth Rs. 1,20,00,000 to make up our deficit.[9] And this fact alone can whip us back to our senses for planting coconut in a planned way in the form of plantations. We cannot ignore the other more important facts. During the last devastating war thousands of coconut plants have been either cut down or have died an unnatural death due to construction of bases for land and air war and bursting of bomb shells, the operation of war theatre being in the main coconut-growing areas of the East Indies and Philippines. We shall have to make good this loss in production and though we cannot produce nuts with a magician's wand in a year but still we must plant the trees first and then wait for the fruit. In India the bulk of the acreage lies in the south-eastern coast line. Travancore and Cochin Union has an area of 6,35,015 acres followed by Madras 6,05,874 and Mysore 1,69,191 acres; Orissa 21,694 acres and West Bengal 16,448 acres with much less acreage in other coastal districts.[8] (Figs. VII & VIII).

The Layout of a Plantation

There is a tendency amongst small growers for a mixed plantation, but they are always detrimental to the coconuts, that live on their spreading green leaves which become covered by the other competing fruit [illegible] production. The plantation should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be absolutely pure, only so long as the palms do not sufficiently cover the entire surface of the soil, secondary crops may be raised, preferably some legume. But along with intercropping the soil should always be additionally fertilized for the secondary crop. It has been found that the square method of cultivation is better workable than the triangular method, though the latter can afford more plants within the same area. But planting of too many plants never bring any good, not only that seedlings should be planted in such a way that when old the leaves of adjacent plants should never overlap each other. The intervening space should never be less than 24 ft. and preferably be 30 ft., when it is meant for copra or nut. But when it is meant for the milk of the green nuts, as is the case in most of the industrial areas and places round about Calcutta, they can be planted more close and is usually planted round the homestead. In most cases they harvest the green nuts leaving only a few nuts for ripening and thus making a double profit. Even the smallest planter may dig a ditch round the plantation, which will act as a reservoir of irrigation water as well as protective barrier. Let us draw up a present-day schedule for an acre of plantation with 50 trees:

(1) Price of 50 seedlings at -|8|- each .. Rs. 25|-
(2) Cost of 5 labour for making 50 pits and planting 50 seedlings at Rs. 2|- each .. „ 10|-
(3) Cost of manure mixture for 50 seedlings (calculated on the quantity of individual requirement of the manures and their price) at -|8|- for each .. „ 25|-
(4) Cost of watering 50 plants during summer months at Rs. 15 per month for 5 months .. „ 75|-

Total Rs. 135|-

The cost of ploughing, etc., will go with the cost of cultivation of the secondary crop which will fetch some money till the palms come to the bearing age. And during this time with the profit from the secondary crop, irrigation drains, fencing, etc., should be done.It should be borne in mind that a long-range plantation is always a losing concern before it comes to age.

Marketing

I have already mentioned to what extent we are deficient in copra and are to import it mainly from Ceylon and other foreign countries. Similarly we are importers of large amounts of oil with a little export. But the balance of trade is maintained by the export of coir, a bye-product of the copra industry. It was started a century back and it is estimated that in 1946-47, 516,215 cwt. of mats and matting and about 288,000 cwt. of coir yarn were exported. This export mostly to the hard currency areas brings about 1.75 crores annually. The most important feature in the marketing of coconut is that the fruit is not easily perishable like others and can be preserved for a long time only through simple natural curing methods. The estimated import and export figures to and from West-Bengal during 1949-50 is detailed below :

Item	*Source of Import and Quantity*	*Value*	*Export destination and quantity*	*Value*
Copra	Andamans .. 25,000 mds.	Rs. 10,00,000	——	——
	South India —Cochin, Malabar .. 5,000 tons	Rs. 30,00,000 at Rs. 600 per ton.	Eastern Pakistan and small quantity in Assam — 1,500 tons.	Rs. 9,00,000 at Rs. 600 per ton.
Coir-Strings	S. India—Cochin Malabar, Alleppay .. 60,000 tons	Rs. 4,80,00,000 at Rs. 800 per ton.	Assam, Burma, East Pakistan, & Upper India— 45,000 tons.	Rs. 3,60,00,000 at Rs. 800 per ton.
Mattings	South India .. 1,000 tons	Rs. 4,00,000 at Rs. 400 per ton.	——	——
Hukka Nut	South India .. 50,00,000 pieces	Rs. 5,00,000 at Rs. 10 per 100 pieces.	U.P., East Pakistan— 12,00,000 pieces.	Rs. 1,20,000 at Rs. 10 per 100 pieces.
Coconut (dry)	Port Blair .. 5,00,000 pieces East Pakistan .. 50,00,000 pieces 55,00,000 pieces	Rs. 9,90,000 at Rs. 18 per 100.	C. P. and other parts of India— 25,00,000 pieces.	Rs. 4,50,000 at Rs. 18 per 100 pieces.
Desiccated coconut	Ceylon .. 20,000 mds.	Rs. 1,00,00,000 at Rs. 50 per md.	——	——
Coconut Oil	Sea-borne (St. Settlement, C. W. Australia) 40,59,140 galls.	Rs. 2,37,85,055	1,739 gallons.	Rs. 15,850|-
	Coastal routes (Madras, Travancore) 8,74,723 gallons	Rs. 67,42,704	69,664 gallons.	Not known.
	Rail and river. 2,02,664 gallons.	Not known.	71,403 gallons.	
	51,36,527 gallons

ECONOMIC ASPECT

Coconut is the only fruit tree which is cultivated for food, for the oil and for the fibre and it can easily compete with any other crop on these three individual merits.

The mature nuts are either used for food preparations or are dried and made into copra. For copra making the fully matured nuts either stored for a month or two are at first husked by hand with the help of a sharp fixed horizontal iron rod. One man alone can husk about 1000 nuts daily and expert hands can do even 2000 nuts in a day. The shell is broken and kept upside down for some time to let the water drop completely, then they are kept upturned for some days when the copra shrinks away from the shell and levered out, if necessary with a thin wooden piece. Then the copras are again dried for a few days more to remove further moisture and in a good sunny week the copra is ready. Artificial drying in kilns is good for the monsoon, when sun-drying should never be undertaken, but care should be taken to see that the copra does not become sooty and give smell of smoke.

The copra thus made ready should be properly stored if not sold to oil millers. The oil is extracted either by country method or by modern milling machineries. But expellers give the maximum extraction of oil. The oil cake or *poonac* is used for feeding livestock but is also taken as food by the poorer people with jaggery. For bakeries or others dessi-

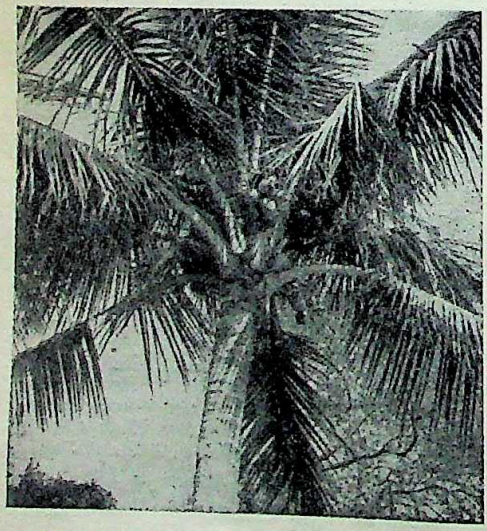

Fig. VIII. Close-up of a full-bearing palm

cated coconut is prepared from good quality nuts or copra, which gives the extracted milk, a nourishing juice as bye-product. The oil is used for cooking, as hair oil and for the manufacture of pomade, candles, 'marine soap' and glycerine. Today the mass production of vegetable fats or margarine is based on this oil.

The spongy cotyledon of the germinating coconut known as apple (*Fopra*) and the apical bud of the growing tree are delicious.

The only prominent fibre obtained from any fruit is the fibre of the coconut husk called 'coir,' mainly used as cordage for all kinds of marine and riverine

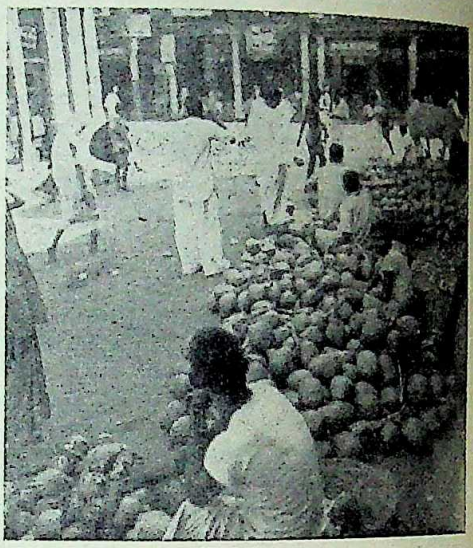

Fig. IX. Are you thirsty? Sale of green coconut at College Street Market in Calcutta

crafts, as it does not decay even in saline water, compared with jute, etc. The coir yarn is used for the manufacture of ropes, mats, door-mats, matresses and for upholstery work in railway carriage, etc. The husk retted in brakish water for about 8-12 months with suitable enclosures are of best quality, although it can be done in fresh water also.

After retting they are beaten with heavy wooden mallets and the fibres are separated from the husk. Best quality fibres are obtained from mature but not over-ripe nuts. The disintegrated pith is usually wasted although it forms the bulk of the husk. In these days of air conditioning with shortage of raw materials the value of the pith compressed as insulation boards may be explored by refrigeration engineers.

The unopened inflorescence is tapped for the juice which can be either 'Nira' or the fermented 'toddy'. It has been observed that in case of poor bearing trees effects of tapping appears to improve the yield, which lasts up to four years. From the juice vinegar and alcohol or jaggery and sugar may be made. The fronds and fruit stalks as well as the husk may be used as fuel and the ash contains a high percentage of potash and can be used as manure. The fronds after

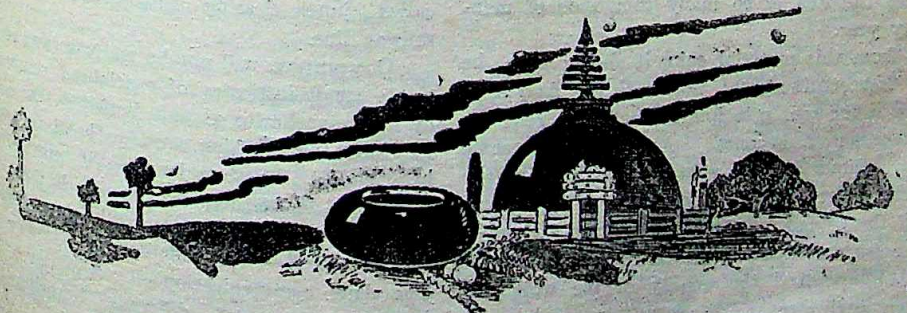
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

trimming and beating can be used as white washing brush. The tender shoots can be made into pickle. The spathe is used as a shelf by the poor. But the midrib of the leaflet helps the cleaning of indoors and outdoors as brooms and its use is universally known. The leaflets are used for making fans, mats as well as thatching of poor men's homes.

The ploughman's hubble-bubble is always made with the coconut shell and today with modern ideas it is used in various other ways as ash-tray, cup and saucer, button, buckles, lamp-shade and box. It can be used as a laddle. The shell charcoal is a good absorbent and is used in making gas masks. The roots are of value as medicine and dye-stuff.

Even in death the palm is of value to us. The trunk is excellent as pillars or beams and rafters.



The long list of usefulness of coconut reminds us of the belief that the great sage Biswamitra in trying to create his new world with new things, first created coconut which is a unique production with its universal use of all its parts. And probably this is the *Kalpabriksha* of the *Puranas*, the tree that fulfills all human wishes.

Conclusion

All along I have tried to impress my readers that this palm with its varied use and long life is economically inter-related with our every-day life. Such a plant should obtain special care from us in the multiplication of their progeny and in this matter the place of the Indian Central Coconut Committee is unique. We know that nothing good can be obtained when the seed is bad and for this every State established and is establishing seed multiplication farms for production of quality seeds of cereals and other crops. Unfortunately coconut did not obtain the attention it deserved. Today we find only a few centres opened by States for this. Private enterprise in these matters ends in failure as it entails heavy expenditure and may be a losing concern though with ultimate gain to the country. With this idea of eliminating bad palms by replacing them with good and extension of the cultivation of coconut in the coconut-growing tracts of India, we must establish coconut multiplication farms or rather nurseries throughout the coconut-growing regions of the country with at least one unit in each producing State. Mother palms are to be selected from within the State after extensive observation tours and the selected nuts from them will be the nucleus of the nursery. The nursery may be opened with a promise to supply at least 1000 seedlings and more than this should have to be planted for rejection of the inferior ones. And this start with a thousand nuts will take us to days when we can supply thousands of good quality seedlings to our countrymen in every State for extension of its production.

AN OLD MAN'S LAST HOPE

By Dr. JADUNATH SARKAR, Hony. D.Litt.

The supreme problem of Free India is how to be intellectually independent of Europe. On the right solution of this question depends her prosperity, and even her very existence as a nation. Europe is advancing every month, nay every day, in arts and arms, in industry and technique, in range of thought and the conquest of nature. India, as even the blind can see, has been standing still, glorying in the "wisdom of our ancestors," or at best borrowing thoughts and material products from Europe at second hand. Hence, even when we seem to be making progress at all, we are only panting far behind Europe like the coolies carrying the baggage of a civilised army and straggling in the rear.

Continual progression is the rule of Europe. Her civilisation is never stationary, she is constantly moving from more to more, from new to newer things. This is the result of the labour of an army of her best intellects, carrying on to higher and higher stages the gains of their predecessors, by working without cessation, without a break. In Europe, "the tail of one generation is where the head of its predecessor had been." This is the root principle of every living civilisation.

Hence, there must be created and vigorously worked a fountain-head of original research on the Indian soil, if Free India is to justify her name. This brings us to the next step. India today is so backward, so poor, that she cannot afford to waste any portion of her existing brain power or material resources; she must get the utmost out of every rupee she spends and every man she employs. And that can be done only by creating centres for this high type of work in those spots where the climatic conditions favour the highest brain work throughout the year without any seasonal stoppage or slackening, and the air and water exclude those periodical diseases which elsewhere cause the loss of so many thousands of man-hours every year.

Apart from this material gain, it should never be forgotten that continuity of work till the final fruit is produced is the root principle of success in research. If the investigation is once suspended for some months by summer heat or winter's cold, it will take many weeks before the returned research-worker can pick up all the threads that he had dropped and make an advance from the point reached by him before his enforced holiday. And the quality of the work also suffers from such breaks; in some cases the uncompleted result arrived at before the break has to be scrapped altogether, and that particular piece of investigation has to be started from the beginning once more. Such losses must be avoided by wise planning beforehand.

This brings us to the third point: where in this tropical country can we find spots with such a temperate climate as to allow vigorous and *continuous* brain work throughout the year? Our noted capitals have their multitude of modern civilised conveniences and scientific apparatus besides expert specialists otherwise employed who are available for consultation, but the enervating heat of Calcutta, Madras and Bombay, the sunstroke atmosphere of Delhi, Lucknow and Allahabad on the one hand, and the freezing cold of Darjeeling, Simla and Naini Tal (in winter) on the other hand, make *continuous* work there for twelve months in the year impossible; they can serve us for eight months at the utmost. These *high* hill stations are also barred out by another very relevant consideration; they cost in dress, shoes and fuel twice or thrice as much as the same style of living in the plains, and their greater distance from the centres of food production naturally enhances the cost of living there.

We are thus left with moderate heights of two thousand feet or more above sea-level and subject to strong cooling winds, such as Shillong and Dehra Dun in the north, Bangalore in Mysore, and the Bombay hills from Lonavla to Talegaon—these last two being only 36 and 20 miles from Poona, on the same G.I.P. line, and the former already provided with good educational facilities of the medium grade and the latter (Talegaon) with an admirable hospital and convalescent home. A research-and-teaching college established here will not have to bear at the start the crippling expenses of what may be metaphorically called jungle-clearing and construction of a new railway line.

Our purpose will not be really served if we merely create small institutes of specialised research manned by a few anchorite savants buried in their laboratories. Research and teaching must go hand in hand for the benefit of both; they languish if mutually isolated. And there is, besides, the sound educational principle aptly expressed by the term "the inter-fertilisation of the faculties"—(*i.e.*, different subjects or branches). The daily communication—it may even be clash—between masters of different branches not only

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sharpens and stimulates the brain of each but also creates an atmosphere most fruitful of the advancement of learning. The hermit in his cell is denied this advantage. Therefore a degree college (with not more than 400 students) should be opened there at the same time and under the same administration. This is the most successful device for bringing to the surface and enlisting for the work in the next generation the most promising pupils.

As for the teaching staff, let not the word research frighten the Finance Minister. The highest professors employed by the Calcutta University, such as Drs. Radhakrishnan, C. V. Raman, and D. R. Bhandarkar, cost about 2,000 rupees each per month (taking into account the pay, the housing concession, employer's contribution to the provident fund, and provision for furlough on full pay and half pay). It is not proposed to take the top-men of the old well-endowed Universities and dump them on my projected hill college. But I feel that a salary of Rs. 600 a month (with residence provided) will attract very able men. Many I am sure will prefer this chance of uninterrupted research work and the full enjoyment of health on Rs. 600 to a cosy chair in Calcutta or Madras on Rs. 1,000. Besides, these hill-college teachers will be kept up to the mark by the periodical society of "visiting professors" and retired educationists, who will demand no pay but only board and lodging and the opportunity of making themselves useful to the next generation, so as to keep India's torch of light burning. Provision for such visiting professors is an integral part of my scheme. (Later on Government inspectors and technical advisers will come for short periods). For them a guest-house should be made ready at the outset. And also a clean hotel supplying decent but cheap and standardised meals. I still remember how exhilarated in spirit, how elevated in mind I felt as a young freshman when attending the lectures of some known authority on a subject, a professor whose opinion is quoted in standard works as decisive, one who has himself advanced the bounds of human knowledge in a particular field. Contact with such first-rate men vivifies the young disciple, like an electric current making the dead frog dance in the physics laboratory. But it does not mean that such pre-eminent scholars should be present at our proposed college, lecturing there throughout the year. Our purpose will be well served if they pay short periodical visits and electrify the students. They will also do a still more necessary work by vivifying the permanent *teachers* of the place themselevs. After all, first-rate men are, in their very nature, not numerous enough.

Before embarking on the scheme, its financial implications must be understood. I am (with all the diffidence of a book-worm) giving below a rough estimate based on the present prices; (the index number today being 446 against 100 in August, 1939). The scheme will be worked in parts, as it grows, from year to year and not in full strength at the very start. But two things must be attended to at the very beginning: (1) land acquisition to prevent private building which may be a bar to future extension, and (2) collection of the indispensable core of a learned library, because ever since the Blitz of London destroyed 20 million copies of printed works (in England alone), many learned books of primary importance have become as rare as the phoenix. But I am optimistic enough to hope for gifts of books from the enlightened rich as soon as our work begins to justify our existence.

All the staff and preferably all the students (maximum 400) should be residential. Hence the heavy building construction necessary at the outset. But why should we not economise in other directions? Why ape Oxford or Cambridge by insisting on a vast meeting hall for *all* the students? I have heard British Oxonians in India sadly complaining that the Presidency College of Calcutta has no Hall for bringing together *all* its thousand students. India has been favoured by nature like ancient Greece; we can hold our College gatherings in the open air (except during two months in the year). Let us sternly cut out ornaments till after *all* the essentials have been provided.

And the first essentials are hostels where the students will not be packed like sardines in a tin, residences for the staff close at hand, and a really good library (with laboratory added in the case of science). For the convenience of younger teachers, there will be one or two chummeries or "bachelors' barracks"—but not in the style of our *dharmsalas*; each one must have a room of his own however small.

Other requisites are a common mess and playgrounds or gardens (so designed as to provide for future extensions). The future is to be assured and the work once started saved from curtailment or debasement by future financial stringency. This can be done only by accepting and steadily pursuing the policy of building up an Endowment Fund of fifty lakhs at its maximum. If the State makes over two lakhs a year for ten years to the Trust managing the Institute, and all public donations are credited to the Corpus of the endowment, the above is not an impossible figure. Judging from some of the noblest non-official institutions whose inner working I have seen, the work of such a hill college, if honestly done, will be its best advertisement and attract large donations. As Swami Vivekananda said to a pessimistic friend at the initial stage of his India-wide philanthropic

REMINISCENCES OF PROF. CARLO FORMICHI

BY MAHAMAHOPADHYAYA VIDHUSHEKHARA BHATTACHARYA

IT was with great pleasure that I read the short notice on the late Prof. Carlo Formichi published in the April issue of *The Modern Review*. It recalled vividly to my mind many incidents associated with him that happened during the time he was a Visiting Professor in the Visva-bharati and I was in charge of Vidyabhavana. The last letter I had from him would be of special interest to the present generation in view of the strong anti-Fascist sentiments he expressed therein in spite of his being an Italian who held high official rank in the academic world of his country. His letter runs thus:

"Rivoli, 25.IX, 1926.

My dear Friend,

Your kind letter has reached me here, where I shall stay a couple of days more before I go back to Rome.

Thank you very much for the sincere sympathy you show me and which I appreciate highly.

I am just like a man that has seen before his eyes a whole city crumble to dust on account of an earthquake. I am seeing many beautiful things pitifully destroyed and I cannot help crying over the ruins.

I do not know yet if the work of reconstruction will be possible. I shall do my best to help it, but on a quite new basis.

I can no longer trust persons in whom I had placed the whole of my love and confidence. I shall ever love you and some other friends in Santiniketan but they are not those who have done the mischief and who have become unworthy of my trust.

Tell Tucci,* please, that I am not writing to him this week for lack of news.

If not in this life I certainly shall meet you in some future existence and you will find a friend in me at once. Be sure of it.

Yours for ever affectionately
Carlo Formichi"

I may also in this connection narrate a few details I obtained from reliable sources regarding the trend of affairs during the Fascist regime. When Gurudev went to Italy, the Italian Government took special care to prevent any person from having access to him, who might give Gurudev a glimpse of Italian affairs different from Governmental propaganda. But somehow Gurudev did come in contact with other views which so displeased him that he publicly denounced the Fascist.

The Italian wife of an American Professor then living in Santiniketan, told me at that time that oppressed as we were under British rule, we were yet much better off regarding freedom of opinion, thought, etc., than the people under the Duce's dictatorship.

A leading Indian Scholar who visited Rome at the time told me after his return, in reply to his query his taxi-driver while passing Mussolini's Office uttered the Dictator's name in a very low and cautious whisper and explained later that he did so in order not to rouse suspicion in the mind of any passerby that he had any sinister motive in showing the Duce's office to a foreigner.

One incident may be added here, when for the first time Prof. Formichi met the class he had to teach, it fell to me to introduce him to his audience. After the introduction he dealt with his subject for a few minutes and then told me, "I hope you will now believe that I can teach." The remark was received with loud laughter

* *i.e.*, Prof. Giuseppe Tucci, the noted Italian Sanskritist who was also in Santiniketan as a Visiting Professor.—V.B.

INDIA'S NATIONAL INCOME

By Dr. R. M. AGARWAL, M.A., Ph.D.

The calculation of per capita national income is not an end in itself but simply a means to an end. And its importance in planning future economic policies cannot be over-emphasized. Every sort of economic planning, agricultural or industrial, commercial or scientific, capitalistic or socialistic, must necessarily aim at increasing the per capita national income because other things remaining the same, particularly prices, it indicates rising standards of living of the people, material well-being and economic progress. It also serves as a measuring rod for comparing the general economic condition of the people in different countries or in the same country at different times. And changes in the various components of national income reflect upon the changing patterns of economic set-up.

But despite its playing such a vital role in the day-to-day economic life of the people and the country, no systematic or scientific attempt, official or non-official, was ever made to take stock of India's national income and compile the per capita earning. Some individual efforts were no doubt made, at their own initiative, by Dr. Dadabhai Naoroji, Messrs. Baring and Babour, Digby, Atkinson, Sir B. N. Sharma, Findlay Shirras, Shah and Khambata, Lord Curzon, the Simon Commission, V. K. R. V. Rao and B. Natarajan at various times from 1871 onwards and in the absence of any other useful data their findings did throw some light over this important issue, but they could by no means be taken as reliable and dependable because their difficulties were innumerable. This negligence on the part of our Government was more so deplorable in view of the fact that of all the countries of the world, ours was the only one which made the largest number of plans and programmes, what if they did not cross the paper stage, during the post-war years. Fortunately it recently realized the necessity of organizing such investigations and appointed for the first time on the 4th August, 1949, a National Income Committee with Prof. P. C. Mahalanobis as Chairman and Prof. D. R. Gadgil and Dr. V. K. R. V. Rao as members to prepare the report on the national income and related estimates, to suggest measures for improving the quality of available data and for the collection of further essential statistics and to recommend ways and means of promoting research in the field of national income. The Committee was also to guide the national income unit of the Government of India in compilation of authoritative estimates of the national income. The Government of India also made available to the Committee the advice of three destinguished foreign experts on national income, namely, Prof. Simon Kuzuets, Mr. J. R. N. Stone and Dr. J. B. D. Derksen who visited India during the cold weather of 1950-51. The committee submitted its first report only recently which was placed before the Parliament by our Finance Minister, Sri C. D. Desmukh on the 5th May, 1951. The Committee proposes to follow up its first report with a final one which is expected to be submitted towards the end of 1951 or early in 1952. The final report would cover both 1948-49 and 1949-50.

According to the first report of the Committee, the sum of the net output of all sectors of economy gives the net domestic product at "factor cost"—Rs. 8,730 crores (Government enterprises Rs. 300 crores, Government administration Rs. 460 crores, and private sector Rs. 7,970 crores). The net national product at market prices, factor cost plus indirect taxes, is estimated at Rs. 9,170 crores. Adjusting these figures with the estimated net earned income from abroad the figure for the net national income during 1948-49 has been arrived at Rs. 8,710 crores or Rs. 255 per head on the basis of an estimated Indian population of 341.04 millions during that year. But while discussing the above estimate at a Press Conference recently, Dr. V. K. R. V. Rao, one of the three members of the National Income Committee told that India was not richer in 1948-49 than in 1931-32 in real terms. His estimate of per capita income in 1931-32 was Rs. 65 which, he added, would come to about Rs. 260 when adjusted to the increased prices and the inflated values of other contributory factors in 1948-49. This indicated that the person was poorer by nearly Rs. 5 in 1948-49 than in 1931-32. Dr. Rao added, "I would certainly state that the per capita real income has not gone up." This is also shown partly by the fact that nearly 53 per cent of the material income was being spent over food alone.

The Committee has however estimated the national over-all average of the net output per engaged person at Rs. 660. Breaking the figure occupation-wise, the net output per engaged person was highest in mining and factory establishment, that is Rs. 1,700 followed by commerce, transport and com-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

munications Rs. 1,600, Government services Rs. 1,300, small enterprises Rs. 600, professions Rs. 600, agriculture and animal husbandry Rs. 500 and domestic services Rs. 400. Thus the comparatively more paying and productive character of mining and manufacturing enterprises as against either agriculture or services is too obvious even though agriculture, animal husbandry and auxiliary activities contributed 48 per cent and commerce, transport and communications 19.5 per cent of the national income. Again contribution by small enterprises, which is 83.6 per cent is about five times as great as that of large enterprises (16.4 per cent). It is also seen that small enterprises account for more than 61 per cent of the net domestic product.

Moreover, the total working force of the country has been placed at 132.74 millions of which 90.50 millions or 68.2 per cent were engaged in exploitation of animal and vegetation, 18.02 millions or 13.6 per cent in industry, 8.30 millions or 6.2 per cent in trade, 5.04 millions or 3.8 per cent in professions or liberal arts, 4.19 millions or 3.2 per cent in domestic services, 2.45 millions or 1.8 per cent in transport, 1.91 millions or 1.4 per cent in public force, 1.70 millions or 1.3 per cent in public administration and 0.63 millions or 0.5 per cent in exploitation of minerals. Hence, the unbalanced nature of our national economy which is predominantly agricultural offers very little scope for future developments, if left undisturbed and allowed to take its own course.

Also 97 per cent of the Government revenue that is, Rs. 690 crores out of a total revenue of Rs. 710 crores was spent over administration. Out of Rs. 710 crores, direct taxes accounted for Rs. 198 crores (Corporation tax Rs. 65 crores and other Income taxes Rs. 133 crores), indirect taxes Rs. 416 crores (Customs Rs. 139 crores, Excise Rs. 107 crores, Stamps Rs. 20 crores, Land Revenue Rs. 42 crores, and other indirect taxes and duties Rs. 108 crores) and fees and miscellaneous receipts Rs. 70 crores (Civil Administration Rs. 38 crores and Miscellaneous Rs. 30 crores) thus making a total tax revenue of Rs. 684 crores. Another Rs. 50 crores was obtained by transfer of operating surplus from current account of commercial enterprises (Railways Rs. 25 crores and others Rs. 25 crores) and income from property accounted for Rs. 22 crores (Interest Rs. 10 crores and others Rs. 12 crores). The expenditure of Rs. 690 crores, on the other hand, comprised Civil Administration Rs. 326 crores, Defence Rs. 279 crores, Miscellaneous Rs. 25 crores, Subsidies Rs. 34 crores, Transfer payment to individuals Rs. 26 crores. Of the expenditure on Civil Administration the cost of collection of taxes alone accounted for Rs. 26 crores while General Administration including expenditure on Police, Public Health, Education, etc., accounted for Rs. 242 crores. Out of Rs. 279 crores spent on Defence, the pay and allowances of the armed forces alone has been estimated at Rs. 117 crores. The surplus of Rs. 20 crores on current account does not represent the budgetary position of the public authorities, but only the excess of income drafted by them and not spent during the year.

The capital account of the public authorities for the same year reveals a sum of Rs. 49 crores and an expenditure of Rs. 208 crores (Capital Expenditure on commercial enterprises Rs. 120 crores, Maintenance and capital outlay of Administrative departments Rs. 81 crores, and Net purchase of assets Rs. 7 crores). The deficit was met by a net borrowing of Rs. 159 crores.

Taking the current and capital accounts and also the current account of the public commercial enterprises together, a sum of Rs. 1,214 crores was paid out of the public sector during the year. Of this, Rs. 680 crores represented wages and salaries, Rs. 28 crores interest, Rs. 360 crores purchase of commodities and services, Rs. 29 crores maintenance, Rs. 60 crores transfer payments and Rs. 7 crores purchase of assets.

Thus, it is obvious that the above details of India's national income and expenditure demarcate the following four characteristics of our national economy:

1. Deteriorating economic condition of the people in spite of rise in their money incomes on account of general inflationary condition in the country and rising cost of living;
2. unbalanced character of our national economy which is predominantly agricultural and which is no more paying on account of too many people working over it;
3. predominance of small-scale over large-scale enterprises; and
4. very little expenditure of public revenue over development programmes as compared with those over administration.

This is anything but in the interest of the country and our administrators must necessarily devise policies to change this natural course of our national economy. If we want to be as powerful and rich as the other countries of the West, we cannot lay too much emphasis over our agriculture and must essentially devote greater and greater attention towards large-scale industrial developments. But this cannot take place without an active and all-out help from the Government. But for this, no country in the world would have been able to increase its per capita national income, not even U.S.A., Canada, U.K., Germany or Japan.

INACCURACIES IN OFFICIAL STATISTICS IN WEST BENGAL

By JATINDRA MOHAN DATTA, M.SC., B.L., F.S.S. (Lond.)

A fresh ration cut has been imposed from the 2nd July, 1951. The Food Minister, Sri Prafulla Chandra Sen, in a recent broadcast tried to justify the policy he is following by quoting certain official statistics. We pity him; he is more a victim of the inaccuracy of official statistics than a sinner for inaugurating a bad policy. We do by no means exonerate him or the Central Government for their policy. But we realise how badly they are being served with official statistics.

In 1934, we pointed out in the pages of the *Sankhya*, the journal of the Indian Statistical Institute, how inaccurate the official statistics sometimes are. In one single year, there were *ten* Chairmen for the Panihati Municipality!

Since then we hoped there would be an improvement in the official statistics; if not in their collection at least in its presentation. We based our hope on the formation of the Provincial Statistical Bureau in West Bengal. But our hopes have been belied.

The Provincial Statistical Bureau publishes a Statistical Abstract for West Bengal. It published one for 1947 sometime ago. It has recently published another for 1948. But there are serious errors in it, both of compilation and presentation. We hope the authorities responsible for the publication of the *Statistical Abstract* would take greater care in future. We would request them to go through the pages of such books, as the *Canadian Year-Books, Australian Year-Books*, etc., to see for themselves how the official statistics are condensed and presented in the British Dominions; and also to go through such books as *Pocket Compendium of Australian Statistics* (pp. 208), price 1 sh.

The attention of the authorities has been drawn to the inaccuracies and insufficiency of the official statistics ever since 1934. (See *Sankhya*, Vol. I, pp. 435-39 and Vol. 6, pp. 231-35). Some serious mistakes in the Bengal Census Report of 1931 (*Sankhya*, Vol. 3, pp. 163-170 and Vol. 6, pp. 327-328), were pointed out by the present writer.

Statistical Abstract, West Bengal, 1948 has been published. This is the second issue of the series. But there are certain errors persisting in it still.

(1) At page 6, in table 1.1 it is stated that the number of sub-divisions in the District of 24-Parganas is 6. But at page 22, table 1.9, five sub-divisions have been shown. The Bongong sub-division has been omitted; the area under it has been amalgamated with the Barasat sub-division.

(2) The population of West Bengal has been given as 21,196,453 in tables 1.2; 1.3; 1.4; 1.5; 1.6. The population of West Bengal (after partition) has been given as 21,211,427 in the Statistical Handbook No. 1 presented to the members of the Constituent Assembly. It is a saleable publication. The figures 21,211,427 have been repeated at pages 3 and 4 of the *Statistical Handbook*.

The error in the figure given by the Provincial Statistical Bureau has arisen in this way. In table 1.9 the figures for each thana has been given; but no figure has been given for that portion of the Daulatpur Police Station which has been allotted to West Bengal under the Radcliffe Award. This exclusion has led to the above error.

(3) At page 274, table 26.3 is headed thus :

> "Particulars relating to New Life Insurance Business of Indian Insurers effected during 1947 and total Life Insurance Business in force at the end of the year in West Bengal."

The heading is misleading. All that has been shown in the table is the business of certain companies registered in Calcutta. The Oriental Life Insurance Company's business here in West Bengal is not included; while the entire business of Hindusthan Life Insurance Company is included, much of which is outside West Bengal.

(4) In table 41.4 at page 383, the number of cinema houses and the monthly average number of spectators are given.

District	*Number of cinema houses (in Dec., 1948)*	*No. of spectators (monthly average)**
Burdwan	11	109,841
Birbhum	5	37,332
Bankura	4	65,756
Midnapore	13	201,344
Howrah	15	221,079
Hooghly	20	232,951
24-Parganas	16	194,405
Calcutta	72	Not available
Nadia	4	46,777
Murshidabad	2	21,389
West Dinajpur	3	18,152
Malda	2	36,851
Jalpaiguri	1	10,325
Darjeeling	4	52,615
Total West Bengal	172	(a) 96,832

(a) Excluding Calcutta.

Figures for Calcutta have been omitted. No explanation has been given why the number of

* Average of twelve months (Jan. to Dec. 1948)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

spectators at Calcutta cannot be given. No attempt has been made to form an estimate of the number of spectators at Calcutta from the amusement tax collected though of the total Rs. 4,21,000 amusement tax collected in 1948, Rs. 3,41,000 came from Calcutta alone. Further in calculating the provincial average of spectators a simple average of the district averages instead of a pooled average for the province has been used. In some copies there is a corrigenda, giving the correct figure, in some other copies there is no corrigenda.

(5) In table 41.2 at page 382, the particulars about street accidents in Calcutta are given.

The figures for 1945, 1946 and 1947 are given; while the figures for 1948 are given month by month, but no totals for 1948 have been given. For ready reference and easy comparison such total should have been given.

But there seems to be error in the figures themselves. For example, the number of persons killed in 1946 and 1947 are given as 324 and 184. But in the *Monthly Statistical Digest, West Bengal,* published by the same Provincial Statistical Bureau for September, 1950, we find at page 101, that the monthly average of persons killed in Calcutta in 1946 and 1947 are 19 and 15 only while they are 27 and 15 respectively if the previous annual figures are reduced to monthly figures.

324 divided by 12 for 1946, comes to 27 and not 19.
184 divided by 12 for 1947, comes to 15.

Let us assume that this is a printing mistake. The total number of vehicles involved in such street accidents in 1946 and 1947 are given as:

	Number of vehicles involved			
	Civilian	Military (British)	Military (U.S.A.)	Total
1946	5,696	2,061	1,112	8,869
1947	9,105	601	28	9,734

The monthly average of vehicles involved in accidents would work out to 739 for 1946 and 811 for 1947. But in the *Monthly Abstract* referred to above the figures given are 1,131 and 1276.

(6) At page 372, table 37.1 capacity of jails in West Bengal has been given. But no mention has been made of the Hazaribagh Reformatory, where West Bengal has a right to send convicts, perhaps because it is in Bihar. As it is a statistical abstract such information should be given. When about two years ago the Judicial Minister of West Bengal, visited the Hazaribagh Reformatory, he found that 87 convicts out of a total of 200 has been sent by West Bengal. (cf. the *Prabasi,* Baisakh, 1357 B.S.)

(7) At page 177, table 14.12 gives the number of newspapers, periodicals and books published in Bengal.

In column 3, the number of newspapers, periodicals published has been given. The *Statesman, Amrita Bazar Patrika* and the *Hindusthan Standard* are counted as one each, the twelve issues of *The Modern Review* are taken as twelve. This is not reasonable.

(8) The area of Calcutta has been shown differently at different places.

At page 22, table 1.2 the area has been given as:

Calcutta excluding Fort William, canals and port	18,121 acres
Calcutta	26,714 "

At page 29, table 1.11 the area has been given as:

Municipal area	31.70 sq. miles
Fort William and Maidan	2.00 "
Total Calcutta	33.70 sq. miles

But the areas of the 32 different wards of Calcutta as given in table 1.2 total up 18,121 sq. miles or 28.3 sq.miles.

(9) Coming now to table 34.1 at page 352, showing the number and constitution of Municipalities, District Boards and Union Boards in West Bengal we have several comments to make.

(*a*) While the figures for Municipalities and District Boards are for the year 1946-47, those for Union Boards are corrected up to July 1948. The report is signed in January 1949. Why the figures for the Municipalities and District Boards cannot be brought up to the end of 1947-48 at least we fail to see.

(*b*) The figures for Nadia District Board are said to be not available. In pre-partition Nadia, the figures were certainly available.

As a result of the partition of Bengal, the districts of Nadia, West Dinajpur, Malda and Jalpaiguri were also partitioned. To provide for this West Bengal District Boards Ordinance XI of 1947 was promulgated, and the West Bengal District Boards Act III of 1947 was passed on the 30th December, 1947. The figures for the reconstituted District Boards could have been and should have been given.

(*c*) If the figures are for the year 1946-47, how then the constitution of the District Board of West Dinajpur, which was not formed till August 1947, could be given. Surely it relates to post-partition position.

(*d*) The number of municipalities is wrong. There were 10 municipalities in Hooghly, and not 11.

(*e*) A note should have been added as to the number and constitution of Cantonment Boards in West Bengal.

(10) At page 344, in table 32.9 classified List of Assessees assessed to Agricultural Income Tax in Bengal, 1945-46 has been given. In the *Statistical Abstract* for 1947 no such table was shown. We fail to understand why the later figures for United Bengal for the year 1946-47 could not be given. After the partition of Bengal, the agricultural income-tax

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

structure of West Bengal has undergone a radical change; and these later figures should have been given. The following abstract of statistics for the several years show that the statistics for 1945-46 standing by themselves are misleading as to the distribution of incomes.

	No. of cases dealt with	Total gross income	Amount of tax collected
		Rs.	Rs.
United Bengal—			
1945-46	4,331	8,18,31,920	90,91,232
1946-47	3,202	4,27,55,090	39,75,954
West Bengal—			
1947-48	2,302	4,34,96,312	38,12,579
1948-49	3,154	4,24,63,815	43,51,416
1949-50	4,249	6,59,75,512	65,11,400

If the detailed figures are available to non-officials, why the same cannot be collected and published in the *Statistical Abstract* we fail to understand.

(11) At page 345, in Table 32.10, Commercial tax collected in Bengal, 1941-42 to 1947-48 has been given.

The Sales-tax, for example, has increased from Rs. 15,61,592 in 1941-42 to Rs. 3,60,45,539 in 1946-47. To what this phenomenal increase is due? It would require sometime to get the Department concerned in assessing and collecting the tax in full working order. Therefore, there is some time-lag. Any normal increase would be due to commercial activity. But there have been several changes in the rate of tax since it was first imposed.

The Bengal Finance (Sales Tax) Act, 1941 came into force on the 1st of July, 1941. The official financial year begins on the 1st of April every year. So the first year's collection represent only 9 months working of the Act, apart from the time-lag to get the working of the Department in full swing.

At first the rate of tax was one quarter-anna in the rupee. By Bengal Act I of 1944 the rate was increased to one half of anna in the rupee. By Bengal Act VIII of 1945, the rate was increased to three-quarters of an anna. It was then reduced to one-half of an anna in 1946; and again increased to three-quarters of an anna by West Bengal Act X of 1948.

Further there have been changes in the Schedule of tax-free goods from time to time. A note drawing attention to these several facts should have been added to make the Table more useful to the reader.

Our observations cover the other taxes also.

(12) In the section headed Medical, beginning at page 160 and ending at page 163, we find in Table 13.4 the distribution of Registered Doctors according to qualification and sex in Bengal for the years 1946 and 1947; and in Table 13.5, the number of registered Nurses, Midwives and Health Visitors in Bengal from 1946-1948.

We have several comments to make on this section.

(*a*) To make the above two tables comparable the figures for the earlier years as well as for 1948 should have been given in Table 13.4.

(*b*) Nowhere we find the number of Dentists registered under the Bengal Dentists Act, 1939. Neither one finds mention of the number of Ayurvedic practitioners, registered under the State Faculty of Ayurveda, nor of the Homeopath doctors similarly registered. This is in our opinion a serious lacunae.

(13) At page 35, in Table 1.15, area and population of Provinces of Indian Union with density per square mile are given.

The area and population of Assam, West Bengal and East Punjab have been shown thus:

	Area	Population
Assam	50,321	73,92,618
West Bengal	28,215	211,96,453
East Punjab	31,028	126,91,430

It is said that these figures are estimated figures, estimated presumably by the Provincial Statistical Bureau.

In the Statistical Handbook No. 1 prepared for the use of the Members of the Constituent Assembly, the respective areas and populations have been shown thus :

	Area	Population
Assam	50,296	74,47,531
West Bengal	27,748	212,11,427
East Punjab	37,058	126,17,175

The second edition of this Handbook was published as early as 1947. Why no use has been made of this authoritative publication, and a fresh estimate, apparently erroneous, has been made, we do not know.

The discrepancies between the two sets of figures are given in the table below. Taking those given in the Handbook No. 1 as the bases, we find the differences to be:

	Area	Population
Assam	+ 25	— 78,913
West Bengal	+ 467	— 14,974
East Punjab	—6,030	+ 74,255

(*b*) Why the population and area of the Native States acceding to India, at least its totals, have not been given to make the Table really useful, we do not know. We complain of its absence.

(14) At page 234, in Table 19.5, a list of towns and villages in West Bengal served with electricity in 1946 is given.

The list is positively misleading. How misleading we shall show by a few examples. The Panihati Municipality consists of seven Wards, of which Agar-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

para, Panihati, Bhowanipore, and Sukhchar are on the river Hooghly (Bhagirathi). They are served with electricity. While Agarpara and Panihati have been mentioned as items No. 1 and 47, no mention has been made of either Bhowanipore or Sukhchar.

Similarly the Kamarhati Municipality consists of four Wards, *viz.*, Kamarhati, Areadaha, Dakshineswar, all on the river Hooghly and of Belghurria. Mention has been made of Areadaha (item No. 2), Belghurria (item No. 12) and of Kamarhati (item No.33); but Dakshineswar has been omitted.

Calcutta and Fort William have been shown as two different places (items No. 17 and No. 21).

Radhanagar (item No. 48) in the district of Burdwan is supplied with electricity from Dishergarh; but no mention has been made of Dishergarh itself as a place supplied with electricity, although it is within West Bengal.

A better plan would have been to give the names of Towns or Municipalities or of the main villages; as also the area of supply and if possible the population, enumerated or estimated, of such area where the supply is available.

We are making these observations to show how haphazardly the statistics have been compiled and presented.

(15) At page 228, in Table 18.1 the production and the number of workers and the Coal Industry have been given. It has been stated that the number of workers for 1946 and 1947 are "not available." This book has been published in 1950, and bears the signature of the Director in 1949. In the *Indian Labour Year-Book, 1947-48*, page 8, the total number of workers in the Mines of West Bengal for the years 1946 and 1947 are given as:

1946—80,373 and 1947—89,682.

The source or sources from which the authors of the *Indian Labour Year-Book*, a Central Government publication, have got the figures are presumably available to the officers of the Government of West Bengal. It appears they have not exerted themselves in the matter.

THE GOSPEL OF KRISHNA

By SUDHIR CHANDRA MAJUMDAR

I

1. The book of Krishna, the son of Basudev, the son of Jadu.

2. Jadu begat Madhu and Madhu begat Sattwata and Sattwata begat Vrishni and his brethren.

3. And in the generation of Vrishni was born Basudev, the husband of Devaki of whom was born Krishna who is called Basudev.

4. Now the birth of Krishna was on this wise: Devaki the king Kangsa's sister was espoused to Basudev.

5. Now it came to pass that as one day Kangsa went out to the street on his chariot, behold, there came a voice from heaven, the eighth child of Devaki, thy sister would kill thee.

6. When Kangsa heard these things, he was very wroth and threw his sister and his sister's husband into the prison and slew one after another, their seven children.

7. Now when Krishna was born in the prison, behold, the spirit of the Lord appeareth before Basudev at night saying, Arise and take the young child to Brindabon, for Kangsa will seek the young child to destroy him.

8. When he arose, he took the young child by night and departed into Brindabon and kept him at the house of Nanda, the king of cowherds.

II

1. Now Krishna grew up to be a fine lad and brought gladness into the hearts of Nanda and his wife.

2. He went forth to the fields to tend cattle by the Jamuna with other cowherd boys and piped and danced merrily in the shade of the Kadamba tree.

3. And the maidens of Braja knew that this was the God which is come to teach love and piety. So they met him in the wilderness and worshipped him.

4. And they said unto him, Draw us, we will run after thee, for thy love is sweeter than wine, so the upright love thee.

5. And he said unto them, Ye daughters of Braja, why do ye leave your husbands and brothers and run after me, behold, I am black and a mere cowherd boy.

6. And they answered and said, Thou art black but comely, yea, fairer than the primrose.

7. Behold we have left our husbands and our kindreds and followed thee, for whither thou goest we will go.

8. When Krishna heard these things, he saw their love was real and pure and so he favoured them.

III

1. Now when Kangsa heard that Krishna was living he was very wroth and he sent demons to kill him.

2. Then Krishna's wrath was kindled and he went forth to Mathura and slaote him and lo he was dead.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

3. Then Krishna gave the people good laws and ruled them wisely.

4. Now king Jarasandha of Magadh, the brother of Kangsa's wives, came with a large army to conquer Mathura.

5. And his men were numerous even as the sands of the sea and his wealth was great, yea greater than Kuvera's.

6. Then Krishna said, Behold ye sons of Jadu, we are few and poor, so shall we leave the city to Jarasandha and move westward.

7. So they went forth to the west even up to the sea and built the city of Dwaraka and dwelt there.

8. There the children of Jadu—the Bhojites, the Andhakites and the Kukurites lived peacefully under him.

IV

1. Now it came to pass that a mighty battle was fought between Pandavas and their uncle's sons, Kauravas.

2. This was done that it might be fulfilled which was said of old, Brother shall rise against brother and bloody battles shall be fought.

3. And all the kings of Ind assembled in the wilderness of Kurukshetra, yea from the Himalayas to Comorin.

4. Now when Krishna came to help Pandavas, he saw Arjun, very much cast down. And he said unto him, Why art thou cast down? Fight and have thy right.

5. If ye fight not, your enemies will think you like the publicans that are weak in heart. Are ye not much better than they?

6. Verily I say unto you, the soul dieth not, but passeth into another body, even as a man weareth a new cloak.

7. Ye have heard that it was said by the sages of old that Thou shalt perform sacrifices and go to heaven; verily I say they have their reward.

8. But desire not the reward and do not sound a trumpet before thee as the hypocrites do.

V

1. Ye have heard that Thou shalt renounce all works, but I say unto you whosoever renounceth the worldly tasks but lusteth after them is a hypocrite.

2. So be thou ever working for it has been said that even Thou shalt not eat except by the sweat of thy brow. But whatever thou eatest or whatever thou doest do to the glory of God.

3. Whosoever offereth any gift to me—water, flowers, fruits or leaves with a sincere heart, that gift shall I take; for hath he not humbled himself for which the kingdom of heaven is?

4. I am the Light of the world, the Supreme Soul, yea, the holder of the universe, but people know me as Basudeva Krishna.

5. Despise all good and bad and seek my shelter and thou shalt not sin before God. *Selah.*

6. Then Arjun arose for battle and long was the fight and terrible was the bloodshed, yea, the land was red with blood.

7. Rivers of blood flowed and mountains of corpses were heaped and the land of Ind was desolate.

8. And the Lord smote the Kauravas by the scores of hundreds and thousands and they were all dead for they sinned against God.

VI

1. When Krishna saw his work was done, the empire of righteousness founded, he departed into Dwaraka.

2. Now it came to pass that the sons of Jadu sinned in the eye of the Lord and God cursed the city and it was doomed.

3. They quarrelled with one another and fought with one another and they were destroyed for their wickedness.

4. Then Krishna seated himself on the branch of a tree when a fowler shot an arrow at him and he yielded up the ghost.

5. Then a thick darkness covered the earth, the earth quaked, the hills rent and behold the land of Dwaraka was under the sea.

6. And all the devas and the departed saints appeared and sang welcome to hail their Lord to heaven.

7. Now when the unbelievers saw these things, they feared greatly saying, Truly this was the Incarnation of God.

8. And the spirit of Krishna said unto all, Lo, I am with you alway, even unto the end of the world. *Amen.*

——:o:——

VINOBAJI IN TELANGANA

By SURESH RAMABHAI

The history of the human race may be described as the story of a long and continuous struggle between the 'haves' and the 'have-nots,' the former trying to have more at the cost of the latter, and the latter trying to rise to the status of the former. The political, economic, religious, social and even cultural revolutions may be regarded as the manifold shades of this great struggle in which greater stress was laid at a time on one particular aspect as against the other. It is the task of the reformer or revolutionary to bridge the vast gulf [illegible] from the have-nots, or, in other words, to break down the oppressive variety of walls acting as a barrier between one man and another, one class and an other, one community or country and another.

To a greater or smaller extent our country also as much suffers from this malady as any other. And inside the country the most conspicuous victim of this havoc is the State of Hyderabad whose capital city with its dazzling wealth and luxurious display offers a gruesome contrast to the squalor and poverty of the inhabitations

CC-0. Panini Kanya Maha Vidyalaya Collection. Digitized by eGangotri
CC-0. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

stretching on from about five miles off from the city. Again, nowhere in Hyderabad has this gulf between the haves and the have-nots assumed so devastating proportions as in Telangana. It is the name given to the area comprising the districts of Mahbubnagar, Nizamabad, Karimnagar, Nalgonda and Warangal, in the south-east, east and north-east of the State, where Telugu is the language of the masses. The centuries-old feudal administration of the State has only countenanced to the growing of this gulf still wider. The general people in Telangana are perhaps poorer and far more afflicted than their brethren in any other part of the country. But, until a few years ago, no attempts were made to alleviate their misery or meet their genuine grievances. Unfortunately, however, the youths, abiding by Communism, who rallied together in this mission of service believed in the maxim of 'All is fair in love and war.' They began to develop Telangana into an impregnable base from which they thought they could succeed in establishing other pockets and thus conquering the whole country in no distant future.

During the British regime neither the condition in Telangana was very serious nor did the then Government of India take any interest in the matter. But with the British withdrawal from India the situation took a grave turn. And when both the State Government and the Republican Government at New Delhi were badly preoccupied in the 'Police Action,' the Communists took hold of this sleeping-hour opportunity to propagate their mission and set in such horrors in most of Telangana as to make the 'haves' flee away with their lives and even the official administration seemed to come to a stand-still. By the time both the State and Central governments felt ready to tackle the area the problem had already taken the form of a big menace pervading all round and the Communist-infected Telangana was famous the world over. But all governments have a strange sense of prestige and a stranger sense of recovering it, if lost. So curiously impelled, both the Governments, amassing all possible stuff in the form of man or material sprang upon Telangana with a leonine violence and asked, at the point of pistol, its people to give correct clues of the communists or hand them over to them (the Police). Frightened by this monstrosity, the poor inhabitants, in some measure, began to give the whereabouts of some of them whom they knew. This enraged the communists bitterly. And they came at night to inflict every pain and torture on those who, according to their true or false information, had submitted to the wishes of the Government. Thus ravaged by the Police forces in the day and by the communists in the night, the hundreds and thousands of men and women and children in Telangana are groaning under a terror which has no parallel in the country. Naturally many innocent people who had nothing to do with either the Police or the communists also came under fire. It is like the grinding down of the proverbial ant together with the grain between the two stones. And truth it is that the innocent ones far outnumber those who are really hands in glove with the Police or the communists. Virtually, therefore, a reign of terror stalks the entire Telangana and the woe-stricken millions know no end of their miserable plight which beggars description.

Towards these people, it was on the auspicious day of Ramnavami, the 15th of April 1951, that Acharya Vinobaji Bhave, or Vinobaji as he is lovingly called, set his face when he started from Hyderabad on a walking tour of Telangana. To quote his own words :

> "I wanted to tour the Telangana as a soldier of Shanti Sena in order to propagate the message of peace. For many days, I could not put into practice this wish of mine for many reasons. But, however, after obtaining the blessings of the Lord Rama, I have undertaken this tour", as he said in the course of a spech (May 10th) delivered to the Communist detenus whom he met in the District Jail of Nalgonda (Vide unofficial Note No. 364, issued by the Director of Information and Public Relations, Hyderabad).

What is the problem of Telangana ? As Vinobaji said in his speech in the village of Mirialguda (May 15th) :

> "Some people here possess thousands of acres of land while some cannot call even one acre as their own." (No. 353)

The seriousness of the situation can be gauged by what he said at Balapalle (May 31st) :

> "The population of this village is 3,000 and its cultivable area is 3,000 acres. But only 90 families own the entire lands, while 600 families are landless. Nor is there any cottage industry in the village. The weavers of the village get yarn sufficient to keep them engaged for eight or ten days only in a month. Equitable distribution of lands should be co-ordinated with the development of cottage industries. Villagers should not grow cash crops. They should grow food crops and enough cotton to enable them to make their villages self-sufficient in the matter of clothing. *The trouble in Telangana is due to indiscriminate growing of cash crops, like groundnut and tobacco.*" (Vide No. 390)

By the way, it shows that thoughtless encouragement given by the authorities in India to the random growth of cash crops like cane, groundnut and tobacco, is responsible for much of our food shortage, as Vinobaji also mentioned in very clear terms in his note on the letter from Sri R. K. Patil, member of the National Planning Commission. (Vide *Harijan*, dated 23rd December, 1950 and 3rd March, 1951). How deeply Vinobaji feels about this all can be gathered from his speech at Medepalli (May 24th) :

> "Forty years ago, as a student I used to read and think about the conditions of my country and feel sorry for my slave country and its miserable conditions. Today, after forty years, there is no change in those conditions; on the contrary, they have worsened." (No. 374)

In keeping with the time-old tradition of India, Vinobaji wants to meet this baffling situation by performing a *Yagna* :

> "In olden days, when disturbed conditions prevailed in the country, our ancestors used to perform *yagnas*. I also wanted to perform a *yagna*, so I have started experimenting this *Bhudana Yagna*. I have asked [illegible] to donate lands. Everyone should

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

take part in this *yagna* which is in the interest of the upliftment of the people. Just as we give our share to the *yagnas*, so also we should donate lands. People were doubtful whether anyone would donate lands to the landless poor in the Kaliyug but when there is a person to ask, people are giving and up till now (speech at Tanikella on May 30th) I have got 3,500 acres of land." (No. 386)

From the foregoing it is manifest that the mal-distribution of wealth and property has brought about all the trouble in Telangana. Nothing else has so much contributed to the communist menace as this. As Vinobaji said at Suryapet on May 23rd :

> "The rich people are responsible for the creation of the communists. The rich in fact are the fathers of the communists." (No. 373)

Receiving donations of land from every one and distributing the same among the poor is the only way to root out this trouble. No amount of Police and military forces will do the job. As Vinobaji made it clear in a speech :

> "In summer you will not find grass but no sooner the rainy season starts, grass begins to grow as there are seeds of grass in the earth. So also the Police can curb the Communist menace for a while, but it cannot root it out permanently. So we must root out this menace by adopting the right path." (No. 386). Or again, "The police will not be very helpful in fighting the Communist menace. The only way to root it out is to remove the unequal distribution of land by peaceful way." (No. 379)

Vinobaji wants that effective legislations must be passed so that this anomaly may become a thing of the past. Speaking at Naikengudam (May 23rd) he said :

> "The task begun by me should be continued. Sri U. Kesava Rao, the President, Nalgonda District Congress Committee, will continue this task. According to my estimate, about fourteen to fifteen lakhs of people live in the District of Nalgonda and if fourteen to fifteen thousands acres of land are donated, then fourteen to fifteen thousand individuals will get their livelihood. This act of distribution of lands will remove the state of restlessness and establish peace. Government should give Taccavi loans and other facilities to individuals who will be acquiring these donated lands. Besides this, the Government should pass an Act limiting the extent of land and the number of acreage that a man should possess and then it should make a provision by the same Act to ballot the rest of the land to the poor. If these things come into existence the communist menace will disappear." (No. 373).

Further, the 'haves' must donate this land regarding it as their duty. Vinobaji made it clear in a speech (May 26th) at Kodmur :

> "The donations that are now being given are not obligations. According to Shastras, the act of donation means the act of sharing with others whatever we have. This clearly means that no individual obliges the other individual by giving donations." (No. 379).

It may be argued whether donation of money will not serve the same purpose. No, certainly not. Vinobaji is very firm on this point. He unequivocally declared at Kodmur (*ibid*) :

> "I do not accept money by way of donation. As a matter of fact money has destroyed India. The values of commodities do not fluctuate; on the contrary, the price of money fluctuates. The value of foodgrains is stationary. I want to redeem the people from the clutches of money which is merely medium and which generates a feeling of pride in the man who donates it. But in the donation of lands the right of the poor is inherent and, therefore, I accept donation of lands. . . . If everyone embraces the poor with love I am sure that the Communist menace will vanish."

In passing it may be remarked that Vinobaji accepts only Shrama-Dan (donation in the form of labour done). He has been working on this principle for more than a year past and with a band of devoted workers has achieved remarkable results in the direction of self-sufficiency by self-labour, in his Paramdham Ashram at Paunar, about five miles away from the famous town of Wardha.

As regards the Communist menace in Telangana, its genesis has been given above in Vinobaji's own words. He bears no malice or ill-will towards the believers in the Communist doctrine. Speaking (May 23rd) at Chandupatta, he said :

> "I have heard that a sort of awakening does exist in this village, as the communists have put in some work here. I consider the communists as my brothers. I have got some friends among the communists and it is not a crime to be a Communist. To be a Communist is to serve the poor." (No. 373)

But Vinobaji has no doubt about it that the ways of Communists are not suited to the country. In the course of the same speech he observed :

> "But, however, the Communists have indulged in violence and murderous acts. This is absolutely wrong and, therefore, all their services go over-board. Sri D. Venkateshwara Rao, a prominent Communist, who belongs to this village is a good man. If he could see me, I would have been able to convince him that he had adopted a wrong path. I have met some Communists in the jails of Hyderabad and Nalgonda and I held talks with them. It is my earnest wish to convince the people by making them understand that the way of peace is the real way to serve the masses." At another place he stated, "I want to make it clear to the Communists that it is not necessary for them to murder the rich, for the era of Democracy has ushered in. As a matter of fact the rich can be killed without pistol; for every adult has now acquired the right to vote. The future Raj will be the Raj of the common man. I request the Communists to come out openly and work. If they do that I will give my co-operation. If the Communists abandon their path of violence, all good and moral people will co-operate with them. Mahatma Gandhi also used to say: 'I am a Communist but I will not accept the suicidal path of violence'." (No. 374)

Nay, Vinobaji goes even further. In appeal to the Communists, he said at Wyra :

> "I request them to abandon violence and if they do so, I will accompany them to every nook and corner of India in order to propagate Communism."

What else could a believer in Communism aspire for ?

Vinobaji's method is that of love. As he observed (May 26th) at Kodmur :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The change that you villagers are perceiving in the entire environment is due to the blessings of God. If everyone believes in God it is definite that He will show the way. God is present in everyone's heart. If we appeal to Him, much work can be done. I will accept lands which are donated willingly. I have not come here with sten gun or with any power which is vested in me by Government. The Communists are doing their work and the Government is also doing its work in its own way. I am also doing some work here in my own way which is essentially based on love."

One need not be sceptical about the efficacy of this method which Mahatma Gandhi taught us by his life as also by his death. Hatred and violence do not help us at all in the long run. Attacks by the Police in the day and counter-attacks by the Communists at night will lead either of them nowhere and, of course, the people will continue to suffer in the extreme. To quote from Vinobaji's speech (June 5th) at Gavicharla :

"Violent manifestations of Communist activities may disappear in Telangana for some time, due to police vigilance and the split among the Communist workers, but Communism as such may continue as a problem with us until we solve the problem of poverty through redistribution of lands and the abolition of the drink habit."

He believes in the innate goodness of man and the conversion of his heart by persuasion. When he met the Communists in the Warangal Jail they asked him whether he could solve the problem by reinstalling the rich in their villages. To this Vinobaji replied :

"I believe that hearts do change. The act of donation will lead to a duel between the good and the evil inherent in man and improve their outlook. The fusion of Indian metaphysics and Western sciences will necessarily be sweet. Non-violence alone is the remedy of all evils." (*Ibid*)

But to work this method is a very hard task indeed. A solid work of this nature could be undertaken only by the Sarvodaya Samaj. To quote again from his Gavicharla speech :

"The Congress cannot serve the people because the principle of service has become a joke for the Congress. The Socialists are a better lot but they are after power. In these circumstances, the Sarvodaya Samaj alone can deliver the goods."

During this tour Vinobaji did not lay stress only upon the distribution of land. He made a plea for self-help and village industries also. As he said in a speech (May 10th) at Nalgonda :

"There is a limit to the extent of the availability of land. Besides, the population is also growing day by day. We must, therefore, increase the number of wells by digging new ones."

(It may be added that Vinobaji has actually dug a well at Paunar, no labour from outside the Ashram being availed of). He went on to say :

"We must construct canals also. The digging of new wells and constructing of new canals will usher in a new era wherein a man will be contented with twenty acres of wet land, whereas now he is not contented even with a hundred acres of land."

He continued :

"Without cottage industries, mere possession of land by a *kisan* will not solve his problem. If the *kisans* take to producing finished goods from the raw material obtaining in the villages, then only they will save themselves." (No. 364)

He also asked the rich to open Nai Talim schools in the villages so that no children need be sent to the cities.

Vinobaji concluded his tour on June 6th when he reached Mancherial, a little town on the bank of the Godavari. During this historic tour of 51 days Vinobaji encamped at 51 villages. It may be added that it was in the early hours of the morning on the 8th of March, 1951, that Vinobaji left his Ashram on foot for Shivarampalli, five miles from the city of Hyderabad, where he reached after covering some 300 miles on 7th April and for four consecutive days from April 8th to 11th, the Sarvodaya Samaj met there for its annual session. In his Telangana tour Vinobaji passed through some 200 villages and received about 9,000 acres of land for distribution among the landless, for which purpose he has formed a committee of three persons. Vinobaji settled about 500 village disputes, almost ten every day, during this pilgrimage of peace, and addressed some two lakhs of people.

A word about his daily routine. Vinobaji got up early in the morning before four o'clock and after the nature calls and the morning prayer he started on his tour by five. Walking for ten or twelve miles until nine he would come to a village, have his bath, frugal meal (consisting of some milk, curd, bananas, and gur) and rest. For two hours from two in the afternoon he went through his correspondence. Interviews began at four and the evening prayer at five, which closed with a speech by Vinobaji. Again, he gave time to the visitors after the prayer and by nine o'clock he went to bed.

The tour has now come to a close. Vinobaji is completing the return journey on foot which will take another fortnight. All the while in Telangana his endeavours have been to "bring about," as he said in a mass meeting at Warangal on June 5th, "a silent ideological revolution in our social outlook by asking the rich to donate lands to the poor."

This is a very heartening, refreshing news the like of which the country has not heard ever since Gandhiji passed away. At this critical hour the people all over the country look forward to Vinobaji to help show them the path lit by the Sarvodaya light and save them from the impending ruin.

ENGLISH

CONVERSATIONS OF GANDHIJI: *By Chandrashanker Shukla. Vora and Co., Publishers Ltd., Bombay. 1949. Pp. viii + 134. Price Rs. 3.*

Shri Shukla, who was the Assistant Editor of the *Harijan* for several years, acted as Gandhiji's Secretary during 1933-34. This was the period when the Civil Disobedience Movement was restricted to Gandhiji alone, and when Gandhiji toured over India in order to combat the vile custom of untouchability.

There were numerous interviews in those days of which reports were duly prepared and subsequently corrected by Gandhiji himself. Shri Shukla has now presented them in the small book under review. He has put students of Congress history under a deep debt of gratitude by throwing an unexpected light on how Gandhiji used to work out his programmes through the national organization.

A DAY BOOK OF THOUGHTS FROM MAHATMA GANDHI: *Edited by K. T. Narasimha Ayar. Macmillan and Co., Limited. 1951. Pp. xxiv + 168 and eight plates. Price paper cover Rs. 2-4, cloth boards Rs. 4-8.*

The editor has brought together excerpts from Gandhiji's writings and arranged them in groups date by date. They are meant to be read, perhaps one group on each day of the year. He has therefore tried to present only such thoughts as has seemed to him to be of abiding interest.

At the end of each quotation we find the name of the book or journal from which it was taken, but no exact references are given. These look unnecessary. It would have been much better if the references had all been given in one place in the appendix. The plates which have been presented also seem to be unnecessary. One portrait of Gandhiji is all right; but why bring in others like the President of the Indian Republic or members of the Cabinet of Mission; for pictures of these impermanent actors on the Indian political chess-board seem incongruous beside a recital of Gandhiji's thoughts which have a permanent value for all times. The printing and get-up of the book do great credit to the publishers.

NIRMAL KUMAR BOSE

THE CULTURAL HISTORY OF THE HINDUS: *By Chandra Chakraberty. Published by Vijaya Krishna Brothers, Calcutta. Pp. 376. Price not mentioned.*

The author's aim is "to assess and evaluate our ancient civilisation and culture ranging from 2700 B.C. (Mohenjo Daro period) to 648 A.D. (Harshavardhana's time)" and in particular "to show dispassionately how India's culture is indebted to others and how her own natural genius has expressed itself." We can form an idea of the range and variety of topics dealt with by the author from his sectional headings, *viz.*, Arts, Philosophy, Morals, Law, Domestic Rites, Medicine, Astronomy, Religious Festivals, the Epics and the Puranas, the Economic Life, Indo-Iranian Contacts, Indo-Chinese Relations, Sex Life, and the Cultivated Plants. No one who reads these pages will grudge the author high praise for his enormous industry in tackling a vast mass of material bearing on his work. But his comparisons of ancient Indian and related civilisations have often to be accepted with a good deal of caution. His etymological derivations especially are not unoften fanciful, if not fantastic. With this qualifications, the book may be safely recommended as a useful reference work on the various aspects of ancient Indian culture and civilisation.

U. N. GHOSHAL

MAHABHARATA (Santiparvan): *Fascicules 18 and 19. Edited by Prof. S. K. Belvalkar. Published by the Bhandarkar Oriental Research Institute, Poona, 1946-47. Pp. vii + 683.*

In these two fascicules the General Editor completes his textual analysis of the famous *Raja-dharma* section which he began printing on the 15th August, 1948, the first anniversary of Indian Independence. We are glad to hope with him, that with the building up of their printing press in the Institute's own premises in Poona, the whole work of publishing the critical edition of the Mahabharata will be completed 'long before the Institute celebrates the completion, in 1968, of 50 years of its unflagging work in the cause of oriental research.'

The *Apaddharma* and the *Mokshodharma* sections will be issued in two separate volumes with special Editorial notes on each of them and the entire Santiparvan (in 4 vols.) will be published with critical notes and general Introduction summing up the results. (As it was done by Dr. Sukthankar in the case of the *Adiparvan*). The Editor confesses that 'old and independent MSS. are very rare'; and so it is difficult to preserve uniformity of textual tradition in regard to the different versions of the Santiparvan which was nicknamed the "Pseudo-epic," of which several versions were textually altered or conflated! So we are doubly grateful to Prof. Belvalkar for having given us a rational order of text reconstruction, even when we know that the Upa-parvans have 'often suffered much wayward handling in the course of transmission.' The bulk of the Mahabharata text came to be fixed in the Gupta period (C. 500 A.D.) after say a thousand years of transmission from the age of Panini (C. 500 B.C.). Then the diverse MSS. traditions developed for another one thousand years. No wonder then that the Great

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Epic shows today a bewildering variation of readings—both in the composition of the Parvans and of the Upa-parvans.

In the MSS. of the *Rajadharma* presented by Prof. Belvalkar we notice that they mostly come from the 17-18 centuries. But a very rare Maithili version of the entire Santiparvan—dated 1516 A.D.—has been traced in the Nepal Durbar Library (No. 738) which has previously furnished unexpectedly new materials to the Bhandarkar Institute. The Editor has used, among others, a rare Bengali MS. (dated 1687) now in the National Library, Paris, which contains the Rajadharma, the Apaddharma and the Mokshadharma sections. These sub-parvans are self-contained units appealing to distinct classes of readers; and therefore critical notes will be published separately for each separate section. Purely exegetical notes apart, the learned editor has given references to the *Sutra, Smriti* and *Puranic* literature throwing new light on the Rajadharma text which can and should be studied with special reference to the Arthasastra, Manu and allied group of Sanskrit literature on the political, economic and administrative sciences of ancient India. This is a much neglected branch of Hindu sciences partly illumined by the *Arthasastra* of Kautilya; and now Prof. Belvalkar has furnished the first critically edited text of the *Raja-dharma* for which future researchers will be ever grateful to him. The Bhandarkar Institute is doing its arduous task for the whole nation and Free India should come forward to help the Editor and his learned colleagues to complete their "Mahabharata-yajna," if possible, by 1958 marking the centenary of India's first fight for Independence.

KALIDAS NAG

POONA RESIDENCY CORRESPONDENCE SERIES. (Government Book Depot, Bombay):

Vol. X: *The Treaty of Bassein and the Anglo-Maratha War in the Deccan, 1802-1804. Edited by Raghuvir Sinh. Price Rs. 15.*

Vol. XII: *Poona Affairs, Elphinstone's Embassy, 1811-1815. Edited by G. S. Sardesai. Price Rs. 15.*

Vol. XIV: *Daulat Rao Sindhia and North Indian Affairs, 1810-1818. Edited by Jadunath Sarkar. Price Rs. 15.*

These volumes bring to conclusion the famous series of English Records of Maratha History, undertaken by the Bombay Government, with the help of the most eminent historians available in India.

These contemporary reports, most of them unpublished till now, are the basic materials on which the true history of the Deccan and also of North India west of Oudh, during the first eighteen years of the 19th century will have to be constructed by the future historian. Their value can never be overestimated. The arrangement, summary of contents, and indexing of the volumes of this series are very helpful to the student. The records light up a rather obscure period of Indian history. Going through these papers, one realises that we had so long been content with the husk only; here is the kernel.

Vol. X gives the full and correct text of five important treaties not easily available elsewhere, and fully details the Duke of Wellington's diplomatic palavers with Vittal Mahadev whom he declared to be "a cleverer man than Talleyrand"! Vol. XII shows how Fate drove the last Peshwa Baji Rao II relentlessly on to the murder of Gangadhar Shastri and ensured his downfall. Vol. XIV has been called by its editor as "The Agony of Rajputana and Malwa", it gives the fullest information in print about the Pindharis, Amir Khan, Jaswant Rao Holkar, and the Rajput States in their worst plight. Tod's reports on the Pindharis, though very long, have been here printed in full. This volume is invaluable.

BRAJENDRA NATH BANERJI

THE AGRARIAN PROBLEMS OF MADRAS PROVINCE: *By V. V. Sayana, M.A., Ph.D. Published by the Business Week Press, 178 Lloyd Road, Madras 14.*

The prosperity of agriculture is not only essential to the success and prosperity of all economic activities in other sources of life as industry, trade and commerce, but to an agricultural country like India it is also to a large extent the economic basis of social progress and political stability. Agrarian problems and policies have attracted special attention of the Governments and the peoples since the Great Depression. But since after the second World War, agrarian problems have assumed much greater importance than ever before and in India, it has occupied the first place from the point of urgency. But unfortunately for us, a continuous and well-planned research activity to carry on systematic and scientific studies of the factual situation in our provinces which is so very essential for the preparation of a rational plan of reconstruction, is extremely lacking. In this book, Dr. Sayana has given us a very rich study on the agrarian situation of Madras which meets the standard of the Research Worker as well as the needs of the enlightened public. The work is the result of a study of published material and accessible records, official and non-official, available on the subject supported by direct field investigations of villages selected on a multipurpose random sampling basis. The book is a very valuable addition to our present meagre stock of knowledge of the agricultural situation in India. We wish there were more Research workers to undertake similar studies in other provinces.

D. BURMAN

THE PERMANENT SETTLEMENT IN BENGAL AND ITS RESULTS: *By S. Gopal. Allen and Unwin Ltd., London. Pp. 52. Price 4s. 6d.*

Many books have been written on the Permanent Settlement of the Land Revenue in Bengal and its good and bad effects on the people of the Province. Mr. Gopal hails from the Madras Province and is comparatively 'an outsider.' He gives a scholarly account of the establishment of permanent settlement in Bengal, and the way in which it has worked. The writer's being an outsider, while it has added value to the study generally, has sometimes landed him in errors. The book, which secured the Curzon Memorial Prize at Oxford, is of particular value now when the State is contemplating abolition of zamindaries.

HOW TO FIND OUT ABOUT THE UNITED NATIONS. *Pp. 48.*

UNESCO PUBLICATIONS: *Pp. 84.*

The United Nations Organisation with all its faults is still the only World Organisation where the world problems are discussed from the international angle of vision. Its various activities are little reported in the daily press; and the intelligent querist finds it difficult to pursue its various activities and to know authoritatively about it. These two pamphlets will be of great use to students of international politics and intelligent readers.

THE QUEST OF LEADERSHIP: *By Donald Portway. Thacker & Co. Ltd., Bombay. 1945. Price Rs. 4-14.*

The author is a man of varied experience. He is an Engineer, President and Senior Tutor of St. Catharine's College, Cambridge, served in the Army for a long time and had been a member of the Army Selection Directorates of Britain and India. He stayed in India for a year and came into close contact with Armymen. Having keen interest in men and their affairs he made his own observations about many aspects of Indian life and has expressed his views in clear and unambiguous language.

Leaders are necessary in every field of human activity. War, politics, business, industry and peace too depend a good deal on the leader and leading man that each has in its own sphere. Leaders in different fields need not have the same psychological qualities. Leadership depends as much on the personal traits of the leaders as on the environmental circumstances. Modern psychology has been paying very great attention to this question of leadership traits and has already contributed materials of considerable significance. The author has presented in this little volume much of this material in plain non-technical language. Laymen as also students of psychology will certainly be benefited by going through this book.

Training and sound education are necessary for all would-be leaders, even for those who are 'born' leaders. This is a point which has been rightly emphasised by the author who has in this connexion drawn pointed attention to the faultly educational system that prevails in India. Real civilian leadership cannot be expected in a country where passing the University examination by fair means or foul is accepted as the ideal of education. The author has made some very pertinent though unsavoury remarks about our methods and ideals of education.

"It is regrettably true that it is impossible to imagine the emergence of dynamic leaders from India's high schools and India's Universities in their present sitting" (p. 101), writes the author and he feels that it is in her military training centre that India is training her future leaders because there "moral and physical well-being is practised instead of mere book-learning."

After all criticisms are not new and have been repeated many times by our own countrymen. So it is not difficult to agree with him. India has travelled a long distance since 1945 when the book was published. Let us hope that she will ere long be able herself to find out the types of leaders that she needs and to devise adequate methods for their training and education.

S. C. MITRA

ROBERT KNOX IN THE KANDYAN KINGDOM (Illustrated): *Selected and edited by Prof. E. F. C. Ludowyk of the University of Ceylon. Published by the Oxford University Press, London. Price Rs. 6.*

The book under review is an abridgment of *An Historical Relation of Ceylon* by Robert Knox, a work which "delighted and edified his (the author's) age."

Son of an English ship-captain, Robert Knox along with his father and several others was detained in 1660 under orders of the king of Ceylon. The elder Knox died shortly afterwards. The younger however survived and managed to give the slip to his captors in 1680.

The present volume describes Knox's life and experience during his captivity and gives an account at the same time of the people, their manners and customs, their laws and language and also the climate, the flora and fauna and the administration of contemporary Ceylon. Editorial notes at places add to the value of the book. The reading public in general and students of history in particular will find the book useful, informative and interesting.

The printing and get-up of the book are excellent. But with a reading matter of 175 pages of text and 18 pages of introduction it should have been more moderately priced.

SUDHANSU BIMAL MOOKHERJI

REPORT OF THE BOTANICAL SURVEY OF INDIA (for 1944-45, and 1945-46): *Calcutta. 1948.*

Due to war emergency floristic study in the fields was kept in abeyance but later on 3,000,000 herbarium sheets were rearranged in the herbarium. Re-identification of all the herbarium sheets of *Grewia* in the light of Burrett's recent and excellent monograph of the family *Tiliaceae*, published in a German journal and not being easily available during the war, was done. This has resulted in adding three new species and several new combinations. Sir David Prain's *Bengal Plants*, Vols. I and II, are out of print. Students as well as plant-lovers suffer very much for their want as they are not always available for consultation. Persons interested in Botany and the Botanical Society of Bengal incessantly demanded at least their reprint, pending the long-sought-for publication, *New Flora of Bengal* by the Botanical Survey of India. But the regrettable fact is that neither the Survey has yet published the said book nor does it deem necessary for reprinting Prain's *Bengal Plants*. When will its new book, *New Flora of Bengal*, be completed and published? Would it not be possible for the Government of India to reprint the *Bengal Plants* for the sake of convenience and research as a stop-gap arrangement? Surely this method of procrastination in researches is very much undesirable and the learned public should make their protests more thorough and stronger. It is also regrettable that only 89 new specimens were incorporated in the Royal Botanic Gardens' Herbarium in 1944-45. We should record our deep sorrow at the sad death of Lt.-Col. A. T. Gage, who contributed much to Indian Botany by his researches and was also concerned with the opening up of the cinchona plantations in Burma and the scheme for the import of the Java Quinine bark. Randhawa discovered a new variety of an alga, *Botrydium granulatum* (1) Grev. (var. *polyrhiza* nov. var.) and S. N. Banerjee established a new species of fungus (*Mitrula Agharkarii Banerjee*) but both of them violated international rules of botanical nomenclature in not including Latin diagnoses and thus losing their new status. A new fossil Gymnosperm (*Dadoxylon resinosum* Shukla) from Chhindwara district (C.P.) was described by Shukla. Prof. Sahni and Surange published a note on *Cyclanthodendron*, a new silcified member of the *Cyclanthaceae* from the tertiary of the Deccan. The discovery of this fossil provides an interesting link between the early tertiary flora of Deccan and the modern flora of South America. A new genus of *Rubaceae* and other new specimens were also discovered. Thanks to Prof. E. D. Merrill, Director, Arnold Arboretum, Harvard University, U. S. A., a cinematographic and botanical expedition to the snowy wilds of Northern Sikkim was undertaken. A huge collection of living specimens for cultivation in the Lloyd Botanic Gardens, Darjeeling and several thousands of dry Himalayan plants for the herbarium was made later on.

In the Industrial Section, Indian Museum, the work also suffered but the department supplied neces-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

sary information relating to Pharmacopoeial drugs, insecticides, rubber-yielding plants, plants used in perfumery trade, etc., to the Government departments, the commercial public, the students, etc. Besides, the Department has discovered *Lobelia nicotianaefolia* Heyne, an Indian plant, which contains the alkaloid 3 times richer in active principles than the European species. In case of *Ipecac*, this section found that the crop should be harvested at the end of the 3rd year to get the maximum alkaloid. It is also recorded from several Indian species of *Aconitum* that the different species contain different proportions of alkaloid content. The most valuable report of Prof. A.V.Hill, F.R.S. on the "Scientific Research in India" has been published. He rightly says with regard to this survey thus: "The great natural resources of India are still inadequately known. Consequently the Geological Survey must be expanded, the Botanical survey restored and the Zoological survey extended." Will the National Government of India kindly look into this report carefully and try to tap the floristic wealth of the country by extending researches in all important branches of Botany? Surely the money spent will not be wasted.

R. M. DATTA

BENGALI

KAUTILIYA ARTHASASTRA (Part II): *Bengali translation by Dr. Radhagovinda Basak. Published by General Printers and Publishers Ltd., Calcutta 1950. Pp. 888.*

The present work happily brings to a conclusion an outstanding work of recent Bengali literature. This is the first complete Bengali translation of that masterpiece of the Ancient Indian Art of Government, the *Arthasastra* of Kautilya. In his short Preface, the author modestly craves the indulgence of his readers for probable deficiencies in his translation, but a perusal of his work has convinced us that it worthily maintains the high standard of the preceding part. It is, as we observed in the course of our review of the first part (*The Modern Review*, January 1951), a marvel of lucidity combined with scholarly accuracy of a high order. We are glad to find that in accordance with a suggestion made by us last time, the author has added in an Appendix a list of rare words (with their explanations) in the whole work. One could have wished that the list had been fuller by the inclusion of such items as *bali*, *udakabhaga*, and *vaidharana*, and more exact in rendering the meanings of words like *sila*, *samgha* and *hiranya*. But these are minor blemishes in a fine work on the completion of which the author deserves our warmest congratulations. We have no doubt that it will receive a most cordial welcome from all lovers of our ancient culture.

U. N. GHOSAL

HINDI

MARATHI SAHITYA KA ITIHASA : *By Narayan Gandev Godbole, M.A. Publishers: Gayaprasad and Sons, Agra, U.P. Price Rs. 3.*

India is a land of many languages which have developed rich and interesting literatures during the last one thousand years or so. These literatures in their early stages drew their inspiration principally from Sanskrit and latterly from English since this country came into contact with England about two hundred years back. Hence generally they followed similar lines of development, though of course there were occasional and none the less interesting variations. Besides containing much valuable information for the student of literature and history they attract the attention of the general reader to the amazing unity of culture underlying the apparent diversities in different parts of this vast land. Their contents therefore require to be popularised throughout the length and breadth of the country. It is, however, a matter of regret that even accounts of these literatures are little-known outside the places of their origin. Under these circumstances Messrs. Gayaprasad and Sons deserve to be congratulated for making accessible to the Hindi-reading public short popular accounts of two important literatures of India, *viz.*, Urdu and Marathi. We hope the enterprising publishers will not stop with what they have done but will complete the series with accounts of all the important literatures. We wish them every success and god-speed in their undertaking.

The work under review has a special value in that it has been compiled by a scholar who is himself a Marathi possessing intimate knowledge of the subject. We would be eagerly waiting for similar publications in other languages too.

CHINTAHARAN CHAKRAVARTI

GUJARATI

KALAKARNI SANSKAR YATRA : *By Ravishankar Raval. Kumar Karyyalay Ltd., Ahmedabad. Pp. 340. Price Rs. 4-12.*

Ravishankar Raval, the distinguished artist of Gujarat, undertook a pilgrimage—an artist's pilgrimage to Japan, North India and Kulu, an account of which forms the content of the volume under notice. The descriptions are colourful, and they are accompanied or set off by sketches and photographs which give a fillip to the reader's imagination. The sections treating of the artist's visit to Japan, North India and Kulu are kept separate, and the atmosphere in each is distinct. Ravalji has enough of the spirit of reverence dwelling in him to make his account of the men and manners that he met something more than a mere human document. Mori San of Kisto and the various organisations of teaching, encouraging and conserving art products received his attention; Nandalal Babu and Sri Abanindranath Tagore had naturally an attraction for him, and he was closely observing what Sri O. C. Ganguli, Jamini Roy and Ramendra Chakravarti were doing in matters of art, while his enthusiasm for the Roerichs and for Prof. and Mrs. Cousins has been very well expressed.

A goodly portion of the second section is devoted to Bolepur and Calcutta, roughly speaking, more than one-fourth of the book.

How the World War II has changed some of the valuations of the artist! It is interesting to find that while Ravalji was full of admiration for Jamini Roy and his bold stand for the living village art, he was doubtful if Jamini Babu would get his due appreciation in his own life-time in spite of his 'immortal' courage and insight and sacrifice. Happily, this wished-for denouement is now an accomplished fact.

The book retains its interest from start to finish; it is not a travel diary, but an understanding appreciation of art in the countries visited—such as may open the eyes of the reader to the realities round about him.

Miracle Man with Unrivalled Power

Everybody in this country is aware of the fact that India's unrivalled and greatest palmist, Tantric, Yogi vastly learned in the Astrology and Astronomy of the East and the West, gifted with super-natural power of predictions, permanent President of the Internationally famed Baranashi Pandit Mahasabha of Benares and All-India Astrological and Astronomical Society of Calcutta.

RAJ-JYOTISHI

Jyotishsamrat Pandit Sri Ramesh Chandra Bhattacharyya, Jyotisharnab, Samudrikratna, Jyotish-shiromani, Raj Jyotishi, M.R.A.S. (Lond.), has won unique fame not only in India but throughout the world (*e.g.*, in England, America, Africa, China, Japan, Malaya, Singapore etc.) and many notable persons from every nook and corner of the world have sent unsolicited testimonials acknowledging his mighty and supernatural powers.

This powerfully gifted great man can tell at a glance all about one's past, present and future, and with the help of Yogic and Tantric powers can heal diseases which are the despair of Doctors and Kavirajas, can help people to win difficult law-suits, and ensure safety from dangers, prevent childlessness and free people of family unhappiness. His three important predictions (prediction about the British victory on the very day—2nd September, 1939—of the declaration of last World War, prediction of the achievement of independence by the Interim Govt. with Pandit Jawaharlal as the Premier made on the 3rd Sept., 1946, and prediction regarding the future of India and Pakistan which had been sent to the Prime Minister of India on the 11th August, 1947 and subsequently published in various Newspapers) have proved correct to the detail, amazed people the world over and have won for him unstinted praise and gratitude from all quarters including His Majesty George the Sixth, the Governor of Bengal and eminent leaders of India. He is the only astrologer in India who was honoured with the title of "Jyotish-Siromani" in 1938 and "Jyotishsamrat"—Emperor among astrologers and astronomers—in 1947 by the Bharatiya Pandit Mahamandal of Calcutta and Baranashi Pandit Mahasabha of Benares. —a signal honour that has not been endowed on any astrologer in India so far.

Panditji is now the Consulting Astrologer to the Eighteen Ruling Princes in India.

Persons who have lost all hopes are strongly advised to test the powers of the Panditji.

A FEW OPINIONS AMONGST THOUSANDS.

His Highness The Maharaja of Athgarh says :—"I have been astonished at the superhuman power of Panditji." **Her Highness The Dowager 6th Maharani Saheba of Tripura State says** :—"He is no doubt a great personage with miraculous power." **The Hon'ble Chief Justice of Calcutta High Court Sir Manmatha Nath Mukherji, Kt., says** :—"The wonderful power of calculation and talent of Sriman Ramesh Chandra is the only possible outcome of a great father to a like son." **The Hon'ble Maharaja of Santosh & Ex-President of the Bengal Legislative Council, Sir Manmatha Nath Roy Choudhury, Kt., says**:—On seeing my son, his prophecy about my future is true to words." **The Honourable Chief Justice Mr. B. K. Ray of Orissa High Court says** :—"He is really a great personage with super-natural power." **The Hon'ble Minister, Govt. of Bengal, Raja Prasanna Deb Raikot, says** :—"The wonderful power of calculation and Tantrik activities have struck me with greatest astonishment." **The Hon'ble Justice Mr. S. M. Das, of Keonjhar State High Court, says** :—"Panditji has bestowed the life of my almost dead son." **Mr. J. A. Lawrence, Osaka, Japan, writes** :—"I was getting good results from your Kavacha and all my family were passing a different life since I started wearing." **Mr. Andro Tempe, 2723, Popular Ave., Chicago, Illinois, U. S. America** :—"I have purchased from you several Kavachas on two or three different occasions. They all proved satisfactory." **Mr. K. Ruchpaul, Shanghai, China** :—"Everything you foretold in writing is taking place with surprising exactness." **Mr. Issac Mumi Etia, Govt. Clerk & Interpreter in Deschang, West Africa** :—"I had orderd some Talismans from you that had rendered me wonderful service." **Mr. B. J. Fernando, Proctor, S. C., & Notary Public, Colombo, Ceylon** :—"I got marvellous effects from your Kavachas on several occasions", etc., etc. and many others.

WONDERFUL TALISMANS (Guaranteed). *In case of failure, Money refunded.*

DHANADA KAVACHA OR THE ROTHSCHILD TALISMAN.—Its wearer earns immense wealth with little struggling and it fulfills the desires without fail. Lakshmi resides at his house and gives him son, fame, vast wealth, long life, all-round prosperity in life. **Price Rs. 7-10.** Special for speedy action **Rs. 29-11.** Super powerful with extraordinary effects **Rs. 129-11.**

BAGALAMUKHI KAVACHA.—To overcome enemies it is unique. The wearer gets promotion in services and succeeds in pleasing higher officials. In winning in civil or criminal suits it is unparalleled. This is also a preventive to any accident or danger. **Price Rs. 9-2.** Special for speedy action **Rs. 34-2.** **(The Bhowal Kumar, winner of the Sensational Bhowal Case, wore this Kavacha).** Super powerful **Rs. 184-4.**

SARASWATI KAVACHA.—For success in examination and sharp memory. **Rs. 9-9,** Special **Rs. 38-9.**

MOHINI KAVACHA.—Enables arch foes to become friends and friends more friendly. **Rs. 11-8.** Special **Rs. 34-2.** Super powerful **Rs. 387-14.**

INDIAN PERIODICALS

Naming the Country

V. S. Agrawala observes in *The Aryan Path*:

It is of interest and value to know the history and traditions of the different names of our country. There are two distinct traditions behind these names, one of them foreign and the other indigenous. All the foreign traditions are rooted in the ancient word *Sindhu*, as exemplified in *Sindhu* (Sanskrit), *Hindu* (Persian), *Indus* (Greek), *In-tu* (Chinese).

In the *Rig-veda*, the earliest Indian document, at least 3,500 years old, *Sindhu* is the word for a river, but more specifically for that particular river which encircles the country to a very considerable length on its north-west. Besides being a river-name, Sindhu was also the name given to the region lying to the east of the river and coinciding with the extensive tract of land now known as the Sind-Sagar Doab. The name Sind as applied to the present province is not sanctioned by antiquity when Sind was called Sauvira, from which the Biblical Ophir was derived.

The confusion of names begins from the time of the Arab invasion of Sind. But Sindhu was a famous geographical designation by at least 1000 B.C.; by it North-west India was known to her neighbours.

The modern word "Hindu" dominating the word "Hindustan," "Land of the Hindus", is directly descended from the ancient name Sindhu.

It is a common mistake to think that the derivation has anything to do with the Muslims. There is evidence in the inscriptions of Darius I, the great Achaemenian Emperor of Iran in the last quarter of the 6th century B.C. that the word "Hindu" was known to the Iranians at that time. In the Charter of the Palace Foundation from Susa, there is mention of Indian ivory being imported for the royal palace from Hindu or India. The Greeks, coming here under Alexander in the 4th century B.C., followed the same tradition and, by omitting the aspirate sound called the river "Indus" and the country "India." The Chinese followed the Greeks and named it In-tu.

At the beginning of the 3rd century B.C. the Sassanians were masters of the Persian Empire and their language was Pahlavi, from which modern Persian is derived. In Pahlavi also the country was known as Hindu and from there the word passed into Arabic and into the modern Persian of the time of Firdausi and Alberuni. The Muslims naturally applied, when they came here, the name "Hind" to this country, following an old tradition. The European nations borrowed the name "India" from their classical predecessors.

Now to the indigenous tradition of the country's name, which is threefold. In the Buddhist literature it was called *Jambudvipa*, but this name did not obtain lasting usage. The second name was given by the Puranas: *Kumaridvipa*, which reflects the colonization of the whole country from the Himalayas to Kumari, *i.e.*, Cape Comorin, and also its unification under a single geographical system. But this name also did not find much favour and was perhaps ousted early by the much more poetic, facile and widely accepted designation *Bharata-varsha, i.e.*, Bharata, the land served by a single system of rainfall or monsoon winds (*varsha*).

Bharata as the name of the country is derived from the basic word *Bharata*, the former having a long and the latter a short initial syllable. Now it is one of the most interesting facts of ancient Sanskrit literature, though one little known, that there are three independent etymologies for Bharata as the name of the country. These three derivations are based upon the conception of (1) the state, (2) the people, and (3) their culture.

According to the first etymology the country was called Bharata because it was brought under a unified political system by King Bharata, son of Dushyanta and Sakuntala of classic fame. Bharata is a great name in the list of old *chakravartins* recorded in the Puranas. A *chakravarti* ruler was one who had established his authority over a *chakra, i.e.*, a realm brought under a single sovereignty. Bharata was such a sovereign ruler and the country unified under him derived its name from him. In the *Mahabharata* it is explicity stated that the conquering chariot wheels of Bharata measured the earth up to the encircling oceans, together with its deep forests and high mountains.

By the time Vyasa composed his great epic, the name Bharata had become established as the designation of the whole country.

The second etymology of Bharata is derived from the name of the people. According to Vedic tradition the Bharatas were a very old Aryan tribe or, rather, the leading and most important *jana* which, after crossing the Beas finally settled in the region of Kurukshetra, including the area around Delhi. This Bharata tribe became very powerful and widely distributed and its descendants found themselves the undisputed masters of Northern India. With the expansion of the Bharata tribe, the name *Bharati Praja, i.e.*, the people descended from that tribe, became a wider appellation and in course of time was applied to all the people settled in this land. There is evidence in the epic that the name had been generally so accepted, at least before the *Mahabharata* took its final form.

The third etymology of the name Bharata goes back to old Vedic literature. The authority of the latter on this particular point is repeated with notable emphasis by Vyasa in the *Mahabharata*. In the *Satapatha Brahmana* Bharata is the name of fire, which was so called because it was the mainstay of the whole community (*sarva-praja*). Culture was symbolized as *Agni Bharata*. Like a fountain it over-flowed into myriad streams, moving along the courses of rivers and valleys. It created on its march new fire-altars, *i.e.*, centres of civilization, until at last the Pilgrims' Progress covered the entire expanse of the country.—*Mahabharata, Vana parva*, 212.20.

This sublime conception of the unity of the country being brought about through the torch of culture aglow throughout the land, is of a beauty and sublimity unique in the whole range of Sanskrit literature. It would be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

hard to find another passage which, besides being as true to its ancient pattern is of greater significance to our modern life. In fact, the cultural unity thus envisaged at the very outset of Indian thought, became the lasting charter of that intellectual and religious synthesis which has distinguished the history of this nation. Gradually the stream of culture began to pour itself into the life-cup of the differing peoples settled on the land, and when the vase was full it over-flowed, saturating the country and welding the many elements into one harmonious whole.

Bharata Agni, as the great symbol of light implanted in the hearts of men, dominated this vast cultural drama and finally gave its own name to the country. This was the basis of the name Bharata, a name applied to the country of all those who accepted that cultural synthesis as the culmination of their own past history. Thus there are three mutually amicable derivations underlying the name Bharata, all rooted in common literary and religious traditions and accepted in one or another version by millions of people for more than 30 centuries. The name Bharat is verily sanctified by antiquity and has been glorified by the ancient seers and poets of this country.

Andre Gide's Place in Our Memories

Jacques Madaule writes in *Careers and Courses* :

When a great writer dies, it seems to us as though, having left the earth on which we all tread, he had gone to fill forever that niche in the Pantheon of Literature where posterity will always be able to find him. I know that for an Andre Gide the prospect of such stillness is rather cruel. And furthermore, his place has not yet been clearly decided. It will take an outline and precision only with the lapse of time and the passing of the generations. Only the greatest remain alive and continue to change their places in the eyes of the succeeding generations. That is in itself the mark of their greatness.

Is Gide, the elusive, easier for us to seize and to define now that his heart is still and he rests in the damp clay of Cuverville? We must, I think, resist the temptation to accept such a belief. He himself has enjoined us, at least in his latest writings, to trace a final view of him, a conception made up of the negation of what his fervour had long made him envisage. But why should we consider the old man worthier of acceptance than the young man or the man in the prime of Life? If we keep only to the constants, we shall, it seems to me, find two: one is a certain perfection of style; the other is the faithful and passionate pursuit of a sort of perfection of life.

But a writer does not survive merely by reason of his style, and there perhaps lies Gide's secret weakness and at the same time the secret of his greatness. That he has contributed something to French prose, no one will in good faith, venture to deny. Of course, the lesson of symbolism was not lost upon him, and to the very end rhythms are to be found in his language that recall the end of the last century. But he never fell into the exaggerations and mannerisms of that period and quite early can be traced in his works, forms that reveal him as a true heir to eternal classicism, that is, a balanced alternation between equilibrium and movement. He reveals in particular a strict economy in his effects, an extreme restraint in his very brilliance to render his essentially inward intensity. It is for this quality, it must be admitted, that Frenchmen will never wish to deny Andre Gide; because of this quality, he will live as long as the French language which he played, as on a piano, to perfection. We find this perfection also in the composition of his "tales" such as *La Immoraliste* or *La Porte etroite* or *Le Retour de l'Enfant Prodigue*. Undoubtedly he was less happy with the novel proper, and if he took more trouble with *Les Fauk-monnayeurs* than with any other of his books, it is nevertheless not the most successful.

But Gide was above all a moralist. This was probably due to his Protestant upbringing from which he found it so difficult to free himself. Yet here too he belongs to a very French line that can be traced, through Port-Royal back to Montaigne. It is of little moment whether Gide sojourned long or not at Port-Royal. He belonged to that race that is at the same time fervent and somewhat austere, that cannot enjoy its pleasures without a certain asceticism. This statement may, at first view, appear extraordinary, since it seems that Gide's purpose was to throw all trammels away to attain the perfect sincerity of naked desire. But he never lost sight of the necessity for the heroic and he knew how to portray it in unforgetable pages, like those, for instasce, that he devoted to Saint-Exupery.

Above all, Gide had a horror of hypocrisy and conformity, the one implying the other, and that made him exalt in all things the virtue of sincerity, even when his own appeared at times to be tinged with affectation and pretentiousness.

It is the flexibility and freedom of this movement that account for Gide's influence over youth. He has been accused of corrupting youth, but it must be recalled that the same accusation had been levelled at Socrates. I do not deny that Gide's example may have been dangerous. The example of the great is always dangerous for the mediocre. But it is rather the mediocre who condemn themselves and not the examples by which they claim to have been inspired. I do not think Gide loved evil for evil's sake, even if at times he affected such a pose. He was too much of a humanitarian to be really wicked. All he had was a horror of smug virtue and if he happened, in a now famous book, to have sung the praises of vice, it was to prove that this particular vice was in actual fact no vice. The demonstration of this can be appreciated in various ways, it nevertheless remains true to say that vice and perversion were not enjoined for their own sakes.

For a long time also Gide revealed a horror of dogmatism; and then we saw him with difficulty give himself up to the narrowest and most rigid of dogmatisms, namely that of reason. He gives up Montaigne's heritage to accept Voltaire's. The reason is that he was not able to face the challenge of remaining absolutely free to the end, and attacked by the sclerosis of old age, he was

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

unable to see that, dogmatism for dogmatism, that of reason is the straitest and narrowest. But, I repeat, there is no need to attach more importance to his latest works than to his earliest, and I do not think that *Feuillets d' automne* will ever supersede *Les Nourritures terrestres*.

Today, we must let those who were his friends weep and those who were his enemies wrap themselves in peevish silence and reproach Gide for not having fulfilled their hopes, as though a great writer did not first and foremost belong to himself. Man belongs to God and His judgement is kept from us. The author is left to us and we should be singularly ungrateful if, standing on the edge of his newly sealed tomb, we did not acknowledge the great debt we all owe him. In a way, he gave his life up to us, for most of his writings were of an autobiographical character. He knew that he risked the severest criticism and he suffered from it more than can be expressed as is proved, for example, by the sorrow he experienced in the face of the book by his friend Charles Du Bos, who had only spoken of him with utter sincerity.

But over and above all this, there remains the fact that Gide introduced into the French world of letters with a wisdom and restraint that do not preclude audacity, certain foreign values that enriched French letters prodigiously. Even if his book on Dostoievsky has since been superseded, there remains the fact that it was Gide who helped Frenchmen to understand the great Russian novelist, and certain aspects of Nietzsche would not be so familiar to them if, the latter had not provided Gide with some of the themes of *L'Immoraliste*. He even drove self-abnegation so far on several occasions as to force himself to do translations, and some of his most admirable works are actually these translations.

Singularly enough, at the end of a long life, Gide has only just entered the portals of Death and yet he does not seem to me to belong particularly to our times. I can see him continuing the line of Montaigne and Voltaire, enriching a tradition of prose and morals, dating several hundreds of years back. In time he will be classed altogether with his great forbears, one of whom at least lived, as did Gide, through one of the most terrible crises of his country without its ever turning him from the enquiry which he had set himself into Man's nature and his own. It is the asceticism rather than the hedonism of his work that will strike the reader and this work, led, through a thousand by-ways, has yet never changed its course. Perhaps Gide's final lesson is acceptance. It is said that he accepted death as he had accepted life. If you ponder on it, you will see that acceptance implies no less constraint than rejection. But was it necessary in order to accept oneself, to end up by denying God?

The Resurrection of Somnath

K. Mukherjee writes in *The Indian Review*:

Somnath has always remained and will yet remain one of the most important land-marks in India's history.

The resurrection of Somnath is like the resurrection of India—showing that through all the vicissitudes in the field of politics, and despite the degradation of foreign domination continuing through several centuries, the heart of India has remained unconquered and unconquerable,—deeply and fundamentally religious with a spirit of toleration that will ever remain an ideal for all other countries, unruffled and serene like Mt. Everest towering over all the thousands of peaks in the Himalayan range.

SOMNATH THROUGH THE AGES

Somnath city with its seven temples has been like Delhi, the capital of seven kingdoms since the days of the Mahabharat.

Somnath, the Lord of the Moon, takes us even to prehistoric and legendary times. The legend says, that Daksha Prajapati (the creator) married all his twenty-seven daugthers to Som, the Moon God who loved best Rohini, the loveliest. This gave rise to jealousy in the minds of the other sisters who implored their father to take Som to task. The father in a rage punished Som who began to wane. All his penances were of no avail. The gods in a body persuaded Daksha to take pity on him. He agreed on condition that Som from that time loved all his wives equally well, and worshipped Siva after a purifying bath at Prabhasa. Som had to agree and according to his father-in-law's wishes he waxed every day for half the month to wane every day for the next half. It is believed that he bathes in the sea off the coast of Prabhasa every other day of the new moon to gain fresh beauty and lustre. Since then Prabhasa has remained a sacred spot; and Siva there has been known as Somnath or the Lord of the Moon.

Prabhasa, where Lord Krishna also built a temple of silver and cast off his mortal coil only two furlongs away from the temple of Somnath, has thus remained a place of pilgrimage even from before the time of the Buddha. But the first temple of the deity was built probably at the beginning of the Christian era. It sank into comparative oblivion during the days of the Guptas (320-500 A.D.) who were Vaishnavas: though the Gharshada and Vakatok kings of the west were Shaivites. Prabhasa, however, became a very prominent international port and remained so during the prime of Ballabi, the capital of Saurashtra. Its fall came with the fall of the capital which about 755 A.D. was ruined by the Arab hordes of the Governor of Sind.

Somnath rose again like the Phoenix from its ashes, when Nagabhatta II drove back the Arab hordes and visited the shrine. It was when the Third Temple of red stone was built—one of the largest of its kind in all India. Somnath now enjoyed the greatest glory from 880 to 950 A.D. kings and peasants—the rich and the poor—all flocked to pay homage to the deity from all over India; and showered presents which gave the temple its fabulous wealth.

But misfortune came a little later for the tale of its riches reached the ears of that soldier of fortune Sultan Mahmud of Ghazni. In 1024 or 1025 A.D. he directed his last expedition against the temple of Somnath, with a big and well-equipped army for he had heard that it was well-fortified. The King of Guzerat with the neighbouring chiefs came forward to defend the shrine and kept back the invader for eight days. On the last day, in a most bloody battle, 50,000 of the defenders sacrificed their lives in a vain attempt to save the shrine. The Sultan entered the fort and then the temple, and when about to get into the 'sanctum sanctorum,' was implored

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

by the priests to save the image: but the image-breaker broke it with his own hands and burnt the temple whose burnt-up pillars can be seen to this day. Mahmud left the place within a month as he feared to face the great army with which Raja Param Deb was marching towards Somnath. The treasures which he secured at the place 'were incalculable and are said to have exceeded all his former captures.'

But after the retreat of Mahmud, the Star of Somnath was again in the ascendant. A succession of strong and enlightened Kings raised Guzerat to the front rank among Indian States: and the temple and the town were both rebuilt and entered into an era of great prosperity. The great emperor Kumarapala built a new temple on its ruins—larger than any on record,—with a court room, a reservoir, a pavilion in front of the deity, and a seat in the shape of a leaping frog for the deity itself. This was the fifth temple of Somnath which stood safe for at least one hundred years. With the decline of the fortunes of Guzerat, at the end of the 13th century—the temple was again attacked, this time by Alauddin Khiliji who defeated its gallant Rajput defenders, and broke the idol.

Better days came for Somnath only after Akbar came to the throne: and thence-forward the shrine remained untouched and undefiled for about two hundred years. Then came another iconoclast Aurangzeb who ordered the total annihilation of the temple so that it might for ever afterwards be beyond repair. The sudden and gradual rise of the Mahratta power, however, stood in the way of the fulfilment of his wishes and his Generals could not demolish the temple.

The Nawabs of Junagadh during British rule held sway over Prabhasa Pattan: but they could not put out the spiritual fervour that attracted pilgrims to Somnath. Now again after the end of British rule, the temple of Somnath is being rebuilt—its rebuilding coinciding with the rebuilding of the nation. In September 1947, the shrine was visited by the late Sardar Vallabhbhai Patel who announced before a huge assembly that the Government of India had decided to take up the reconstruction of the temple.

Since the time of Aurangzeb the temple ceased to contain the deity; in 1706 for a while it was used as a mosque even. Maharani Ahalya Bai of Indore tried to bring back the deity to the desecrated temple but her architects held that it was beyond repair: so, she built a new one near the Sixth Temple. The new temple —the Seventh properly speaking—is conjuring itself up again on the very site—and Somnath is about to emerge on a greater and more glorious chapter. The deity—one of the twelve Jyotirlingas—has been placed in the same spot where it was consecrated more than 2000 years ago.

Sri Chaitanya and Somnath

Lord Chaitanya (1485-1532) when he visited the ruin of the temple more than four hundred years ago (c. 1512), cried his heart out: and in paying his homage to the deity, prayed that Lord Somnath might re-arise in all his glory for the good of his devotees. He also said :

"Come, O Lord Somnath, come thou into my heart,
And allow me to see there thy divine image."

His wishes are now being fulfilled, thanks to the endeavours of the late Sardar Patel.

President Rajendra Prasad, while installing the 'Jyotirlingam' in the new shrine on May 11, was greeted by a hundred and one salutes of gun-fire. Addressing the mammoth gathering from all parts of India, he said, "In the days of yore the temple of Somnath was the centre of the faith and wealth of this country. The fame of its unparalleled glory and wealth had spread to distant regions and countries. Unfortunately during several centuries it had to suffer calamity after calamity. Again and again it was desecrated and demolished. But while the external symbols of a national faith may be destroyed, nothing can destroy the very foundations of that faith."

"It was for this reason that inspite of having had to face numerous calamities there always remained in the hearts of the Indian people an undying faith and respect for this temple of Lord Somnath; and it ever was their dream to build this temple again soon after its destruction, and they went on doing so time after time."

Then, as the head of our secular state, he very pertinently observed, "On this sacred and historic occasion it is desirable for all of us to realise the great secret to spiritual faith which is that to have a glimpse of God

of Truth it is not necessary for all men to follow one and one path alone."

"This great truth had been perceived by our ancient seers and they had proclaimed it to mankind. They had consistently declared that though He is one, yet the wise describe Him in many ways and by many names. Similarly the Mahabharat says that all paths lead to God just as all rivers flow to the ocean. Unfortunately this great truth was not properly grasped by different people and in different ages, and so very destructive and terrible wars were waged between different countries and different peoples."

The Future of Somnath

The future of the temple of Somnath is very glorious —far more so than its historic past—for near it is being built the splendid Dehotsarga monument to commemorate the holy spot where Lord Krishna gave up his body, and also because, according to the wishes and plans of Sri K. M. Munshi, author of the novel *Jay Somnath*, it is going to have a Sanskrit University attached to it—in the midst of thousands of trees that are being planted there to give it the appearance of Sri Krishna's Nandanvan, because a temple is not worth the name which is not also a seat of learning.

The Ideal of Social Reconstruction

Prabuddha Bharata observes editorially :

Vedanta stands, above all, for universality, synthesis, and harmony. It is a most practical philosophy of infinite hope, strength, and life-affirmation. Vedanta, while recognizing inevitable differences between man and man on the relative plane proclaims the supreme equality and fraternity of all beings on a spiritual and divine (*paramartha*) basis. But this divinity has to be manifested sooner or later. And it is best that social leaders emphasize this great Vedantic ideal of not only spiritual liberty, equality, and fraternity but also inherent divinity and sacredness of human personality. This lesson of universal brotherhood, of loving one's neighbour as oneself, has been inculcated by all religions. The Vedanta lays down the surest path for the social, moral, and spiritual progress of man and enjoins the performance of duties by which he gradually transcends his lower self and lives a higher and purer life and advances onward till his self merges in the universal Self. The duties which Vedanta enjoins have reference to the relation in which man stands to himself, to his kith and kin, to his community, to his country, to the whole of mankind, nay, to the whole universe as part of one infinite existence. True salvation, or to use a more appropriate expression, *moksha* (liberation from ignorance and bondage), consists in the complete realization of this identity, this spiritual world view.

A doubt is often expressed, saying, 'Does not this spiritual (*ergo* non-material and otherworldly) outlook on life clog secular activity and thwart ambition and progress, thus disturbing practical relations between man and man in the ordinary workaday world?' This is a question which has been discussed and answered times without number since the dawn of life on earth. The Upanishads and the *Gita* have solved this momentous problem. The Tantras and the Puranas also have thrown considerable light on the subject, sufficient to disabuse the doubting mind of all such misconceptions and misjudgments regarding the supremacy of the spiritual ideal over all other ideals in life. Vedanta is far from being an abstraction merely meant for philosophical discourses and intellectual interpretation. It is intensely practical and can be most effectively carried out in everyday life, producing lasting harmony and satisfaction and giving the highest benefit to all—to the person who is bold enough to practice it as well as to others around him. Man understands the true significance of spiritual ideals only when he puts them into practical application in individual and collective life. Practical demonstration is the only condition for the establishment of a society on the basis of spiritual ideals.

The most outstanding feature of Indian civilization is its insistence on Dharma as the foundation of the social order. The principles that regulate and guide man's functions in daily life and in his social relations are constituted by what is called Dharma—a word of protean significance. As Dr. S. Radhakrishnan observes:

"The basic principle of Dharma is the realization of the dignity of the human spirit which is the dwelling-place of the Supreme. . . . It is truth's embodiment in life, and the power to refashion our nature. . . . The principle of Dharma rouses us to a recognition of spiritual realities not by abstention from the world but by bringing to its life, its business (*artha*) and its pleasures (kama), the controlling power of spiritual faith."—*Religion and Society.*

The ideal of social reconstruction should remind the builders of society, through its various aspects, that the ultimate Truth in man has to express itself in spiritual illumination and in extension of his syspathy across all barriers of caste and colour. And Vedanta can and does provide mankind with such an ideal which while it does not deprive man of the advantages of wholesome economic, social, and cultural institutions, enables him gradually to transcend his material limitations and realize his spiritual unity with the ultimate Reality in and through the brotherhood of man.

DIABETES
CURED
IN SEVEN DAYS

No matter how severe or long standing, Diabetes can be completely cured by VENUS CHARM, the latest scientific Discovery. Some of the main symptoms of this disease are Abnormal thirst and hunger, excess sugar in urine and itching, etc. In its serious form, it causes Carbuncles, Boils, Cataract and other complications. Thousands have escaped from the gallows of death by using "VENUS CHARM". The very next day it eradicates sugar and normalises specific gravity. Within two or three days you will feel more than half cured. No dietary restrictions. Ask for Free literature. Price per phial of 50 tablets Rs. 6-12-0. Postage free. Available from

FOREIGN PERIODICALS

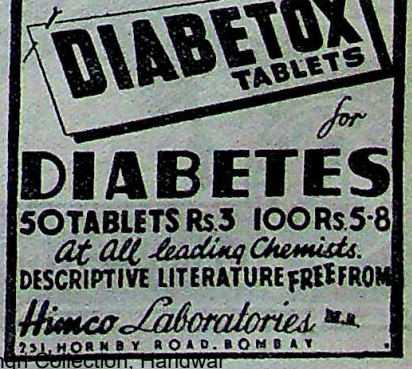
Early Travellers in India

"Wanderlust" writes in the *Bulletin of Italian Cultural Information* as follows :

Strange lands have always held a singular fascination for the human mind. Most popular of all channels through which it has sought to reach an understanding of the unfamiliar and unknown is travel. Books come only second best. In many this thirst for travel developed into a "wander-lust" so intense that they braved the privations and perils which all too often, in early times, characterised travel in the remote regions of the earth. Travel has become comparatively safe and easy only in our own time. Rather than act as a deterrent, they added zest to travel and made of it an adventure which a few found irresistible.

Few lands have lured travellers more than India. Throughout history men have been drawn to her from both the East (the Far East) and the West. The records these early travellers have left of their observations contribute many colourful pieces to the mosaic of her history. To the travel-minded they hold an interest which has not staled with the passage of time.

From the West, perhaps, the earliest visitor to India was John of Monte Corvino, a Franciscan friar, who in 1200 travelled in a frail bark to the beautiful coasts of Malabar and Coromandel, of which Sarojini Naidu has sung. South India struck him as a land of great cities and wretched houses, few hills, beautiful rivers, many springs, where cattle were sacred and idolatry rampant. In that region of perennial summer, sowing, reaping and fruit-gathering were seen in all seasons. John speaks particularly of the aromatic spices, of trees which yielded honey, sugar and a liquor like wine and the wonderful "Indian nuts" as big as melons and as green as gourds growing on trees like date-palms. The people were olive-skinned, with well-formed but hairy bodies, scrupulously clean, feeding on milk and rice, eating no meat and drinking no wine.



Odoric of Pordenone was another Franciscan missionary who touched the Western coast of India on his way to China in 1316. He describes at length the Fire-worship of the Parsis, the Hindu veneration of the cow, trees and serpents, the 'monstrous' idols by which their gods were represented, of golden roofs and marble pavements of their temples, their burning of widows, their pilgrimages, religious 'starvation' and cruel penances.

Jordanus, a French Dominican monk from Rome, was probably the first to come to India on a proselytising mission. He settled down at Kulam in Travancore in 1328. He has left a remarkable treatise on the fruits, the 'flora' and the 'fauna' of India. He talks of the cocoanut, the jack-fruit, the sugar cane and ginger root; of the one-horned Indian rhinoceros, the docile beast of burden and transport, the elephant; the big bandicoot rats, the white ants which destroy timber, the large 'mason' wasps; the bold kites, the white russet fishing-eagles, the many, the wonderful and the beautiful birds of the Indian islands. Of the people themselves Jordanus contrasts the civilised Hindus and Moslems with the savage forest tribes of the interior and of the mountains, living in caves, wearing no clothing and 'of brutish aspect'. Though the size of India is great and its population enormous, he observes, the Indian people were but children in the art of war or even seamanship. But the land was fairer than any other, its food more savoury, its people more honest and much more moral than the Christians of Europe.

Jordanus was followed by Bishop Giovanni dei Marignolli of Florence who settled down in Kulam for 16 months. His departure from India in 1350 was followed by a lull for three centuries during which few travellers ventured to come to India, as the country was almost continuously convulsed with fierce Meslem invasion from the north, of intolerant and fanatical Turks, Afghans and Mongols. The only part of the land which was comparatively accessible to Europeans was the Southern region under the sway of the Hindu rajas.

The next record of travel in India is the annals of Nicolo dei Conti, a Venetian merchant, who first touched at Cambay which he describes as a flourishing port from where he subsequently reached the kingdom of Vijaynagar. His description of the Ganges Delta, the charming villas and gardens, and plantations of delicious bananas, is lively and touched with romance by an occasional 'traveller's tale', as when he speaks of reeds or riverside bamboos 'so lofty and of such enormous girth that one section between the nodes or knots of the stem made a serviceable fishing boat'.

An outstanding traveller was Ludovico di Varthema, an Italian, who succumbed to wanderlust in his twenty-fourth year. From Venice his ship touched at Alexandria, next at Cairo and passed on to Syria. From Damascus he travelled to the holy cities of Mecca and Medina, touched Aden and finally reached India in 1505. He voyaged round the Peninsula of Gujerat, halting at Cambay. He describes the Jains of Kathiawar who when in going through their repositories of grain, found weevils or any other kind of beetle, instead of killing them removed them to the domed insect-houses in which places were also kept ants who were fed on meat! Cambay he described as famed for its spices and perfumes, agates, cornelians and onyxes, and even diamonds! His account of the Muhammadan Sultan of the region is realistic and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

vivid, but is occasionally touched with incredulity, as when he describes him as 'having been habituated to consume poison or poisonous drugs from childhood in the hope that he might thus never lose his life by treacherous attendants or enemies who might seek to put poison into his food!' Varthema also speaks at great length of the life of a Hindu Chieftain who whenever he travelled, was accompanied 'by his wife and children, four or five riding horses, tame monkeys, parrots, civet cats, chitas and falcons.' Passing through the Colaba District on to Goa and Bijapur, Varthema describes the magnificant palace of Adil Shah at the latter place. At the ports along the Coast of Kanara, Varthema is specially struck by the abundance of domestic buffaloes, oxen, sheep and goats, the absence of horses, mules and asses; the quantities of rice eaten by people; the numbers of peacocks, parrots, wild boars, deer, wolves and even lions, of roses and other flowers and fruits. Kannanore (Cannanore) he describes as a port which kept up a great trade with the Persian Gulf, had lots of Arabs in the city and grew cucumbers and melons, cocoanuts, rice, pepper, ginger, cardamoms, and other spices, besides the mango fruit. As beasts of burden and draught elephants were used.

Varthema's next halt was at Vijaynagar, the capital of the ancient Hindu Kingdom of Karkatak, which 'occupied a most beautiful site on the side of a mountain and had a triple circle of walls.' It contained immense parks for hunting and fowling, and appeared to him a second paradise with the best air, great fertility, wealth of merchandise and abundance of all possible delicacies. Varthema describes the great army of Vijaynagar which had among other things four hundred elephants. Kalicut (Calicut) is described as a very noble city, 'the converging port of Portuguese and European trade fleets.' Calicut was then ruled by the Zamorin family. Varthema gives an extensive and intimate account of the six classes of the city's inhabitants, their customs of dress, diet and vocation; of their harvest festival and devil dances; of the magnificent palace and regal temple, of the ships built out of native wood from the forests, which grew as many as a hundred and twenty different varieties of fine timber. Varthema greatly admired the orderliness of the people and the strict manner in which justice was dispensed. Nearly all the travellers who visited this part of India between the 13th and the 16th centuries, agree on the honesty and sense of justice of non-Muhammadan natives. Varthema's sojourn in India coincided with a period of intense commercial and military activity, from Vasco da Gama's arrival at Calicut in May 1498 to the establishment of Albuquerque as the first Portuguese Viceroy over Portuguese trading stations on the Malabar Coast.

The next remarkable account comes from Barbosa, Magellan's cousin, whose descriptions of the people—the Brahmans and the Banyans (Banias), the potters and the workers of clay, the workmen, the weavers, the agricultural labourers, the mariners and fishermen, the makers of hats and shields, the astrologers, fortune-tellers and weather prophets, the quarrymen, carpenters, blacksmiths and silversmiths, the salt-makers and rice-growers, the hunters, the practisers of low witchcraft and finally the miserable, naked, negroid bush tribes living on roots and wild fruits and such beasts and birds as they could kill in the woods, the merchant communities of Bengal and Eastern India, Calicut, Cambay or Gujerat, the Parsis, the Arabs and the Moplas—are singularly instructive and full of sociological interest.—'Come to India' Special Supplement, *United Asia*, 1950.

"Fourscore and Seven Years Ago"

America Honors 87th Anniversary of Abraham Lincoln's Gettysburg Address

Fourscore and seven years ago, on November 19, 1863, Abraham Lincoln, the sixteenth President of the United States, began his famous speech at the dedication of the National Cemetery on the battlefield of Gettysburg with the words:

"Fourscore and seven years ago our fathers brought forth on this continent, a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

Today, Lincoln's Gettysburg address represents a mid-point between the founding of the American republic and the present. The young republic, which had emerged from the cocoon of its colonial status with the American war of independence, grew in that first fourscore and seven years into a nation. As Lincoln spoke, his nation was torn and twisted in that most bitter of struggles, a civil war. Then, as in the years of the war of independence, there were those who could not see beyond the perils and strife of the present into the growth, development and prosperity that was to come, unparalleled in degree and extent.

In the second fourscore and seven years, which began with Lincoln's Gettysburg speech and extend up to the present, the American republic has grown in power and prosperity beyond even the wildest anticipations of the brightest prophets of that mid-term year. Yet, as in 1863, the American republic today faces a conflict and a struggle, a struggle in which the principle that "government of the people, by the people, for the people shall not perish from the earth" is again at stake.

For the people of the United States, the life of Abraham Lincoln, storekeeper, soldier, lawyer, orator and President, has symbolized the right and the opportunity of the humblest citizen of a democracy to follow a path from a frontier settlement to the highest position in the land. Born in a log cabin in a cleared patch in the forests of the frontier state of Kentucky, Abraham Lincoln began life as poor, as unheralded and as devoid of immediate opportunity as any child born today in the humbler villages of India. Yet, within the years of his life, he came to occupy the presidential mansion in his country's capital and, in the years since, to occupy an almost unparalleled position in the hearts of the American people and the pages of American history.

The life of Abraham Lincoln exemplifies the opportunities open to the citizens of a free country, a country in which the right of every citizen to life, liberty and the pursuit of happiness is both recognized and championed. That right and that opportunity, however, did not come to Abraham Lincoln as a gift of fortune. They came as a direct result of both the struggle for freedom and the continuing struggle to make freedom real, a struggle which continued through the fourscore and seven years of American history before Lincoln's Gettysburg speech, and has continued through the fourscore and seven years that have passed since that day.

The United States of that mid-term year in its history and the United States of 1950 are as different as the rude frontier of Lincoln's youth and the urban New York of today. Yet, the continuing necessity of the struggle for the rights of freedom, as presented by Lincoln in his battlefield speech in 1863, remains dominant today in the thinking of the American people. Today, as then, this truth remains. Freedom, if it is not to die, must be reborn and reborn again in the hearts of a people who would remain free, a truth that led Lincoln, in this same Gettysburg speech, to resolve that his nation "under God, shall have a new birth of freedom."

For Lincoln in 1863, as for the American people today, the rights of the individual, and the equality of opportunity that can make those rights effective, are worth defending. The American foreign policy in 1950 no less than the domestic policy of Lincoln's day, is "dedicated to the proposition that all men are created equal" and that "government of the people, by the people, for the people shall not perish from the earth."

Within those simple phrases has been caught much of the American philosophy of political existence. By government *of* the people, the American people mean a government that derives its authority, its right to continued existence and its support from within the people themselves, not from any small selected group or by imposition from any individual or self-designated band. By government *by* the people, the American people mean a government in which the people play the roles and fill the seats of the mighty, a government that is "of" not "over" the people, that is a part of, not a lid on, the people. By government *for* the people, the American people mean a government that works for the people, not the reverse; they mean a government that derives its right to continued existence from the will of the people, not a people who derive their right to continued existence from the will of the government.

The American people believe today, as did Abraham Lincoln, that men are created equal, not with the equality of the slave labor camp, but with the equality that can bring a poor child of the frontier to the presidency of a great land. They know that this equality is an ideal. They make no pretense that it is a full reality, for themselves or for any other nation. With all humility, the American people of today can say with Abraham Lincoln, "It is for us, the living, ... to be dedicated to the great task remaining before us."

In this year of alarm and crisis, the people of America

Natyacharya SISIR KUMAR BHADURI says :

and the other freedom-loving nations of the world can take a measure of strength from a look back through fourscore years and seven to that day in 1863 when a President of the United States, caught in a struggle as bitter and as brutal as any ever fought, seeing son fighting against father and brother against brother, facing a future as cloudy and uncertain as any the world faces today, could, with calm determination and certain equanimity, restate in these words the basic American belief in the rights of man, the eternity of freedom and the certainty of a brighter future:

"Fourscore and seven years ago our fathers brought forth on this continent, a new nation, conceived in liberty and dedicated to the proposition that all men are created equal.

"Now we are engaged in a great civil war, testing whether that nation, or any nation so conceived and so dedicated, can long endure. We are met on a great battle-field of that war. We have come to dedicate a portion of that field, as a final resting-place for those who here gave their lives that that nation might live. It is altogether fitting and proper that we should do this.

"But, in a larger sense, we cannot dedicate—we cannot consecrate—we cannot hallow—this ground. The brave men, living and dead, who struggled here, have consecrated it, far above our poor power to add or detract. The world will little note, nor long remember, what we say here, but it can never forget what they did here. It is for us the living, rather, to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here dedicated to the great task remaining before us—that from these honored dead we take increased devotion to that cause for which they gave the last full measure of devotion—that we here highly resolve that these dead shall not have died in vain—that this nation, under God, shall have a new birth of freedom—and that government of the people, by the people, for the people, shall not perish from the earth."—*USIS*. The Principle of Indeterminacy

Under the heading, "Aspects of Modern Science," writes Ira M. Freeman in *Unesco Courier*:

All naturtl science is based on observation. Whether our knowledge of any segment of the external world remains at the level of a mere cataloguing of facts, or soars to the heights of Relativity or of Quantum Theory, observation of Nature as she really is constitutes the foundation of science, and all else is secondary.

There is one aspect of the business of making observations that is usually taken for granted, and that is the faith (for this is all it amounts to) that any observation made here and now may be expected again on any other occasion when the same conditions prevail. This proposition is sometimes called "*The Uniformity of Nature*" or the "*Constancy of the Universe.*" But whether mere faith or something else, it works. It is science's answer to the ancient beliefs in capricious demons and deities.

Despite the bewildering differences between one science and another, all of them advance largely by the same general tactics: observations are made, quantities are measured (where possible), results are correlated, theories are set up and general conclusions are drawn in the form of natural laws. The great scientific conquests of Galileo and Newton, of Darwin and Pasteur, were made according to this kind of campaign plan.

A Miscellaneous Approach

What we call classical physics attained a high state of perfection toward the end of the last century. Evolving largely from ordinary mechanics, it went forward on the assumption that all the events taking place in space and time have the objective character that we associate with common mechanical phenomena such as the falling of a stone or the swinging of a pendulum.

Early in the nineteenth century the great French mathematician and physicist Laplace made the much-quoted statement that an omniscient mind, knowing the momentary location and speed of every atom in the universe, could deduce the entire course of events in the cosmos, both past and future. The universe was thus viewed as a machine, with all the parts rigorously interlocked. Every event was held to be strictly determined by the preceding one; every effect was ascribed to a definite cause.

Later, this mechanistic approach began to be challenged when scientists learned to break up the physical world into its basic constituents. The ubiquitous quantum aspect of nature (*see "What is the Quantum Theory" in the Courier for November, 1950*) began to assert itself once more, and in several places.

In 1927, a brilliant young theoretical physicist, Werner Heisenberg, was able to state a highly significant generalization relative to the observation and measurement of elementary processes. It is called the Principle of Indeterminacy. In one way of phrasing it, the rule asserts that the more closely we determine the location of a particle, the less accurately are we able to specify its motion, and *vice versa*. Heisenberg contends that the underlying cause of this puzzling situation is the fact that every process of measurement or observation actually *interferes* with what is being measured or observed.

The Evasive Electron

For example, if we should wish to "see" directly a single electron, it turns out that it would be necessary to use light of very short wavelength for the purpose. But light of this kind is highly energetic, and if thrown at an electron would knock it completely out of its original position, thus defeating what we are trying to accomplish!

In the same way, there is a fundamental inexactness, an uncontrollable or indefinable element, inherent in *all* measurements relating to elementary processes. Of course,

in dealing with ordinary large-scale objects, the interaction between object and observer becomes vanishingly small, and things seem to behave in their accustomed way, but on the sub-atomic scale, the obvious connection between cause and effect is no longer in evidence.

After all, nature does seem to be governed by order and regularity, and so if strict causality is not valid in the submicroscopic realm, what takes its place? The answer is that what we observe in coarse-grained experience is a statistical orderliness—the average behaviour of a multitude of individual entities—and such an average is accurately predictable. It is predictable in the same way that the death rate in a given population group may be computed in advance by a life-insurance company, although there is no way of forecasting when a given individual is going to die.

Chance rules the activity of the individual sub-atomic particles of physics, but their *"cultural"* or *"crowd"* behaviour, as mirrored by the large-scale world of ordinary experience, turns out to be completely in accord with expectation. The recognition of this fact has been of vast importance to the development of modern science, and has had profound and far-reaching effects on philosophical thinking as well.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will help you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you to do, in your spare moments at home, to—

...Your Vocabulary by Thousands of Words;
...the Right Word in the Right Place;
...Avoid all Errors of Grammar, Idiom and Diction;
...Develop Originality of Style and Expression;
...Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
...Become an Engaging Conversationist and Be Popular in Good Society;
...a Person of Culture, Power, and Influence;
...Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage-Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

...is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading ...cational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had ...r tuelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ...ss man and woman who would use the English language for all one is worth in business and social life. We shall be ...to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas ...stamps. Will you do it TO-DAY?

A START
THEY WILL ALWAYS
REMEMBER

As wise and far sighted parents you will give a lot of thought to your children's future, looking forward to the time when they will be making their own way in the world.

Start them now on the way to security and prosperity. Invest regularly in National Savings Certificates. A 12-year Certificate for Rs. 100 purchased monthly for 12 years from birth will provide a monthly income of Rs. 150 for twelve years from the age of 12 to 24. You couldn't give your child a better start.

NATIONAL SAVINGS CERTIFICATES

Issued by the National Savings Commissioner for India, Ministry of Finance, Gorton Castle, Simla.

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind." —*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know." —*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

RAMAKRISHNA
HIS LIFE AND SAYINGS

By

Prof. F. MAX MULLER

This is the first *Life* and collection of the Sayings of the Master in English by the great Orientalist and lover of India.

Gives a bird's-eye view of the religious movements of Sri Ramakrishna's time with a sketch of the Vedanta philosophy of which the Master was the living embodiment. Contains also 395 sayings and an exhaustive index.

'Sri Ramakrishna's life is presented in the book in very brief and simple language. In this life every word of the wary historian is weighed, as it were, before being put on paper.'

—*Swami Vivekananda*

Pp. 200. *Price : Rs. 5*

CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Shanta Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

—*Amrita Bazar Patrika.*

THE MODERN REVIEW

SEPTEMBER 1951

VOL. LXXXX, No. 3 WHOLE No. 537

NOTES

The Congress Crisis

There is a storm brewing over the control of the Congress and the Congress Government as well. The two camps are being led by the Premier of the Indian Union and the President of the Congress. The former is an international figure, deeply beloved by a very large section of his people for his spartan spirit of sacrifice and unchallenged integrity, the latter is an austere purist, highly respected by all who know him for his ascetic outlook on life and his sincerity and integrity is beyond doubt. Both are poor judges of men, specially where friends and satellites are concerned, and both have vulnerable spots, one due to an emotional temperament and the other due to his fanatic regard for Congress tenets. These have been exploited in the past by the more unscrupulous party agents of both, and in the end it has led to this present *impasse*.

Pandit Nehru has put forward his opinions on the situation in a Press Conference. He refuted the view that this crisis was caused by the schism in the U. P. Congress and insisted that the matter in question was far more vital.

He further said that the A.-I.C.C. and the plenary session of the Congress should state clearly what the Congress really stood for. Somehow there had been a lack of reality in the passing of the Congress resolutions. They did not attach much importance to them. Sometimes almost contrary things have been said and done.

The time had now come to infuse that reality. His resignation was meant to bring about that reality and force people to think. Congressmen should know what really they stood for.

There was a good deal of discussion in the Press and elsewhere about the conflict between the Congress President and the Prime Minister and how far the Congress Executive should control the Ministry. It was a very interesting question which would be settled only in the long run through conventions. Obviously the position of the Congress President and the Prime Minister after independence could not be the same.

The Prime Minister, he said, could not in a strict way be controlled by the party executive. But he must carry out the major policies that had been laid down by the party. "I do not think that the Congress Executive should interfere in my works except in broad matters of policy."

"If I belong to a party," he said, "obviously I must follow the broad policies which that party holds. Either I accept it or, if I feel I cannot do so, I have to tell them that I cannot do so and give my reasons. If, nevertheless, they say I must do so, then I get out and somebody else comes in who can do it.

"That has nothing to do with Parliament. If the Congress Executive told me to resign from my Prime Ministership, I resign immediately, but I do not think the Congress Executive should interfere in my work."

"All those questions," Sri Nehru emphasised, "were purely theoretical and his resignation from the Working Committee had nothing to do with them. Therefore, the question before the A.-I.C.C. was whether such policies as I stand for are to be Congress policies or some other policies. It has nothing to do for the moment with Parliament or my being Prime Minister."

Asked whether he subscribed to the view that the only way to solve the present deadlock in the Congress was the amalgamation of the two offices of Prime Minister and Congress President, Sri Nehru said, "As a general proposition that has no meaning. It can only mean the suppression of one function, practically speaking. That may occur during a crisis for a temporary period, but it should be avoided as far as possible unless circumstances are such that for the moment one does something which is normally not desirable but the compulsion of events brings it about."

Asked whether he wanted only reconstitution of the Working Committee or also changes in the Provincial set-up at some stage or other, Sri Nehru said, "Reconstitution of the Working Committee is to be a symbol of a change in outlook and direction. I feel that the Congress, in spite of the many good things that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

it has done and the right resolutions it has adopted, is drifting in the wrong direction. I should like it to take a turn. As a symbol of that turn, the resolutions having failed, a reconstitution of its executive would be effective. If the reconstitution or a partial reconstitution takes place without producing that sensation of a change, it has failed regardless of the individuals coming or going. I am always thinking in terms of the effect on the masses of people."

"I am anxious," Sri Nehru said, "to produce an atmosphere in the country of a certain united, concerted effort towards prescribed ends, of a certain unity of effort, of a certain wholehearted appreciation of what we call a secular State, of non-communalism, etc., because I think that if that is not done, the disruptive forces in India come into play and weaken us and prevent progress. Reaction comes in under the cloak sometimes of even nationalism as it calls itself. I want to fight that and in order to do that, I want the vast masses of people to feel that way."

He would, he said, like the Congress to think in terms of the Bangalore Resolution, which left its doors open to those who had left it and he would like the Congress to repeat that not only formally by resolution but warmly. "It did not matter who came back as a result of that invitation. It was not the individual but rather the approach which was important."

Sri Tandon has been much more taciturn and has in the main preserved an inflexible attitude. He seems less aware of the malady in the body politic of the Congress than Pandit Nehru.

But the main question remains unanswered before the Man in the Street and Man in the Field. What that question is, has been put in a more or less correct fashion by Dr. Jyotsna and Harin Shah in the *People* of August 11. The *People* being an organ of the Congress, this article has some significance and therefore we append the following extracts from therein:

"Must the Congress be wound up now that we have attained our political freedom? Gandhiji, with his remarkable foresight, saw dangers of the delicate fibre of our liberated nationhood being ravaged by early outbursts of party strife and power-politics in the absence of sound political morality.

He was driven at one time to the conclusion that the Congress may be 'folded up' implying thereby that the glorious chapter of freedom's fight should not be allowed to be besmirched by party strife and that a fresh beginning should be made by Congressmen from a new platform.

At any rate, he wished to pull out the band of constructive workers from the organization so that even if the Congress indulged in power-politics and gravitated too much towards Parliamentary politics, undoing its glorious past, the country would still have constructive workers to fall back upon.

Three years after Bapu's death, the question still worries his successor. Must the Congress be liquidated? Some of the closest advisers and associates of Shri Nehru are dinning this in his ears. Despite his strong love for the organization even Panditji, it appears, sometimes leans towards the view that the Congress must be peacefully liquidated after the General Elections.

If so, the question can be really considered after the general elections. For the elections do offer an opportunity for stock-taking, for setting the house in order, for enlisting new blood and talent and for overcoming frustration."

Needless to say we do not share this escapism of the authors. The question is of such vital importance that it cannot brook further delay. It must be considered now, before, during and after the elections. It is this procrastination and escapism that has discredited the Congress most in the eyes of the public. Further on the authors say:

"The immediate question, therefore, is, what is wrong with the Congress? What must it do to recapture the nation's love. Demagogic analyses and sermons cannot carry us very far.

We have seen the once-revolutionary party of the Chinese people, Kuomintang, crash so suddenly. Vulgarised by the power it acquired at the birth of the Chinese Freedom it is responsible for its own extinction. On the other side, the motley crowd that started surging forth from Canton and Hankow became by 1949 one of the biggest political and military powers of the world. The party after coming in power, fought vigilantly the inner contradictions, and its weaknesses. We are not concerned with its ideology or policy here.

Let us take the question of food. The Central Government, which is led and controlled by the Congress, had to decide to impose a further cut in the foodgrains ration and to make it simultaneously more expensive. While a big campaign should have preceded and followed this decision from the hundreds of branches of the ruling party, preparing public opinion to receive with equanimity the unpleasant but inevitable measure, we found no important leader or Congress Committee, even holding public meetings or issuing literature explaining how the measure was inevitable in the circumstances though of a short duration. The opposition parties, of course, could not be expected to be more charitable.

Let us size up the issue—the change that has visited us. From the point of view of the 'Supreme National Front,' we are now only one of the many political parties. The Press was by the side of the Congress. Today, the Congress can claim no such privileged support. The Congress should build up good relations with the Press and win over its sympathy.

Then again commerce and industry stood for the Congress. Today, their approach is halting for they are diffident about their future."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Here again we differ. Commerce and Industry, ever since its invasion by speculative Big Business, has kept faith with none. They have most treacherously betrayed the very people whose staunch support for Swadeshi kept them guarded against extinction. The authors then go on to say:

"The students continue to be largely ignored and unorganised; all the more regrettable when we are passing through such gigantic national projects.

We have not properly understood the great mental revolution that is going on in the mind of our Kisans. Aspirations for leadership are now developing among the few educated youths from amongst Kisans, and if the Congress fails to utilize them, they could hug other parties, eagerly awaiting them.

We seem to be blissfully undermining the morale and enthusiasm of the huge army of Government servants. Need not the Congress bring home to Government servants the golden opportunity that their service offers them in serving their country."

Despite our differences we agree with the authors inasmuch as they have pointed out the staring, glaring fact that Congress leaders are unwilling to face, that they have lost touch with all and sundry, the rank and file, of all those on whom they counted in the past. True, the Congress is not dead yet, but that is no credit to the hybrid leadership it has had since the passing of Bapu. So it is about time a sincere attempt was made to resuscitate it.

A great deal of hope has been based on these political schisms by the enemies of India, and Pakistan in particular. That however is another story. The Shia Conference must have been a rude shock to those who hoped otherwise, despite all the clumsy utterances of Fazlulla Khan and others of that ilk. The Nawab of Rampur, who presided at that conference, clearly stated his stand and that of his community.

Referring to Pakistan, he said: "We should realize that the destiny of the Muslims of India and our community in particular is indissolubly linked with the fate of India and its people. We in this country are no enemies of Pakistan or of any other nation, but let it be clearly understood that we have made India our home of our own free will, that we stand solidly behind India in its struggle for peace and progress. My advice to Muslims is to support our own secular democracy and to call upon our Muslim brethren in Pakistan to give their minorities a fair and square deal."

The Japanese Treaty and India

India's refusal to attend the San Francisco Conference, where the Japanese Treaty will be finalised, is an event of major consequence. This refusal, together with India's expression of unwillingness to accept any operations from Japan, has given a new turn in international politics. Sri Nehru's decision has been generally hailed in Tokyo and Commonwealth countries. But a few of the American commentators have defended Sri Nehru and have been nearer the truth. May Lerner writes in the *New York Post*:

> "If Mr. Nehru did not exist, it would be necessary for us to invent someone like him to fill the vacuum in Asia between a Russia the Asiatics fear and an America they still distrust. What remains of non-Communist Asia will not yet accept American leadership. If America is not to be the leader-symbol as against Russia, who is? The only possible answer is: Nehru's India. It can make a bid for Asia's leadership only if it speaks as an Asiatic people which is what it is doing. If it lines up solidly with our policies, it loses Asia—which means that the hope of any democratic life anywhere in Asia will be gone for generations. Since we cannot lead Asia ourselves, the next best course is to recognise Mr. Nehru's chances of leading it and to accept him as the last, next to best, hope."

The daily *Boston Herald* writes:

> "We are failing India. It is hopeless to defend the East against Russian Communism if the East does not want to be defended by us. We cannot command. We must persuade."

The appointment of Mr. Bowles, a Liberal Democrat, as U.S.A.'s Ambassador to India represents another gesture towards better understanding with this country but the American Note on India's unwillingness to attend the San Francisco Conference has not been quite happy. It has been suggested that the Conference would be attended by 48 nations. Mere number of representatives, some from the Central and South American States of lesser importance and some from Asian countries of doubtful sovereignty, cannot lend sufficient weight to a decision affecting Asia with India and China as abstainers. It is unfortunate that U. S. diplomacy has failed to appreciate this position.

The following is the text of the Prime Minister's statement on the Japanese Peace Treaty :

"The House will be interested to know of the latest developments in regard to the proposed peace treaty with Japan and the Government of India's decision thereon.

"The war against Japan ended six years ago. This was followed by a military occupation of Japan which has continued till now. India, in common with other Powers, was interested in putting an end to this unsatisfactory state of affairs and terminating it by a treaty of peace. Owing to difference in the approach to this question between different Powers, little progress could be made.

"The Government of the United States of America and the United Kingdom thereupon took the lead in drafting a peace treaty with Japan. There were originally two separate drafts which differed materially from each other. Finally some minor changes were incorporated in the United States draft, and the Government of the United Kingdom accepted it. The United States and the United Kingdom then became joint sponsors of the revised draft treaty and this was communicated to us on July 20, 1951.

"The Government gave careful consideration to this revised draft and communicated their views on July 28 to the U. S. Government in regard to it. In this reply it was stated that the Government of India were in full sym-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pathy with the underlying object of terminating war with Japan as soon as possible and admitting her to the community of free foreign nations. It was pointed out that the other objective of the peace treaty with Japan should be to lessen the existing tension in the Far East and help towards a peaceful settlement of the problems affecting that area. In order to satisfy these objectives, attention was drawn to some provisions in the draft treaty and certain proposals were made on behalf of the Government of India."

On August 12, 1951, the Government of India received the reply of the U. S. Government to their comments. Some minor variations were made in the original draft, but none of the major suggestions put forward by the Government of India were accepted. The Government thereupon, after careful consideration, came to the conclusion that India should not sign the Peace Treaty or participate in the San Francisco Conference. It was further decided that immediately after Japan attained independent status, the Government of India would make a declaration terminating the state of war between India and Japan and, later, a simple bilateral treaty with Japan should be negotiated.

In accordance with this decision, the following communication was sent on August 23, 1951, to the Government of United States, through our Embassy in Washington :

"The Government of India have, after most careful thought, come to the conclusion that the Treaty does not, in material respects, satisfy either of these two criteria.

(*a*) It is only natural to expect that Japan should desire the restoration, in full, of her sovereignty, over territory of which the inhabitants have a historical affinity with her own people and which she has not acquired by aggression from any other country. The Ryuku and the Bonin islands fully satisfy this description. Nevertheless, the Treaty proposes that until the U. S. Government seek and obtain trusteeship over these islands, they should continue to be subject to the legislative and administrative control of the U. S. It is apparent to the Government of India that such an arrangement cannot but be a source of dissatisfaction to the large sections of the Japanese people and must carry the seed of future dispute and possibly, conflict in the Far East.

(*b*) The Government of India recognise that, as a sovereign nation, Japan should have the right to make arrangements for her defence as provided in Article 5 of the Treaty. If, in exercise of this right, Japan should decide to enter into defensive agreements with a friendly Power, no one could reasonably object to this. But the right should be exercised by the Government of Japan when Japan has become truly sovereign. A provision in the Treaty which suggests that the present occupation forces may stay on in Japan as part of such a defensive agreement is bound to give rise to the impression that the agreement does not represent a decision taken by Japan in the full enjoyment of her freedom as a sovereign nation. The effect of this not only on the people of Japan but upon large sections of people in Asia is bound to be most unfortunate.

"As already stated the Government of India attach the greatest importance to the treaty providing that the island of Formosa should be returned to China. *The time and manner of such return might be the subject of separate negotiations* but to leave the future of the island undetermined, in spite of past international agreements, in a document which attempts to regulate the relations of Japan with all Governments that were engaged in the last war against her does not appear to the Government of India to be either just or expedient. Mutatis mutandis the same argument applies to the Kurile islands and to S. Sakhalin.

"For the foregoing reasons, the Government of India have decided, with regret, that they cannot be parties to this treaty. It is their sincere hope that lasting peace will prevail in the Far East and, to that end, they will continue to co-operate with the U. S. and other Governments in such manner as may be open to them, consistently with the principles on which their foreign policy is based. As a first step, it is their intention, as soon as this may be practicable, to put an end to the state of war between them and Japan, and to establish full diplomatic relations with that country.

"It has already been announced that the Conference convened at San Francisco to consider the Draft Peace Treaty with Japan will not be open to negotiation, though attending Governments will be free to state their views on the Treaty. The Government of India feel that the statement of their views on the Treaty contained in this reply, should be adequate to clarify their own position to the Conference. It is their intention, if the U. S. Government have no objection, to communicate this reply to their own Parliament, which is now in session, on August 27. Once the document has been published, it will be available for the information of the Conference, and the Government of India will be glad if the Government of the United States, which will act as host to the Conference, will have this reply circulated to its members. As, for the reasons already stated, the Government of India will be unable to sign the Treaty, they think that it is not necessary for them to send representation to it."

American Note on India's Decision

The United States State Department announced that India had served formal notice that it would abstain from the Japanese Peace Treaty Conference at San Francisco next month.

India was taking this action principally because it objected to provisions which permitted American Defence Forces to remain in Japan, the announcement said.

An American reply made public at the same time as the communication from India said :

"It would be quite impracticable and totally unwelcome for the United States to help to defend Japan if that were not wanted by the Japanese people."

In a 1,500-word note, the State Department expressed regret at India's decision not to sign the treaty at

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar.

Digitized by Arya Samaj Foundation Chennai and eGangotri

conference in San Francisco opening on September 4.

In its reply the United States deplored India's decision to make a separate peace, and said :

"There can never be united action for peace unless the nations are willing to accept what, to each, may seem imperfections.

"The Government of the United States believes that the peace will be more stable if it is founded on united action, just as victory involved united actions and the occupation involved united action."

The American answer expressed surprise at India's claim that the proposed treaty would not restore the Japanese to a "position of honour, equality and contentment among the community of free nations."

It quoted the Japanese Prime Minister, Shigeru Yoshida, as saying in a letter dated July 13 : "The treaty as it stands, reflects abundantly American fairness, magnanimity and idealism."

The United States Note began by saying the American Government replied "in the same spirit of frankness and friendship" which animated the Indian Note of August 23.

Welcoming India's expressed intention to end its state of war with Japan and establish diplomatic relations, it said :

"The overriding desire of the Government of the United States is peace in Asia. The Government of the United States believes that the peace will be more stable if it is founded on united action just as victory involved united action and the occupation involved united action.

"However, the people of the United States will not feel their efforts and sacrifices for victory in the Pacific have been in vain if they have made it possible for the Government of India to make peace with a Japan, which is no longer a military and aggressive threat.

"The Government of the United States regrets that the Government of India feels that the pending treaty of peace has such imperfections that the Government of India prefers to make a separate peace. There can never be united action for peace unless the nations are willing to accept what, to each, may seem imperfections.

"In its specifications of imperfections the Government of India suggests that the treaty of peace will not provide Japan with a position of honour, equality and contentment among the community of free nations.

"This suggestion greatly surprises the Government of the United States. From the beginning the announced goal of the United States has been to restore Japan to just such a position.

"It is the belief of the Government of the United States, shared by the Government and people of Japan, and of many other States that the pending treaty, to an unprecedented degree, achieves the goal.

"For example, the Prime Minister of Japan in a letter of July 13 to Mr. John Foster Dulles written on the occasion of calling the San Francisco Conference said: "I am grateful that we have been consulted and given a full opportunity to submit our views and desires and moreover that these have been in a large measure incorporated in the draft treaty. The Treaty as it stands reflects abundantly American fairness, magnanimity and idealism.

"The Government of the United States doubts that the Government of India had fully understood and taken into account the views of the Government and people of Japan."

The American reply said : "The treaty makes provision for multilateral signature now and obligates Japan to conclude similar treaties with all countries not now signatory who are parties to the United Nations declaration of January 1, 1942.

"The Governments of the United Kingdom and of the United States, sponsors of the present text, and the many other Allied powers which have co-operated to produce that text, have gone to great pains to assure that the treaty will be such as to enable all of the Allies to subscribe to it."

"The Government of India suggests that the treaty should restore in full Japan's sovereignty over territory of which the inhabitants have an historical affinity with her (Japan's) own peoples and which she has not acquired by aggression from any other country," the reply continued.

"This principle would involve a major departure from the Potsdam surrender terms, which specified categorically that the Japanese sovereignty should be limited to the four home islands and to such minor islands as the parties to the surrender proclamation might determine.

"The Government of India has never questioned these terms during the five and one half years during which India had served as a member of the Far Eastern Commission, which was established to ensure the fulfilment of those terms.

"The principle now put forward by the Government of India would require the retention by Japan of full sovereignty over the Kurile Islands and over the Ryuku Islands.

"Yet, the Government of India criticises the treaty provisions with reference to the Kurile Islands because it does not explicitly transfer full sovereignty to the Soviet Union, and criticises the provision with reference to the Ryukyus because, although it leaves sovereignty in Japan, it permits of a United Nations Trusteeship with the United States as administering authority.

"The Government of the United States finds it difficult to understand how the Government of India can be confident that future arrangements regarding the Ryukyu and Bonin Islands, the terms of which are not yet formulated, will hereafter be a source of dissatisfaction to large sections of the Japanese people.

"Nor does the Government of the United States understand why the Government of India applies such different tests as between the Kuriles and the Ryukyus."

Continuing, the American reply said : "The Government of India objects because the treaty gives Japan the right to prevent its becoming an indefensive nation between the date of the coming into force of the treaty of peace and the coming into force of some voluntary collective security arrangements.

"The Government of India suggests that the only way to prove that such a security arrangement is in fact voluntary, is to subject Japan to the grave risk incident

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to a period of total defenselessness in close proximity to proved aggressors.

"There is no reason to believe that this is desired by the people of Japan or that it would promote the welfare of Japan for the treaty of peace to impose that grave hazard upon Japan.

"The Government of the United States has gone to great lengths to ascertain that and security agreement which Japan seeks shall, in fact, be responsive to the will of the Japanese people. It would be quite impracticable and totally unwelcome for the United States to help defend Japan if that were not wanted by the Japanese people.

"The statements of the Japanese Government and of the political leaders of Diet, and manifold expressions of public opinion, all demonstrate that the Japanese do not want Japan to become a defenceless nation upon the coming into force of the treaty of peace.

"No less than 32 of the Allied powers all members of the United Nations have freely made or are making collective security arrangements to which the United States is a party.

"It would indeed be surprising if the sentiment which has animated so many free peoples did not manifest itself also in Japan.

"The Government of India states that the future of Formosa should not be left "undertermined." It suggests that the treaty should provide for the return of Formosa to China but that the time and manner of such return might be the object of separate negotiations.

"It would seem to the United States that a future disposition is "undermined" if it depends upon future negotiations as to time and manner.

"The Government of India must be fully aware that there cannot at the present time be any final agreement among the Allied powers with respect to the future of Formosa.

"To insist that a Japanese Peace Treaty be deferred until there is such agreement, is in fact, to postpone indefinitely the restoration of Japan to 'honour, equality and contentment among the community of free nations' which the Government of India agrees is an urgent requirement.

"Furthermore, the Government of the United States observes that the Government of India apparently does not intend itself to defer ending its state of war with Japan until the future of Formosa has been definitely dealt with."

The reply continued: "We the Government of the United States do not claim that the prospective treaty of peace is in every respect perfect. It involves adjustments such as are the inevitable accompaniment of any concerted human effort.

"The essential thing is that the treaty is a peace treaty and is drawn in terms which do not contain within themselves the seeds of another war.

"Delay would cost a price which makes petty all the sacrifices incident to present action. It would perpetuate the surrender terms which subject the Japanese Government to the military rule of the Allied powers.

"If that subjection is continued after the Occupation has served its legitimate and valid purposes, the result is indistinguishable from colonialism and imperialism in vicious form.

"The United States does not want to be a party to colonialism or imperialism. That is why it strives so earnestly to achieve the best possible peace as promptly as possible.

"That is why it contributes so liberally to the rehabilitation of our former enemies as well as of our friends.

"The Government of the United States regrets that the Government of India is not disposed to join this united offer for peace.

"However, the Government of the United States welcomes the assurances of the Government of India that, in so far as consistent with the principles on which its foreign policies are based, it will continue to co-operate with the United States Government and other Governments to the end that lasting peace will prevail in the Far East.

"The Government of the United States hopes that these principles to which the Government of India alludes, will permit of co-operation which is practical and fruitful of peace," the American note concluded.

The Indian Note, sent by the Indian Charge d'Affaires in Washington, Sri M. K. Kripalani, to Mr. John Foster Dulles, President Truman's special adviser on the Japanese Peace Treaty, said that India's present reply was conceived in a spirit of frankness and sincere friendship for the Government and people of the United States.

The Government of India throughout the negotiations had laid emphasis on two fundamental objectives:

1. The terms of the treaty should concede to Japan "a position of honour, equality and contentment among the community of free nations" and

2. "They should be so framed as to enable all countries specially interested in the maintenance of a stable peace in the Far East to subscribe to the treaty sooner or later."

"The Government of India have, after the most careful thought, come to the conclusion that the treaty does not in material respects satisfy either of these two criteria," the Indian Note stated. After clarifying its stand, as given in the note quoted by Pandit Nehru in Parliament, the Indian Note concluded:

"The Government of India would be glad to know if the United States Government have any objection to their informing our Parliament of this reply on Monday August 27, 1951," the Indian Note concluded.

India's Reply to America's Note

The following are the main points of India's reply to the last communication from the U.S. Government on the Japanese peace treaty:

"The Government of India welcome the assurance that the overriding desire of the Government of the U.S.A. is peace in Asia. The Government and people of India have striven to this end to the best of their ability, because they consider peace of paramount importance to the world

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and, more especially, to the countries of Asia, which have suffered for many generations under alien domination.

"The Government of India also welcome the assurance of the U.S. Government that they do not want to be a party to colonialism or imperialism. Opposition to colonialism and imperialism has been the basis of India's struggle. Having experienced the burden and the injury that flow from both, the people of India are convinced that continuance of them in any form and in any part of the world cannot lead to peace or progress or to the happiness of the people concerned.

"Turning to certain specific points relating to the treaty which arise out of the reply of the U.S. Government, the Government of India wish to make the following observations :

(1) "The U.S. Government have expressed the belief that their view of the proposed treaty is shared by the Government and the people of Japan. The Government of India regret that their appreciation of the situation does not tally with that of the U.S. Government.

(2) "In suggesting the return of the Ryukyu and the Bonin groups of islands to Japanese sovereignty, the Government of India are not challenging the Potsdam terms of surrender. As the U.S. Government have themselves pointed out, those terms left room for the addition, by agreement, of some minor islands to the islands of Honshu, Hokkaidu, Kyushu and Shikoku, over which Japan was to be allowed to exercise sovereignty.

"Nor have the Government of India any intention whatsoever of applying dissimilar principles to different parts of territories which have a historical affinity with Japan and which Japan did not wrest from any of its neighbours. If they excluded the Kurile islands from the scope of their suggestion, it was because the Yalta agreement provided, without any reservation, that the Kurile islands shall be handed over to the Soviet Union. The Government of India cannot be held responsible for any inconsistency, which is the result of the Yalta agreement.

(3) "In discussing the Government of India's views regarding defensive arrangements to be made by Japan, the Government of the United States describe them as tantamount to leaving Japan defenceless against proved aggressors. The Government of India fail to find any warrant for such a conclusion from anything that they have said. The draft treaty recognizes that Japan as a sovereign nation possesses the inherent right of individual or collective self-defence and that Japan may voluntarily enter into collective security arrangements. Adequate provision is thus made for Japan independently to make whatever arrangements she considers necessary for her self-defence as soon as she has signed the peace treaty, and it is not clear to the Government of India why there should be any 'period of total defencelessness' for Japan.

(4) "In regard to Formosa, the Government of India have suggested that, in keeping with international obligations, it should be stated clearly in the treaty that it would be returned to China. That would determine the future of Formosa leaving the time and manner of such return to be settled at a future date. The Government of India have been and are of opinion that a declaration that Formosa shall be returned to China will help in creating conditions for a settlement in the Far East. But the Government of India have at no time insisted or even suggested that a Japanese peace treaty should be deferred until there is final agreement with respect to the future of Formosa.

(5) "The Government of India have been anxious that a peace treaty with Japan should be signed and the military occupation of Japan terminated at the earliest possible moment.

"The Government of India do not wish to come in the way of any nation which is satisfied with the terms of the present treaty and is prepared to sign it. They only claim for themselves their inherent and unquestionable right not to sign a treaty with the terms of which they are not fully satisfied.

(6) "The Government of India have no intention of proposing to Japan a treaty of peace which would in any way be controversial or which would run counter to the provisions of the draft treaty of peace. Their action is not being represented at the San Francisco conference and in making a separate treaty of peace with Japan, should not, therefore, adversely affect either the friendly relations that exist between the Government of India and the Government of the United States or the co-operation of the two Governments in everything 'which is practical and fruitful for peace.'

(7) "The Government of India hope that the observations made in the foregoing paragraphs reveal a unity of outlook between them and the Government of the United States in many vital matters that affect the future of the people of Asia and of humanity in general.

"The differences that exist between them are differences of method and approach. Such divergencies of opinion are bound to occur even amongst the friendliest nations and should not be allowed to cause resentment that might come in the way of mutual understanding and community of effect."

Korea

Negotiations have broken down in Korea. There was a fusillade of accusations against the U.N. forces, concerning the breach of armistice terms in regard to the neutral zone at Kaesong. The Commander of the U.N. forces, General Ridgway had the whole incident thoroughly investigated and as a result of which the following reply was sent to the Commander of the Communist forces :

"Your message of August 24 pertaining to alleged incidents by elements of the U.N. Command is so utterly false and so preposterous and so obviously manufactured for your own questionable purposes, it does not in its own right merit a reply.

"Nor do other incidents you have cited as intentional violations by the U.N. Command of the neutral zone at Kaesong.

"When not fabricated by you for your own propa-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ganda needs, these incidents have proven to be actions of irregular groups without the slightest connexion, overtly or covertly, with any forces or agencies under my control.

"In spite of this I have consistently required my senior delegate, and commanders of forces under my Command, to grant you the courtesy of a full inspection and report on every alleged incident, regardless of its manifest falsity.

"Evidence in this most recent alleged violation was even more palpably compounded for your insidious propaganda purposes than your earlier efforts.

"In line, however, with our constant adherence to the ethics of decency, I have in this case, as in all others, fully investigated your charges.

"My senior Army, Navy and Air Force Commanders have individually certified to me in writing that none of their elements have violated, or could possibly have violated, the Kaesong neutral zone in this or any other instance of alleged violations reported by you.

"I have caused the result of the investigation into this most recent allegation to be widely published so that the entire world will be fully cognizant of your quite evident intent to use a manufactured incident in order to evade your responsibility for having suspended the negotiations.

"Allegations made in your several recent communications concerning alleged firing at Pan Mun Jon; the alleged ambush of August 19 by U.N. forces; and alleged bombing and strafing of Wednesday night (August 22), are rejected without qualification as malicious falsehoods totally without foundation in fact.

"When you are prepared to terminate the suspension of armistice negotiations which you declared on August 23, I will direct my representatives to meet with yours with a view to seeking a reasonable armistice agreement."

The reply speaks for itself. But the affair is so astounding that one wonders as to what its significance really is. It is evident that it is not to the interest of some party—whether directly involved in the struggle as yet or not—that the war should end.

Linguistic Provinces

The question of linguistic provinces has again come to the forefront. A General Secretary of the Congress has declared on two occasions in two different places that the Congress is committed to the principle of the formation of linguistic provinces. During the Bangalore Session of the A.I.C.C., the Working Committee re-iterated this principle when it was agreed that claims for the formation of Andhra and Karnatak provinces would be favourably taken up.

Prime Minister Nehru has introduced a new factor of expediency and general agreement in the question of linguistic provinces. On August 22, Prime Minister Nehru told Parliament that *when there was a broad agreement between the parties concerned in the matter of creation of linguistic provinces, the Government on their part would gladly take every step possible and needed for the fulfilment of that demand.*

The occasion for this statement of Government's policy was provided by an adjournment motion tabled by Prof. Ranga. The motion was disallowed.

The adjournment motion wanted the House to discuss the fast unto death taken by over 15 well-known Andhra members of the Congress, including Swamy Sita Ram, Sri Bulusu Sambarmoorthy, Sri and Srimati Basavayya and others in connection with the failure of the Government to take effective and urgent steps towards the formation of the Andhra province.

The Prime Minister explaining the Government's policy stated that although this was a matter of the utmost concern to the House, the matter could hardly be the subject of an adjournment motion. "We are certainly anxious that well-known public men should not indulge in hunger-strikes with regard to any such matter."

He confessed the matter of the creation of the linguistic provinces was a matter of great interest to the Government, but so far as the Government was concerned, Sri Nehru added, they had always held the view and expressed it on numerous occasions that before any proposal for a linguistic province was considered, all the parties concerned should come to some broad agreement on the question. He admitted, however, that some measure of agreement was there over this matter in the case of Andhra. But the question was not one of agreement on the boundaries alone. There should be agreement on the finances, services and many other things. And the Government having gone through the question very carefully had concluded that this would create many difficulties.

After all, Sri Nehru added, at no time did the Government like the word "partition" in another context. But inner partition was bound to create difficulties, which would be faced of course, but one had to deal with the question carefully.

If, therefore, there was this broad agreement forthcoming from the parties concerned, the Prime Minister assured the House, "So far as the Government are concerned, I must declare this policy that the Government would take all steps needed for the fulfilment of that demand."

It might be possible for the Government, he said, that the preliminary step of setting up a Commission for the purpose might be taken even now. But in the absence of any broad agreement between the parties concerned there was the danger of the Commission reporting back that there was no agreement between the parties. Therefore, instead of furthering the cause, the report of the Commission might delay matters.

"*So far as we are concerned,*" Sri Nehru went on, "*we are prepared to go ahead with the question of linguistic provinces on the basis of a large measure of agreement.*" But he was sure that the hunger-strike, particularly by eminent public men, was hardly the way to achieve the object.

But next day, a different note was struck by Sri Rajagopalachari when, during a Bengal-Bihar boundary

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

controversy in Parliament, he said that the boundary question was an administrative problem and that it should not be lifted to the level of a sentimental or language or nationality problem.

Now the question is whether the demand for linguistic provinces is looked upon as a matter of principle, or as an administrative problem. The Prime Minister, the Home Minister and the Supreme Executive of the Party they represent seem to differ on this issue rather widely. If it is a question of principle, expediency is a secondary matter and the principle cannot be accepted for particular areas in the country and denied to the rest. If principle has to be adhered to, dissident voices must be overcome by the Party which should throw its entire weight on the side of the principle. If the unwillingness of Bihar to part with the Bengali-speaking areas is considered to be against the agreed principle, it is for the Party to overcome it. Bengal cannot be blamed for raising the issue. From the administrative side as well, Bengal's claim on these lost districts is irresistible. West Bengal is a maimed province which has suffered most due to partition and it is only fair to help her rebuild the house by altering her boundary so as to include these Bengali-speaking tracts. The case is of urgency because of the distinctly undemocratic—indeed inhuman—attitude of the Bihar administration towards the Bengali speaking peoples who are in a large majority in the areas concerned. We have before now spoken of the cowardly attitude of the Congress with regard to this question. Shri Rajgopalachari was never troubled with principles and so his statements are of no consequence in this matter.

Corruption in Office and in Industry

The Government of India appointed two Enquiry Committees to get track of the corruption in officialdom and amongst India's industrialists. Reports have been published, exposing a state of affairs that is staggering. The Shroff Committee uses the word "outrageous" in characterizing the "over-stocking and deterioration of Railway Stores" in India. A summary of this part of the report says:

"While the country was being starved of essential materials, such as iron and steel and copper wire, the Committee discovered in the excessive stocks of stores of the Railways, items such as steel bars, rounds, galvanized sheets and copper and enamelled wire. It discovered that the present stock of fire bricks on the Assam Railway would meet its requirements for 272 years, that of carriage body finishing enamel for 105 years and of asbestos for 66 years. The stock of cutter, for wood-working machinery, on the B. B. and C. I. Railway would last for 192 years, of bolts for 126 years, and of snap head rivets for 55 years. The stock of the tin plates on the E. P. Railway would last for 222 years, of steel transverse keys on the M. and S. M. Railway for 139 years; of brown paper on the South Indian Railway for 304 years, of rope and steel spring wire for 867 years and of wooden keys for 195 years."

About corruption and its cause, the Committee's verdict is as follows:

"We have had no opportunity of investigating any cases of corruption or embezzlement in the stores organization. We feel, however, there is considerable scope for leakage because of the very unsatisfactory state of store-keeping at several depots, lack of inspection at receiving ends, very extensive direct purchases made by the Controllers of Stores under emergency powers of the General Managers, and the enormous and almost incredible quantities of stocks of certain items of stores, unavoidably resulting in serious deterioration and obsolescence with artificially created necessity of forced disposal."

The Ganga Nath Enquiry Committee has also submitted its report on Sugar racket of 1949. Its findings are:

"The Sugar Syndicate moved out stocks *far in excess* of agreed quantities. These stocks were cornered by hoarders who raised prices. The surprising thing is that the U. P. Government endorsed, and the Central Government accepted, the Sugar Syndicate's request for extra wagons without bothering to inquire why extra wagons were wanted. These wagons were used to move sugar in excess of agreed quantity.

"Wagons were allotted in the belief that they had a uniform capacity of 10 tons when actually very many of them could, and did, carry 20 tons! Huge quantities were moved to the border towns of Punjab from where sugar was smuggled to Pakistan. Nobody stopped the scandal at *any* stage! The Government allowed the Syndicate to export 30,000 tons of sugar to Pakistan at a time when the stock position was already weak!

"Earlier the Syndicate tried to sell sugar in Pakistan at 'cut' prices and, imposed a levy of four annas per maund on all home consumption! More than 75 per cent of the mills charged a premium—at times as high as Rs. 10-12-4 per maund—on their sugar stock releases!"

These things were the talk of the people in the autumn of 1949. Since then they have had no occasion to thank either the Government or their Birlas, Dalmias, Singhanias and their legal advisers for making sugar less costly to them. The thing that irritates and rankles is that during the war, sugar was cheaper and that under Wavell, and now with a Rajendra Prasad, we are worse off in this and other kindred matters. This state of affairs will continue until the Parliament contains a majority of persons who feel for the agony of the suffering masses in reality. The present coterie of sycophants, drawn from the party-caucus, are responsible for all this corruption. They have fooled the people long enough with their lip-sympathy. It is about time they were purged.

Bhakrā-Nangal Project and Damodar Valley

The courtesy of East Punjab's Publicity Department enables us to publish the following:

"As a result of the construction of Bhakra and Nangal Projects, I can see that vision of a Punjab not far distant from now, a new Punjab with a network of canals, with electric railway trains, tramways, with towns humming with industrial activity and with villages full of flourishing fields. The construction of this project will provide great opportunities to the people of Punjab for the exercise of their initiative and skill in the planning, construction and industrial fields. New ideas will spring up to make the border State one of the richest in India," observed Dr. Gopichand Bhargava, Chief Minister, Punjab, on the occasion of the commencement of Bhakra Dam Works on the 29th April, 1951.

"The fruits of this project would become manifest even earlier," he added. "The Nangal Hydel Canal and Power house would be completed by 1953 which would enable them to supply electricity to Delhi and also provide a certain amount of non-perennial irrigation in certain parts which are at present without any irrigation facilities.

"He regarded Bhakra and Nangal Projects as the symbol of the New Punjab, a Punjab which has risen during the last 3½ years on the ruins of the old.

"We had numerous problems to face after partition. Not only had we to rebuild the shattered economy of this mutilated and truncated State but had to rehabilitate millions of our unfortunate brethren, who had been driven away from their ancestral homes by communal fanaticism. Starting from scratch we have reached a stage in the development of this State when there is no looking back. It is heartening to find this project has kept pace with the growth of our State. We look forward now to an era of peace and prosperity, of growth and development, in which Bhakra and Nangal would play a most significant role."

We wish god-speed to our brethren of East Punjab in this scheme. On our side the Damodar Valley is hanging fire due to prolonged obstructions from New Delhi on one side and hesitation on the other. One particular little Tin-God is blatantly following this "denial policy" in safety because of the ignorance of the Chief Executive of India, who has lost sight of his duties to the people of West Bengal.

Rajasthan's Water Resources

Rajasthan's people, and the Indian Union also, have been building high hopes on the Multi-Purpose Irrigation Schemes that both the Governments have been sponsoring. The story told below is really heartening. And it is good to hear that it is not all failure and futility, though a section of our politicians have been doing their best or worst to kill the people's confidence in their own ability to solve their own problems.

"A Multi-Purpose Development Project costing nearly rupees 14 crores and capable of generating 7,75,000 K.W. of electrical energy and yielding over one lakh tons of food-grains every year is under construction in Rajasthan.

"The scheme known as the Chambal Valley Project consists of three power dams and a barrage with canals on either side of the river Chambal which takes its origin in the northern slopes of the Vindhyan range and flows through Madhya Bharat and Rajasthan for a length of about six hundred miles before joining the Jamuna in U.P. The total catchment area of the river is about 55,000 square miles out of which the main river and its tributaries drain about 11,000 square miles.

"The uppermost dam, known as the Gandhi Sagar Dam will be in Madhya Bharat State, the next two dams—the Rawatbhata (Bhopal Power Project) Dam and the Kotah Dam and the Kotah Barrage, the lowermost, being in Rajasthan State.

"The Rawatbhata Dam will be built about 20 miles downstream of the Gandhi Sagar Dam and at a distance of about 32 miles from Kotah City in Rajasthan.

"A colony near the dam site has been laid out and the construction of road from Kotah City to the site are in progress.

"The Kotah barrage will be built about 15 miles downstream of the Kotah dam and about six miles below Kotah City.

"The water from the turbines at the Kotah Dam passing into the river will be picked up at the barrage and utilized for irrigation."

Tube-Wells

We have been depending on foreign experts for our river-control activities. We were not aware, however, that even for sinking tube-wells, we have to depend on U.S.A. for their machineries, pipes, etc. The Food Minister in Lord Linlithgow's Executive has rubbed in this dependence in a statement made in New York. He has advised the Indian Government to indent largely for materials required to sink 5,000 tube-wells, as the river-control activities will take years to show results. He thinks that these would prove of more value than the 2-million tons of food-grains which will carry us through 12 months only. What does India's Food Minister think of this brain-wave of Jwala Prasad Srivastava?

India's Food "Bill"

The enactment by the U.S.A. Congress of what is popularly known as India's Food Bill has put an end to a sorry business, the memory of which will rankle in Indian hearts for a long time to come. There has been bitterness in this argument as a section of the Congress

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had attempted to exploit India's necessity for food-grains for extracting political advantages. Their attempts have been foiled, we hope; and it should teach rulers of States that there are limits to political meanness.

Today however, we desire to forget this episode, and try to realize what the cost of this food "bill" will remain for our descendants. The following indicates it in certain details :

The loan of 190 million dollars will carry interest at two and a half per cent per annum. The period for the first instalment of the interest begins on December 31, 1952. The loan is repayable in 35 years and the first instalment of the payment part of the principal is due in June 1957, whereafter semiannual instalments, including the principal and the interest, became payable in accordance with a fixed scale and schedule.

An amount of seven million dollars per annum become payable from 1957 to 1966, ten million dollars per annum become payable from 1967 to 1976 and twelve million dollars from 1977 to 1986.

Thus, posterity will pay for meeting the famine conditions now prevalent in Bihar and Madras and other parts of India and maintaining the twelve-ounce ration a head in the rationed areas for the next 35 years. While the scale and schedule of repayment of the principal and the interest have already been fixed, negotiations will start shortly for agreement on the details of raw materials and other goods, which may form part payment on behalf of India, as from December next year.

While two million tons of additional food-grains are coming from the United States of America more than about four million tons are coming from other countries —a considerable part thereof is again coming from America, Canada, Argentine, Australia—and from Russia and China commitments have gone down after a signing of trade agreements with the two countries. For the information, of those who have been shouting down "capitalist" America and boosting the "Peoples' States" of China and Russia we give the following facts :

Russia offered half-a-million tons of wheat, but when it came to negotiations India was evidently unable to supply goods in return for wheat for more than 100,000 tons. Russia wanted shellac, tea and jute from India. China offered one million tons of food-grains but the actual agreement related only to about four lakhs of tons. Of this rice is only about 16,500 tons and the balance consists mainly of milo or grain sorghums, a variety of jowar, red in colour but which is the nearest substitute for food in the rice-eating areas. India will supply 14,000 tons of jute bags in return. These cost more than Rs. 5,00,00,000 as against the total value of Chinese food-grains of Rs. 13,00,00,000 the balance being payable in cash. In the matter of wheat, there has been considerable annoyance in public over what was taken to be jowar adulterated with wheat. We find that was Russian wheat (of 2nd quality).

Central Food Technological Research Institute, Mysore

The report of the progress up to 1st March, 1951, of this Institute gives an idea of its value:

General: The 'Cheluvamba Mansion' in which the Institute is located was formally received by the Hon'ble Prime Minister on 29th December, 1948. The Institute office in Mysore commenced work in the beginning of February, 1949, and the first laboratories were fitted up and work started towards the end of July of the same year. By about the beginning of October, 1950, most of the laboratories had been fitted up and the Institute was formally opened by the Hon'ble Sri C. Rajagopalachari on 21st October 1950.

An important development was the decision of the Government of India, through the Ministry of Agriculture, to merge the Indian Institute of Fruit Technology with this Institute. The transfer was with effect from 1st March 1950 and the staff joined at Mysore between April and June, 1950.

Utilisation of Tubers and Production of Synthetic Grains : The immediate programme is mainly directed towards studies which have a bearing on the urgent food problems of the country. One of the important findings relate to the replacement of 25 to 50 per cent of cereals by tuber flours (particularly tapioca and sweet potato) and other processed tuber products. It was found that, in addition to maintaining growth, the tubers actually exercise a supplementary action because of their higher calcium content. This finding is of considerable practical value. The Institute has also succeeded in fortifying and then converting tapioca into grains which could be cooked and consumed the same way as rice. This work has already attracted considerable amount of attention and the Travancore-Cochin Government arranged for a pilot plant demonstration of the process at the All-India Exhibition organised under the auspices of the Trivandrum Municipal Corporation.

Mixed Farming in Uttar Pradesh

Mr. S. Ibne Ali's article reprinted from *Indian Farming* of August, 1950, should inspire farmers:

"The Department of Agriculture, Uttar Pradesh, aims at improving the economic plight of the cultivator. It can be achieved only by getting the maximum turn-out from a minimum investment and also by encouraging such means as may supplement their income.

"Although mixed farming is an old practice in our country, due to several reasons there has been a gradual deterioration in this type of farming and the domesticated animals' health and breed. The same has resulted in an all-round deficiency of good bullocks, cows, buffaloes and consequently, milk and milk-products, manure, and above all in the fertility of our land—the national wealth of the country.

"India being primarily an agricultural country,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the sole occupation of the rural population is connected with agricultural pursuits. It has been observed that in our country agriculture has become more or less a gamble against nature. If there are timely rains and the weather is favourable the cultivator is able to earn his living without resorting to loans, otherwise, he is entangled in untold miseries inflicted upon him by the usurious money-lender. It is, therefore, imperative that he should adopt mixed farming not only as an extra source of income but also as a means for ensuring good breeds of domesticated animals. These days when prices of bullocks have gone very high, it is beyond the means of an average cultivator to buy them. But if cows of good breed are kept, the difficulty can be overcome to a great extent. Apart from this, the cultivator and his family get plenty of better and nourishing food comprising of milk and milk-products.

"Today, Western agriculture is based mostly on mixed farming practices and is very well organized. This has enabled America, Canada, Australia, and other advanced countries to achieve peak productions in agriculture and they are thus, in a position even to supply food-grains to the deficit countries.

"Sir John Russel, a well-known agricultural expert of Great Britain, after making extensive tour of our country in 1938 had very strongly felt, and rightly too, that the farmers of this great sub-continent did not keep good milch animals and hence their children got very poor nourishment and their land remained low in fertility.

"It is true that from a pair of bullocks or cows we can, if we wish, get 25 cart-loads of manure which is sufficient to provide humus and a large part of the fertilizing elements to four acres of wheat or paddy. For two cows, one acre of land is necessary for growing green fodder, *viz.*, jowar in *kharif* and berseem in *rabi*. The manure thus obtained from the animals, if applied to four acres of land under wheat or paddy, will give an yield equal to the produce from six to seven acres of unmanured land. It is therefore incorrect to think that by growing fodder in one or two acres, the acreage under food-grains will go down and the output will be lowered. In fact, a cultivator having a pair of bullocks, can actually produce more from a smaller area if he keeps two cows also, than otherwise because in that case he can manure his fields better.

"In the Uttar Pradesh the Department of Agriculture selected six districts representing diverse soils and climatic conditions for undertaking experiments on mixed farming. The districts selected were Meerut, Bareilly, Lucknow, Barabanki, Gorakhpur and Deoria. In each district a village was selected for this purpose. In each village six cultivators who possessed eight to ten acres of land were selected. Out of these six cultivators two were picked out to practise mixed farming and they were asked to keep two or three well-bred cows and buffaloes. They were advised to maintain them on improved lines. They also grew some fruits and vegetables, wherever possible. The remaining four cultivators were left to go on without adopting mixed farming. An account of their daily expenditure and income was regularly maintained. It was proved after five years of experimentation, that mixed farming was much more profitable than ordinary farming. By keeping a few milch animals an additional income is derived from the milk and milk-products and the progeny of the cattle. In addition, the manure produced from these cattle increases the fertility of the soil thereby increasing the turn-out per acre. In practising mixed farming, the rotation of the crops is so adjusted as to have fodder also from the same holding without affecting production of food crops. This is possible because, with the help of additional manure, intensive farming is possible without minimizing the fertility of the soil.

"It has been further observed from these experiments that in the western districts of the Uttar Pradesh a culitvator with a holding of eight to ten acres could easily maintain three cows and buffaloes and a pair of bullocks, while in the eastern districts only two cows or buffaloes besides a pair of bullocks could be kept. Such holdings were enough to provide sufficient fodder for the livestock to yield good produce and also to increase soil fertility.

"It is thus clear from the results of the experiments that in the case of mixed farming the cultivator's income per acre is Rs. 100 more than that derived by ordinary farming. Moreover, he gets ample supply of milk, milk-products, fruits and vegetables. Besides, he is able to raise his own bullocks and milch cattle and grow fodder crops like berseem, lucerne, *jowar, guar*, etc.; the animals help to increase the fertility of his land. Naturally, his overall income is gratly increased. It is also necessary to point out here that if the milch animals that are kept are of a poor breed, the sole purpose of the scheme of mixed farming will be defeated."

Side by side of work for the improvement of livestock, there is an incipient prejudice against it noticeable amongst officialdom.

Mineral Resources of the DVC Area

The Damodar Valley Corporation has published a very valuable report on the mineral resources of this region. The report has been prepared by Mr. V. R. Khedker who has already earned a high reputation as a geologist. It will be a mistake to accept it as a mere summary of all available data in the possession of the Geological Survey of India obtained during the past 100 years. The author has not only given a full account of the occurrences and reserves of mineral resources of this region, but at the same time, he has indicated the various industrial uses of these minerals and the pattern of integrated industry that can be developed with them. The potentiality of our mineral

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

industries against our present foreign trade has been assessed. This will serve as a guide to the future industrialists. Mr. Khedker has taken special care to warn about the danger of wastage in the extraction of important minerals. For example, he has pointed out that although the Foley Committee (1920) had said that Indian coal is not inexhaustible and scientific mining methods are needed for its conservation and economic extraction," practically no action had been taken by the authorities. Not only nothing has been done to stop wastage, the direct result of the Coal Grading Board's recommendation in 1925 has been to encourage methods of further wastage due to partial extraction involving sections of a seam. The author says that this has proved to be responsible for the loss of future recovery from many other seams or parts of the same seam and that this grading of sections of seams must stop immediately. The conditions brought about by these processes of mining have, during the last 20 years, caused a disastrous series of fires, explosions and collapses in the Damodar Valley coal fields. He has indicated the need for the formation of a National Coal Commission as suggested by the Indian Coalfields Committee (1946). Mr. Khedker has studied our mineral problems from the standpoint of national interest. About the utilisation of bye-products he says, "The Indian Union is deficient in petrol. In other countries most of the Benzole recovered as a bye-product is used for preparing a motor spirit which has decided advantages because of its knock-suppression quality in high combustion engines. As something like 3 to 4 million tons of coal is coked in bye-product ovens in India, it may be asked why so little Benzole is made here. The Bararee Coke Company Ltd. were pioneers in 1920, and they were succeeded a few years later by the East India Railway plant at Giridih. The total output of the two plants does not exceed two lakhs of gallons per annum while the potential output of existing coke plants is about 3 to 4 million gallons per annum. Up to now this deficiency on the part of the industry has been ascribed to the Central Excise taxation on petrol and the resulting mechanics of price variation." In the present threatening petrol crisis, this suggestion should be given the closest attention by the Department of Industries of the G.S.I. Mr. Khedker says that the Central Government may consider extending some form of suitable protection to the manufacture of Benzole spirit.

Discussing India's high bargaining position in respect of manganese ore. Mr. Khedker says, "The reserves of manganese ores within India have a strategic value. Besides, India is perhaps the most important producer of certain high grade metallurgical ore. Consequently, the exporting ore should yield adequate benefits and may perhaps be utilised for securing essential commodities in which she is deficient, e.g., petrol, copper, zinc, etc." Great Britain, U.S.A., Germany, France and Japan produce about 70 per cent of world's steel but their manganese output is a little over 1 per cent. India is exhausting this very important mineral in the crude state and at a very low value. In its wide applications, manganese is perhaps only second to iron ore. In the section on mica, the author has shown that the royalty charged for mica is 5 per cent of the pit's mouth value and the dead rent in the new leases has been fixed at Rs. 12 per acre in the Kodarma Reserved Forest. These rates are ridiculously low and had been fixed to suit foreign interests. The number of important mica companies is about 12, and most of them are foreigners. There is no reason why the royalty and dead rents should not be reasonably enhanced and the mining lease rules suitably changed. The case with manganese is also the same. Mr. Khedker has focussed attention on the question of mining lease. In the section on silica, Mr. Khedker has indicated the potentiality of a new line in glass industry, *viz.*, the use of glass in electrical installations specially in high voltage transmission lines. In Western countries, glass as insulator has come to be known as the Miracle Maker and is rapidly replacing porcelain. Mr. Khedker has revealed that besides the pyrites deposits near Sahabad, much sulphur can be recovered from zinc concentrates and from oil purification, galvanising and tinning plants. The de Lattre process for the recovery of acid from spent pickling liquors deserves examination. He believes that the resources of sulphur, which India is in desperate need today, in the Damodar Valley Area are encouraging, if a scientifically planned effort is directed towards mobilising them. In the last section, Mr. Khedker has given a very valuable study of an integrated mineral industry in the Damodar Valley clearly indicating the basic and subsidiary industries that can be developed there. The Report, to say the least, will prove extremely helpful to the future industrialists of the country. But meanwhile it will be profitable for the Government of India to consider seriously the problems of wastage of valuable minerals, utilisation of bye-products and a reorientation of the mineral lease policy on the lines pointed out in this report. The question of nationalisation of mines in this connection may be seriously considered. The report would have been of greater value, had the author been permitted to be a little more outspoken.

Indian Coal

A recent news announced to the world that India's coal has been able to re-capture certain of the markets in "four continents," Asia, Australia, Africa and Europe. There may be an element of exaggeration in this claim, and it would be foolish to depend on these outside markets. We should bend our efforts to reorganize the home market and be freer from the ups and downs, the whims and caprices of people who are not ruled of the soil. We would be satisfied if the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

following facts and their appreciation are borne out by experience:

"There is a popular misconception that because there is believed to be a shortage of metallurgical coal, which belief is now being examined by an Expert Committee, it necessarily follows that there is a shortage of other high grade coals. There is no shortage of high grade coal either in production or in reserves for ordinary industrial use.

"Non-coking high grade coal suitable for steam raising is produced in the required quantities and the output can be stepped up to meet any foreseeable increase in demand at a very short notice. Reserves of good quality non-coking coal are very great in India, and in four Fields only, they are:

	Millions of tons
Jharia Field	1,625
Raniganj Field	1,660
Karanpura Field	3,740
Bokaro Field	1,300

(The figures for Karanpura and Bokaro Fields are proved reserves and large areas remain unprospected.)

"It is conservatively estimated that the supplies in these Fields alone would be more than sufficient to last for over 350 years."

Trickery in Jute Trade

On more than one occasion we have tried to expose the trickery that prevails in the jute trade. The letter of Sri Satish Chandra Das Gupta of Khadi Pratisthan, in *Harijan* of July 28 last, will go a long way in supporting us. But New Delhi authority has chosen to turn the blind eye to the moral and material lapses of this trade, on which Satish Babu can speak in more detail, if authority cares to look into the various factors that have been fostering this disease. The editor of this weekly appears to suggest that Satish Babu approached authority, but there has been "no response" to his request for investigation.

> "For sometime past the Indian Jute Mills Association prices or market prices of jute twine have been less than the price of raw jute, *e.g.*, on 30-5-51, the prices of raw jute and twine were as follows: Raw jute Rs. 105 per md.; Twine Rs. 83 per md. This is adversely affecting what is left of cottage spinning of jute . . . The jute cultivator now finds it more paying to sell out the little jute stock he has for household purpose. . . This is to explain how the lower price of jute twine *vis-a-vis* the raw jute affects employment in cottages."

After this, who will believe that the Rajendra Prasad-Nehru Government are anxious to promote the Gandhi Plan?

Bengal South-Eastern Border

Bengal's South-Eastern border, in spite of its strategic and economic importance, has been a neglected zone. The recent strike lasting over months together has resulted in at least this much good that the attention of the Central Government has been drawn towards it. Although inadequate, one may say that let there be a beginning. The Minister of State for Railways has, on August 25 last, introduced a Bill in the Indian Parliament which seeks to replace the Ordinance promulgated recently which seeks to make provision for the proper management and administration of certain narrow-gauge light railway still managed by private companies. The Ordinance was made applicable to the Barasat-Basirhat Railway, owning a narrow gauge line about 52 miles long in West Bengal. The Ordinance was of a general nature and provided for the application thereof to a delinquent privately run railway company by a notified order. Such a notification would enable the Government to appoint a new Board of Directors and any contract of management between the railway company and any managing agent would be automatically terminated. The intention underlying these provisions, it is explained, is that the company should be put back in its normal position when it would be possible to restore the management of the company to its old board of directors or to a new board of directors appointed in pursuance of a resolution passed by the shareholders of the company. Powers to administer the affair of the Barasat-Basirhat Railway have been delegated to the Government of West Bengal.

This Railway is of strategic importance and is in an extremely unsatisfactory state; it has stations which are not worth the name, the running of the trains is clumsy and above all it continues to be one of a narrow gauge. The railway connects Calcutta with Basirhat, a very important town on the south-eastern border. This railway by now ought to have been converted to a metre gauge one and run on a full-fledged railway service. We hope some of the Parliamentarians, specially the Bengal contingent, should take up this matter when discussion of the Bill comes up. The appropriate Ministry of the Central Government in charge of road construction should also make an immediate survey of the communication of this area and link up by road places that ought to be connected with one another and finally with Calcutta. The serious attention of the West Bengal Government should be drawn to the maintenance of the embankments of this locality which are of utmost importance in the matter of food production. These embankments protect the paddy fields from the onrush of saline water. Breaches in the embankments not only destroy standing crops by letting in saline water, but it brings in its trail endless misery for the local people. Cattle mortality becomes heavy due to foot and mouth diseases. Drinking water is spoiled. Paddy fields go out of cultivation for a few years due to salinity of the soil. The morale of the people goes down. This state of affairs is highly unsatisfactory and is grossly detrimental in frontier strategy. The morale of the people inhabiting the first line of defence is essential in the proper maintenance of a border area.

"The Dividing Britisher"

Under this heading appeared a letter in the *People* of Delhi, dated July 28 last in which the writer quoted a "complete paragraph" from the book entitled *While Memory Serves* by Lt.-General Sir Francis Tucker who had been G.O.C. in Eastern Command during the last 18 months of British rule in India and for about 3 months after August, 1947. The point that the writer brings out in this quotation was that the Britisher had a larger hand in dividing India.

While there generally is such an impression in India we are constrained to say that the Britisher could not have done this mischief if the Muslims of India had been able to accept India as their own as they do Arabia or Pakistan. It is this separatist conceit that the Britisher exploited for his own purposes and which the Quaid-e-Azam lashed into a fury. All the same Sri Ram Kumar Leithra has done well to draw attention to this phase of British policy in its Kashmir context:

"There was much therefore to be said for the introduction of a new Muslim power supported by the science of Britain. If such a power could be produced and if we could orient the Muslim strip from North Africa through Islamia Deserts, Persia and Afghanistan to the Himalayas, upon such a Muslim power in Northern India, then it had some chance of halting the filtration of Russia through the Persian Gulf. These Islamic countries, even including Turkey, were not a very great strength in themselves. But with a Northern Indian Islamic State of several millions it would be reasonable to expect that Russia would not care to provoke them too far . . . . It seemed to some of us very necessary to place Islam between Russian Communism and Hindustan."

Indian Interests in Burma

The news of a new treaty of mutual advantage to India and Burma revives speculations about the present position of economico-financial interests built up by the labour, skill and intelligence of India's national in this neighbour of ours. The occasion should be taken advantage of to recall the many factors involved that have taken a not friendly form for some time, from before the last Great War.

Sometime ago a Madras weekly devoted to trade and allied subjects indicated these:

"The part played by South Indians, particularly Nattu Kottai Chettiars, in the development of land in Burma is by no means insignificant. They started as financiers and advanced considerable sums of money as loans to Burmese peasants. There was, naturally enough, a steady transference of land into their hands as the peasants found themselves unable to repay the loans and mortgages were foreclosed. While in 1930 the Indian community owned hardly half a million acres, in 1938 they had acquired about 2½ million acres out of a total of about 12 million acres of cultivable land. The total value of all lands and other immovable properties, owned by Indians in Burma, according to a spokesman of the External Affairs Ministry of the Government of India, is about Rs. 90 crores.

"In accordance with the provisions of the Burma Land Nationalization Act, owners of cultivable land, whether Burmese, Indian or European, will get 12 times the annual land revenue as compensation, the average annual revenue per acre being Rs. 3. The Act was enacted on the basis of Section 30 of the Constitution of Burma Act stating that "the State is the ultimate owner of all lands and it shall have the right to regulate, alter, and abolish land tenures or resume possession of any land and distribute the same for collective or co-operative farming to agriculturists, and that there can be no large holding on any basis whatsoever, and that the normal size of such private holdings shall, as soon as circumstances permit, be determined by a Commission. Though the said Commission has so far not submitted its recommendations regarding the normal size of a private holding, an agriculturist is allowed to have a holding of not more than 10 acres, and only in exceptional cases a joint family in which not less than 5 persons till the soil is given a holding of 50 acres. It is thus seen that the Act was meant, not as an anti-Indian measure as supposed in some quarters, but as a socialistic law to effect badly needed land reforms in a predominantly agricultural country. The charge of discrimination cannot thus be technically brought forward, though in reality its effect will be discriminatory.

"Whether the terms of compensation now arrived at between the Burmese Government and the Indian Delegation are equitable to both the Burmese Government and the Indian nationals cannot be decided with any degree of finality in view of the wildly contradictory views of the interested parties.

"The compensation that is likely to be offered, according to one estimate, comes to about Rs. 30 per acre for average land, and on this basis the total cost of acquisition of foreign-owned land in Burma will be only about Rs. 10 crores. No one can say what exactly will be the total amount that Burma will have to pay as compensation, but if it is to be only a paltry figure of Rs. 10 crores, it is certainly a meagre amount considering the value of the holdings. It should be borne in mind that between 1880 and the present day, the total acreage under rice in Lower Burma has increased something like 300 per cent, thanks mainly to Indian enterprise.

"One distinct gain, however, of the visit of the Indian Delegation is the new spirit of friendliness and cordiality that has developed between Burma and India. As for the immediate present, the offer by India to take Burma rice in lieu of cash payment of compensation for nationalised lands of Indians may meet with ready approval by the Burmese Government, though this question was beyond the brief of the Reddi Delegation. . . ."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We are glad that the old enmity between the Indian and the Burmese is being forgotten. Apart from British Imperialist policy, the most responsible factor in this enmity of the past was the greed of those very same money-lenders whose cause is being espoused by our Madras contemporary. The transference of land, which is assumed to be "naturally enough" was mostly a rapacious land-grabbing process, as we saw for ourselves in Burma when we visited that country after the first anti-Indian riots.

Malaya's Independence

In the first week of June last, Mr. Dato Onn Bin Jalafar, President of the United Malaya National Organisation (U.M.N.O.) and Home Member in the Malayan Federal Government, has come out with the statement that his ideal is achievement of an "Independent Malaya" within a period of seven years. It has been hailed as "bold and courageous" by Mr. C. C. Tan, leader of the Singapore Progressive Party, and welcomed by Mr. K. Ramnathan, President of the Malayan Indian Congress and Mr. Dato Tan Cheng Lock, President of the Malayan Chinese Association. Thus, all the three most important races in Malaya, the Malayan, the Chinese and the Indian, have jointly discarded their previous demand of "dominion status" under the Crown and agreed to fight for complete independence.

Malaya is rich in rubber and other important raw materials, so essential to British trade and industry in these days of acute shortage of raw materials. The British have therefore held fast to this peninsula ever since they came there in 1874 to "assist" the local population. But pursuing the policy of "divide and rule" between the Indian, Chinese, and Malayan communities, the British have been exploiting this rich peninsula, bleeding the country white.

After the defeat of Japan and reoccupation of Malaya by the British, the revolutionary changes in India, Burma, Pakistan, Ceylon, and Indonesia have had their repercussions in Malaya as well. The people raised the cry of "dominion status" under the Crown, but the British instead created a new Federation of nine States ruled by the Sultans with British advisers. Penang and Malaya were created as settlements, and Singapore was put under a separate Administration, the whole peninsula being governed by a British High Commissioner.

To meet the popular agitation, the British recently introduced some kind of constitutional reforms, which provide for a Legislative Council with members nominated by the High Commissioner and not elected by the people. The "ministerial system of Government" also provides for the appointment of six non-officials and five officials by the High Commissioner to take charge of the various Departments of the Government. This dyarchical form of government, without any popular representation, failed to meet the demands of the people of Malaya. They thus continued to agitate for transference of real power.

Mr. Dato Onn's statement has created a stir in Malaya. The fear that the Malayans may not like to share political power with other communities is offset by Mr. Onn's declaration that if the U.M.N.O. did not open its gates to non-Malayans at the annual meeting in August he would form a new party to be called "Independence of Malaya Party." The thing does not appear to be as simple as that. In Mr. Dato's household there is opposition. His son, Captain Hussein who happens to be the Secretary-General of United Malayas National Organization is opposed to his father's idea, though it indicates no deviation from U.M.N.O.'s objectives. We must wait for further light to appreciate the Malaya situation.

Malayan Federal Citizenship Bill

There is a large volume of opinion among Indians and Chinese in Malaya, that the provisions of the Malayan Federal Citizenship Bill must be considerably changed before they can be acceptable.

The Bill was referred to a Select Committee of the Malayan Federal Legislative Council last week with little debate. That does not, however, mean that its provisions are not controversial. It only signifies that all discussion has been postponed to the Select Committee stage.

Legal experts have emphasised that if the Bill becomes law, no longer will an Indian or Chinese be able to enjoy dual citizenship rights in this country—that is rights of citizenship of his own country and of Malaya. The Bill requires that a citizen of the Federation of Malaya must abjure all other loyalties and must undertake not to exercise the rights and privileges of any other nationality or citizenship. Under the present law, such dual citizenship rights are permitted though the applicant for Malayan Federal Citizenship has to make a declaration that he is permanently settled in the Federation.

Under the Bill all Malayans born in Malaya States become citizens by birth. In the case of locally-born Indians, Chinese and other non-Malayas there are exceptional provisions. For citizens of the United Kingdom and colonies the first generation will be eligible for citizenship by registration. Only the second generation will be citizens by operation of law.

Persons who have lived for not less than ten years in Malaya in the preceding twelve-year period, are able to speak Malay or English with reasonable proficiency, and undertake to settle permanently in Malaya, can acquire Federal citizenship under the Bill by first enrolling themselves as subjects of the ruler of the Malaya State where they reside.

Certain facilities which British subjects now enjoy in respect of citizenship will be withdrawn from them under the Bill, and these privileges will be confined to citizens of the United Kingdom and colonies. According to prominent Indian lawyers, this will affect a large number of Indians in this country who are British subjects but not subjects of U.K. or colonies. They add that the tendency in Malayan politics has lately been to confine to U.K. and colonies nationals the special rights and privileges hitherto enjoyed by British subjects.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

During the debate on the Select Committee motion in Federal Legislative Council, a Chinese member said that the Bill sought to impose several new conditions for citizenship which were not present under the existing law. Thus, the first generation born in the settlements of Malacca and Penang would be deprived of the right by operation of law to be Federal citizens.

On the morning of the day the Bill came up for consideration in the Council, the influential Chinese-owned Singapore *Tiger Standard* urged that the Bill should be "killed." This new Bill is not an improvement on the present situation, the paper said. "On the contrary, it seeks to make even more rigid the lines of distinction between the various communities. It places new legal and constitutional barriers which would result in the intensification of communal fears and suspicions."

The Malayan Indian Congress, at its annual session, held last month, asked that Federal citizenship should be granted on standard and uniform qualifications, namely, five years' residence in Malaya, good character and ability to speak colloquial Malaya or English.

The above news was sent from Malaya on July 19 last.

Indians in Ceylon

Recent events in Ceylon has created a certain amount of tension in India. The people then in their new consciousness are apt to forget that Indians have made contributions to the island's enrichment. These people, about 8 lakhs of men, women and children, are being denied citizenship rights; and the policy of "Ceylonization" is being pursued with a certain amount of injustice.

We do not generally quote British observers in connection with our efficiency as compared to other Asian peoples. But in Ceylon's context we are tempted to quote the late Commander-in-Chief of the island's forces, Admiral Geoffrey Layton who, irritated perhaps by the threat of "Ceylonization" now directed against Indian-born Ceylonese but ultimately adversely effective against all foreigners, is reported to have said that Indians worked twice as hard as Ceylonese. There must be something in this gibe. The same is heard of in Burma, in Fizi, in the West Indies, in Mauritius, in South Africa's sugarcane lands to the credit side of our people—about 40 lakhs spread all over the world.

Indians in Ceylon, organized in their Congress, have been at the forefront of Ceylon's fight for freedom. And they have not been able to ignore the Sennanyke-and-Bandarnayke discrimination. They have fought it to a stand-still in the law-court. A news-item from Colombo has sent the information that "recently a judgment was delivered by the District Judge of Kegalla. The Kegalla judgment delivered in favour of one Mr. Kodakan Pillai in his petition for restoring his name on Ceylon's electoral rolls held the Citizenship Act of 1948 and the Electoral Amendment Act of 1949 *ultra vires* of section 29 (2) of Ceylon's Constitution. This section provided that no law enacted by Parliament should make persons of any community liable to restrictions to which persons of other community were not made liable or confer on persons of any community any privilege or advantage which was not conferred on persons of other communities. The logical step for the Ceylon Government arising out of this judgment would be to restore all deleted names in the Electoral Rolls or to set about amending the Constitution."

This will not, however, stand in the way of the Ceylon Ministers having their way. Law-courts do not command that respect from the controllers of State policy as these used to do. This is a universal phenomenon. The resignation of Mr. Bandarnayake is a pointer which should warn us of coming events. It is about time that our Foreign office made it clear to all and sundry that any country that deliberately sets out to cheat and deprive the children of India who have gone abroad, would get "reciprocity" with a vengeance. Ceylon is a pointer, like South Africa, of the boons of the "Commonwealth."

Modern Amenities in Rural Ceylon

The United Nations Economic, Scientific, Cultural Organization has been sponsoring centres of modern amenities in various parts of the world, specially in Asia. One of these is at Minneriya in Ceylon in her Northern Central Province now reduced to a "dry zone." This is being re-converted to its former plenty. This story was told by Dr. Spencer Hatch, once U.N.E.S.C.O. adviser in rural education to the Government of India and now director of the Ceylon Project, in *Courier*, U.N.E.S.C.O's organ. We make no apology in quoting certain parts of it.

"Minneriya is the centre of a colonization experiment begun by the Ceylon Government as part of its resettlement programme, in which special emphasis has been laid on improved agricultural methods. The opening of the fundamental education demonstration centre there means the beginning of a new march forward—educational, cultural and scientific—which will not only help the people of that area, but will also be an example to other parts of Ceylon as well as to other countries with similar problems.

The Minneriya Colony, where the new Fundamental Education Centre has been set up, is a symbol of new hope for such people, for it has shown in recent years how practical ideas and strenuous efforts can work a "miracle" in the jungle. In this once dangerous malaria-infested area, the jungle has been cleared by the Government, the ancient irrigation system based on copious "tanks" which are the size of small lakes has been restored, and colonists, formerly displaced persons, have been settled on the land.

The Ceylon project is also providing a significant demonstration of co-operation and co-ordination, the Centre being staffed by experts in literacy training, agricultural education, sanitation, rural industries and home economics in co-operation with Unesco and three other UN Specialized Agencies—the World Health Organization, the International Labour Organization and the Food and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Agricultural Organization. Representatives of different related departments of the Ceylon Government will also join the staff. All the bodies as well as voluntary non-official agencies will work together in a common programme.

The Ceylon Centre will also be co-ordinated with the new Unesco Pilot-Project in Delhi State, India."

The Suez Canal

The Middle East's resentment against Western domination is symbolized by Egyptian anger against British diplomacy. It is, therefore, necessary that we should get hold of the main facts of this dispute. It was the genius —the capacity to take infinite pains and the power of endurance—of a Frenchman, De Lesepps, which made possible the opening of what is known as the Suez Canal today.

The La Compagnie Universelle du Canal Maritime de Suez is French-controlled with the British Government holding 44 per cent of the shares. Until March 1949, only two of the directors were Egyptian (out of 32), but according to an agreement arrived at that month, five more Egyptians were to be appointed as and when vacancies occurred. According to the Company report of 1950, extracts of which were published in some of the leading English newspapers, the Canal earned 16 million pounds sterling for its shareholders that year. Out of this, Egypt's share was a little over a million pounds. These two facts plus the obvious one—the canal is part of Egyptian territorial waters—gives the background to the rising dispute between Great Britain and the Government of King Farouk. Egypt can do nothing about this state of affairs until 1968—when the 99-year canal lease ends. At the same time, she has usurped powers of traffic control and utilises the immunity given to her coastal trade to interfere and upset the principles that have hitherto guided the passage through what are international waters.

It must be recalled, however, that the then British Prime Minister, Benjamin Disraeli took advantage of Khedive Ismail's extravagance to get hold of the 44 per cent of Suez Canal shares that Britain holds today. Very soon followed Arabi Pasha's revolt, and Liberal Gladstone's virtual occupation of State power in Egypt. His adviser in this matter was the "Radical" John Morley whose informant on empire concerns was the equally Radical Charles Dilke who lost his chance for Britain's Premiership owing to Queen Victoria's old world prejudices against sexual laxity. These are the facts of the 70-years' imbroglio that waits a solution even today.

Security Pact for the Pacific Area

On the 13th July last the United States, Australia and New Zealand signed this Pact at Washington. It consists of 11 articles and is expected to go into effect when the peace treaty with Japan is concluded and continue indefinitely. The Japanese treaty is due to be signed in September in San Francisco.

The Pacific Pact provides for the establishment of a council of the three nations' foreign ministers or their deputies to implement it.

In the preamble to the treaty the parties declare their "sense of unity."

The preamble reaffirms the faith of the three parties in the purposes and principles of the United Nations Charter and their desire to strengthen the fabric of peace in the Pacific.

It notes that the United States, on the coming into force of the Japanese peace treaty, may station armed forces in and around Japan, to assist in the preservation of peace and security in that area.

It recognises that Australia and New Zealand as members of the Commonwealth have military obligations outside as well as within the Pacific area.

The treaty provisions follow :

Article 1 : The parties undertake to settle any international disputes in which they may become involved in a manner consistent with the principles of the U.N. Charter.

Article 2 : The parties shall maintain and develop their individual and collective capacity to resist armed attack.

Article 3 : The parties shall hold mutual consultation in the event of aggression in the Pacific.

Article 4 : Each party shall recognise that an armed attack in the Pacific area on any of the parties would be dangerous to its own peace and safety and shall act to meet the common danger in accordance with its constitutional processes.

Such an armed attack and resulting measures taken to meet it shall be immediately reported to the United Nations Security Council.

Article 5 : For purposes of Article 4 an armed attack includes an attack on any island possession of any of the parties in the Pacific.

Article 6 : The treaty does not affect the parties' rights and obligations under the U.N. Charter.

Article 7 : A council of foreign ministers or their deputies of the parties shall be established to consider matters concerning the implementation of the treaty.

Article 8 : The council of foreign ministers is authorised to maintain consultative relationship with other authorities in the Pacific area.

Article 9 : Relates to ratification of the treaty.

Article 10 : The treaty shall remain in force indefinitely. Any party may withdraw from the council of foreign ministers one year after notifying the Australian Government which shall inform the other party.

Article 11 : The treaty, in the English language, shall be deposited in the Australian Government's archives.

It was made plain throughout the draft that Australia and New Zealand's commitments to the United States are limited strictly to the Pacific area including the Pacific coast of the continental United States. American involvement in the European area, for instance, would not obli-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gate the two dominions to come to their ally's aid. The U.S.A. signatory, Mr. Dulles, reiterated America's hope that the pact would be only the first step in the building of a comprehensive regional security system in the Pacific area. This declaration explains the significance of the projected treaty with Japan. For, without her, the security of the area cannot be secured.

Canada's Culture

Since the days of the second world war, there has been an integration of Canadian defence arrangements with the U.S.A.'s. Canada's Defence Minister publicly indicated the lines in which the armed forces of the two neighbours have been co-operating. This arrangement "makes sense," he said; and one of the reasons "for sending the bulk of the Canadian Army's special force to Fort Lewis, Washington, to complete training was because the force 'may have to fight side by side with United States Forces.'

"He did not elaborate on either point in a political broadcast but raised the prospect of Canadian Forces being moulded into higher American rather than British formations."

This collaboration has, however, been having other consequences which were brought out in a 500-page report of the Commission on national development in the arts, letters, and sciences appointed by the Prime Minister, Mr. Louis St. Laurents. The report appears to be worrying the Canadians. As one of them put it, "The gist of Commission's findings is that Canada is losing her soul to the United States.

"Culturally Canada is "anaemic" because of "easy dependence on a huge and generous neighbour." Some American contributions, such as Rockefeller and Carnegie awards, have done much for the Dominion's cultural progress, but at the same time a heavy price has been paid; Canada has no national theatre, film industry or literature worth talking about.

"The five-man Commission was headed by Mr. Vincent Massey, Chancellor of Toronto University, and spent two years on its investigations. One of the recommendations of the commission to combat "soap opera" Americanism is State control and development of the arts and entertainment."

We have our doubts about the efficacy of "State Control" over culture. Canada happens to have a uniform language and literature except for the French Canadians. And it is they who will supply the marks and notes of an independent culture.

Denmark's Fisheries

The Royal Danish Legation's Commercial Section released on July 1 last the following: "The annual octput of the fisheries in Denmark amounts to more than 450,000,000 lbs. at a value of Rs. 150,000,000 when sold by the fishing industry. Exports of fish and fish-products in 1950 amounted to more than Rs. 100,000,000 (1949: 130,000,000).

The North Sea is the main fishing ground of the Danish fishing industry. The fishing vessels working in the North Sea range in size from about 20 to about 40 tons gross. The fishing is carried out with the Danish seine and trawl. In contrast with the trawl the Danish seine is no dragging implement but is heaved in to an anchored vessel.

The Danish fishing vessels are,, in the great majority of cases, owned by the masters of the vessels, whereas owners of more than one vessel are a rare occurrence. Generally the crew on the fishing vessels work for shares.

The catch is partly sold at public fish auctions partly through private exporters, and partly through the so-called co-operative fish selling associations, of which there are about 50 in the country. The part of the catch sold by the fish auctions amount to about 50 per cent of the total catch, the sales through private exporters to about 40 per cent, and the sales through the co-operative fish selling associations to about 10 per cent.

The Government offers various forms of support for the fishermen, partly in the form of Government loans, partly in the form of subsidies for the construction of new fishing vessels, etc. The Government loans are granted through the Fisheries Bank of the Kingdom of Denmark "Kongeriget Danmarks Fiskeribank."

West Bengal's Premier has staked his reputation on two Danish trawlers. In view of this experiment, the facts are worth knowing.

Nuffield Foundation

In addition to its programme of fellowships and scholarships, the Nuffield Foundation, during the year that ended on March 31 last, made grants in support of research schemes in Commonwealth countries. Among these grants was one of £1,500 (Rs. 20,000) to the Christian Medical College, Vellore, for special equipment needed in the neuro-anatomy research department.

Since the last report, India, Pakistan and Ceylon have accepted the Foundation's offer of travelling fellowships similar to those already in existence for Australia, Canada, New Zealand and South Africa. Five fellowships for study in Britain are available for India each year (two in medicine, one in engineering, one in the natural sciences and one in social sciences); three for Pakistan, and one for Ceylon.

Capital in the West makes itself pleasant by devoting part of its earnings to public education and relief. In India except the Tatas there is hardly any one that deserves mention in this connection. The few other instances that there are, are those of self-aggrandizement and show of opulence at the home-towns of the capitalists, away from where the money has been earned, and where the money could be spent with the greatest utility.

An Assamese Scholar Honoured

The news that the University of London has conferred the title of D.Litt. on Srijut Surya Kumar

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Bhuiya, the Director of Archeology and Ancient History to the Government of Assam, will be welcomed by lovers of knowledge all over India. In his own Province, Doctor Bhuiya has the well-deserved reputation as a historian of Assam proper; he had long been recognized as an authority on men and things Assamese. His appointment was a recognition by the State of a popular verdict. Today it has won recognition in wider circles beyond India.

Commemorating Sister Nivedita

The Ramakrishna Mahamandal has realized a dream and aspiration of Swami Vivekananda's—to establish a Centre of Ramakrishna culture in the garden-house of Jadu Mullick where Swamiji had received initiation from Paramahamsa Dev, and where a revelation of Jesus Christ had flowed into the Master's consciousness. The Mahamandal has been able to secure most of this garden-house land through the help of the West Bengal Government from the East Indian Railway which had acquired it for building the Willingdon Bridge. For this thanks are due to an old-time Agent of the Railway, Mr. N. C. Ghose.

The old garden-house is being renovated. And a new idea appears to be taking shape there—an International Guest House has come into being, and the Committee of Management with Deputy Commissioner of Calcutta Police, Sri Satyendra Nath Mukherjee, have vast schemes of extension and improvement that would justify the title of the House. We are glad to notice that the House has signalized its advent by organizing a memorial meeting of Sister Nivedita—the first of its kind after the few since her departure from this world (1911). The meeting is to be held on the 9th September, 1951, and we have no doubt that as the years pass on, the House will be able to organize study into the life and work of Sister Nivedita which are being forgotten.

To the success of this noble endeavour the editors of the *Prabuddha Bharat*, English monthly and the *Udbodhan*, Bengali monthly, can contribute the most by making available to the world the many unpublished letters and writings of this noble daughter of Eire who had devoted her superb powers to the service of India, the land of her *Guru*.

Venereal Disease

The Second World War has left the scourge of venereal disease widespread all over India. Arrangements for fact-finding about this disease in our country are so poor that no correct idea of this curse can be made. During the last war, not only the cities and towns but even villages have been contaminated. Attempts so far made to fight this menace in Bengal have been far from satisfactory and have been done on entirely wrong lines. Too much attention had been laid on its propaganda side and too little attention had been given to educate the medical practitioners and medical students in modern methods of treatment of the disease. About 1943 a Director of Social Hygiene was appointed and some 17 lakhs of rupees were spent on propaganda. Proposals were later made for the appointment of Visiting Surgeons in Medical Colleges but these posts had been held in abeyance. Arrangement for specialist lectures in the Medical Colleges was made but in a country where knowledge of treatment of the disease is meagre, such lectures were ineffective. Recently it had been decided to attach three professors of Venereal Disease in the three Medical Colleges of the City, but, it is understood, only one of them will be filled. Applications have been invited from F.R.C.S. men for this post. But again a mistake is going to be committed. This disease is essentially a case for medical and not surgical treatment. In England, venereal disease is a subject of study under the Medical Group and M.D. or M.R.C.P. with V.D. as a special group can be taken up. Surgical manifestations in this disease are only some 10 per cent as compared to the medical manifestations of this disease. It will be good if means can be found to appoint all the three professors as originally proposed.

Rana Hiranya Shamshere

Death occurred on August 8 in Calcutta of this scion of Nepal's ruling class. Father of Rana Subarna Shamshere, at present Finance Minister of the State, he was different from his class, and "lost caste" with them for his progressive views. His son inherited the same traditions and was driven to tread the dangerous path at the end of which shines equality in the various relations of human life. During last year's developments in Nepal, he was a tower of strength to the popular cause. He lived to see the back of autocracy broken in his motherland, and must have died happy.

Rukmini Lakshmipathi

In the death of Dr. Rukmini Lakshmipathi, India has lost one of the leaders of the Women's Movement. She was, however, not left long to follow this rather narrow path; and from an inner urge was found to stand shoulder to shoulder with men in our common fight against British rule. During the Salt Satyagraha which formed part of the wider Civil Disobedience Movement of 1939, she was the first woman in Madras to defy this law and court imprisonment. Then came the acceptance of Ministry by the Congress and Rukmini Lakshmipathi was chosen Deputy Speaker of the Council, the Upper House of the Legislature. We remember her specially for her work for women's uplift in her own Province; and for the eager interest she took in the activities of the Nari Siksha Samiti of Calcutta as and when she happened to visit our city. She died in her 67th year, May her soul rest in peace.

TENSIONS IN THE MIDDLE EAST

By Prof. TARAKNATH DAS, Ph.D.

In the area between Egypt and India—as we may define the Middle East—the causes of tension are many. Besides the over-all problem of Soviet efforts to penetrate into the area and the present intense conflict over Iranian oil, we must list Anglo-Egyptian disputes over the Sudan and the Suez Canal, the problem of Arab-Israeli relations, including the vexed Arab refugee problem, the Egyptian blockade of Israel-bound vessels passing through Suez, Syrian opposition to Israel's drainage project in the Huleh swamps, the permanent status of Arab Palestine. In addition, India's foreign policies affect the whole of Asia, while additional sources of conflict are Pakistan's relations with her two neighbours, Afghanistan and India, and subversive Communist agitation in Pakistan.

Let us examine these issues briefly. The British desire to create an independent Sudanese State is bitterly opposed by the Egyptians who wish to give the Sudanese full local autonomy while federating the Sudan with Egypt. To one who has studied British procedure and arguments in partitioning other countries, British concern for minority rights and self-determination in the Sudan becomes suspect. One reaches the conclusion that a Sudanese program which will intensify existing anti-British feeling in Egypt must be avoided. For rapprochement between Britain and Egypt is of utmost importance to the entire free world.

Ever since, through the far-sighted statesmanship of Disraeli, Britain managed to get control of the Suez Canal, domination of the lands around the Canal has been the crux of British policy. There is nothing in international law to prevent Egypt from nationalizing the Canal when the 99-year lease of the Suez Canal Company expires. But an Egypt in control of Suez and allied with Soviet Russia would be highly prejudicial to the Atlantic Pact powers and the forces friendly to them in the Middle East. Hence, it is of the utmost importance that American, British, French and Egyptian statesmen devise a formula which will be satisfactory to Egyptian national interests, as well as to the needs of the free peoples.

It would clearly be to the advantage of Egypt, in this tense situation, to come to terms with Israel, so that those two advanced Middle East States might co-operate towards greater security and progress. I sometimes hear vague talk of the possibility of such a settlement, but at the same time Egyptian and Israeli spokesmen continue to exacerbate matters by making public statements to the effect that the breach between the two countries cannot be healed. Certainly, as long as Egypt blockades Israel, there is no possibility of a peace settlement. The blockade has been strongly protested by the United States, Great Britain, Australia, Norway, for since it involves oil which might otherwise be refined at Haifa, it touches Western interests to the quick.

It is of immeasurable importance to the future of the Middle East that the Arab League powers recognize that Israel is a fact which cannot be wished out of existence or destroyed by a new Arab invasion. Once Israel's existence is recognized, Arab hostility would, with inevitable logic, have to give way gradually to collaboration with Israel. This is not so impossible as it may sound. It was the program of the late Emir Feisal who welcomed Zionism to the Middle East as a future aid to the Arabs in the development of their territories.

In the framework of over-all collaboration, Israeli swamp reclamation would come to be seen as being what it really is—beneficial to the Arabs as well. Such projects would then cease to be sources of conflict and become factors towards cementing friendlier relations.

Essentially neither the Jews nor the Arabs can or should pursue a pre-Russian policy. Their friendship to the West will be strengthened if the Anglo-American powers and their friends in the United Nations encouraged Arab-Israeli co-operation. This will be possible if powerful forces in Great Britain and the United States foreswear their present sympathy for anti-Semitic thinking, on the one hand, or political Pan-Islamism, on the other.

Racial or religious exclusiveness of the Pan-Islamic or anti-Semitic types lead to intolerance of minorities and ultimately to refugee problems, as we see in the sad cases of the Arab refugees from Palestine or the vastly more numerous Hindu refugees from Pakistan. In the special case of the Arab refugees, it is beginning to appear that they might be best readjusted by making their homes in under-populated Arab countries, with the aid of internationally administered funds to which Israel would contribute for compensation. The approach of combined re-settlement and development work suggested by the Clapp Commission remains valid and should be the foundation-stone of aid to the Arab refugees.

Certainly no area of the world needs large-scale

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

development more urgently than the Middle East.

Students of world affairs cannot ignore the fact that international tensions are caused not merely by international rivalry, but are often the direct result of internal conditions affecting the well-being of the masses. Poverty and depressed conditions lead to national disunity, civil wars and revolutions, resulting in serious national weakness which invites aggressive action from expanding imperialist powers.

The Near and Middle East today are characterized fundamentally by abject poverty of the masses and workers, due primarily to the feudal land system. Whenever there are expressions of unrest among the masses of the Middle East, we are at once told that this is due to Soviet Russian plots and intrigues. To be sure, Soviet Russian governmental agents—Russian and native—are always alert to opportunities for spreading disaffection among the masses, but their propaganda alone cannot bring men to riot and revolt. Ordinary human beings are extremely conservative and do not wish to risk their lives to bring about a change in the social order unless they have reached the point of desperation. Full recognition must be given to the fact that the masses of the Middle East are reaching that stage.

The newspapers daily print items about unrest in the Middle East—attempts by peasants to take over the properties of landlords in Egypt, Iraq, Iran, Pakistan and India. We read of the growing strength of Left Wing political groups in country after country.

It is often said that Islam immunizes the Moslem peoples against Communist propaganda. The Moslem countries are regarded as the bulwark against Soviet Russian imperialism trying to penetrate into the Middle East. Pakistan, in particular, is considered a dependable ally of the Anglo-American Powers against Communism. But the fact is that it was a Communist plot, headed by the Chief of the General Staffs of Pakistan and others, that recently almost overthrew the present government of Pakistan. The rise of the Tudeh Party in Iran, too, disproves the assertion that Islam is the best antidote to Communism.

It is equally true that Hindu India has Communist parties of various brands, while the tension due to internal social inequalities and economic oppression is so grave that the Nehru Government has imprisoned several thousand Indians—Hindus, Moslems, Christians —without trial on charge of subversive activities. The Nehru Government has even restricted the freedom of press in India by a constitutional amendment.

Social revolution in the Middle East cannot be checked by wishful thinking. The standard of living of hundreds of millions in the region must be raised by internal reforms, sponsored by the local Governments and aided by the Government and people of the United States. It is here that Point Four Program can play a great and crucial role, welding together diverse parts of the world towards freedom.

The case of Iranian oil is an aggravated example of the social tensions affecting the Middle East. Persia has been a pawn ever since Tsarist Russia and Britain tried to partition it between them as part of the attempt by the Triple Entente to check Germany and her Berlin-Baghdad Railway and German-Turkish collaboration in world politics. Persia is still a pawn and Persian nationalists and every self-respecting Persian resents this.

One of the most revealing items regarding Persian oil came out of the recent hearings regarding the ouster of General MacArthur. It was the information given by General Hurley to the late President Roosevelt that continued exploitation of Persian oil by the Anglo-Iranian Oil Company (which is controlled by the British Government which owns more than 60 per cent of its stocks) will result in serious discontent in Persia which will be used by Soviet Russia. He suggested that Anglo-Iranian Oil Company and other Middle Eastern oil concerns should take the initiative to make more equitable arrangements regarding royalties, etc. Heeding this suggestion, American oil concerns have made greater concessions to the Arab States regarding royalties. Had the British Government followed this precedent, there might not have arisen the present crisis.

To look at the present crisis realistically, one will have to acknowledge that Iran, like Mexico and other countries, can, by exercising the sovereign authority of the State, cancel a concession and nationalize an industry. This is not contrary to the practices of International Law. The Labour Government in Britain which has nationalized its coal industries cannot very well take exception to Iran's right to nationalize the oil industry. But it must be understood that Iran must not expropriate private property without just compensation. Adjustment of compensation should be arrived at between Britain and Iran, and the Government of the United States should use its influence to bring about a peaceful solution of the issues involved. The Government of the U.S. should, however, be careful not to take any action which may give the impression that the Anglo-American powers are in concert against Iran. Landing British forces in Iran might well have serious repercussions in the *whole* of the Middle East and even lead to World War III.

The possibility of Iranian nationalists who are not pro-Soviet, seeking Soviet support, must not be ruled out. This can be clearly understood if we take into consideration certain developments in the situation in China after World War I. To my personal knowledge the late Dr. Sun Yat-sen, after World War I, tried to enlist the co-operation and support of America, Britain and also Japan toward abolition of extra-territorial jurisdiction in China, but the statesmen of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

those nations, largely through British influence, completely ignored Dr. Sun's legitimate pleas, while the Government of Soviet Russia formally gave up all extra-territorial rights and concessions in China. This situation forced Dr. Sun, who was pro-American and pro-Japanese and had always been suspicious of British and Russian imperialism in Asia, to seek Soviet Russian aid. Then came the importation of Soviet experts into the Republic of China under the Knomintang regime. And we know what has happened in China, step by step, leading to complete Communist control.

In the present Anglo-Iranian crisis, American statesmanship should be directed towards the preservation of American interests, not following the British anti-Iranian program blindly. It cannot be overemphasized that if the conduct of the American Government in relation to the present Anglo-Iranian dispute is anti-Iranian, there will be very serious effects all over Asia, even in Egypt and Turkey. Today all Asian statesmen of any consequence must think and act in terms of Asian independence and sovereignty, and all of the Middle and Far East countries are in full sympathy with the present Iranian efforts to divest the country of British control. Any false step on the part of American statesmen will rouse Asian antagonism and raise louder cries of American imperialism siding with the British. Let us hope that American statesmanship, seeking to co-operate with the British, will be successful in solving the present crisis in Iran and solidifying the common interests of the Anglo-American and Asian peoples to uphold world freedom, rather than playing into the hands of Soviet Russia.

If we move further east to Pakistan, India and Afghanistan, we find that tension between India and Pakistan and Pakistan and Afghanistan may have most far-reaching and disastrous consequences to the whole world. This is not understood by the majority of Americans, even American experts on the subject, who have tended to make the British point of view their own.

The very creation of Pakistan by partition of India is an indictment of British rule. In pursuance of the policy of "divide and rule," the British authorities deliberately led up to partition.

Lest there be any misunderstanding, let me acknowledge the fact that there was a very small group of Pan-Islamists in India during the latter part of the nineteenth century and the early days of the twentieth century, but not until 1940 did the demand for partition of India come from the Moslem League. It came then under the leadership of Jinnah, who in his early days had prided himself on being "an Indian first and a Moslem afterwards." The seed of this idea that Moslems and Hindus are different nations was sown by British officials who in 1905 introduced Communal representation into Indian political life in the Morley-Minto Reform scheme. The Moslem League and the British authorities nurtured the seed of dissension for 35 years, and in 1940 the demand for partition of India came to the fore in Indian politics.

In 1947 when the British found that they could not remain in India as rulers, they decided to leave India in partitioned, not united form. Mr. Churchill agreed to support Indian independence, provided that the Moslems of India were given a separate State —Pakistan, which would have territories in the North-western part of India adjoining the Persian Gulf and Afghanistan and Western India (Punjab) and in North-eastern India (Eastern Bengal) adjoining Tibet, Burma. This was a monstrous scheme from the political and economic points of view, and unfortunately the leaders of India, such as Mr. Nehru, did not have the vision or courage to oppose partition effectively because they held that after the British got out, Pakistan and India would become a United India.

In supporting the Moslems of India, the British hoped to use the Moslem blocs of Western Asia as an obstacle on the part of the Soviet march towards the Persian Gulf and the Middle East, while in the East they anticipated using Eastern Pakistan, Burma and Malaya to check the Russians and Chinese.

The Indian people cannot help feeling that any nation that supports the cause of partition of India cannot be a friend of India. This is one of the facts in the Indian attitude of non-hostility to Soviet Russia and China. They feel that the Anglo-American Powers are for Pakistan and against India, as has been demonstrated in their attitude on the issue of Kashmir. The Anglo-American powers seem anxious to appease the Moslem world even to the extent of hurting the vital interests of 340,000,000 Indians.

The reflex of this is the growth in India of a trend towards Russo-Chinese-Indian collaboration in world politics which is dangerous for America and the people of India and the world at large. The only way for the free powers to counteract this is to adopt a positive policy which will lead to Indo-Pakistan co-operation, not at India's expense, but in terms of the development of federalism in India and Pakistan so that Pakistan would be analogous to the province of Quebec in Canada. Today more than 35 to 40 millions of Moslems live in India and enjoy equal rights. Just as Catholic and French-speaking Canadians in Quebec are Canadian citizens and Quebec is an integral part of the dominion, so Pakistan must in the course of time be reunited with India in a new United India which will pursue a policy of collaboration with America.

Playing Pakistan against India, to check the possi-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

bility of the development of a strong united India, is as dangerous as it was to play Japan against China to avert what was called "Yellow Peril." That policy, originated by the British, Germans and Russians, did not serve to maintain western or White supremacy in Asia. If a similar policy is adopted by America now, it will also fail and ultimately help the cause of Soviet Russia.

American scholars tend to think exclusively in terms of Europe, and of Asia incidentally; but I venture to predict that Asia is the key to the future destiny of mankind and that co-operation between Asia and America is the most important factor in the field of world politics and one of the best hopes for the future peace of the world.*

* This is a summary of views expressed by the author, as one of the participants in a panel discussion on "Tensions in the Middle East" on July 9, 1951, in one of the sessions of the Institute of Public Affairs, at the University of Virginia.

—:0:—

THE FIVE-YEAR PLAN

By Principal S. N. AGARWAL

The Planning Commission has recently published the Draft Outline of the First Five-Year Plan involving a total outlay of Rs. 1793 crores on various sectors of national development. The Plan is, evidently, a valuable document containing a fund of data and statistics regarding the different phases of reconstruction in India. It is the first attempt of its kind in this country and cannot be dealt with lightly in a spirit of indifference. The Draft Outline contains several hopeful and sound features of economic development and social evolution. Its emphasis on agriculture, rural uplift, small-scale and cottage industries, basic education, decentralisation of political, economic and administrative power is, indeed, to be welcomed. But there are several other features of the plan which cannot be called satisfactory from the standpoint of India's national reconstruction.

The basic defect of the Five-Year Plan is its failure to present a clear-cut picture of future economic development. This is partly understandable because the Planning Commission has tried to follow the present economic policy of the Government of India. But I have always strongly maintained that our Planning Commission should be, more or less, a non-party organisation consisting of experts who ought to be above party politics and whose policies should not be easily changed with a change in the Government. We, therefore, expected that the Commission would try to present a bold and definite Plan for Free India, a Plan that would be in conformity with India's indigenous culture and traditions and, thus, catch the imagination of the people. The ideal of "mixed" economy has become almost synonymous with the maintenance of the *status quo;* it is not capable of making the masses feel the glow of freedom and Swaraj. Mixed economy is bound to be a "hotch-poch" of several principles of economic reconstruction, often contradictory and, therefore, making for confusion. In the modern world there are two main economic ideologies, namely, capitalism and communism. These two ideologies are at war with each other and threaten the very existence of humanity. In India, Gandhiji had shown a third ideology which beautifully combined the good points of the other two. It is now recognised by eminent thinkers that the only alternative to Communism can be Gandhism. The Gandhian way of life is not a "fad" but a sound and scientific pattern of socio-economic re-orientation. If the Plan had been able to envisage such a new order in our country it might have been possible to present an attractive but practical picture not only for India but for the whole world.

The other chief drawback of the Plan is its rejection of the aim of "Full Employment" which is the ideal of all modern economic planning. The Constitution of India also guarantees to every citizen the "right to work" and "the right to an adequate means of livelihood." I, therefore, honestly feel that the Planning Commission in laying more emphasis on greater production rather than on full employment has gone against the fundamental directive of the Indian Constitution. In fact, any Plan which does not try to provide employment for all citizens as the topmost priority cannot be called a Plan at all. In order to achieve the objective of Full Employment in India, it is essential to organise decentralized cottage industries on the widest possible scale and as the very basis of economic planning. With the exception of basic industries which ought to be owned and managed by the State, all the consumer goods industries including cloth, oil, sugar, paper, rice and match have to be organized on a small scale in the rural areas so that the nation may have "fields, factories and workshops" for solving the problem of employment, and what is even more, under-employment. Obviously, the Plan has not been able to face this basic fact with courage and boldness.

As regards the details of expenditure in different sectors of national economy, the Plan has attached too much importance to "grandiose" schemes of multipurpose River Projects and development of Transport and Commu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nications. Out of the total outlay of 1493 crores of rupees in the first part of the Five-Year Plan, the Power and Irrigation projects will consume Rs. 450.26 crores. While the importance of irrigational facilities and cheap power supply cannot be under-rated in any plan of economic development, the fact remains that the nation cannot afford to rely on long-term and centralized projects which might ultimately prove to be "white elephants" for the poor cultivator and artisan in India. A decentralized plan of irrigation with a country-wide network of village wells, tube-wells, small canals, tanks, reservoirs and similar other devices would have been more practical and useful. Improvement of railways, roads, shipping and civil aviation, according to the Plan, will involve an expenditure of Rs. 388.20 crores. This huge amount could also be reduced by about Rs. 100 crores which could, instead, be more profitably spent for providing better social services.

Rs. 100.99 crores have been earmarked for the development of large-scale, small-scale and cottage industries. Out of this amount, only Rs. 16 crores are to be utilised for village and cottage industries. Moreover, the Commission maintains that "programmes for cottage and small-scale industries cannot be viewed in isolation from programmes relating to the corresponding large-scale industries." The Plan, therefore, recommends "common production programmes." This clearly shows that the Planners do not visualise a decentralised type of economy for its own sake; they favour cottage industries only for the sake of certain immediate advantages and expediencies, particularly relating to capital and investment.

Social services, including education, health, housing and social welfare, have been allotted Rs. 254.08 crores in the first part of the Plan. This is, surely, inadequate in a country which is proverbially poor and which desires to grow into a Welfare State. The chapter on Education, is, unfortunately, the least satisfactory. No lasting socio-economic reconstruction is possible without a radical change in the educational system. It is, therefore, surprising that the Planning Commission should have dismissed the vital problem of education in such general terms. It is necessary that the country should be given a comprehensive picture of the future educational structure in the Five-Year Plan.

The sources of Finance envisaged in the Plan are by no means very certain. The Plan also admits that the terms of public loans, small savings and additional revenue due to fresh taxation are "a matter of speculation." Under the prevailing money market conditions it is very doubtful whether the expectations of the Commission are reasonable. Even if these expectations are realised, there will still be a gap of Rs. 375 crores over five years. The Commission indicates the possibility of "deficit financing" to the extent of Rs. 290 crores. This would "impose a definite strain on the economy" of India by setting into motion the inflationary tendencies. The Plan further mentions that "if foreign aid is available for financing development expenditure, the sterling balances can be used for importing consumption goods and thus bringing down domestic prices." The use of sterling balances in the manner mentioned above appears to be highly unsatisfactory.

The Plan does not present the problem of Controls in a convincing manner. Curiously enough, the Commission think that if—and this is a big 'if'—the controls are efficiently worked, they can "raise the moral standards of the community." Can we expect any such miracle from the existing administrative machinery: In regard to the Food policy, the Commission urges that during the next few years annual imports of foodgrains to the tune of 3 million tons should be planned for, and adds that in exceptional years imports may have to be larger. So, this is the brilliant picture of the much-boosted national self-sufficiency programme!

There are several other aspects of the Plan which could be discussed here in detail. But considerations of space in these columns prevent me from dealing with them. There is, however, one basic question that must be answered. What is the future of the Plan? The Commission have so far been able to publish one Draft Outline which is to be finalised only after "further consultations" with the Central Ministries, State Governments and its own Advisory Board and Panels, and the members of Parliament. This procedure will easily take several months. By that time, the country will be in the grip of election fever. After the general elections the altered strength of different political parties at the Centre and in the States might necessitate a change in the personnel of the Commission. This would mean a further revision of the Plan and a fresh chain of consultations. So, unfortunately, the Plan bids fair to remain only a paper Plan for endless discussions. It would have made a world of difference if the Plan, after receiving final touches, had been launched in all seriousness on the 15th August, the fourth Anniversary of India's Independence.

THE REPUBLIC OF INDIA—PROMISE AND PERFORMANCE

By Dr. HARIDAS T. MAZUMDAR

I consider it a special privilege to be invited to deliver the second annual lecture for the Sudhindra Bose Memorial Foundation here in Iowa City on the great campus of the State University of Iowa. I am especially happy because I had the pleasure and privilege of knowing Dr. Bose and because I am thoroughly convinced of the utility of the work that he was doing.

Dr. Sudhindra Bose was a noble son of Mother India, a fine American citizen, a great teacher, and a worthy citizen of the world. The trail he blazed some of us are trying to follow in our own humble fashion. In his rich remarkable career Dr. Sudhindra Bose taught various generations of students in the field of political science. But, more than that, he taught them a better appreciation of the cultural heritage of half the population of the world who inhabit the continent of Asia. This pioneering work needs to be done more today than ever before. The inventions of science and technology have practically annihilated distances in time and space, and the world as a result has become a small neighborhood. Orient and Occident are no longer far apart. Indeed, the problems of the Orient today become crucial considerations in the formulation of our American foreign policy.

The officers and friends of the Sudhindra Bose Memorial Foundation deserve to be congratulated on their vision to keep alive the memory of the remarkable work that Dr. Bose did on this great campus.

In my own humble fashion I have been interested in doing the same sort of thing that Dr. Bose had dedicated his life to achieving: namely, bringing about a better understanding between the peoples of the Orient and the peoples of the Occident. Perhaps, a word about my background might be in order. During ten years of my stay in this country as a student, I undertook to present Mahatma Gandhi's cause, and the cause of India's freedom, to the American people as an extra-curricular activity. Then, after finishing my studies at the University of Wisconsin, I returned to India during the Christmas week of 1929 when I attended the famous Lahore Session of the All-India National Congress. It was at this Congress that the resolution on independence was passed by the acclamation of the people gathered together. Then, I was a guest of Mahatma Gandhi's at his Satyagraha Ashram, Sabarmati, for three months, and at his invitation became a member of the Dandi Salt Party. This Dandi Salt Party of Mahatma Gandhi's was very much like the Boston Tea Party. Just as the Boston Tea Party was the starting point of the American Revolution for freedom so Gandhi's Salt Party was the prelude to India's non-violent revolution. Then, in the fall of 1930 at the suggestion of Pandit Motilal Nehru, father of the present Prime Minister of India, I returned to this country to interpret the inside story of India's non-violent revolution and to present Mahatma Gandhi's teachings of non-violence and soul force. For well-nigh fifteen years I busied myself with the self-imposed task of interpreting Gandhi and India to the American people as a twenty-four-hour job. Thus, you can see that I am tremendously interested in the present topic that has been assigned to me, "The Republic of India—Promise and Performance."

Before I take up the subject of the evening, may I say a word about the reasons that brought me to this country for my higher education. It was the fashion in those days in the twenties for young men from India to go to England for their studies to earn English degrees, to return to India and get fat government jobs. You may wonder why I chose to come to America instead of going to India. Well, the reason is simple. It can be traced back to a very important experience I had in my grade school in the State of Baroda. In my second grade reader in the Gujarati language I came across a lesson about a boy from this land. I knew he was not from India because he had a different type of costume on and because he had an unpronounceable name. A name such as Haridas Thakordas Mazumdar is easy and simple. Anybody can say it—in India. This boy's name was George Washington, quite a difficult name. To judge from the contents of the lesson, it seemed to me the people would like to talk about George Washington, but I was afraid that because of his unpronounceable name, people might shy away from talking about him. The lesson dealt with the story familiar to all American children, the story of the famous cherry tree. The lesson had a great many interesting meanings for me. In the first place, of course, it is not unusual for a boy in India to receive a gift. It is unusual for a boy in India to try out actually how sharp the little gift might be, the hatchet that George received, for instance. As a boy, one grows up in India having a great many cultural inhibitions, and here

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

George had the temerity and the audacity actually to try out how sharp his little hatchet might be. The result was a little disastrous. The cherry tree was crest-fallen, shall I say? And, as a boy, I said to myself while I in India could not very well try out, even though I might have longed to do it under the same circumstances, I felt very happy that George did it. And, I said, "Hurray, for George!" Secondly, I discovered that George was willing to talk to his father—I think it would be appropriate to say to 'talk back to his father.' In India, the little boys do not talk back to their parents. I was later to learn after a stay of some time in this country that in George Washington's country people magnificiently disregard the old world saying that children are to be seen but not to be heard. In this country, on the other hand, if you have children in your family and if friends come to visit you, it is the children who do the talking—nobody else. Thirdly, I discovered that George's father, instead of meting out punishment to the boy for his offence, congratulated him that he told the truth and let it go at that. I said to myself, "They seem to have very pleasant ways of dealing with some situations in George Washington's country." Finally, the lesson ended up by saying, "And, the truth-telling George Washington became the Father of his country." I said to myself, "If George were so good and truth-telling and if he became the father of his country, perhaps, all of his children must be equally good and truth-telling. Some day I ought to go and pay a visit to George Washington's children." Thus, it came about that everytime I came across a lesson on America or any reference to America, I thought back and reminded myself of that first introduction of mine to George Washington's country, and my desire to come to this country became ever more firm. Hence, when in 1920 I was in a position to make a decision for study abroad, I decided in favor of coming to this country rather than going to England. Perhaps, you may be interested to know whether or not my boyhood impressions of George Washington's children have been borne out as a result of my visit to this country. Well, on the whole I should say, and I speak with considerable experience and research behind this statement, on the whole I can say that my boyhood impressions of George Washington's children were correct. On the whole, the American people are good and truth-telling, and I would advise anybody to take his chances with them. One would not be going wrong. But I must also report to you one qualification that I feel ought to be made: namely, that when George Washington's children are engaged in the national pastime of a political election campaign, I do not give two cents for their truthfulness. (Laughter!). Even so, let me say, ladies and gentlemen, I think enough of George Washington's children, think highly enough of them, to have cast my lot in with you and I became an American citizen four years ago. This means that I have a twofold responsibility —one responsibility to Mahatma Gandhi's children, another responsibility to George Washington's children. And I am trying my humble best to promote better understanding between the people of India and the people of America.

I

As you can readily see, having spent over twenty-five years of my life in the promotion of India's cause for freedom in this country, in England, and in India, I am especially interested in assessing the results of that non-violent revolution for freedom. What, for instance, was the promise of the free India? What are the accomplishments of the free India? These are legitimate questions, and I wish to address myself to these questions this evening.

At the very outset, let me make it clear that we are thinking of India as a free nation not for one year only, though technically India became a Republic only last year, to be precise on January 26, 1950. Actually, India became free on August 15, 1947. It was on that historic day that the British Empire in India was liquidated with the creation of two autonomous dominions, the Dominion of Pakistan and the Dominion of India. Thus, we have a period of four to five years of India's career as a free nation, and I shall attempt to evaluate the results of this freedom of India. We shall attempt to look into the promises of freedom and the actual accomplishments of free India during the last four or five years.

The best way to start this discussion is by reminding ourselves of the vision of free India as described by Mahatma Gandhi. During his voyage to England on board the S. S. *Rajputana* in the year 1931, Mahatma Gandhi gave an interview to newspaper reporters. In this interview he in a magnificent manner embodied his hopes and aspirations for the free India of his dreams. I was privileged to spend a month with Mahatma Gandhi in London at the time of the second round table conference, and I can assure you that this vision of a free India literally and faithfully sets forth Gandhi's dreams and hopes and aspirations for his dearly beloved Motherland. Let me quote this statement verbatim. It is a short statement. Just one paragraph. But it is important not only because it is Gandhi's vision of his free India, but because it has also served as a guide-post to his co-workers and his followers in the rebuilding of the free nation—in the fashioning of the free India. Here is Gandhi's vision of the Free India:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"I shall strive for a constitution which shall release India from all thraldom and patronage and give her, if need be, the right to err. I shall work for an India in which the poorest shall feel that it is their country in whose making they have an effective voice—an India in which there shall be no high class and no low class of people—an India in which all communities shall live in perfect harmony. There can be no room in such an India for the curse of untouchability, or the curse of intoxicating drinks or drugs. Women shall enjoy equal rights with men. Since we shall be at peace with all the rest of the world, neither exploiting nor being exploited, we should have the smallest army imaginable." (Please note: The apostle of non-violence, the embodiment of soul force, still makes room for the existence of an armed force for the State of the Free India!) "All interests not in conflict with the interests of the dumb millions will be scrupulously respected whether foreign or indigenous." (May I parenthetically add that the word 'dumb' used by Gandhi really means inarticulate). To continue Gandhi's statement, "Personally, I hate distinction between foreign and indigenous. This is the India of my dreams."

Here in this statement you will notice one dominant note, namely, the supreme concern with the well-being of the masses, the under-privileged millions of India, that they would have an effective voice in the making of the new India; that their well-being would be the supreme concern of the government of the free India. Now, we may ask of ourselves the question, "Is this promise of the Free India being realized?" And, my answer is a very emphatic "Yes." Yes, indeed, the well-being of the masses of India is being today translated into reality not only as part of the government policy but it is also being realized in the actual lives of these millions of people. For instance, the concern, the master concern, of the Nehru Government is the increasing of the purchasing power of the masses and raising the standard of living of the vast millions of India. By improving methods of agriculture, and by promoting industrialization, the Government of India is at present successfully implementing Mahatma Gandhi's point regarding the conserving and the safeguarding of the well-being of the masses. Yes, in the making of the new nation the under-privileged will have an effective voice! One special project of the Government of India has promise of tremendous good to the whole nation. I refer to the projected construction, projected and actual construction, of at least ten to twelve hydro-electric projects on the TVA model. These TVA-type multi-purpose projects are expected to be finished within less than ten years. It is gratifying for us in America to know that some of our best engineers and technicians are helping the Government of India in the building of these hydro-electric projects. When finished, these projects would serve a number of purposes, all aiming at the improvement of the standard of living of the people. For instance, these hydro-electric projects will, in the first place, mean flood controls. Secondly, they would bring about irrigation and thus bring under cultivation many millions of acres of land which today remain uncultivated. Thirdly, these hydro-electric projects will facilitate internal navigation, and, fourthly, they will generate tremendous electric power which will be made available to the people at large whether in the huts in the villages, or in the dwellings in the towns, or in the factories in the cities. They would make available to all these citizens of India electric power at low cost. Thus, we may well see that these hydro-electric projects will literally change and transform the face of Mother India for the better. So far as the economy of the new India is concerned, I visualize the emergence of what we in this country call a mixed economy. The Government of India is committed to the proposition of owning, directing and operating certain key industries, what in this country we would perhaps call "public utilities." It is also committed to the proposition of permitting full and free play to private enterprise on the one hand and to the co-operative societies on the other. Thus, in the field of economic activity, we may well visualize part state socialism, part co-operationism, and part capitalism. This is not a new mixture dreamed up by the leaders of India. They have an excellent model before them in the well-regulated and well-articulated economy of Sweden, the home of the Middle Way. Whether a vast country such as India will be able to make a success of this mixed economy, the future will have to tell. I for one feel optimistic about the outcome of this experiment. This is not to say that I advocate the same sort of arrangement for this country. It simply means that in the conditions of India where the industrial development is still very backward, the Government must take a lead in behalf of the under-privileged masses.

Now, let us look at the other aspect of Mahatma Gandhi's dream of the Free India. He said that in the Free India that he visualized, there would be no curse of untouchability present. How is this promise being realized? Well, if you could imagine, in your wildest stretch of imagination, that at the Constitutional Convention in Philadelphia we had as Chairman of the Drafting Committee of the Constitution a slave from Georgia, you would perhaps have an approximate picture of the sort of revolutionary change brought about in modern India. It is pleasing for us to note that in Mr. Nehru's cabinet a so-called untouchable gentleman has been holding the portfolio of law. It is still more gratifying to note that this same untouchable gentleman, so-called, was Chairman of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Drafting Committee entrusted with the task of framing the new constitution of Free India. Is untouchability on the way out? Well, I could not give you any more concrete proof. And it is also instructive to note that in the new constitution of the Republic of India the practice of untouchability has been made a punishable offence.

With reference to Gandhi's dream that women shall enjoy rights with men, I don't think at this late day we need to ask ourselves the question whether that point is being implemented. There are hundreds of leading women who are today taking an active part in the public life of India, in the diplomatic service of India, and they are helping fashion the new India. Thus, economically and socially, the dream of Mahatma Gandhi is on the way to realization. In the field of political achievements, we in America may legitimately take just pride in the fact that the framers of the new constitution of India derived a great deal of inspiration from our constitution. As with us, so in India, the Government is divided into three co-ordinated branches, the executive, the legislative, and the judicial. And, the Supreme Court of India is made the custodian and interpreter of the new constitution of India. As in our constitution, so in the constitution of the Republic of India, they have a Bill of Rights, what they call "fundamental rights," guaranteeing to the citizen most of the rights that our Bill of Rights guarantees to our citizens. Then, of course, they have a special clause in their Fundamental Rights section prohibiting the practice of untouchability which is peculiar to the social organization of India.

II

In the field of political achievements, I am even more thrilled by the preamble to the constitution of the new India. For the first time in the long and checkered history of the Orient, we find the enunciation of the political doctrine of popular sovereignty. Let me read to you the preamble to the new constitution of India. "We the people of India." Yes, "we the people," a direct echo from our own constitution; "we the people" marks a revolutionary change in the outlook of the new India. In days gone by in India, or, for that matter, in Europe, too, the divine right of kings used to hold sway in the thinking of the people. Indeed, when the emperor of Japan at the time of the Meiji restoration gave certain rights and privileges to his subjects, it was in terms of the king or the emperor granting rights. The emperor, in other words, was conceived as the fountain source of authority and sovereignty. Here in the constitution of India as in our constitution a century and a half ago we find enunciated the doctrine of the people as being the fountain-head of authority and sovereignty. Let me read the complete text of the preamble:

> "We the people of India, having solemnly resolved to constitute India into a sovereign, democratic Republic, and to secure to all its citizens
>
> Justice, social, economic and political;
>
> Liberty of thought, expression, belief, faith and worship;
>
> Equality of status and of opportunity, and to promote among them all
>
> Fraternity, assuring the dignity of the individual and the unity of the nation,
>
> In our constituent assembly, (or, as we would say, 'in our Constitutional Convention,') this 26th day of November, 1949, do hereby adopt, enact, and give to ourselves this constitution."

One of the most spectacular achievements of the new India in the political field is the integration of some 500 odd princely states with the federal government of India. In the days of British rule these princes were maintained on their thrones as relics of feudalism, as props to the British Raj. Once the people came into their own they saw to it that these relics of feudalism would not stand in the way of the enjoyment of democratic rights and privileges by any of the sons and daughters of Mother India, whether they were born in a princely state or in what was previously British India. And now these states are today integrated with the government of India. Some small states have been merged into what were adjoining provinces; some States have been merged together, smaller units into one larger viable administrative unit, and some of the larger states have been permitted to function as autonomous states. Indeed, the provinces of what was British India have also been raised to the level of states or commonwealths. It may interest you to note that in my doctoral dissertation at the University of Wisconsin dealing with the same problem, I had forecast the emergence of a federal government in India with the provinces and states as autonomous units on a par with one another as constituent members of the Government of India. The only difference between the so-called princely states of yesterday and the new states that were provinces, is that the administrative head in the princely state is a prince who serves there as a hereditary monarch subject to the will and confirmation of his subjects, while in what used to be provinces, the administrative head is a governor appointed by the President of the Republic of India. It is interesting to note that these states were integrated into the government of India on condition that their subjects be given the right to convene a constitutional convention of their own and to frame a democratic constitution.

Thus, we see that economically, socially, and politically the vision of Mahatma Gandhi is being fulfilled. Free India is implementing the hopes and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

aspirations of that great man of God. I may therefore say that so far as the field of internal reconstruction and reorganization in India is concerned, the promise of freedom is becoming an actuality. It is good. We are all happy that the people of India are forging ahead on the path to liberty, social justice, and equality—also, to abundant life, in spite of temporary set-backs now and then caused by the forces of nature.

III

In the field of external relationships of the new nation, I must confess I cannot find reason for being unqualifiedly enthusiastic. There are items both on the credit side and on the debit side of the ledger. Certain expressions of India's foreign policy are commendable and creditable to the new nation. Certain other aspects of India's foreign policy are, in my judgment, mischievous, wrong and detrimental to the well-being of India, to the cause of freedom, and indeed detrimental to the whole world.

Let me at the very outset of this discussion make one point clear. It is not pleasing for me to be critical of India or her leaders. After all, I spent twenty-five years of my life in the service of India. And I wish her people well. But if I am to be true to the cause of truth for which Mahatma Gandhi stood, then I cannot help making adverse criticisms of certain aspects of India's foreign policy. Let me also make another point, that so far as I am concerned, I look upon Mr. Nehru's thinking in the field of foreign relations objectively, and I criticise his views not by attributing any base motives to him, but by resort to certain psychological interpretations. After all, Mr. Nehru is dominantly concerned with the rebuilding of the economy of India. That is his master passion. It is a laudable one. The people of India do deserve a better deal, economically, socially, politically. Therefore, I have no quarrel with Mr. Nehru's sincere preoccupation with the rejuvenation of his country. But this very preoccupation sometimes makes it impossible for him to judge the things in the outside world objectively and realistically. Anything happening anywhere in the world that might conceivably stand in the way of India building up her strength and economy is a nuisance to be brushed aside. I think this is the psychological motivation behind Mr. Nehru's erratic thinking with reference to Korea and the United Nations.

Let me, first of all, point out two constructive and positive expressions of India's foreign policy. Soon after British rule came to an end in India, at the invitation of Prime Minister Jawaharlal Nehru, an All-Asia cultural relations conference was held in New Delhi. This was the consummation of a longing of all the sons and daughters of Asia through the centuries. Asia has a great and noble heritage and all her sons have been hoping and praying that some day they might all get together to share their ideas one with another. In this conference and the succeeding one the leading men and women of the different countries of Asia participated and they pooled their resources with a view to discovering appropriate ways in which the experience of one country might be of benefit to others.

Another positive feature of India's foreign policy was symbolized by the convening of a conference of interested nations in New Delhi to resolve the then existing deadlock between the Republican forces of Indonesia and the Dutch government.

Perhaps, you all recall that the United Nations at that time had certain resolutions passed instructing or inviting the Dutch rulers of the East Indies to release the political prisoners and to enter into an agreement with them for transfer of power from Dutch hands to Indonesian hands. These resolutions of the U. N. were immediately tucked away on the shelf. They were not implemented. Feeling that the situation was becoming impossible, Prime Minister Nehru took the lead in inviting interested nations of Asia, including the representatives of Australia and New Zealand; and in the historic conference held in New Delhi, these representatives of Asia passed certain resolutions after due and proper consideration—resolutions demanding the release of political prisoners in Indonesia and calling upon the Dutch rulers of the East Indies to transfer power to the Indonesian Nationalists at the earliest possible moment. It is interesting to recall that within less than two weeks after these resolutions were passed in New Delhi, the Dutch authorities did see fit to release the Indonesian Republican leaders, and, of course, after that with the help of the good offices of the United Nations Commission, the Indonesian people achieved their independence.

These two expressions of India's foreign policy are, in my judgment, highly commendable. They redound to the credit of India and in a real sense express the vital concern and hope of Mahatma Gandhi that his people would play a leading, but humble, role in bringing about better understanding among the peoples of the world and in helping oppressed peoples to gain their freedom.

In the matter of the attitude of the Government of India toward the Korean crisis and toward the role of the U.N., I must confess a deep sense of disappointment. As I said a while ago, I do not doubt the integrity of Mr. Nehru nor the high purposes of the government of India.

IV

What I am afraid of is that the present government of India, especially Mr. Nehru, looking at the problems of the outside world through the perspective of a people engrossed in their own internal problems, has been unable to view objectively the problem of right and wrong in the international scene.

I, for one, was very much heartened when the government of India, along with the other governments of the world, took a stand in June, 1950, to brand the North Koreans as aggressors.

As the crisis in Korea developed, we began to detect in Mr. Nehru's thinking his special concern to localize the war in Korea. This concern was a laudable one. The American government, too, like every other well-intentioned government, was doing its utmost to localize the conflict in Korea.

But when this concern for localizing the conflict in Korea was concretely expressed by Mr. Nehru in terms of certain policies, one began to see a trend in his thinking toward compromise and appeasement. For instance, as you will recall, at the very start of the Korean crisis, Mr. Nehru undertook to play the role of an intermediary, and he wrote letters to our own Secretary of State and to Mr. Stalin. In these communications, he suggested the appeasement of Red China as a way to end the aggression in Korea by the North Korean aggressors. I am very happy our State Department refused to accept Mr. Nehru's suggestion. That suggestion had no merit from a moral or ethical standpoint. Later, when the United Nations forces were about to cross the 38th parallel, Mr. Nehru's government took the position that they should not cross the 38th parallel.

It seems to me that the problem of crossing the 38th parallel was strictly a military problem. If the North Koreans had been aggressors and the United Nations undertook police action to combat that aggression, then the existence of the 38th parallel as a dividing line became entirely irrelevant. Indeed, the North Koreans themselves by their aggressive action had eliminated the relevance of the 38th parallel.

Later in the course of the military campaign in Korea, Mr. Nehru's government and Mr. Attlee's government in Britain pleaded for consultations with the representatives of the Communist government of China as a possible way to end the Korean conflict.

In a real sense this was entirely an irrelevant sense, but precisely because the American government and the United Nations organization were in the right they could afford to accept the suggestion of the government of India, the government of Britain, and other governments of their mode of thinking.

We had at the United Nations at that time the humiliating experience of the representative of Communist China flouting the collective judgment of mankind and indulging in irresponsible talk which left no room for negotiation or conciliation. And when the Chinese government did intervene in the Korean conflict on a large scale, Mr. Nehru's government began to make the claim that this situation arose because of the failure of the United Nations to give a seat to the Peking regime.

This claim, it seems to me, was beside the point because the seating of the Peking regime in the United Nations was a matter entirely unrelated to the original aggression perpetrated by the North Koreans against the Republic of Korea in the last week of June, 1950.

Later yet, when the problem arose whether or not the United Nations should take a stand on the intervention in the Korean conflict by the Chinese Communist regime of Peking, Mr. Nehru's government took the position that it would be unwise to brand the Communist Chinese regime as an aggressor. For the record, it may be noted that the government of Pakistan abstained from voting on that resolution. The government of India voted against branding the Chinese Communist government an aggressor.

I cannot understand how the government of India, having branded the North Koreans as aggressors, could logically refrain from branding the Peking regime as an aggressor as well. Or, does the fact that Communist China represents a large reservoir of manpower make the difference in Mr. Nehru's thinking?

Perhaps, we can charitably say that Mr. Nehru believed that by treating the Communist regime indulgently we might be able to work out a peaceful settlement. But then, the question arises, a peaceful settlement at what price? By the betrayal of principle? The principles for which Mahatma Gandhi lived and died?

It would appear that in the field of international relations, Mr. Nehru has failed fully to utilize the responsibility that devolved upon India as a free nation.

Indeed, I must go a step farther and say that Mr. Nehru is going back on the very principles that brought him to the leadership of his people; the rebel who was willing to go to prison rather than make a compromise with principles is today advocating compromise with principles and betrayal of the truth.

I am quite sure that Mahatma Gandhi would much rather want his people to stand by truth than act on the basis of expediency even for a gain real or fancied.

Is there any way to explain the gap between Mr. Nehru's realistic thinking in the field of national

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reconstruction and unrealistic thinking in the field of international relations? Let us remember that he has said that the United Nations cannot solve tensions between great powers.

Let us remember that the League of Nations collapsed precisely because it, too, confessed that it could not settle disputes between great powers. If the United Nations Organization is to play the same role as the League of Nations, then its disappearance from the world scene would be no calamity.

V

It is very interesting to note that in the field of internal reorganizatoin Mr. Nehru has fully realized the menace posed by Communism. The Communist leaders have been dealt with more harshly by the Government of India than by any other non-Communist government in the world. And yet, Mr. Nehru persists in his wishful thinking that it is possible to do business with the Communists outside of India. I cannot understand how one could be so unrealistic in one's approach to Communism. Perhaps, it is possible to do business with the Communists, but you can do business with the Communists only on their terms which means liquidation of the life of freedom and democracy. And, I am quite sure, Mr. Nehru is not willing to liquidate democracy and freedom. But precisely because he is deeply concerned with the problem of India's rebuilding, he is willing for the moment to overlook the menace posed by Communism externally.

Having spent many years of his life as a fighter for freedom, Mr. Nehru, of course, fully realizes the nature of the problems besetting his people. And as an ardent follower of Gandhi, as a humanitarian in his own right, and as a great patriot, he has embarked upon a program of national reconstruction which already has brought India into the forefront of nations as a democratic and stable force.

However, this very preoccupation with the struggle for national freedom over a long period of time has left Mr. Nehru unprepared to shoulder the responsibilities of a newly emerged free nation in the field of international relations.

I personally feel sorry for this because we have had a right to expect that Gandhi's nation would under all circumstances stand for right, truth, and justice, and not for expediency or for betrayal of principles.

In spite of my dissatisfaction with certain aspects of the present foreign policy of the government of India, I would urge the American public to be patient and tolerant with the young Republic of India. Whatever may appear on the horizon at a given time in the shifting international field, the long-range goal and perspective of India both internally and externally, shall abide. And it is this feature of the long-range validity of the goal of India's policy that gives me hope that at the crucial moment the government of India will take its stand on the platform of truth and justice.

Our dissatisfaction with Mr. Nehru's approach to Korea and to the U. N. should not lead us to take actions which would be unworthy of the American heritage. We have always stood ready to help those who have been in need. On the morrow the people of India shall be in the throes of a famine. The government of India has under pressure from public opinion in this country just entered into a trade agreement with the government of Pakistan whereby the surplus food stocks of Pakistan would go to India in exchange for Hindese commodities needed by Pakistan.

This is a good agreement. Even so, the needs of India in the matter of food grains will not be fully satisfied by the import of surplus food-stuffs from Pakistan. The best estimates are that the people of India may need approximately 2,000,000 tons of food-grains in the next six months if they are going to avoid wide-spread famine.

It is a tribute to the good-will of the American people and to their sincere desire to serve the afflicted that throughout this land millions of Americans have raised their voices in behalf of sending food grains from this country to India. It is also commendable on the part of our government in Washington that it has been taking prompt steps to aid India with the needed food-stuffs.

I would not want to see this food sent to India in the hope of converting Mr. Nehru to our point of view. I am firmly of the conviction that Mr. Nehru's stand on Korea and the U. N. is wrong, that it is capable of change, that it could be brought in line with the point of view of the democratic world; but I would not want to use the food as a weapon in an attempt to coerce Mr. Nehru regarding his point of view or policy.

I am quite certain that the doing of the good, namely, the sending of this needed food-stuff to the starving people of India is its own reward. And we hope that the common people in India, when they receive this food, will think kindly of their friends and neighbours across the Pacific in the United States of America who are willing to make the sacrifices in order that they may have food.

In conclusion, I wish to refer to two points of more than contemporary interest. Both Mr. Nehru and Mr. Attlee of Britain present the phenomenon of two of our greatest armchair strategists. They both

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

want to tell our military leaders how to conduct the war. If I were in President Truman's shoes, I would accept the suggestions of both Mr. Attlee and Mr. Nehru under the following conditions. I would say to both of these gentlemen, "Messrs. Attlee and Nehru, perhaps you are right. Maybe we ought not to cross the 38th parallel. Suppose then in order to carry out your wishes we make this suggestion. Since you allege that the presence of our troops in Korea is creating a panic in the thinking of the Chinese people on the mainland, we wish to withdraw every one of our American soldiers from Korea, and you, Mr. Attlee, and you Mr. Nehru, send your British and Hindese troops to Korea to man the 38th Parallel line, and please give us an undertaking that there will be no Dunkirk. With your boys manning the 38th Parallel, we shall be very happy to keep on talking, if need be, for the next ten years, how to bring about peace with Communist China."

Finally, in spite of some of my criticisms of India's foreign policy at the moment in relation to Korea and the United Natoins, let me say that I have complete faith in the abiding framework of India and her destiny. India's abiding framework is and shall remain quest for truth, quest for justice, quest for liberty, quest for equality. In this noble four-fold quest, so well exemplified by Mahatma Gandhi, America and India can stand shoulder to shoulder and march forward to the realization of man's age-old dream of peace on earth and good will among men. Thank you. (Prolonged applause).

QUESTION PERIOD

Question : Will you tell us something about Pakistan?

Answer : It is not possible to give any brief answer about Pakistan and I do not know what special point you have in mind. If you are asking the question whether the leaders of Pakistan are also concerned with raising the standard of living of the under-privileged masses, I would say that on the whole they, too, are adopting the same procedures and implementing the same policies.

Question : What about population pressure in India?

Answer : The problem of population pressure in India and, for that matter, throughout the Orient is a real one. Just this morning I was happy to note in one of our newspapers that Mr. Nehru has come out in favour of birth-control. I believe the intelligent leadership of India, and of the rest of Asia, is going to institute planned parenthood clinics all over the lands and thereby help the underprivileged masses to regulate the size of the family.

Question : Will you tell us something about the impasse in Kashmir? Is it true that Mr. Nehru is opposed to a plebiscite in Kashmir?

Answer : No, it would not be true to say that Mr. Nehru is opposed to a plebiscite in Kashmir. Indeed, it must be recalled that Mr. Nehru was the first one to make a suggestion that the plebiscite in Kashmir should be the final determinant as to the destiny of the people of Kashmir. But it is true today that Mr. Nehru wants to have the plebiscite under conditions he sets forth. Indeed, I wish I had a little more time to discuss this question, but I can say in a few words that to me the problem of Kashmir and the problem of Korea are in many ways parallel and identical. Mr. Nehru takes one set of criteria in dealing with Kashmir and another set of criteria in dealing with Korea. Perhaps, the fact that Mr. Nehru's family originally came from Kashmir may have something to do with this mode of reasoning. Perhaps, subconciously, I admit. At any rate, in Kashmir he takes the position that the aggressor must first be removed, ejected, from the territory. Then he takes the position that the army of the government of India should be there to maintain order while the plebiscite is conducted. In Korea he takes the opposite stand. He wants the aggressor armies to remain where they are. He wanted them to remain below the 38th parallel in his first suggestion of compromise. And he wants to have a plebiscite held, if at all, not after the ejecting of the aggressor forces from Korea, but he wants the plebiscite to be held in the presence of the aggressor forces. I must confess that the problem of Kashmir is very delicate and I cannot help thinking that if Mr. Nehru's position in Kashmir is right, his position in Korea is entirely wrong, and *vice versa*. In both cases, aggression has been committed. Now how to resolve that problem is the supreme business of statesmanship. Mr. Nehru cannot have his cake and eat it, too. If he wishes to hold one set of criteria in dealing with Kashmir, he should have the same set of criteria in dealing with Korea. Thank you very much.*

* The article is a recording of Dr. Haridas T. Mazumdar's speech, the second annual Sudhindra Memorial Foundation lecture at the State University of Iowa, on April 19, 1951.

"THE PRESIDENT OF INDIA"

By K. K. BASU, M.A., LL.B. (Cantab.), Barrister-at-Law

In the last May, June and July numbers of *The Modern Review* have appeared two articles of Prof. Banerjee and one of Mr. Sen-Varma respectively on the above subject. I have dealt with Mr. Sen-Varma's article hereinafter. I am grateful for his fair approach to the points at issue. He sets out my propositions without any attempt to misread them and almost in the way that I would like to state them myself, before he starts answering them.

Ordinarily it should not have been necessary to reply to Prof. Banerjee's article any further. Both Prof. Banerjee and myself adhere to our respective points of view in the matter, and I have given reasons for my views, and I am content to leave such reasons to the judgment of the readers. On the last occasion[1] it was only because I found that some of my views had been misapprehended, and therefore misrepresented, that I had to write. Unfortunately, it is the same reason that has called for the present article so far as Prof. Banerjee's articles are concerned.

I

The extract from *Marbury* vs. *Madison* was cited by me expressly with reference to the American and the Indian Constitutions which have "controlled" legislatures.[2] How far, if at all, it can apply to other Constitutions is beside the point. Again, on the issue whether the said observations of Marshall C. J. are sound arguments they were mere *dicta* and not part of the *ratio desidendi* of the case, and that emphasis on the said observations was relatively less, are clearly irrelevant. The particular judgment came up for consideration before the U.S. Supreme Court in a number of later cases,[3] in none of which the soundness of the above extract appears to have been questioned at all. In the absence of a decision or *dictum* of a competent court disapproving, or even doubting the correctness of the above observations, I find it difficult to accept any views to the contrary.

That the judiciary has necessarily the last say in the matter of interpreting a Constitution was stated not merely following Marshall C.J. or Hughes C.J. as has been wrongly supposed. It was stated[4] obviously in relation to the fate of section 14 of the Indian Security Act (Act IV of 1950) before the Supreme Court of India in *Gopalan's* case. Until the Constitution has been suitably amended to reconcile its provisions with the said section 14, the said section must remain void as a result of the above decision. That is how the judiciary has "the last say." Judges have indeed no occasion to interpret any provision of the Constitution until the same comes up before them in a litigation. (I am leaving out for the present the consultative function of the Supreme Court of India). But it is only then that the question of judges having any say on the construction of the Constitution can at all arise. It is needless to point out that I did not refer, nor was I understood to have referred, to views of judges expressed *per incurium*.

On the question of admissibility of the debates in the Constituent Assembly I put forward the proposition[5] that ". . . unless there is ambiguity, the actual language used in the Constitution is the acid test, . . .". This appears to be quite in accord with the observations cited by Prof. Banerjee himself of Cockburn C.J., Lord Wright and Kania C.J. as also of the text-book writers, Willoughby and Willis. This accounts for the majority of the galaxy whom he presumes to claim to be in his company.[6]

The eminent professor evidently failed to appreciate the above proposition, and so I may be permitted to dwell on the matter in a greater detail. It should be observed, however, that it was never in dispute that such extraneous matters as are legitimate may be resorted to for a limited purpose in cases of ambiguity.

Two propositions seem to be fairly clear in the maze of judicial learning on this topic: (1) Resort to such extraneous matter is permissible only where there is an ambiguity in the relevant text, and (2) even then, only to ascertain the historical background of the words actually used. It is unnecessary to burden this article with numerous quotations laying down the principle.[7] I propose to cite only

1. *The Modern Review*, February, 1951, p. 141.
2. *Ibid.*
3. *Ibid.*
4. In 1882, when the *Lawyers' Edition of the Reports of U. S. Supreme Court* was first published the above judgment appears already to have come up for consideration on more than 65 occasions.
5. *Ibid.*
6. *The Modern Review*, June, p. 456.
7. Apart from the cases cited in my article in *The Modern Review*, February, 1951 (p. 143), it should be noted that Gwyer C. J. in *Central Provinces and Berar Act* (1939) 1 F. C. R. at p. 46, favoured such reference only for historical purposes and to matters of which the Court would take judicial notice, and even then Sulaiman J. dissented from him. (*Ibid* at p. 77). Prof. Banerjee has relied

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

the views of the highest courts of England and India respectively on this point.

In *Assam Railways and Trading Co. Ltd.* vs. *Inland Revenue Commissioners*[8] reference by counsel to a Report of a Royal Cofmission for the construction of a section of Income Tax Act, 1920, was rejected by Lord Wright (Lords Blanesburgh, Warrington of Clyffe, Atkin and Thankerton concurring) as inadmissible in the following words:

". . . But on principle no such evidence for the purpose of showing the intention that is the purpose of object, of an Act is admissible, the intention of the Legislature must be ascertained from the words of the statute with such extraneous assistance as is legitimate . . . *It is clear that the language of a Minister of the Crown in proposing in Parliament a measure which eventually becomes law is inadmissible* and the Report of Commissioners is even more removed from value as evidence of intention . . ."

Further in *Liversidge* vs. *Anderson* (1942 A.C. at pp. 270-1) Lord Wright made the following observations:

". . . Counsel for the appellant knew English law too well to contend that they were entitled to refer to what passed in debate in the House of Commons or the House of Lords. *That is clearly inadmissible*. . . ."

In *A. K. Gopalan* vs. *The State of Madras and the Union of India*,[9] the Attorney-General M. C. Setalvad is reported[10] to have insisted on a reference to the debates in the Constituent Assembly only for the purpose of showing that the Assembly was fully aware of the implications of the difference between the old form of expression and the new. Kania C.J. and Fazl Ali J. in that case were prepared to allow such reference only for such limited purpose as aforesaid as will appear from the following observations:

". . . The result appears to be that while *it is not proper* to take into consideration the individual opinions of members of Parliament or convention to *construe the meaning* of the particular clause, when a question is raised whether a certain phrase or expression was up for consideration at all, a reference to debates may be permitted."—(Kania C.J. at p. 185).

". . . In my opinion though the proceedings or discussions in the Assembly are *not relevant for the purpose of construing the meaning* of the expressions used in Article 21, especially when they are plain and unambiguous, they are relevant to show that the Assembly intended to avoid the use of the expression 'without due process of law'."—(Fazl Ali J. at p. 212).

In the same case Patanjali Sastri and Mukherjea JJ. rejected the contention of the learned Attorney-General. Das J. was frankly doubtful about such admissibility, while Mahajan J. did not think it worth his while to deal with such contention at all. The relevant observations are set out hereunder:

"Learned Counsel drew attention to the speeches made by several members of the Assembly on the floor of the House for explaining, as he put it, the 'historical background.' A speech made in the course of a debate of a bill could not reflect the inarticulate mental processes lying behind the majority vote which carried the bill. Nor is it reasonable to assume that the minds of those legislators were in accord. The Court could only search for the objective intent of the Legislature primarily in the words used in the enactment, aided by such historical material as reports of statutory committees, preambles, etc. *I attach no importance, therefore, to the speeches made by some of the members of the Constituent Assembly in the course of a debate on Article 15.*" (Now Article 21). —(Patanjali Sastri J. at p. 236).

". . . In my opinion *in interpreting the Constitution* it will be better if such extrinsic evidence is left out of account . . ."—(Mukherjea J. at p. 277).

". . . If it were permissible to refer to the drafting Committee's report, it would be another answer to the contentions of Learned Counsel for the petitioner . . . I do not, however, desire to base my judgment on the Drafting Committee's report and I *express no opinion as to its admissibility* . . ."—(Das J. at p. 290).

Both Mukherjea and Das JJ. had been at one time practising before the Calcutta High Court. In view of Prof. Banerjee's avowed aversion to Calcutta lawyers I was reluctant to cite their views. Such views nevertheless being in substantial agreement with others' are binding on all Indian Courts, and hence are relied on.

From the speech of Lord Wright in *Assam Railways*, etc. case cited hereinabove it is obvious that even where resort to such extraneous materials is at all permissible it can only be for the limited purpose of assisting the court in ascertaining the intention of the legislature from the words used. The extracts of the judgments of the Supreme Court of India cited hereinabove also make it clear that the said Court also held unanimously that such debates, for whatever other purposes they may be referred to, cannot be referred to for "the purpose of construing the meaning of the expressions used" in the Constitution. "The actual language," therefore, "*is* the acid test," notwithstanding Prof. Banerjee's disapproval[11] of this observation of Lord Wright's[12] which the eminent Professor mistook for mine.

(*The Modern Review*, June, 1951, p. 454, fn. 94) on a newspaper report of an alleged argument of the Attorney-General before the Patna High Court in support of such reference, but was silent as to whether such argument was upheld. I dare say that the Patna High Court found such argument as untenable as did the Supreme Court in Gopalan's case, mentioned herein.

Language of Article 74(1) of our Constitution appears to provide that any exercise of function of the President under the Constitution must have *inter alia* this element of "aid" of his Council of Ministers. Participation of his Council of Ministers in any exercise of his functions by the President thus appears to be imperative from the said Article. Exercise of functions of the President must therefore be in accordance with such "aid" given. This interpretation is also supported by the obvious antinomy of aid and hindrance. Omission by the Council of Ministers to give or by the President to take such "aid" in the exercise of any of President's functions under the Constitution does amount to a violation of the Constitution. I find that Prof. Ramesh Chandra Ghosh is also of the same view.[13]

To say that "the text of our Constitution has not given us a true picture of the position of the President" is merely to beg the question. Because, whatever picture is given in the text *is* the true picture. Such a view is not a purely technical or "legalistic" one. Even if it is so it will still be a more correct approach to the construction of the Constitution than what Patanjali Sastri J. in *Charanjit Lal Chowdhury* vs. *The Union of India*[14] has deprecated as "a doctrinaire approach."

Language of Article 74(1) thus not being ambiguous, if literal and ordinary meaning is given to *all* the words therein, as already explained in my previous article,[15] reference to the debates in the Constituent Assembly is entirely out of place in its interpretation. I had also pointed out[16] that the word "aid" actually occurring in the said Article cannot be treated as redundant or a mere surplusage. One cannot create an "ambiguity" by so strange a construction, for the mere barren pedantry of strutting out with lengthy extracts of the debates in the Constituent Assembly. Prof. Banerjee in his recent articles[17] seems to have even gone one better in his explanation. ". . . nor can we reasonably treat the word 'aid' as a technical term. . . .," says he, as if he had, at any stage, sought to give any meaning to the word "aid."[18]

"Bless thee Bottom! bless thee! thou art translated."

I am sorry that any one should have read in my article any self-complacency or self-conceit. In a controversy where there is room for *bona fide* difference of opinion such mental attitude is certainly unbecoming. That shrewd men of the world pay their hard-earned money for the advice, in Constitutional matters, of persons licensed to practise in Courts in preference to those of laymen claiming to be better informed in such matters is a fact. Such propensity on the part of seekers of advice may appear unsatisfactory, unreasonable and even irritating to some of such opinionated laymen, but it is none the less a fact. And I have yet to learn that a statement of a fact may sound of conceit.

For example, a casual reader, unfamiliar with Prof. Banerjee's pronouncements, *ex cathedra* and infallible, may suspect some lurking conceit in the following homilies:

> "One should be sure of one's facts before one makes a categorical statement in regard to a point of constitutional law."[19]
>
> "One should think a little deeply about the implications of one's statement about a constitutional matter before one should make it."[20]

But such suspicion is unwarranted, and will be unjust to Prof. Banerjee. He has done well to remind all who write on constitutional matters of these conditions precedent. One only wishes that he himself had had them in mind when he did burst into print.

II

The main point of difference between Mr. Sen-Varma and myself appears to be the interpretation of Article 74(1) of the Constitution. My reading of the said Article has been published elsewhere,[21] as also in the previous portion of this article. Mr. Sen-Varma has attempted to test my interpretation by reference to a hypothetical legal provision.[22] I think, however, that the wording of such hypothetical provision should have corresponded as much as possible to that of the relevant Article before the same could be used as a test. If therefore such hypothetical provision had been worded thus, "There shall be an association of lawyers to aid and advise the Supreme Court in the exercise of its functions," I have little doubt that such aid and advice would have been a *sine qua non* of exercise of any of the Supreme Court's functions, and, therefore, no function of the Supreme Court could be exercised without the aid and advice of the association of lawyers.

The duty to give such aid and advice on the part of the Council of Ministers presupposes a corresponding duty to receive such aid and advice on the part of the President. Mr. Sen-Varma has contrasted a possible absolute supreme and unfettered exercise of functions by authorities under powers conferred on them by Parliament under Article 53(3)(b) with the

exercise of functions by the President. He explains the position further in these words,[23] ". . . it not being the duty of the Council of Ministers to aid and advise these other authorities *or the duty of these other authorities to seek such aid and advice . . . .*" It is apparent that he himself has in mind the correlation of the duties to give and seek aid and advice as suggested in my interpretation of Article 74(1).

If I am correct in my interpretation of the above Article there need be no difficulty in reconciling the said Article with other Articles *e.g.*, 75(2) or 85(1); because the exercise of any function of the President including the functions contemplated in these latter Articles, must be aided and advised in the terms of Article 74(1) before they can at all amount to any exercise of his functions under the Constitution. I agree, however, that had Article 74(1) contained such additional words as Mr. Sen-Varma has suggested[24] the interpretation put by me on the said Article would undoubtedly have been fool-proof.

I have previously distinguished between the political usages in states having written constitutions and conventions of the English type.[25] Without elaborating further on the topic I may say that the facts that political usages do grow in states with written constitutions, and that such usages may be obeyed and respected for a considerable length of time, do not necessarily alter their character. Their contravention does not lead to such inevitable legal consequences as will happen in a case of similar contravention of constitutional conventions in England. The distinction is always there, however the two types of usages may resemble each other in appearances.

Much has already been written on Article 53(3)(b).[26] I only write to give reasons why I have no apprehension that a possible application of the said Article may lead to such absurdity[27] as Mr. Sen-Varma envisages.

If, for example, the executive power of the President is conferred on another authority by Parliament under the said Article, the power so far as the President is concerned stands abrogated in the sense that he can no longer exercise it. This is the result of the operation of the *non obstante* clause "Nothing in this Article shall . . ." at beginning of clause (3) of the said Article. Secondly, "functions" in clause (3)(b) of the said Article is undoubtedly wider in import than "executive powers" in clause (1) thereof and includes the latter. This also follows from the said *non obstante* clause. Because, unless conferring *inter alia* of executive powers of the President by Parliament under clause (3)(b) was also in contemplation the said *non obstante* clause in that form would not have been necessary. Thirdly, Parliament may, and in all probability will, confer such functions not in an unfettered form but with such conditions for their exercise attached thereto as it may in its wisdom prescribe. Again, the saving clause at the very opening of Art. 73 prevents its coming in conflict with any power that may be conferred under Article 53(3) (b).

I agree that it is possible to draft a written constitution with an "uncontrolled" legislature and in such a case the doctrine of *ultra vires* in relation to legislation can have no application. One of the earliest experiments of this was the Constitution of the State of Queensland enacted in 1867. But as Mr. Sen-Varma himself has noted[28] I restricted my observations to Constitutions with "controlled" legislatures like the American and the Indian.*

PLANNING EDUCATION AT THE POST-MATRICULATION STAGE

By R. C. RAY, M.A.,
Vice-Principal, M. B. B. College, Agartala

When a student passes the Matriculation Examination he at once finds himself on the cross-roads, where he has to make his choice of the path he will take to reach the goal he has in view. The road, at this point, fans out in various directions before him, offering him a choice of educational opportunities in different fields. He takes the path that promises to lead him to the field of work most suited to his taste and aptitude, wherein by devoted application and honest industry he makes good use of his opportunities and lays up the foundation of a successful career for himself.

That is, he does in a progressive country with a well-planned and well-organised structure of national education. In a country like ours, where such an educational structure is yet in the stage of planning, he is hardly ever as lucky as that. For him there is not much of a cross-road as yet at any stage. He walks the broad path of literary education, which is still almost the only path for him, and finds himself in the College very often compelled to pursue an unsuitable course of education with results that are far from happy to contemplate. We are at the moment deeply worried by the deplorable pass-rolls in our University Examinations; but if we care to look into the root-causes, we will find that this limited choice of educational opportunities for our youth at the post-Matriculation stage is perhaps the largest single factor that accounts for this lamentable state of things.

The educational system of a country must reflect its ideals and aspirations and must be broad-based upon its needs in educated and trained man-power to work for the realisation of those ideals and aspirations. The India that the British left to us when they quitted her soil was poor, almost destitute, in everything except in ideals and aspirations. The educational system we had then reflected nothing but our state of degradation and if it was based upon any needs at all, those were the needs of a dependent people as conceived by their benevolent masters. To make that educational system serve the purposes of a free and progressive nation, it has to be reshaped and re-conditioned almost from base to apex with due attention to every part of the structure so as to strengthen and re-vitalise those weak links which at present make the whole structure weak and ineffective. Finally, it has to be based upon the large and growing variety of needs of a free people and thus made to reflect something of the ideals and aspirations of the new India. We know that a re-organisation on these lines has already been planned for our University education, and that our secondary education also has, of late, engaged a good deal of the attention of the reformers in the different States. But our post-Matriculation education, we are afraid, has not received even half the attention that it undoubtedly deserves. In fact there seems to be a lot of loose thinking about the purpose and scope of such education and its due place in the general educational structure of the country. It is commonly forgotten that apart from its importance as a link between the school and the University stages, education at this stage marks, and should mark, the close of all academic training for large numbers of our young people. As such it has a distinct usefulness of its own which has to be recognised by assigning it a place of importance in our scheme of national education. If our secondary schools are the weakest link in our educational machinery, our post-Matriculation Institutions can only be described as the broken link. This broken link has to be restored and geared up as much for the smooth and efficient working of the machinery as for the success of our efforts towards national reconstruction.

In the following paragraphs it will be our endeavour to indicate briefly the lines on which this part of our educational machinery can be strengthened and revitalised with an eye to the more urgent and pressing needs of the nation today.

II

The one great problem of India today is the problem of feeding our growing population. It is said that in the last ten years our population has recorded an increase of nearly 13.4 per cent, and that during that period there have been, on an average, 42 lakhs more births than deaths every year. Our deficiency in food-grains amounts to nearly 4 million tons at present, and it is bound to go on increasing at a tremendous rate from year to year with the population figure going up at the present rate. Even with all reasonable checks on the growth of population, it will require a colossal effort to step up our food production to bring us anywhere near the target of self-sufficiency. Then, again, it is not merely a question of stepping up food production; we have at the same time to step up the production of such essential raw-materials as jute and cotton if our industries are to carry on at all and if we are to attain even a workable independence on the economic front. But our grow-more-food and other campaigns in this direction have shown us that we shall never succeed in our efforts at stepping up production up to the desired extent so long as, along with the improvement of our land resources and operational methods, we do not take measures for the improvement of the quality of the personnel engaged in agricultural work. That is to say, we have to improve and extend the facilities for agricultural education at all levels. For it is by such education alone that we can ensure the necessary efficiency in the organisation and working of this our principal and most vital industry and aim at self-sufficiency within our existing resources.

At present we have 21 Agricultural Colleges in the country with facilities for admitting only 1500 students annually. As the University Education Commission have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pointed out, even if half of them should graduate "this would represent only three agricultural graduates per year per million of the farming population." This is not an encouraging picture at all; but far less encouraging is the picture of agricultural education at lower levels. We have at present only 19 schools providing facilities for non-graduate courses in Agriculture, and the ratio of the annual output of these schools to the farming population of the country must work out at a far more hopeless figure. And yet it is this kind of trained personnel that is our greatest need today. The Central Advisory Board of Education estimated that for their programmes of agricultural development they would require the following personnel in the course of the next decade :

Field assistants	20,000
Stockmen for animal husbandry ..	20,000
Non-graduate assistants	10,000
Graduate assistants	1,500
Inspectors (graduate) for animal husbandry	4,000
Gazetted officers for agriculture ..	300
Gazetted officers for animal husbandry ..	550
	56,350

It will be seen that out of the total personnel of 56,350 listed above, the overwhelming majority of 50,000 are non-graduate assistants of various types such as can be trained by Agricultural Schools. We have not enough institutions today to train even a third of the required number in the next decade; nor, as far as we know, have we any plans for setting up such institutions in any number in the near future; and yet we must have them if we want to put through our programme of agricultural development as the first and most important step towards the stabilisation of the economy of the country.

A large part of this personnel, it is true, can have the necessary education even at the pre-Matric. stage at resident rural high schools, such as are contemplated in the proposals of the Central Advisory Board of Education, or even at our Secondary Schools if their curriculum of studies is expanded to include the programme of education necessary for the training of such personnel. But the vast majority of them will be required to go through a separate course of studies and training in Agricultural Schools, after passing the Matriculation Examination to qualify themselves for the work which they will be called upon to undertake. Such schools will naturally include in their courses of study, besides elements of Agricultural Science and practice, such allied subjects as irrigation, animal husbandry, poultry farming, etc., and should preferably be located in the countryside where the students will have the opportunity of supplementing their academic education with practical knowledge gathered from direct contact with actual farm practices.

Here then is a very useful branch of education to which our students can be diverted at the post-Matriculation stage, to the immense benefit of the students themselves as well as of the nation. Students educated in such schools will not only supply the essential man-power for the development projects of the Government, but some of them may well turn out to be of the more enterprising type who will go in for independent business as agricultural, poultry or dairy farmers.

III

Though agriculture still remains the principal basis of our economy and will continue to remain so for many years to come, India has vast potentialities for industrial development and we are already committed to a policy of rapid industrialisation of the country. The Planning Commission has prepared a five-year plan to that end which is now under the active consideration of the Central Government. For the success of any place, however, the greatest need today is for trained man-power to work the various development schemes that have been proposed or taken in hand already. We require an army of engineers and technical experts to work at the top and we look to our Engineering Colleges and Technological Institutes to supply them. We require a far bigger army of technicians, draftsmen, foremen, etc. to assist the engineers and experts at the top, and it is in this type of personnel that we are at present hopelessly deficient.

We have at present 23 full-fledged Engineering Colleges and about 13 technological institutes or departments attached to universities. It has been roughly calculated that the annual output of Engineering graduates in the country is at present nearly 1130, while it is 3000 in Great Britain and over 50,000 in the U.S.A. That is to say, our annual output of Engineering graduates and diploma-holders is only one-third that of Great Britain and only one-fortieth that of the U.S.A. But even if we leave out comparison with other countries and consider our own requirements only, our present output will be found to be hopelessly below the mark. According to the estimates of the Scientific Man-Power Committee, the requirement of the country for engineers and technologists of all types in the next 5 to 10 years is nearly 27,000, which will put the annual demand at between 5400 and 2700. With our present output standing at 1130, the gap between the demand and the supply seems to be very wide indeed. We have great hopes, however, in our four proposed Higher Technological Institutes, one of which (Eastern Technological Institute in Hili near Calcutta) is going to start working very shortly and it is hoped it will not be very long before the other three also will be in a position to admit students. When these Institutes will begin to send out graduates, our present gap will surely be narrowed down and we will become nearly self-sufficient in this type of personnel.

We wish we could be half so confident about the other type too—we mean that big army of non-graduate technical assistants without whom our engineering experts would be as ineffective as a band of redoubtable army commanders without any army to command. In the U.S.A. it has been found by experience that for every high-grade engineer ten technicians are needed. Even if we calculate our requirement at a more modest proportion, our annual need for this kind of personnel cannot

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

be anything less than between 10,000 and 20,000 in the next 5 to 10 years. When we remember that this figure represents only the requirement of the Government for the implementation of their development plans, and that there is a vast field of demand for such trained personnel in our numerous and fast-growing private industries as well, we will be inclined to raise this figure to twice or even three times as many. For, in any well-ordered and progressive economy Government's venture in the industrial field can represent only a part, and that too by no means a very large part, of the total activity of the country. Then, again, while planning for such education we must keep in mind the country's need for ambitious young men who, after receiving training in some art or craft, will, instead of seeking jobs in Government or private industrial concerns, go in for starting small industrial units of their own or settle down independently in the business of making and repairing scientific apparatus, hospital appliances, electrical and photographic equipment, etc.

For real economic independence we need self-sufficiency not only in agricultural products and industrial goods, but also in the thousand and one small things which are daily necessaries in a modern society and yet for which we have even today to depend, in a very large measure, on foreign imports. Take, for instance, the equipment of a modern office and see for how many items in it you can depend solely on our indigenous manufactures. For such manufactures we do not require highly educated engineering or technological experts. All we need are technical entrepreneurs—men with a sound training in some technical institution with just the necessary initiative and enterprise. We are sure there is no want of young men with initiative and enterprise in our country; but our present educational machinery, instead of fostering these great qualities and bringing them into proper play, mostly helps only to smother them by condemning their possessors to uncongenial educational activities. The resultant wastage in human energy and loss in national wealth, if it were possible to calculate them in hard arithmetical figures, would be a staggering revelation indeed !

To prevent this wastage and this loss and to build up a sound economic life aimed at all-round self-sufficiency, there should be increased facilities for technical and vocational education at the post-Matriculation stage. There should be one more broad line branching out of the royal road of literary education at this stage and there should be a halt to the present general stampede for admission into the colleges and a planned diversion of students to that branch line. This is necessary as much for the sake of those vast numbers of our young men who are at present swelling the ranks of the 'failures' (not only in examinations but in life as well) for their enforced submission to the wrong type of edurational discipline, as for the nation whose efforts towards a progressive economy are bound to be thwarted so long as there remains any weak or broken link in its educational machinery.

For that purpose we require a number of Engineering Schools offering non-degree courses of study and training in various branches of engineering and technology. These schools will supply the non-graduate technical personnel for employment in Government and private concerns and also that band of technical entrepreneurs who, after picking up the necessary know-how in these schools, will start small industrial units of their own to manufacture that great variety of small things which make up such a large part of the total material needs of the society. At the same time we require a large number of technical schools for the training of foremen, draughtsmen, craftsmen and general technical assistants. They will ensure a continuous supply of skilled technicians for our industries and, by helping a large number of young men to set up in independent business and earn an honest and decent living, will play an important part in the solution of the problem of unemployment. Besides admitting regular students these schools will also provide facilities for short-term refresher courses for our existing craftsmen, mostly recruited from untrained artisan class, so that they may improve their skill and efficiency and adapt themselves to the highly mechanised industrial processes of the modern age.

IV

When we have thus dispersed the 'misfits' in general education by providing facilities for them in other lines more suitable to their tastes and capacities, it will be time for us to think of re-organising general education itself at this stage and put it on a sounder basis.

From what has been said in the foregoing sections, we must not be understood to underrate the importance of general education. On the other hand, we believe that such education will always continue to occupy the place of first importance in any scheme of national education, and that specialisation, at whatever stage it may be introduced, will always have to be grounded on a sound general education. For, we fully agree with the University Education Commission when they say:

> "The person with a narrowly specialised education is like a man who lives in a house with only one window, so that he can look out only in one direction. A general education should open windows in many directions, so that most of the varied experiences of his life and most elements of his environment shall have meaning and interest to him."

Similarly, nothing is further from our mind than to suggest that we have too many colleges in our country and too many students seeking collegiate education. For, the fact is far otherwise and we are fully aware of it. According to the Report of the Radhakrishnan Commission, referred to above, we had in 1936 only 1,26,000 students in the colleges out of an estimated population of 363 millions, which works out roughly at one student for every 2880 inhabitants; while the corresponding figures for some of the progressive countries of the world for that year were as follows :

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Country	Population in Thousands	Students	Number of inhabitants per student
U.S.A.	1 22,800	9,90,000	124
Canada	11,000	48,500	227
South Africa (white population only)	2,000	8,400	238
France	41,907	81,000	517
Great Britain	44,795	50 600	885

From the above it will be clear that far from having too many colleges or too many students in the colleges we are as backward in this as in other branches of education and have a good deal of leeway to make up to come anywhere near the progress achieved by the more advanced countries of the world. If still we hear complaints about overcrowding in the colleges, it is overcrowding in an altogether different sense and in the ultimate analysis, it reduces itself into a problem of distribution and organisation. Our problem at present is: (i) we have too many students in some colleges and too few in others, and (ii) we have too many of those students who should not be there at all and too few of those who should.

The problem of distribution can be solved by restricting admissions to colleges up to a permissible maximum, and by insisting on all affiliated colleges maintaining a minimum standard of efficiency in the strength and quality of the teaching staff as well as in Library, Laboratory and other equipments. The problem of organisation can be very largely solved by effecting planned dispersal of students to technical and occupational lines as suggested in the foregoing sections, and by encouraging poor but meritorious boys to come to the colleges in larger numbers by making generous provision for stipends and other awards. In this latter respect particularly there is a lot to be done by us yet to save good merit, that might well be turned into national asset, from being merely wasted for want of assistance from society. The provision for financial assistance to deserving students is very meagre in our country. In most provinces only about 10 per cent of the total enrollment in a college is entitled to exemption from payment of tuition fees, and the government and other awards also do not generally exceed 1 per cent. These few lucky students also are assisted only to the extent of one-fifth or one-sixth of their total expenditure, and for the remainder they have mostly to shift for themselves. On the other hand, in the British Universities taken as a whole the proportion of assisted students was no less than 67.9 per cent in 1946-47, while at Oxford and Cambridge over 82 per cent of the students receive financial assistance in one form or another. It may not be possible for us to emulate, with our existing resources, the practice of the British universities, but it is nevertheless the duty of the community to see to it that, as long as it can be helped, no meritorious student may be debarred from collegiate education merely on account of indigence.

Thus while we want to see a large number of boys, at present wasting their time and energy in the colleges, diverted to more suitable branches of education, we also want to see a large number of other boys, now rotting in uncongenial spheres of activities outside, coming to the colleges to pursue the higher courses of study with profit to themselves and to the nation. But more than that we want to have a reformed and re-organised course of general education at the post-Matric. stage that will be designed to serve adequately the needs for which such a course of education should rightly exist. For that it is necessary, above all, that we should start with a clear idea of the objective we have in view in planning the education of our youth at this stage.

What, then, is the objective here? In the words of the University Education Commission, the aims of the Intermediate Colleges should be "to meet a variety of needs of our young men by giving a vocational bias to their courses while retaining their value in a system of sound general education as a preparation for the University courses." Whether we have separate Intermediate Colleges as recomemnded by the Commission, or whether our Intermediate classes continue to be attached to the degree colleges as at present the aims of this course of studies must remain the same. Is our present system of education, with the existing curriculum of studies and the existing methods of putting that curriculum into effect (through teaching and examinations), adequate and suitable for fulfilling those aims?

We would say nothing about the working of the curriculum for that would take us further afield and involve us in controversies, which, however important, are not strictly relevant to our present purpose. We would, therefore, content ourselves with a few remarks about the curriculum and our present reading programmes in various subjects. We hope nobody would deny that our present curriculum of studies is inadequate and unsuitable, in some respects, as being based on certain pre-conceived notions rather than on a correct appreciation of the needs of the time. It would also be generally agreed that it is rather too narrow, too limited in its scope, to meet the growing variety of the needs of our students and of the nation. It does nothing to give a vocational bias to the course, and if it does prepare for the University courses it does so only in a very limited way. For, while it includes preparatory courses for higher studies in general Arts and Science subjects it wholly leaves out those for higher studies in technical and professional subjects. Besides, the reading programmes in some of the subjects (in English, for example) have to be re-modelled to bring them in line with the changed needs of the time; in some other subjects, (in the sciences, for example), they have to be revised and brought up to date; and in all subjects they have to be rationalised and made more practical in their outlook and general aim. Above all, the curriculum has to be widened in its scope so as to give full latitude of choice to boys with different tastes and inclinations.

The importance of this aspect of the matter seems to have been recognised by the Syllabus Committee of the new Board of Secondary Education of West Bengal by giving a distinct vocational bias to the proposed Syllabus

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the School Final Examination. This is all to the good, no doubt. But it will lose much of its meaning and usefulness if it is not followed up by a similar vocational bias in the Intermediate Syllabus too. For what does a boy do after passing the School Final Examination with Agricultural Science or Elements of Engineering as his optional subject? Either he goes to an Agricultural or Engineering School or to an Intermediate College to prepare for the University Course in the subject of his choice. The present Intermediate Syllabus, however, would leave him no choice but to engage in a fruitless and wasteful pursuit of a general Arts or Science course. Besides this, the widening of the scope of the curriculum may well prove a boon to those boys who come to the College for want of opportunity for more suitable education elsewhere and, finding no interest in the usual subjects of the curriculum, swell the ranks of the 'failures.' Some of the new subjects may at last stimulate their interest and may even point to a hopeful career for some of them.

———:O:———

THE INDIAN NATIONAL CONGRESS: ITS PAST, PRESENT AND FUTURE

By Prof. GUR PRASAD SRIVASTAVA, M.A., LL.B., D.P.A., D.F.A. & D.

The object of the Indian National Congress, which constituted the spearhead of anti-imperialist agitation before the transfer of power and which is now running the administration, was to make India free from foreign domination. Therefore, with the attainment of that object the question arises whether it has outlived its usefulness. Some people answer this question in the affirmative. They are of opinion that the Congress which once captured the imagination of the Indian people and was their sole mouthpiece can now exist only as a political party which, having assumed power, is bound to suffer in popularity. But the majority of people are of the opinion that the party which has been instrumental in winning the freedom of the country should also be given the opportunity to consolidate it because at present it is the only properly organised party which is capable of assuming the reins of Government. In these circumstances it is both interesting and instructive to speculate on its future.

But the question of its future can not be answered without a reference to its past and present activities. The Congress, like freedom movements all over the world, was a purely political organisation in the beginning. Its object was the establishment of parliamentary democracy in India. No doubt, this was due to the character of its leadership which was drawn from the upper middle class, the lawyers being foremost in its ranks. But with the advent of Mahatma Gandhi this conception changed. Mahatma Gandhi had a complete philosophy of life and to him the freedom of the country was not an end in itself, but only a means to an end, *viz.*, his constructive programme. Thus there were two conflicting currents of thought inside the Congress. But with the assassination of Mahatma Gandhi the parliamentary programme has triumphed over the constructive. In the opinion of Acharya Kripalani[1] the present leadership of the Congress is incapable of implementing any constructive programme. But this is an extreme point of view. The Congress Ministries did much valuable work during their first regime. In fact, Professor L. F. Rushbrook Williams speaking about their work in 1938 said that "they deserve much credit for what they are doing; they are completely in earnest and are working desperately hard."[2] Even in their present regime they have taken up many useful agricultural reforms including the abolition of Zamindari.

But the future of the Congress would be determined by its work during the present regime. No doubt, the partition of the country unleashed the forces of darkness and disruption on an unprecedented scale. The problem of the relief and rehabilitation of the uprooted millions would have been enough to shake the foundations of any Government and, more so, a newly established Government. But the Congress administration handled it with firmness and tact. The solution of the problem of Indian States—first their accession and then merger in the Indian Dominion—is a marvel of statesmanship. Moreover, the successful termination of the controversy about Dominion Status versus Complete Independence gives us a glimpse of the realism of our Prime Minister, Pandit Nehru, who had been instrumental in changing the goal of the Congress from Dominion Status to Complete Independence, could neither eat his own words nor could he write off the history of the Congress since 1929. At the same time he realised the advantages of membership of the Commonwealth. The result was a compromise by which India has become an Independent Sovereign Republic and at the same time she also enjoys all the privileges of membership of the Commonwealth. There is no doubt that Pandit Nehru's success was due to his personal influence in both the countries and Sardar Patel rightly remarked that it was his personal triumph. So far as foreign policy is concerned, even the Socialist Party has accepted the broad principles enunciated by our Minister for External Affairs, although fault may be found in minor details. It may also be pointed out

1. *The Future of the Congress*, p. 32.

2. *Where about India*, p. 139.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

that our foreign policy is more idealistic and less realistic in approach.

Coming to internal administration we find that the Congress Governments have done much to contribute to the prosperity of the poor Indian peasant even at the risk of being called a partisan Government. Their abolition of Zamindari, which they promised in their election manifesto and which is taking place before our very eyes, speaks eloquently of their attitude towards agrarian problems. Besides this, they have taken up many schemes of agricultural reclamation and agricultural debt relief. Moreover, they are effecting nationalisation of transport and are taking steps for promoting the health and education of the people.

But this is not the whole story and the Congress Governments are also guilty of many omissions and commissions. In spite of the existence of nationalist Governments both in the States and at the Centre one fails to see the glow of freedom on the face of the common man and woman of India. The question arises, why is it so? The causes are not far to seek.

The principle of the Congress, specially since the advent of Mahatma Gandhi, has been that example is better than precept. Gandhiji symbolised this principle in his own personal life. But the present leaders with a few notable exceptions have forsaken this principle. That is why they are unable to inspire the common man with the zeal for freedom.

Moreover, the Congress Governments have failed to check inflation and the soaring prices of commodities which are hitting the lower middle class very hard. The Prime Minister of India speaking at Allahabad on 5th September, 1949, said:

> "We are trying to bring down the level of prices of commodities. As a matter of fact, the rising prices have already been arrested."[3]

But instead of going down, the prices are going up. In fact, there is room for suspicion that the Congress is not really keen on controlling prices as that would ultimately affect the prosperity of the Kisans. The Prime Minister in the speech referred to above said that "kisans and labour constituted a very large majority of the population and they had grown richer."

The Congress Governments have practised patronage and jobbery on a large scale. In this connection it will not be out of place to mention that when President Washington was once beseeched by the widow of one of his soldiers for a job, he refused to grant the request on considerations of merit.[4] But here it is not so. As for example, the age concession for political sufferers applying for Government service really puts a premium on patriotism. Moreover, this thing is fraught with grave consequences for the country. At the same time the multiplication of the posts of ministerial rank as well as other well-paid jobs in utter disregard of the demands of economy is evident of the fact that the Congress Governments have fallen from the high moral pedestal which they once occupied. Two instances of such jobs in Uttar Pradesh are the posts of District Information Officers and the District Development Officers. The Public Service Commissions have also been dwarfed in their status due to the play of party politics. On the principle that the function of recruitment belongs to the Public Service Commission, the holding of interviews in the Secretariats is also improper. At least it creates suspicion in the minds of the candidates. Moreover, the manner in which the Home Ministry of the Government of India recently conducted interviews for emergency recruitment to the I.A.S. is also not above suspicion. The interviews were spread over a year as the Special Recruitment Board travelled throughout the length and breadth of this country and interviewed the candidates at the capitals of the various provinces. But after completing the interviews in some provinces they came to the conclusion that some candidates, who had attained very high positions in the interview test, would be selected in any case and ordered such persons to take their probationary training while the interview in some provinces had not even been started. Such a thing is indefensible in principle. It is possible that the Recruitment Board was quite right in its opinion. But it is a principle worth accepting that the selecting authority should do nothing which is likely to cause suspicion of partiality or patronage in the minds of the general body of candidates.

But the Congress Governments have practised patronage not only in the narrow sense of appointments to public posts but in the larger sense also. An instance of this was the granting of permits for public careers to political sufferers. They can also get permits and licenses for the various essential commodities, such as sugar, iron and cement and many of them make profit by selling the commodities thus obtained in black market.[5] Moreover, the interference of highly placed Congressmen in minor details of administration on behalf of friends and relations has marred the efficiency and integrity of administrative and judicial bodies. It is interesting to note that the President of the Congress issued a directive to Congressmen in this connection on 17th January, 1949 which said:

> "No Congressmen—more specially the members of the elective bodies—should interest himself in recommending candidates for offices, for securing permits for export or import or for obtaining licenses for shops, for themselves and

their friends and that none should approach the authorities—particularly the executive, including judicial officers—in respect of civil or criminal matters pending before them."[6]

The Congress Governments have also failed to check bribery and corruption. No doubt, the Anti-Corruption Department of the Government is in existence but it is common knowledge that a large majority of Congressmen themselves are a prey to this evil. In fact, some people even accuse ministers of it. In this connection it is significant to note that a Public Conduct Resolution was passed at the Jaipur Congress and although the ministers were excluded from its scope, it was admitted that it exists among them also.

Moreover, the Congress administration is very extravagant. The Congress Governments have formulated a host of plans and projects without caring the least from where the money to finance them will come. The opening of embassies in even insignificant countries, the appointment of various Committees and Commissions, the opening of numerous scientific laboratories and generally the spending of public money in various long-term schemes could certainly be postponed at present when economy is the crying need of administration. Even our constitution-making has proved a very costly affair.

Finally, the problem is that of efficiency versus democracy. The democratic system is by its nature slow-moving. That is why in times of stress or emergency it is put on the shelf and only the semblance of democratic institutions is maintained. But here democracy has not been able to deliver the goods due to many reasons. Firstly, the electorate is very large. Secondly, the people are ignorant. They do not know how to derive the maximum benefit from the Government. The leaders of the Indian democracy are themselves unfamiliar with the practical working of Government. The political agitators of yesterday are the Ministers and Governors of today. Naturally we have to make some allowance for this fact. Lastly, there is no effective opposition to Government. In this connection it is significant to note that an opposition consisting of twelve members styled as the Social Democratic Party was formed in the Constituent Assembly (Legislative) of India under the leadership of Prof. K. T. Shah last year, but it was soon liquidated. Recently the Congress dissidents under the leadership of Acharya Kripalani, Dr. P. C. Ghosh and Mr. T. Prakasham have formed an opposition party known as the "Kisan-Mazdoor-Praja Party." It is difficult to predict at present whether that party will be able to act as an effective opposition party in the legislature after the coming general elections.

But most of the defects of the Congress administration are due to the fact that the rank and file of the party is drawn from the class of people having no stake in society. They, therefore, want to make the best of their situation. But, after all, we have to admit that these defects have resulted from the fact that due to long political dependence the people themselves have lost the qualities associated with a free people. They lack character and we know that water cannot rise higher than its source. Therefore, we have to put up with the present phase of our national life which is a necessary transitional stage.

However, so far as the future of the Congress is concerned we have to bear two facts in mind. Firstly, the Congress which has now become a political party in the narrow parliamentary sense is bound to be discredited in course of time due to its assumption of political power. The second fact which makes us a little apprehensive about the future of this mighty organisation is that it has no younger element which might replace the old leadership when time comes as the youth of the country is inclined towards socialism and communism. But there is no cause for unnecessary alarm, although, doubtless, the Congress will soon lose its present hegemony as other political parties gain support on the strength of their own programme and due to the weaknesses of the Congress. In fact, Pandit Jawaharlal Nehru speaking at the meeting of the U.P.C.C. at Cawnpore on 27th August, 1949 said: "We have lived so far on our past earnings, but that cannot continue for ever."[7] But, perhaps, it has enough bank balance to win the next elections.

Although deterioration and disintegration are fast setting in the Congress organisation and individuals and groups of Congressmen are withdrawing from it to form rival political organizations, there is every reason to believe that the Congress will exist as a political party in future. No doubt, it would have to revitalise itself by internal reform of its machinery which includes the purging of the self-seeking elements who have entered its fold. Moreover, the Congress should also act on the advice of its ex-General Secretary, who speaking at Benares on 2nd October, 1949 said that "the Congress must now be reorganised as a political party as distinguished from a platform."[8]

Dr. Sampurnanand, the Congress Minister of Education in Uttar Pradesh, feels that the Congress has lost its old moral fervour. "That is why," he says, "the Congress is dying, slowly but surely. Its momentum will carry it forward yet a while but not for long." Therefore, he thinks that "if we feel that we cannot now carry on as an organisation with a message

6. The *Pioneer*, dated 18th January, 1949.

7. The *Pioneer*, dated 28th August, 1949.

8. *Ibid*, dated 3rd October, 1949.

and a mission, let us honestly face facts and give to this great body that honourable burial which it deserves." But this is a counsel of despair. In fact, the Congress should not only try to regain its old moral fervour but should also promote the material prosperity of the people.

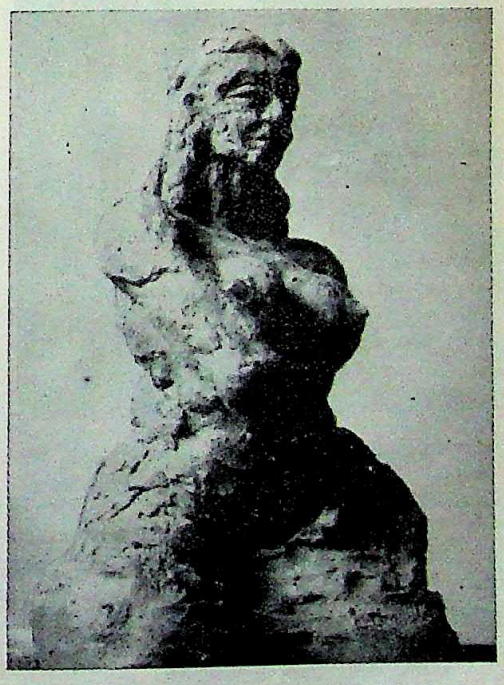
9. *Amrita Bazar Patrika* (Republic Day Supplement), dated 26th January, 1951.

———:O:———

SELF-INTRODUCTION

By SUDHIR KHASTGIR
(*A Contemporary Indian Artist*)

I am not a writer, scholar or an art-critic. Seldom I use my pen, brush is my companion and clay I am fond of. I get hold of a pen when I feel I am misunderstood and misrepresented.



Study (*oils*)
By S. Khastgir (1944)

I have actually no quarrel with anybody. Painting and modelling are not my hobby but my whole existence. If I am told I produce too many puerile pictures and sculptures it may hurt me, but I must confess, I can't help it. I do them with all sincerity.

"History of art has no connection with artistic experience. To try to understand something of a period and its circumstances is not the same as allowing oneself to be carried away by enthusiasm for one movement in art," says Ludwig Goldscheider.

He continued in his book *Art without Epoch*:

"Many of the great monuments of art have been destroyed; others have been cast aside or still await discovery. But it is not only those which lie buried in the earth that have been cast aside; many works still exposed to the light of day or

A woman (*terra-cotta*)
By S. Khastgir (1950)

preserved within the walls of museums have been cast aside because they are no longer necessary to our everyday life . . . if Raphael has not yet been

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

cast aside, at all events dust has descended upon his monumental frescoes. Yet while some works vanish into darkness, others arise from their concealment. . . . What was the general opinion of Rembrandt two generations ago? In 1877, Burckhardt thought fit to describe Rembrandt's weaknesses as follows: 'It is highly probable that these deficiencies disturbed even the master himself in his work; for him, who was always talking about nature, it must have been a great humiliation to be unable to avoid defects which even a beginner could avoid.' In reality, the past changes as rapidly as the present."

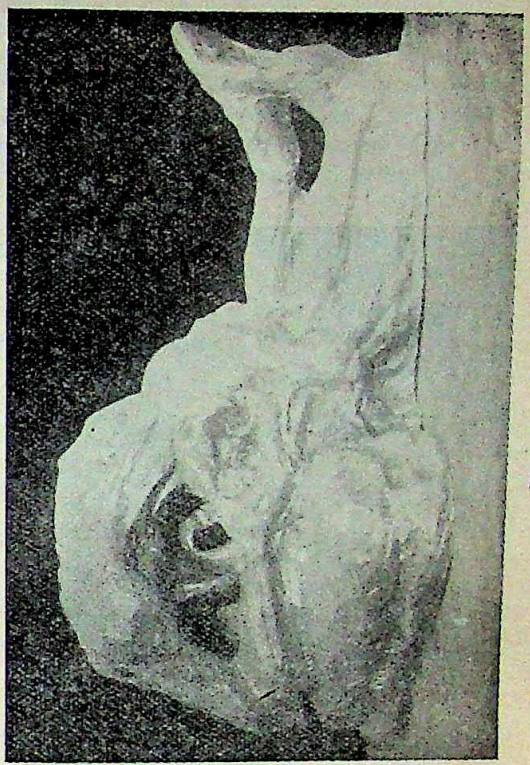
So, it is no use worrying about criticism as long as we remain sincere to ourselves.

A woman Sadhu in meditation (*terra-cotta*)
By S. Khastgir (1950)

I must confess, I do believe in tradition and heredity, and do not altogether neglect experimental cross-breeding in the progress of art and culture. Recently there is much talk on art in our country by all sorts of people. I do not grumble for that as long as I am also given a chance to say what I have to say. Difference of opinion will always be there. The world will not be so interesting a place if we all thought the same way and if the angle of vision of all of us were the same.

Let me begin with my own story. My art-teaching commenced in Bengal; at no other place than the famous centre of art, Santiniketan. Though from this it does not follow that I am a great artist being in no way removed from the common run of them. What I wish to assert is that in learning art I got the right start. It is now twenty years I left Bengal, I am fixed up in a place outside Bengal pursuing my own work as well as teaching the same. Thus regarding myself there are scores of other artists from Bengal who like myself are engaged in pursuit of art outside Bengal.

Dancer (*terra-cotta*)
By S. Khastgir



The main reason for this is of course known to all. The revival of Indian art began in Bengal. Dr. Abanindra Nath Tagore, inspired by the Poet Tagore and Mr. Havell, was enabled to bring about the revival of Indian art. This reinstatement of Indian art was effected by the hard labour of Abanindra Nath Tagore.

Modern Indian art commenced on its career basing itself on the ancient paintings and sculptures of Ajanta, Ellora, on the Rajput, Mughal and 'Pahari' schools of painting, and the style and technique found in them. No doubt, this great task was achieved in Bengal, but it must never be overlooked that credit of this great revival belongs to India as a whole.

Maharajkumar of Sikkim
By S. Khastgir (1945)

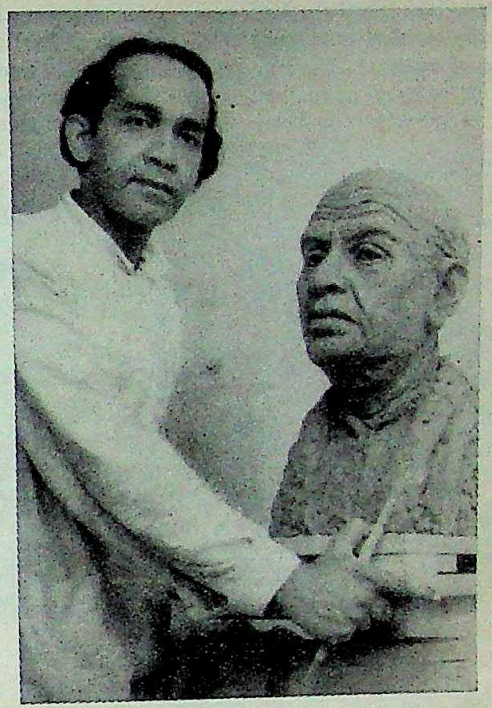
In order to link up Modern Indian art with the lost arts of the country it was necessary to retrace the steps back through the centuries—this was secured by Abanindra Nath Tagore. It will be a matter of regret and utter ungratefulness on our part, if we, his pupils and his pupils' pupils, forget this fact. Indeed, we are enjoying the fruits of his labour to a large extent.

The link with Indian traditional art and sculpture has been restored and surely time is now ripe for establishing contact with the art of other countries. For Indian art to boldly march ahead, not only great strength and courage but more than anything else a full awareness of its own individuality, is necessary.

In the modern world of art, I am aware, there is an aspect where all the various arts of the different countries are bound to meet and join hands. In our country a new school of painting is devoting itself to an ideal which is based on the imitation of ancient representations of temple gods and goddesses, *Kalighat Pat*, and coloured wooden dolls and toys done by the village artisans. This is attracting much notice; great resemblance is observed in the folk-songs and folk-arts of all lands. And just as our old country-tunes like *bhatiyali* or boatmen's songs easily move the heart, in the same way folk-art contains a simple appeal readily felt by all. Dr. Abanindra Nath Tagore and his foremost disciple Dr. Nandalal Bose painted quite a few paintings in this style long before others dreamt of taking this line. But it is significant to note that they soon quitted this path. This again seems to be for the same reason that quaint country melodies are best sung by peasants and boatmen as they ply their oars. These may provide entertainment enough when sung in the rich men's parlour, or heard on the gramophone or the radio, but how thin and poor is the effect compared with the original. Abanindra Nath and Nandalal in their wisdom of the true artist, saw the distinction and were warned. They contented themselves by merely blazing the track. Great art is never beguiled by the counterfeit, it pursues truth alone.

No country today wishes to remain isolated and limited within its own culture. Nor is such a course possible. We must proceed warily, well on our guard. In Europe, modernists' experiments created a storm in the world of art. Not that a blast or two from there did not reach our shores. But it was enough to prostrate those who had sprung hastily from loose earth and shallow roots, therefore, in their conceit terming themselves 'progressive,' 'cosmopolitan' and what not, whereas those who withstood the storm and are still standing erect were the followers of tradition who had nothing but to gain from the severity of their experience. A blind imitation of foreign modernism is possible by those alone, who have never fully realised the richness of Indian art and culture. They stupidly imagine themselves bankrupts and set much store by any trifle or trash thrown into their beggar's bowl.

It is customary even now for some art-students of our country to proceed to other foreign countries, specially Europe, to learn Western art-technique without first completing a study of their own art. I am fully convinced that this is to receive an entirely wrong training. Such imitation of the technique, style and mannerism of foreign artists, long before we have allowed our roots to grow deep down into the culture of our own country, will inevitably result in the decline of our own individuality. Of course, mutual interchange in a spirit of simple give and take is possible and is even desirable but it must be clearly understood that those alone who have enough and to spare can indulge in such civilities. Whistler made numerous paintings after the Japanese manner. He



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

borrowed much but was not a beggar. He knew how to receive only because his own largeness was beyond any question.

Those who are unacquainted with the history of this revival of Indian art are usually heard to complain that Indian art lack fineness and nerve, that it is still lingering in the Ajanta age with its tradition of "thin tapering fingers and elongated eyes." It is not possible for every artist to originate a new style or create ever-fresh visions of beauty. In every walk of life there are experts whose job is to lead in their own line. So among artists as well you cannot possibly get rid of all 'quacks' and mediocres. They are in every profession. The number of 'quacks' and mediocres in medical line are much more than good doctors; for that good doctors must not be blamed. All the same, responsibility lies heaviest with those of the artists who have strong foundation of their own tradition and culture as far as art in India is concerned. It requires great efforts to avoid the beaten path as we all know. The mind and soul must be maintained strong and healthy. The laziness ingrained in our bodies must be shaken down. One must learn to perceive not with the eyes alone but with all the senses and faculties. Only then shall our creations be forceful and original. To plunge thoughtlessly into the vast surging spirit of modern European art, would be nothing short of suicide.

So far as regards my observations on Indian art. I know that there are different schools of thought in India. I do respect and listen to them and try to understand their points of view. Artists do generally depend on art-critics but when I see many misrepresentations of facts and much dictatorial criticism of

The sculptor at work

artists appear in newspapers and journals, I can't help but take a pen instead of a brush for a change.

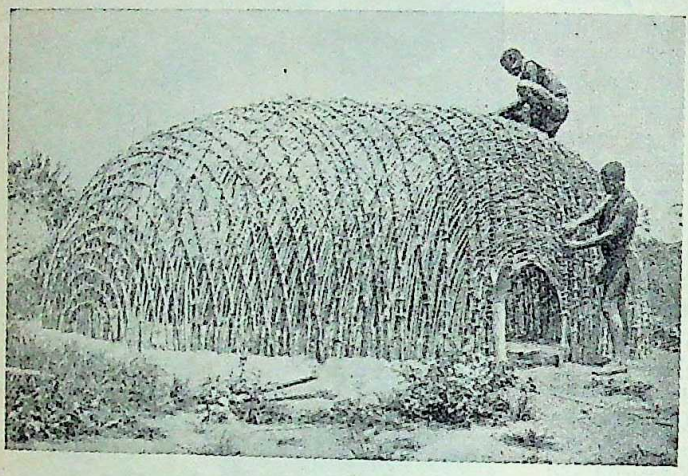
Dehra Dun

———:O:———

A GLIMPSE OF THE DARK CONTINENT OF AFRICA

By Dr. TAMONASH CH. DAS GUPTA, M.A., Ph.D.

The sunny continent of Africa, long known as the "Dark Continent," was given the unfortunate appellation for more reasons than one. Besides the backward condition of its dark-skinned people in matters of culture, civilization and intellectual attainments, want of adequate knowledge of a large part of the big continent still unexplored by civilized nations is mainly responsible for such a name, if the tinge of aspersion involved in it is ignored.



However, Africa is not so much unknown today as it was in the first half of the 19th century A.D. The Continent of Africa is a large mass of land which occupies an area of the globe from latitude 37 deg. north to latitude 34 deg. south and from longitude 51 deg. east to longitude 18 deg. west, the equator passing through its centre. It contains 1 crore and 17 lakhs of sq. miles and is three times the size of Europe, two-third the size of Asia and six times the size of India. It is second in size among continents and is situated in the old Hemisphere of the world to the south-west of Asia and south of Europe. The Mediterranean sea lies to its north, the Red sea and the Indian Ocean (with the Arabian sea) to its east, the Indian Ocean to its south and the Atlantic Ocean to its west. The narrow strait of Gibraltar to its north-western corner separating the African port of Ceuta from the European port of Gibraltar at the nearest approach between the two continents, once did not exist. Similarly the man-made Suez canal to the north-eastern border of Africa separates it from Asia. In reality the Isthmus of Suez connects the former with the latter. Unlike any other continents the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

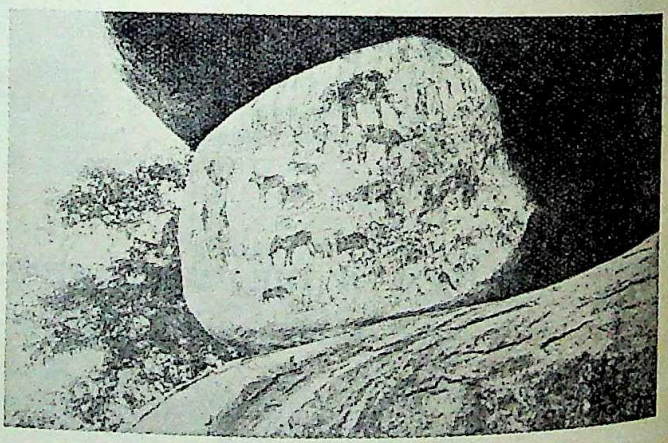
Tropic of Cancer and the Tropic of Capricorn both pass through Africa.

Africa mostly is a huge table-land and triangular in shape, the northern half being broader than the southern portion but gradually lower in elevation from the sea-level. In fact, the major part of North Africa is covered by a vast desert called the Sahara which in great part is below sea-level. The Lybian



Hut-building in Natal

desert to its north-east and the Nubian desert to its east are nothing but continuation of the Sahara. Another great desert lies in the south-west of Africa and is known as the Kalahari.

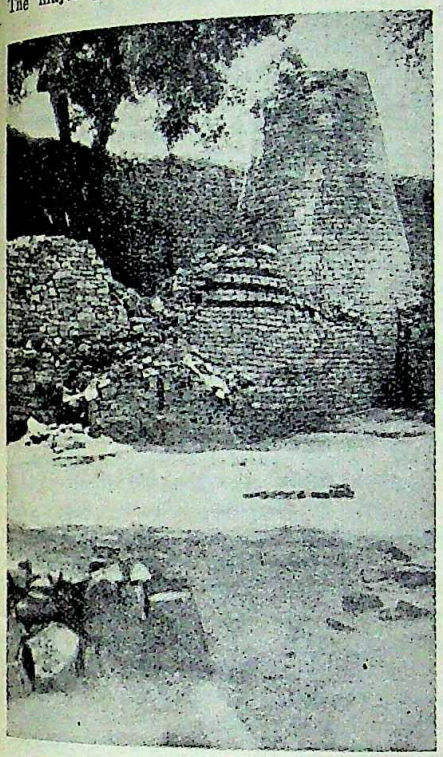
Africa possesses some of the biggest rivers and lakes of the world. In its eastern part the river Nile (4000 miles), in Middle-Africa the Congo river (3000 miles), in the north-west the rivers Senegal, Gambia and Nigar (2300 miles), in the south-east the river Zambesi (1600 miles) may be mentioned in this connection. There are other rivers also, such as the Calabar, the Imo and the Cross—all in Nigeria; and the Vaal river, the Orange river and the Limpopo river, all in South Africa, may be referred to.

The rivers of Africa are mostly inland but the bigger ones fall into the sea, but all of them are difficult of access by boats towards their mouths due to the rivers passing so many table-lands with different heights and thereby having falls and cataracts. Of these rivers, the Nile (with the Atbara and the Blue Nile) falls into the Mediterranean Sea, the rivers Congo, Senegal and Gambia fall into the Atlantic Ocean, the river Zambesi falls into the Indian Ocean. The South African rivers, such as the Orange and the Limpopo also fall into the Indian Ocean. Besides these big rivers, many of the rivers of Africa belong to the inland drainage system like the river Shari which falls into Lake Chad.

Africa possesses the greatest water-falls of the world. Victoria Falls may be compared only with the Niagara Falls of America. The Victoria Falls originates from the Zambesi and was discovered by David Livingstone. The other well-known Falls are the Livingstone Falls, the Stanley Falls and the Fram Joseph Falls. Among the Lakes, Lake Kivu in the volcanic region of Ruanda, the Victoria Nyanza, the Edward Nyanza, Rudolf Nyanza and Lake Nyasa deserve mention. To the west of Nyasa lake are the lakes Bengueh, Tanganyika and Moera. The two lakes Stanley and Livingstone originate from the Congo river. Another well-known lake, *viz.*, Lake Chad, is in western Sudan. But the greatest lake of Africa is Lake Tanganyika which is 400 miles in length (north and south) and lies to the east of the Congo country.

Bushman paintings in a rock-shelter near Salisbury, South Rhodesia

Of the mountains, Mt. Atlas (North Africa), Mt. Kivu (4792 ft.), Mt. Nieuwoeld, Mt. Drakensburg, Mt. Stromburg, Mt. Kenaya, Mt. Kilimanjaro, Mt. Ravanzori (16798 ft.) and the Mt. Virungo (dead volcano) deserve notice. Of these Kilimanjaro has the greatest height of 20,000 ft.



It has been already mentioned that almost the whole of Africa is a huge table-land excepting the deserts of Sahara, Lybia, Nubia and Kalahari, some narrow coastal strips and river-plains. The table-land gradually descends towards the coast by stages, each

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

each stage being locally known as the "Karroo." Africa also possesses some very dense forests, specially in Congo and Nigeria and some big lakes specially in Portuguese East Africa and Tanganyika territory.

The major part of Africa lies within the Torrid

The 'Temple,' Zimbabwe

zone and hence over the greater part of the continent heat is intense, only the south-east and the south-west sea-boards having temperate climate. In Sahara extreme climates, extreme heat by day and extreme cold by night, are to be experienced.

Physically Africa may be divided as follows:

(1) Atlas mountain region in the North.

(2) The North-western plateau (elevation about 500 ft. in average).

The region includes the Sahara, the Lybian and the Nubian deserts. To its south and south-west is the Lake Chad region with the desert and hilly region of Timbaktu. The Congo river basin is also included within this area as also the Guinea-coast region with its two hills Futa Jalon and the Cameroons. The elevation of this region is gradually higher towards the south.

(3) The south-eastern Plateau. It extends from the western coast of the Red Sea (at the middle) to the centre of the region known as South Africa. The Ethiopian Table-land forms its northern part. The biggest lakes of Africa known as the Nyasa, Tanganyika and the Edward are situated within this area. The important mountain-systems of Africa mainly emanate from the Ethiopian Table-land. These are mounts Kenaya, Kilimanjaro (about 20,000 ft. in elevation), Ravanzori (Revonzori), Drakensbarg and the Nieuwoeld (in the south).

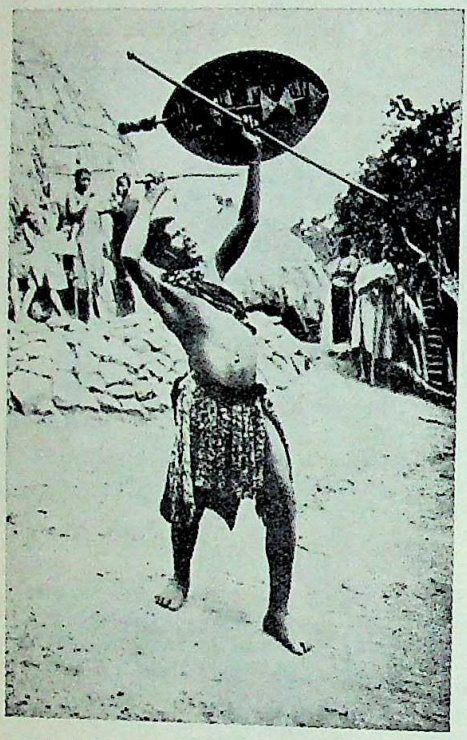
A Swazi witch-doctor

The coastline of Africa is comparatively smaller with fewer indentations considering the big size of Africa and very few plains near the sea-coast to its north-west and eastern sea-boards. The dense African forests and hills as in Congo contain many big games, such as the lion, the elephant, the rhinoceros, and the gorilla. There are also reptiles and crocodiles. Besides, peculiar animals like the zebra, the ostrich, the giraffe, the hippopotamus (of the river) are specially Africa's own. Africa is not only rich in flora and fauna, she is also rich in mineral wealth, such as diamond in Kimberley and in some other parts of South-Africa, tin in Nigeria, copper in Congo, and gold in Transvaal. Copper, zinc, lead, asbestos and coal are also available in the mines of Rhodesia and South-Africa.

Africa may broadly be regionally divided as follows:

(1) North Africa composed of Atlas mountain region, Egypt and the Sahara. This area has strong affinities with Southern Europe.

(2) The Sudan (the whole region south of the Sahara) including Ethiopia to its East.



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(3) The Central Africa composed of Congo and Tanganyika regions.

(4) The South Africa including Rhodesia (North and South) and the South-west Africa.

Politically Africa contains the following zones*:

A Zulu "heaven-doctor" warding off a hailstorm

(1) The north region contains the States of Morocco, Algeria, Tunisia and the Barbary States. To their east lies Egypt with its Suez Canal and parts of Alexandria, Said and Suez. Also the Sudan (Eastern Sudan).

(2) The North-East Africa contains the States of Ethiopia (Abyssinia), Eritrea and Somaliland (British and Italian).

(3) The Central and Eastern Africa include British East Africa with Baganda, Uganda and Kenya, Tanganyika, Nyasaland and the North and South Rhodesia with Mashonaland and Bechuanaland. Some British Colonies and Protectorates and the Portuguese colony of East Africa (the Mozambique territory) are included within this area.

(4) The South Africa consists of the Union of South-Africa which includes the States of the Cape of Good Hope, Natal, Transvaal and the Orange River Free State, and the South-western Africa consists of the Damara Land and the Great Namaqua Land.

(5) The Western Africa contains Belgian Congo and Portuguese West-Africa (Angola).

(6) The North-West Africa including the Guinea-coast (with many small settlements and colonies). This region includes some British, French and Portuguese Colonies and Protectorates as also the Negro State of Liberia. The great Sahara desert (French possession) and the Sudan (Western Sudan) are also included within this region.

(7) The islands of the Eastern Sea-board of Africa, *viz.*, the Zanzibar, Madagascar, Mauritius, etc.

(8) The islands of the Western Sea-board, such as the Madiera, Canaries, St. Helena, the Cape Verde Isle, etc.

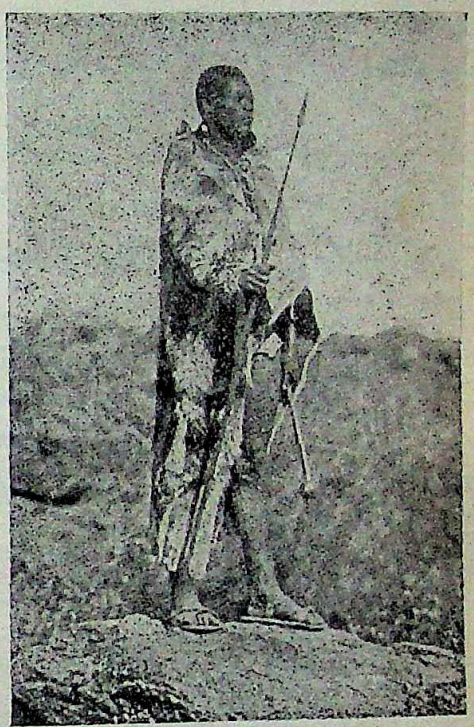
The English, the French, the Belgian, the Italian and the Portuguese have now the maximum interests in Africa, German interest being now non-existent. They have occupied under various political terminology most of the regions of this continent. The Arabs including the Berbers, the Fellahins and the Moors, the Copts and the Turks settled in large parts of North-Africa. Principally the Arabs, the Moors and the Turks now rule that region.

Of the ports on the Mediterranean coast from the west to the east, Algiers, Tunis, Tripoli, Alexandria and Said are noteworthy. In the east from north to south, Suez, Port Sudan, Jibuti, Mogadishu, Mombasa, Zanzibar, Dar-es-Salaam, Sofala, Lorenzo Marquis, Port Natal and Durban are important. In the south, Port Elizabeth and Capetown, and in the west from north to south, Ceuta, Tangier, Agadir, St. Louis, Free-town, Accra, Bata, Loango, Loando, Benguela and Port Nolloth deserve mention. The Gulf of Guinea, the Bay of Saifa and the Walvis Bay to the west of Africa, St. Helena Bay to the south of the Continent, Delagoa Bay to the south-east, Mossel Bay and the Gulf of Aden to the east and the Gulf of Sidra to the north—these are practically the only gulfs and bays that deserve notice.

The population of Africa is approximately 156,576,789 in number out of the total population of the world which is 2,222,014 902. Thus, over one-fourteenth of the total population of the whole human race live in this Continent. Of course, all these peoples are not of one race. The earliest inhabitants of Africa were not at all advanced in civilization. The present Bushmen, the Pygmies and the Hottentots (their own name Khoi-khoi and tribes Nama, Kora, etc.) represent these primitive peoples today. With the march of time a race now known as the "Negrito" migrated into various parts of Africa. They came from an unknown land (of the north-east of the Continent). These people, divided into innumerable tribes, were all more or less dark-skinned like their predecessors but unlike them with some rudiments of better civilization however crude these might be. Their original home might be somewhere near Suez or at best in the region of Ethiopia. The Negrito race is broadly

* See Dudley Stamp: *The World, Asia*, etc., also Bartholomew's *World-Map*.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar



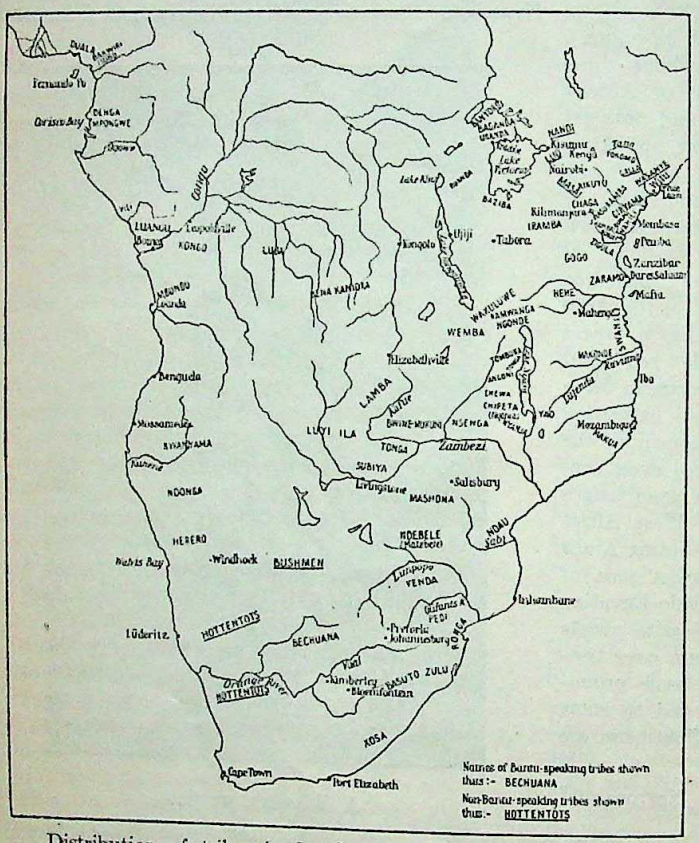
Digitized by Arya Samaj Foundation Chennai and eGangotri

divided into two main divisions, *e.g.*, Sudanic Negroes and the Bantus. It was, perhaps, due to the pressure of the race-movement from the north, the Negro tribes first left their original home and settled in West Africa and the Sudan. This pressure might have come from the Bantu tribes, who again had to move southwards due to the race-movements of the Hamitics (a branch of the Caucasians). The whole Central and South Africa are now occupied by the Bantus (or Kaffirs). Of over fifteen and a half crores of population of Africa, the number of North African Semitic and Turkish peoples including the Moors and the Berbers will be about 5 crores. The Sudanic Negroes number about three crores, the Bantus about seven crores of Africa's population and the rest (*e.g.*, Hamitic and others) will be nearly one crore including a sprinkling of European settlers in the south and other parts of Africa. By far the largest population of Africa is Bantus or Kaffirs. The Hamitics do now occupy a portion of the north-eastern sea-board of Africa. Besides the Hamitics, the Semitics including the Coptic population of Egypt and later on the Arab people settled in North Africa. Except Egypt where the Turks have now colonised the whole sea-board countries of North Africa on the Mediterranean have now been colonised by the people of Arab extraction or their allied people and are variously known as the Arabs, Berbers and the Moors. The Moors even conquered and ruled Spain (of Europe) for a good length of time. The whole Sahara desert and West Africa has also come under the influence of the trading Arabs subject to the political control of France. A part of eastern Sudan is controlled by the Anglo-Egyptian administration. To give an idea of the Negrito people who are all still in tribal condition and form over two-thirds of the whole population of Africa, some prominent names (among innumerable tribes) and to some extent their distribution in African Continent are given here.

The Negrito tribes: (*a*) The Sudanic Negroes and (*b*) the Bantus (Kaffirs).

(*a*) The Sudanic Negroes: (1) The Aro tribe (Nigeria), (2) Yorubas, (3) Ibas, (4) Fairlis, (5) Kiayus, Ikoms (of the Cross River, Nigeria), etc., etc.

(*b*) The Bantus (who form by far the largest Negrito population of Africa): (1) Dualas (adjoining the Gulf of Cameroons and also the northern end of Lake Nyasa), (2) Pokomos (of the Tana Valley and the Tana riverside, north-east Africa), (3) Zulus (the south-east Africa), (4) Hereros (the south-west Africa), (5) Basutos (also Basutus), (6) Anyanjas, (7) Wadigo (British East Africa), (8) Bechuanas, (9) Angonis (Nyasaland), (10) Xosas, (11) Yaos (Lujenda Valley, Portuguese East Africa), (12) Wazaramos (Tanganyika territory), (13) Swahilis (coastal strip from Warsheikh to Cape Delgado), (14) Akambas (or Kambas, North Nyasaland), (15) Kintus (Uganda), (16) Bailos (Northern Rhodesia), (17) Batongas (Northern Rhodesia), (18) Makondes, (19) Irambos, (20) Leghoya (a Bechuana tribe), (21) Kingas, (22) Bankutas, (23) Bavendus, (24) Capedyes, (25) Girimayas (Kenaya), (26) Barongas (Delagoa Bay), (27) Chipetas (a branch of the Thongas, west of Lake Nyasa), (28) Chagas (Kilimanjaro Mountain), (29) Bagandas (Uganda), (30) Banyaruandas, (31) Luis (of the Zambesi, south-west Africa), (32) Ntungwas (a Zulu tribe), (33) Ngunis (or Abengunis; this name is preserved by the Angoni tribe of Nyasaland. From the stock of Ngunis both Zulus and



A Bakwena warrior

Xosas came, as is believed), (34) Thonga Bantus (Amatongas), (35) Batusos or Bahimas (of Uganda and Unyaro. Now non-existent except in Ankole and Ruanda), (36) Musanyes, (37) Bushangos (or Bangongo tribe), (38) Benga tribe, (39) Bakongas (on the Loanga river, a tributary of the Kasai river, Congo), (40) Bankutus, (41) Hausas, (42) Barongas (Delagoa Bay, a branch of the Thongas), (43) Rongas (Delagoa Bay), (44) Sumbaras (south of Lake Victoria), (45) Mbundus (Angola), (46) Makuas (Lower Congo), (47) Sesutos, (48) Ambundus (of Angola also known as Mbundu), (49) Nalongas (south of Angola), (50) Kwanyamas (south of Angola), (51) Baluyis (East Africa), (52) Wasus (East Africa), (53) Bapedis (a branch of the Basutos living in Transvaal), (54) Bailas, (55) Ngonde (Konde tribe, north-end of Lake Nyasa), (56) Basumbwas (of N.-W. Unyamwezi), (57) Wacha-

Digitized by Arya Samaj Foundation Chennai and eGangotri

gas, (58) Kavirondo (Nyasaland), (59) Makondes (Tanganyika territory. Makonde plateau is near the east coast, south of Lindi and to the north of the river Ruvuma), (60) Swazis, (61) Lalas, (62) Lambas (northern end, Lake Nyasa), (63) Ilas (northern end, Lake Nyasa), (64) Isubus, (65) Bondeis, (66) Bakwaris (Northern Rhodesia), (67) Ansengas (northern end of Lake Nyasa), (68) Lubas, (69) Chinyanjas, (70) Wawembas, (71) Bongos, (72) Wapokamos, (73) Mablas (a tribe of Southern Bambala), (74) Sutos.

Distribution of tribes in Southern and Equatorial Africa

Among the Hamitic tribes, the Masai, the Galla (north-east Africa whence the Hottentots came), the Somali and the Ethiopians may be noted, the Sambaru, Rendile, Turkana and Nandi tribes are also allied to the Hametic Galla and Somali. The ancient Egyptians and the Copts are, of course, Semitic.

"In the main, the area we have mapped out, from the Cape of Good Hope to Lake Victoria, and thence eastward to the Tana river and westward to the Cameroons, is occupied by Bantu-speaking tribes. North of these the people of Negro, Sudanic or Negritian speech extend in an irregular bend from Cape Verde to the confines of Abyssinia, even to some extent penetrating the latter. The "Eastern Horn" which ends in Cape Guardafui inhabited by the Hamitic Somali, while their kinsmen the Galla, and other tribes, probably more or less allied to them (Samburu, Rendile, Turkana, Nandi), spread out to the north, west and south, their fringes touching on the areas of Bantu and Negro tribes—Pokomo, Kikuyu, Kavirondo, and others.

"But these areas are not completely uniform. In South-Africa we have two non-Bantu elements, though both are now almost negligible except within a very limited area. The Bushmen, who would seem to have been the oldest inhabitants, are now practically confined to the Kalahari Desert and the adjacent regions, though a few (who have quite lost all memory of their own language and traditions) are to be found scattered about the Cape Province and Orange Free State. If they are the Troglodytes alluded to by Herodotus whose speech was 'like the squeaking of bats,' they must either have at one time overspread the greater part of the continent, or migrated southward from the Sahara within historic times.

"Whether the Bushmen have anything beyond their small stature and their mode of life, in common with the Pigmies of the Congo basin (the Batusis, the Bahutis and the Batwa Pigmies) and other small races known or reported to exist in various parts of Africa remains at least doubtful; but anatomists, I believe, hold that their physical evolution has proceeded on entirely different lines.

"We have already referred to the people whom we are accustomed to call 'Hottentots'—their own name for themselves, when speaking of the whole people and not of any particular tribe (*e.g.*, Nama, Kora), appears to be Khoi-khoin—'men,' par excellence.

"In Struck's language map, the green Bantu ground is diversified, in the Eastern Equatorial region by a large irregular yellow patch. This denotes the Masai, a nomad, pastoral people lighter coloured than the average Bantu, though darker than the pure Galla or Somali. The most probable theory of their language is that it is Hamitic by origin (which would account for its possessing gender-inflection) but has been strongly influenced by contact with Bantu and Sudanic idioms ('angenegert' is Meinhof's expression). The contact between their legends and those of the Hottentot's is one of the most interesting facts which have come to light in recent years.

"Besides these, we have to do, in East Africa, with some curious 'helot' tribes . . . such are the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dorobo among the Masai, the Wasanye among the Galla, the Midgan and Yibir in Somaliland. These are commonly hunters and have, in some ways, much in common with the South African Bushmen, though their physique differs widely from that of the latter, as we now know them . . . The Wasanye and Dorobo formerly had language of their own, which a few old men still know, but the former now speak Galla and the latter Masai. The Wasanye and the Yibir and some, at any rate, of the rest, have an uncanny reputation as sorcerers, and some of these helot tribes, *e.g.*, the Tumal and the Il-Kunono are blacksmiths. We cannot help being reminded of our own Gypsies and Tinkers."—Alice Werner, *African Mythology*, pp. 112-113. See also G. W. Stow, *Native Races of South Africa.*

In the Sanskrit Puranas mention is found of the seven *Dwipas* or Continents composing the earth. Of these 'Salmali' is one. Africa may be termed as 'Salmali Dwipa' as a great part of Asia has been known as the 'Jambu Dwipa.' These geographical divisions of the ancient Indians connote the knowledge of the continent of Africa to them.

India had good knowledge of Africa in ancient times, mainly through trade and commerce and partly due to other (cultural, racial and religious) reasons. National and individual efforts or activities also caused ancient Indian influences to be felt in Africa. Of this forgotten connection some are historical facts and some are only vague surmises.

———:O:———

HENRICK IBSEN—THE POET

By Prof. V. PUTTAMADAPPA,
University of Mysore

Man is the only animal, ratifies Hazlitt, that both laughs and weeps. These words are true, at least, in the case of writers such as Bernard Shaw, Charles Lamb, Jonathan Swift, Moliere, Gorky and Ibsen. Of these, the last, Henrick Ibsen, a Norwegian by birth and dramatist by profession, stands out like a beacon from the rest. The course of his life ran between the shores of tears and laughter. He laughed in his plays, and wept in his poems. The reading public hardly knows to-day that Ibsen loved to call himself a poet rather than a playwright. Unfortunately, the attention of his admirers was drawn more towards his plays than his poetry.

Ibsen did not write much poetry because he thought that "to be a poet is to see." In fact, was not a poet called "a seer" by the Greeks? He also said that "the poet's task is to see, not to reflect."

He became a dramatist by virtue of his irrepressible impulse to recreate invisible images that moved in his mind; but he did not become a poet of eminence by virtue of his adamant notion that "songs unsung are ever the sweetest." Incidentally, one might be reminded of what Keats said long ago, "Heard melodies are sweet, but those unheard are sweeter." And the fundamental difference between Ibsen and Keats was, the verses of the former were full of experiences, and those of the latter full of innocence.

Ibsen was born in the year 1828—the same year in which Tolstoy and Meredith were born. He was very adventurous as a child. According to his own brothers and sisters, he was an odd specimen of humanity. While he was a student, he was very studious and resourceful, and his mind was extraordinarily receptive. Later, when Ibsen became a man of letters, he sketched his own boyhood in his poem "Brand," and in his play *Peer Gynt.*

As a man Ibsen was shy of people, and as he advanced in age his love of seclusion increased almost proportionately. In the early days of his manhood, Ibsen had to face poverty and adversity. His illegal and temporary contact with a certain servant-maid, and his even begetting a child from her drew him away from morals, and finding him in that state no one ever thought that he would, in the capacity of a litterateur, excel the great Norwegian writers like Holberg, Wessel and Nordahl Brun.

As in so many others, in Ibsen too, the emotion of love awakened and excited the poetic talents that lay latent in him so far. The year 1849 steered the life of Ibsen from dullness to activity. In this year he seriously fell in love with a girl named Clara Ebbell who was a poetess herself. He wrote many poems in her memory.

His first poem appeared in black and white in the year 1849, and immediately it drew the attention of literary critics. Writing poetry did no more scare him; on the contrary, it became a temptation to him, and to that temptation, without any protest, he yielded. In his earlier poems there were bitterness and touches of despondency. Rank poverty that was gnawing like a leech at his flesh did not, however, lessen his passion for poetry nor was he a pessimist to be carried away by freak circumstances. He described his pitiable state in these words:

> "The wildness of the hurricane
> Doth rage within my soul
> Nor is there path or pilot known
> Upon the sea of doubt."

In his little poem named "Resignation", he recalled explicitly the operations of his feelings and cravings of his heart. At times he would doubt his talents and ask himself, "Did I then wrongly aspire, was my writing cold and vain?" He arrived at a conclusion within him-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

self that the duty of a poet was, "the poet should lead the people and solve their secret longings with his song." In his poem, "On the Falls," he represented the fight in his heart between poetry and personality and thereafter his whole attitude towards life changed, and he began to roam the streets, grew beard, and never attended to any personal cleanliness. All these conflicts in Ibsen's mind took place when he was hardly thirty-six years old. He longed for clarity of expression so much that he said once, "when he had attained the highest clarity he wished to die." In his poems, "Bird and Bird-catcher" and "The Eider Duck," Ibsen unreservedly disclosed his vain attempts at free self-expression in his poems. Sometimes he assured himself that he had the requisite talents to write good poetry—poetry which the world would not easily let go; and some other times he thought that he was incapable of writing poems of note, and that all his poems would be nothing but balderdash. This state of his mind, he described in his poem entitled "The Miner." The interval between the years 1849 anl 1856 was a sort of preparatory time in the life of the poet. During these years, he had his own hopes and fears about his talents. "Hopes sprang eternal in his breast", and "he never was but always to be blest". As days rolled on, his love of writing poetry increased by leaps and bounds, and in his poem, "In the Picture Gallery", printed in 1859, he wrote that "he seemed to hear the living stream of poetry rippling within him". With the march of time, Ibsen arrived at the conclusion that life and poetry were quite apart, and that it was impossible to represent real life in poetry. Though a facile verse-maker, he shunned writing poetry, and hence took to painting.

The year 1850 proved a turning point in the life if Ibsen. For, in that year, Ole Bull, a Norwegian enthusiast, and a great violinist himself, opened a national Norwegian theatre at Bergen and appointed Ibsen as his first "theatre poet". In the next year Ibsen was imprisoned by the Norwegian Government as he was concerned with the Norwegian working men's movement. This incident nipped Ibsen's enthusiasm for poetry, and after his release he seriously took to writing plays. "After he had once decided on the drama as his proper method, Ibsen's poems were infrequent and unimportant." The fire of his enthusiasm for writing plays was further fanned when his plays met with immediate success. In fact, it was his desire from the very early days of his life to portray in his works, "human beings, human emotions, and human destinies upon a groundwork of social conditions and principles of the present day." Ibsen first experienced his theatrical triumph through his play *The Feast at Solhug* on 2-1-1856, and his indomitable will having won its way forward he took a new grit on the ground under his feet.

During the years 1848 and 1849 Ibsen wrote many controversial poems and sonnets. In this period, he could have produced more poems, if he had only a will to do that. But there was that intellectual torpor which clouded his mind, and sapped completely the enthusiasm he had for writing poetry. He was so much afraid of his own [illegible] dramatist

self that he said once, "I hid in the darkest corner—a was terrible!". In his poems up to 1850, he dwelt "dreaming nothings, always imagining himself far from the madding crowd." If one reads in succession Ibsen's "In a Picture Gallery," "The Day Light Covered," and "With a Water Lily," one can easily trace the slow transition of the author's mind.

Between 1857 and 1863 Ibsen wrote—that is what biographers say, any way—not less than forty poems. Then followed a collection of poems entitled *Dighte*. This collection contained poems satiric, narrative, purely lyrical and mystical. In 1871, Ibsen published another collection of verses, in which many poems were included in memory of his wife Susannah Thorsen. After the year 1871, Ibsen's faith in his own talents changed. The caterpillar which was so far in the dormant stage came out suddenly as a butterfly, and began to dance with joy. To this period belongs the poem "The Spring Time of Life," one of the best poems of Ibsen, in which the poet sang the joy of life. Once he became confident of his talents he declared to the world boldly :

> "Everything which I have created as a poet has had its birth in a frame of mind and in a situation of life."

What we wrote, he said on another occasion, "had not been experienced but lived."

Ibsen wrote two long narrative poems—"On the Heights" and "King Haakon's Guildhall." The latter was left unfinished in spite of the writer's sincere and serious attempts at completing it. Another narrative poem of some note Ibsen wrote was "Terje Vigen" which outbeats all his other poems in its grandeur, writer's vivid experience, and in fact, Ibsen himself said that this poem was "born of a deep inner need."

Ibsen gave up writing poetry because he found out that he could express his thoughts and ideals better in plays rather than in poems. But it must be kept in mind that Ibsen could not have become a great dramaturgist had he not been first a poet. He had the vision of a poet which enabled him to conceive of innumerable images he made use of in his plays. That he was not an intuitive poet nobody could deny. "He often had to struggle hard and long before the images took clear shape in his mind. He was driven by an inner compulsion that would not let him rest until he could see his own thoughts standing before him in clear and tangible form. The impulse to form his mental images into self-existent shapes was, in a sense, the one pole of his genius." Both in poetry and plays, Ibsen accepted no master and had no disciple. His peculiar personal and professional idiosyncrasies he never gave up. As these idiosyncrasies could never be kept suppressed by the fiery-tempered poet they found a natural vent in his poetry and plays. In this respect he was one with Dickens, Turgenev, Hebbel, Balzac and De Coster.

It should be borne in mind that Ibsen always thought himself a poet, and that he was after all a poet first and

THREE PIONEER FREE INSTITUTIONS IN CALCUTTA

By JOGESH C. BAGAL

I. The Anglo-Hindu School

The foremost of the free schools in Calcutta in early nineteenth century was that of Raja Rammohun Roy. Rammohun settled in Calcutta late in 1814. Distressed at the illiteracy and consequent drawbacks of his countrymen, especially of the poor, he founded for them a Bengali school at Suripara. Later, he opened an English class at his own garden-house in connection with this school. It must be sometime in 1817, for we have it on the authority of *Samachar Darpan* (October 8, 1831) that while Rammohun was refused participation in the management of the Hindu College owing to the opposition of the orthodox Hindus, he, instead of quarrelling with them, himself founded an English school in no time. This was, according to the paper, an instance of magnanimity which was found so largely in him. Instruction was given to the students free of charge, and such poor but meritorious students as Tarachand Chakravarty, took their lessons here. From the start Rammohun alone bore all the expenses of the school including the house-rent and the pay of the teachers.

As the school became popular in the locality, students flocked to it in larger number. Rammohun felt the necessity of erecting a house for his school. He procured a piece of land in Simla near Cornwallis Square, on which a new house was built. He removed his school to these premises in 1822. Henceforth it came to be known as the Anglo-Hindu School. It was from this time onward, perhaps, that he received monetary assistance from his friends and admirers in the town for the proper maintenance and efficient management of the school.
